Correspondence.

UNCONSTITUTIONAL ABRIDGMENT OF THE SUFFRAGE.

To the Editor of The Nation:

Respected Friend: In regard to the contention that the Fifteenth Amendment prevents Congress from giving effect to that provision of the Fourteenth which requires a reduction of representation when the right to vote is denied or abridged, it seems to me that the facts are as follows: The Fifteenth Amendment prohibits the abridgment of the suffrage "on account of race, color or previous condition of servitude." The prohibition here is absolute so far as it goes, and the thing prohibited cannot be done without a palpable violation of the letter and spirit of the Constitution. Therefore, Congress can take no notice of such an abridgment of the suffrage except to prohibit it. To suppose that Congress can reduce the representation of a State on account of such an abridgment of the suffrage is to suppose that Congress can license a State to violate the Constitution. On that supposition, a State violates the Constitution, and Congress permits it to continue the violation, provided the said State pays a penalty, which is virtually a license fee, in the form of a reduction of representation. Such action by Congress would be revolutionary. When either Congress or the Supreme Court assumes the right to sanction a violation of the Constitution, constitutional government will have come to an end. The only legitimate function of Congress in such a case is to uphold the Constitution.

It is clear that the section of the Fourteenth Amendment which requires a reduction of representation, applies only to such abridgments of the suffrage as may be effected without violating the Constitution; that is, to such as are not "on account of race, color, or previous condition of servitude." The Fifteenth Amendment supplements and modifies the Fourteenth, but does not supersede it, or conflict with it in any wise. Isaac W. Griscom.

Philadelphia, 8th month 25th, 1903.

NEGRO AND JEW.

To the Editor of The Nation:

Sir: In a recent number of the *Libre Parole* are some interesting comments by M. Édouard Drumont on the negro question in the United States, which show how the race problem of one country may be made to point a moral in the affairs of another. M. Drumont says:

"As concerns the negroes, we have no right to encourage by our approval the rigorous measures which have been adopted against them across the Atlantic. As I have said before, they have done us no harm in France, and hence we do not see why we should intermeddle with their struggle with the whites in the United States. The moral which stands out plainly from these facts is the establishment of a scientific, moral, ethnological, social, and economic truth with which our readers have long been familiar. Equality between races will never exist. Shem, Ham, and Japheth, will never live side by side in fraternity, tolerance, and peace. . . . In France, Japheth has become the slave of Shem. In the United States, Japheth wishes to reduce Ham again to the condition of servitude from which he already regrets that he raised him."

Lawrence B. Evans.

Paris, August 20, 1903.

OUR INTEREST IN SPANISH ARCHIVES.

To the Editor of The Nation:

Sir: The recent appointment of the librarian of the Philippine Islands, to make explorations in the archives of Spain and Mexico respecting the earlier history of the islands, should serve as a reminder that in those same archives there are, or should be, lying vast quantities of unedited material relating to a much earlier acquisition by the United States, namely, Louisiana. Efforts have been made for years to induce the Government to secure copies of the materials of Louisiana history in foreign archives. Surely, Louisiana should come before the Philippine Islands.

In almost all the treaties by which territory has been acquired from other civilized nations by the United States, there has been a clause in the treaty providing that all the archives relating to the portions of territory thus acquired should be handed over to United States authorities. I have once or twice tried to follow up the history of attempts to carry into execution this clause. In the case of two treaties I found the appointment of an officer to receive the documents, but the matter always ended with the statement from him of his inability to carry out the work. Is it not time that the non-fulfilment of this article in all the treaties should be inquired into, and that a commission be appointed to repair the negligence of past administrations?

I am not ignorant that steps in the direction suggested have been considered by committees of the American Historical Association. It seems to me that there would be considerable economy if the work on Louisiana and the Philippines could be carried out simultaneously.

Yours truly, William Beer.

Howard Memorial Library, New Orleans, August 27, 1903.

CHAMBERLAIN "SCREWS."

To the Editor of The Nation:

Sir: People at home have perhaps as good opportunity for keeping up with the progress of the ball that Mr. Chamberlain has started as those of us who are now in England; for the newspaper correspondents are observing and quick. But some of the interesting details are sure to be lost. I enclose a letter cut from the London *Daily News* of yesterday, which indicates in some degree the direction and progress of the protectionists. The visitor seems to be at home, with a national election day close at hand. P.

Oxford, August 14, 1903.

Sir: I write to call your attention to the way a Mr. Willey of Exeter—who is, I believe, an engineer and a Tory—intends to support Mr. Chamberlain in his endeavor to tax the food of the people. Mr. Willey employs, I have an impression, a good many men, and you will see from the *Western Times* I send you that he, according to the old Tory style, expects them to vote at the next election as he thinks fit. He concluded his speech at Exeter last Thursday, at a meeting in the Guildhall, called to discuss the new fiscal policy, as follows: "As a point of honor he should say to his men that he expected them to follow his lead in this direction of vital importance affecting the very existence of his industry, and he had little fear of the result. If they did not follow the leader, they could not complain of him if they found their occupation gone, and if he asked them to step aside for men on whose loyalty he could depend." This extract is taken from the tenth page of the *Western Times*.

It would be useful to reprint it and to show the public what is the spirit which animates some of Mr. Chamberlain's followers.—Yours, etc., G. F. Newman.

Luther House, Crediton, Devon, August 10, 1903.

ENGLISH HOME OF THE FRANKLINS.

To the Editor of The Nation:

Sir: It is not generally known in the States that the little village of Ecton in Northamptonshire, five miles east of the county town, was the home for all time, as

ordinarily calculated, of the Franklin family, till about the period at which the father of the celebrated Benjamin crossed the Atlantic. This, perhaps, puts the matter somewhat inadequately, seeing that the bones of generations of Franklins lie under the shadow of the thirteenth-century church, which is no discredit to the county that, above all others in England, is conspicuous for its ancient churches.

A couple of inscribed tombstones of date 1702 commemorate the last of the Franklins who lived in Ecton, namely, the uncle and aunt of Benjamin. The names of the family, from that date back to the beginning of the Registers, 1549, are continually on its pages. The family were small freeholders, of the yeoman class, owning a house in the village and about thirty acres of land, to the cultivation of which they added various trades, that of blacksmith being the one we hear most of. The homestead has gone, but the house erected on its site in 1757 remains, and is now the village store.

Benjamin Franklin's father was born here; but, owing probably to religious differences with his family, who were strong church people, he removed to Banbury, whence he eventually emigrated to America. A brother, Thomas Franklin, whose tombstone is kept in good order for the benefit of the very few Americans who chance to visit Ecton, rose higher in the world than his forebears and became a lawyer. He left only a daughter behind him, and, on her marriage to a Mr. Fisher in another part of the county, the little freehold was sold, and the Franklins vanished from Ecton.

Eight times a day, however, we are still reminded of the family after a fashion quite unique in English county villages; for Tom Franklin, the above-named lawyer, uncle of Banjamin and last of the name, evidently a stirring and active person, collected a subscription for a new chime of bells to be hung in the old church tower, which, in addition to the usual function of church bells, are set for a carillon, and, for the last 200 years, at stated hours, night and day, play the time-honored but now forgotten tune, "Britons, Strike Home"—a favorite, no doubt, of the Ecton Franklins.

And now for the practical part of this letter. Ecton Church is in danger of collapse. Restoration, not for fancy or decorative purposes merely, but for the saving of the edifice, has been pronounced by an experienced architect to be necessary. The parish is a purely agricultural one, consisting of 500 souls, including the rector, squire, the writer, seven or eight farmers, and the rest all laboring men or servants. The sum required is £3,000 ($15,000). There is no fund worth mentioning to which such a parish can appeal. The people of the parish have to do their own church restoration, while to apply to the English public on the strength of the Franklin association would be waste of breath and print.

I venture to think that, for obvious reasons, there may be people in America who will help us to save this fine and stately old thirteenth-century fabric, in which Franklin's family worshipped for 300 years at any rate, and were all baptized and buried, from collapse. The parishioners will be able to find about half the required sum at the outside; of the balance there is no prospect in view. I might also remark that Ecton Church with its surroundings, its Queen Anne rectory, its Hall and timbered precincts, and quaint old-fashioned village, is one of the most picturesque nooks of its kind in the Midland counties; and, curiously enough, is only twelve miles from the home of the Washingtons at Brington.

Letters may be addressed to the Rev. J. C. Cox-Edwards, rector, Ecton, Northampton.—Yours truly, A. G. BRADLEY.

ECTON, August 4, 1903.

Notes.

G. P. Putnam's Sons' fall announcements include 'Literary New York: Its Landmarks and Associations,' by Charles Hemstreet; 'Protection Papers,' by William Dudley Foulke; 'Twelve Years in a Monastery,' by Joseph McCabe; Moore's translation of the Odes of Anacreon, with six designs by Girodet de Roussy, on Japanese tissue; the Poems of Dante Gabriel Rossetti, edited, with illustrations from his own designs, by Elizabeth Luther Cary; the Works of Charles and Mary Lamb, in seven volumes, edited by E. V. Lucas; 'The Record of a Family,' a means of preserving interesting data in the lives of children from birth to maturity; 'The Constitutional Decisions of John Marshall,' edited by Joseph P. Cotton, jr., in two volumes; 'The Writings of Samuel Adams,' edited by Prof. Henry A. Cushing, in three volumes; the second volume of John Boyd Thacher's 'Christopher Columbus'; 'Parliamentary England,' by Edward Jenks; 'Ireland under English Rule,' by Thomas Addis Emmet; 'Palaces, Prisons, and Resting-Places of Mary Queen of Scots,' by M. M. Shoemaker; the second volume of Hanotaux's 'Contemporary France'; a Life of Voltaire, by S. G. Tallentyre; 'Old Court Life in France,' by Frances Elliot; 'Romance of the Bourbon Châteaux,' by Elizabeth W. Champney; 'French Life in Town and Country,' by Hannah Lynch (library edition); 'Austrian Life in Town and Country,' by Francis H. E. Palmer; 'Turkish Life in Town and Country,' by Lucy M. J. Garnett; and the 'Life and Teachings of Abbas Effendi,' by Myron H. Phelps.

Houghton, Mifflin & Co.'s list will include 'William Wetmore Story and his Friends,' by Henry James; 'William Ellery Channing,' by Paul Revere Frothingham; 'John Greenleaf Whittier,' by Prof. George R. Carpenter; 'Henry Ward Beecher,' by Lyman Abbott; 'The Life and Letters of Margaret J. Preston,' by Elizabeth Preston Allan; 'Memoirs of Rufus Putnam,' edited by Rowena W. Buell; 'Reminiscences of an Astronomer,' by Prof. Simon Newcomb; 'My Own Story,' by J. T. Trowbridge, and the same author's Poetical Works; 'The Singing Leaves,' by Josephine Preston Peabody; 'The Passing Show,' five short plays by Harriett Monroe; 'Elizabeth of England,' a dramatic romance in five volumes, by Prof. N. S. Shaler; 'The Overture,' poems by Joseph Russell Taylor; 'Gawayne and the Green Knight,' by Charlton M. Lewis; 'Fifteen Sonnets of Petrarch,' selected and translated by T. W. Higginson, who also collaborates with Henry W. Boynton in a 'Reader's History of American Literature'; 'The Great Poets of Italy,' by Oscar Kuhns; 'Aids to the Study of Dante,' edited by Charles W. Dinsmore; 'Ruskin's Comments on the Divina Commedia,' compiled by George P. Huntington; 'Essays on Great Writers,' by Henry D. Sedgwick, jr.; 'Ponkapog Papers,' by Thomas B. Aldrich; 'My Cookery Books,' a collector's discourse by Elizabeth Robins Pennell; 'The History of Oliver and Arthur,' Englished by William Leighton and Eliza Barrett; 'Hill Towns of Italy,' by Egerton R. Williams, jr.; 'The Land of Little Rain' (Southeastern California), by Mary Austin; 'The Clerk of the Woods,' by Bradford Torrey; the Works of John Burroughs in twelve volumes; 'New Bedford of the Past,' by Daniel Ricketson; 'American History and its Geographic Conditions,' by Ellen C. Semple; 'American Tariff Controversies in the Nineteenth Century,' by Edward Stanwood; 'Zut and Other Parisians,' by Guy Wetmore Carryl; and 'Rebecca of Sunnybrook Farm,' by Kate Douglas Wiggin.

From Macmillan we are to have a Life of Robert Morris, by Dr. Oberholtzer; 'Getting a Living: the Problem of Wealth and Poverty; of Profits, Wages, and Trades Unionism,' by George L. Boler; 'A Pleasure-Book of Grindelwald,' by Daniel P. Rhodes, son of Mr. James Ford Rhodes, the historian; and Stephen Phillips's new play, "David and Bathsheba."

The Chicago University Press announces 'Lectures on Commerce and Administration,' by several hands.

'Ferns,' by Dr. C. E. Waters, will shortly be issued by Henry Holt & Co.

We have already noticed several of the interesting volumes containing selections reprinted from Arber's 'English Garner' (London: Constable; New York: Dutton). The last volume, 'Fifteenth-Century Prose and Verse,' with an introduction by Alfred W. Pollard, has, in addition to what is taken from Arber, several highly interesting pieces not included in the 'Garner'; among the rest, some curious Christmas carols from an Oxford manuscript, the Miracle Play of the Nativity from the Coventry cycle, the morality of "Everyman," and a number of the prologues and epilogues of Caxton. The editor justly thinks that the dulness generally attributed to the literature of the fifteenth century is partly what we may call physiological—that is, it seems dark because we are dazzled by the brightness of Chaucer and Shakspere in the preceding and following centuries; and in this he is partly right. Lydgate and Hoccleve certainly do weigh down the century like two Old Men of the Sea; but the exquisite prose of Malory more than makes amends. The editor might have made his contention stronger if he had cast his eye north of the Tweed and marked what poetry was bursting into blossom there.

Mr. Frederic L. Paxson's 'The Independence of the South American Republics' (Philadelphia: Ferris & Leach) is a book of some two hundred and fifty pages, mainly historical. It is for the greater part based on unpublished original manuscripts, and contains a detailed account of the events leading to the promulgation of the Monroe Doctrine, including the South American wars of liberation. Nine pages of bibliography are appended. The volume will be found of value by students of the period. As a study in international law, its author's aim seems to be to bring out the difference between the modern theory of recognition of new States as

dependent on the actual facts of the case, and the old view (if it can be called one) that recognition was a matter of policy. As he points out, there could be no true modern doctrine of recognition until there was a true modern doctrine of neutrality, which itself was not developed until after 1776. Our recognition by France during the Revolution was really a case of intervention.

Dr. H. Meyer's little book called 'Determination of Radicles in Carbon Compounds' (John Wiley & Sons) has been translated by Prof. J. Bishop Tingle, with important improvements for which the author expresses his thanks. It is a valuable book, not only in the laboratory, but as an aid to the book student in enabling him to preserve a practical attitude of mind toward the subject.

Chemists and microscopists designate certain mixtures and processes by their devisers' names; and of these terms Mr. Alfred I. Cohn, favorably known by a former book on indicators, has now compiled a dictionary of some three thousand entries, entitled, 'Tests and Reagents' (D. Van Nostrand Co.). He disclaims all pretensions to completeness; and certainly it were to be wished that Carnot's test for potassium had been inserted, as well as Flandin and Danger's method of detecting arsenic, this having as good right to a place as the method of Fresenius and Babo that Mr. Cohn duly books. Devanda's alloy, being used in analysis, might be looked for; and it were better not to disappoint expectations having any shadow of justification. Still, on the whole, we do not think the compiler need fear dissatisfaction on the score of omissions. Nor, on the other hand, can harm be done by the appearance of the fuming liquor of Cadet under an odd disguise suggesting that eminent pharmaceutist's searching out a test for cacodyl in the year 1760, nor in Scheele's green figuring in similar fashion. What will be perplexing is that a person wanting to know, for example, what Mayer's solution is, will find himself confronted with twenty-three articles headed "Mayer," with no way, short of going through them all, of making sure which of them is commonly known as Mayer's solution. Nevertheless, despite imperfections incident (among other things) to first editions of original dictionaries, the book promises to be useful to those for whom it is intended, as it already is curious to those for whom it is not intended. A forty-three-page index enhances its value.

The first, or Qualitative, volume of Prof. F. P. Treadwell's 'Analytical Chemistry' (John Wiley & Sons) is the very best book with which to learn qualitative analysis in the old-fashioned thorough way that we have ever seen, and almost persuades us that that was the right way, after all. The tests given are numerous but not indiscriminately collected, and the descriptions of the ways of performing them far superior to anything of the sort we have ever seen. The student is instructed to calculate numerically the delicacy of every test, and the concentrations of the solutions are supposed to be given on the labels of the bottles. On the other hand, the account of mass-action is inadequate, encourages loose thinking, and conveys the impression that the matter is far simpler than it is. Not having seen the original, we are unable to say what the translator, Mr. William J. Hall, has done for the work; but we gather that he has introduced some improvements of detail. We are constrained to say, however, that the misprints are numerous and sometimes bad; as when the student is directed to use nitric acid when hydrochloric is meant, a salt of ammonium when a salt of aluminium is meant, tin when zinc is meant, etc.

The July issue of the *Library Journal* is wholly given up to the proceedings, in that month, at the Niagara Falls Conference of the American Library Association. This means a matter of 242 pages in double columns of type like that we are now using. It is needless to commend these papers and discussions to the attention of educators and sociologists. The report opens with consideration of President Eliot's proposal to stow away or discard books obsolete or little used; his own university's librarian contributing perhaps the weightiest suggestions. Mr. Lane is convinced from experience that "direct personal access to a classified collection of all the material at hand is of the first importance if profitable work is to be accomplished." This he fortifies by the testimony of investigators. An interesting feature in library economy is revealed in two papers on "duplicate pay collections of popular books"—a sort of parlor-car principle which at St. Louis has proved highly remunerative. Miss Johnson, librarian of the Carnegie Library at Nashville, Tenn., discoursing on Southern libraries in general, reports (and justifies the fact) that they are, with few exceptions, "rigidly exclusive of blacks." With the old trust in Providence and "its own good time and way" for the abolition of slavery, "the librarians and library boards are disposed to do all in their power to aid the colored people in securing libraries of their own *whenever the opportune time arrives.*"

For a number of years the pronounced Catholic circles of Austria and Germany have been collecting funds for the purpose of establishing a distinctively "independent" Catholic university in Salzburg, in Tyrol, after the model of the "free" university (entirely under Church control) in Freiburg, Switzerland. This is because the Catholic faculties in the State universities are not under Church supervision, except in the case of the newly appointed Strassburg faculty, where, by special arrangement between the German Government and the Vatican, only professors acceptable to the Church can be appointed. In order to counteract the Ultramontane venture in Salzburg, an international organization of university men has been established in Germany and Austria, which has arranged for extensive courses of lectures and other regular university work at Salzburg during the long summer vacation in August and September. An official appeal has been published for coöperation and attendance on the part of those who do not believe in a Catholic "Science." The list of lecturers for the present summer includes some fifteen from various German universities, and among them even the veteran Mommsen, who has all along been the leader in the fight for independent research, free from Church control, in the universities of the Fatherland. The Freiburg experiment, it may be remarked, has practically proved a failure. Not only have all men of independence been forced out of the faculty, but the university authorities of Germany have publicly announced that they will give no credit to a student for the time he spent at Freiburg, or recognize a degree from that institution, on account of the inferiority in the quality of the work done there.

Prof. Dr. von Luschau has just returned from his fifth expedition to northern Syria, bringing with him thirty-four large boxes of Hittite archæological finds, intended for the Royal Museum at Berlin. As the finds of the other four expeditions are also there, the Museum will become, next to that of Constantinople, the headquarters for Hittite archæological studies. This is one step towards satisfying German ambition to make the collections in Berlin rival those in the British Museum, where, it is alleged, foreign savants and scholars are no longer welcomed as they were in former days.

The Eighth International Geographic Congress is to convene in this country in September, 1904. Early in that month the principal scientific sessions will be held in Washington, to be followed by social sessions in New York, Philadelphia, Baltimore, and Chicago, with a final session in conjunction with the World's Congress of Science and Arts in St. Louis. An excursion from that city to Mexico and to points of geographic interest in the western United States and Canada is also contemplated. The Committee of Arrangements have their headquarters, and may be addressed, at Hubbard Memorial Hall, Washington.

A notable collection of contemporary paintings, drawings, etchings, and lithographs, including a full representation of the Glasgow School, has been shipped to Philadelphia by the International Society of Sculptors, Painters and Gravers, and will make a tour of leading American cities before being shown at St. Louis during the Exposition. Boldini, Lavery, Von Uhde, Strang, Mesdag, Maris, Vierge, Rodin, Greiffenhagen, Anning Bell, Pennell, and Shannon are some of the contributory artists. Mr. Whistler's death caused the withdrawal of his quota.

—There appears to be something shady about a proposed edition of Jefferson's Writings, to be issued in connection with the Thomas Jefferson Memorial Association. The scheme to place a memorial of Jefferson in the city of Washington has much to commend it, even if the form be open to question. The Association, however, is offering 1,000 copies of the Writings in twenty volumes at $60 to $120 for the set, according to binding. The claim is made that the edition will comprise *all* the Jefferson matter in the Department of State and published in 1853 by order of Congress; but the compilation of 1853 is most imperfect, and *all* the Jefferson matter in the Department would fill more than twenty volumes. The publishers further state that the new edition will include "an autobiography of Jefferson," which is nothing more than the "Anas," and has already been printed in full. Similar pretensions are put forward for other well-known material, as if it were to be printed now for the first time. The editor is Andrew A. Lipscomb, and associated with him is Albert Ellery Bergh. The publisher is the Walter Thorp Company of New York. The edition of 1853, made by H. A. Washington, and the later compila-

tion made by Paul L. Ford, would together cost about the same as the proposed issue by the Jefferson Memorial Association, and yet would give *all* the important writings of Jefferson now known. No circulars descriptive of the undertaking have been issued. *Caveat emptor.*

—The two bulky volumes aggregating more than 2,000 pages and entitled, 'The History of the Treman (Tremaine, Truman) Family in America, with the related families of Mack, Dey, Board and Ayers,' by Ebenezer Mack Treman and Murray E. Poole (Ithaca, N. Y.), is a monument of ill-directed labor and ill-digested facts. The editors say, in their brief preface: "The plan of this book is so simple as to need no explanation." This is generally the notion of genealogists who disregard the perfected method of their craft, and invent their own scheme of arrangement, display, and reference. It will be enough to point out that there is no table of contents; that each of the families named above is treated by itself, and has its special index, and that its own rubrics are mingled with those of allied families (*e. g.*, Bodle, Earle, Rappleye, Goldsmith, Baker, Smith, King, Banks, Newman, Marshall, Bailey, Allen, Wyckoff, Updike, Bower are intercalated between the two Tremans on page 128 and page 133 of volume one). The separate indexes have, indeed, the merit of showing each family connection in a single view, but also compel resort to five alphabets for any person whose connection is not known. The index references are not by page, but by personal number, running nearly into the million, with such formidable compounds as 972900-6620 (we knew this unfortunate, who died in early manhood). A famous Boston orator appears on page 1683 in the list of his father's children, and is numbered 916,504; at page 1685 (vol. 2) he reappears in a full article, with the number 921,000; and has a shorter article devoted to him on page 1820*c*, under the number 969,-203. Could any system be less in need of explanation than this? Much true information is contained in these volumes, much is fanciful and unauthenticated, and there is no proportion or editing shown in the use of quoted matter. Not a few prominent names are to be found on searching; but as a rule, for high or low, there is no indication whether the person commemorated is descended from or connected by marriage with the Tremans, Macks, Deys, Ayerses, and Boards. The portrait illustrations are numerous and highly interesting.

—The Norwegian Evangelical Lutheran Church of America, or, more briefly, the Norwegian Synod, celebrates its fiftieth anniversary this year by the issue of a jubilee publication of about 500 pages, large octavo, with 48 half-tone pictures, setting forth in detail the history and general progress of this church organization during the half century, as manifested not only in the increased number of ministers and congregations, but also in the erection of schools, colleges, homes for the aged and for children, hospitals, etc. Although the Synod dates its inception from 1853, the first Norwegian Lutheran congregation was formed ten years earlier at Muskego, Wis., and other congregations were organized soon thereafter. The first attempt at forming a synod was in 1850, but it was only in October, 1853, that the organization was effected. The Synod started with 38 congregations, attended by six ministers—figures which, in the present jubilee year, have been increased to 900 and 280, respectively, representing about 140,000 communicants. These totals would now have been much larger but for a schism in the church in 1888, due mainly to differences of opinion as to the election of grace, in consequence of which nearly one-half of the congregations seceded. The number of congregations then lost has now about been regained.

—In the first years of the church almost all its ministers came over from Norway, with whose national church the Synod closely allied itself; but of the 60 ministers thus imported 30 returned to their native country, others left the service on account of age or for other reasons, and, out of the whole number of 280 ministers now in active service, only 16 were educated for the priesthood at the University of Norway. From the very beginning, the efforts of the officers of the Synod were directed towards making it independent in the training of ministers; and the necessity of supplying this demand has been the prime moving force in the erection of the many colleges, seminaries, schools, etc., that attest the interest which this people, even when transplanted from its native shores to surroundings calculated to favor materialism and a stubborn struggle for existence, take in the higher education. The first school to be established by the Synod was the Luther College at Decorah, Iowa, which, under the unbroken direction of its now aged president, Prof. L. Larsen, has ever been and probably will continue to be the main seat of learning among the Norwegian-American population, where patriotism and fidelity to American institutions are cultivated side by side with reverence for the ancestral home, and love and admiration of its language, history, and literature. Many of the young men who have issued from Luther College have made their mark in American political and social life, while not a few have gone thence to seek wider opportunities for study at the great American universities and taken respectable positions in art and science.

—A notable addition to our knowledge of American archæology has just been made by Capt. Daniel Bruun, a Danish investigator, who, following in the footsteps of the learned Dr. Kaalund, had already spent much time in examining in Iceland the remains of the farmsteads and temples belonging to the heathen age. Since April of the present year he has been exploring the sites of the Icelandic settlements made in the tenth century on the shores of Greenland, which, after flourishing for more than three centuries, were, as is generally surmised, destroyed about the middle of the fifteenth by the invading Eskimos. The colony was divided into two districts, the Vesturbyggd and the Austurbyggd, the latter much the larger. Owing to a misreading of the saga texts, it was long taken for granted that these names indicated the situation of the settlements on the western and eastern coasts of Greenland. Many explorers, at various times, have sought for remains of these old Northmen, but, misled by the geographical error, failed to find them, until finally, as late as 1830, the Danish captain Graah succeeded in hitting upon several farmsteads and the walls of a church, together with a runic stone, thus proving that the terms employed signified the relative westernmore and easternmore positions of the settlements on the southwest-facing coastline of Greenland. In 1894 Capt. Bruun undertook his first voyage to Greenland, and confined his observations mainly to the Austurbyggd in the modern district of Julianeshaab. This year he has been chiefly engaged in seeking for the almost unvisited Vesturbyggd, lying in the district of Godthaab, and has brought back most gratifying results. Owing to native traditions, the Eskimos have, from the days of the missionary Hans Egede, shown great unwillingness to assist in any researches connected with the story of the Old-Northern colonists, but Capt. Bruun was accompanied, for much of the time, not only by the official Danish inspector of South Greenland, but by the well-known and intelligent native printer, Lars Möller, who enjoys the respect of all his fellow-natives.

—Captain Bruun, after an absence of five months, has just returned to Copenhagen, but for full details of his success the public must await his official report. It is, however, known that he has discovered the foundations, generally overgrown with grass, but easily traceable, of many farmsteads, with the stone portions, such as the supports of the fodder-troughs in the stables, for instance, yet standing; the ruins of a church, its churchyard still preserving several Old-Northern skeletons; a stone baptismal font; a head, of European type, carved in walrus bone; and a multitude of relics of all kinds, mostly from the refuse mounds of the settlements, resembling those in Denmark known to geologists as kitchen-middens. These last embrace various sorts of bones, especially of domestic animals, proving that the colonists possessed horses, cows, sheep, and goats. On the whole the sites of between 60 and 70 of the 90 farmsteads alluded to in the sagas as existing in the Vesturbyggd have now been fixed; while in Ameralikfjord, where lay the northern boundaries of Austurbyggd, no fewer than 16 farmsteads were traced by Captain Bruun, some of them indicating by their size the importance and wealth of the yeomen who inhabited them. Sites of old hunting huts were also found, and of *sæters*, or dairy huts, belonging to the high-lying summer pasture lands. It is singular that the relics of such a pasture site should have been surveyed by Captain Bruun in the Austmannadal, which opens into the Ameralikfjord, and at the very point where Nansen and his companion, in their perilous snowshoe crossing of the Greenland glaciers, encamped in order to construct the canvas boat with which they succeeded in rowing to Godthaab. Right here lay not a few distinguishable ruins. The last period of Bruun's researches was occupied with the fjords to the north and south of the trading stations Arsuk and Ivigtut. His achievements will probably lead to some changes in the accepted Old-Northern geography of these regions. They at least furnish important additional proof of the genuineness of the saga accounts relating to the so-called "pre-Columbian" discovery of the Western world. But it is pretty certain that Greenland has not yielded all the information

it has to give in regard to the sturdy Icelanders who built hamlets and churches, 900 years ago, on its bleak shores, and who had their priests and bishops, navigators and merchants, and even their warlike chieftains and inspired poets before the struggle between the Norman and Anglo-Saxon in England was fairly ended.

—Those who could best have spoken of the late Frederick Law Olmsted in his prime are no longer with us. Dying on Friday in his eighty-second year, he had outlived not only his own powers, but the friends of his early manhood. By a happy circumstance, his name has been actively perpetuated in the profession of landscape gardening and architecture, which, following in the footsteps of Downing, he brought to an unparalleled pitch of achievement and propaganda. From New York's Central Park and the Boston Metropolitan Park system to the Golden Gate, the continent is dotted with his natural monuments, such as any philanthropist or any artist might envy. Thus, no doubt, he will be chiefly remembered. The civil engineer and scientific farmer, the American Arthur Young travelling and observing in both hemispheres, will be forgotten in the creator of the pleasure-grounds of our teeming population, the promoter of civic embellishment. Forgotten already by the multitude is his herculean performance during the war as secretary of the United States Sanitary Commission. Forgotten too much—but they are time-proof—are Mr. Olmsted's classic reports of his journeys in the Southern States before the war. In these volumes will forever be read the economic condemnation of American slavery, along with incidental dispassionate, almost at times feelingless, revelations of the hideous cruelties of that system. In them may now be read, and should be read by every one alarmed at present Southern conditions, the underlying causes of post-bellum backwardness and reaction. A deeper oblivion has, not surprisingly, overtaken Mr. Olmsted's connection with the incipiency of the *Nation*. Such notices of his as we have seen have not overlooked his connection with the ill-fated *Putnam's Magazine*. None has recalled his intimacy with Edwin Lawrence Godkin, and their joint scheme for such a journal as emerged in 1865 and may soon celebrate its fortieth anniversary; his temporary proprietorship in it; and his editorial relations. This, small part of his life-work though it was, could not go uncommemorated in these columns; and would that the hand which clasped his in the small beginnings of this enterprise, could now portray that modest and lovable character, warm-hearted and yet sane, well-balanced, equable, gentle as a woman or as those growing things which he wrought into lines and tracts of beauty for the perennial adornment of his native land.

THE POOL AND THE WATER-CURE.

Cartells et Trusts. By Étienne Martin Saint-Léon. Paris: Librairie Victor Lecoffre. 1903.

Trust Finance: A Study of the Genesis, Organization, and Management of Industrial Combinations. By Edward Sherwood Meade, Wharton School of Finance and Economy, University of Pennsylvania. D. Appleton & Co. 1903.

Both of these books treat of the same general subject, to wit, industrial combinations. Martin Saint-Léon's little volume is in its scope the more extensive, both because it covers the various types of industrial combinations in Europe and America, and also because it attempts an evaluation of such combinations in their economic, social, and political bearings. Mr. Meade's book, as the title would indicate, confines itself to American Trusts, and deals mainly with their finances. While it happens, therefore, that the two writers occasionally cross each other's track, as, for example, in discussing watered stock, their respective orbits are in general too far apart to make it worth while to study critically the intersections of their arguments.

The chief importance of the French book for readers in this country is its succinct account of those Europeans cartells and syndicates which in a general way are analogous to our Trusts. The account is the more valuable for the reason that the writer has a first-rate knowledge of the Trust in America. He consequently takes pains to point the contrast as well as to emphasize the likenesses between the Trust and the cartell. Each chapter is fortified with a well-sorted bibliography giving the cream of the literature upon the general topics treated in the text.

The term cartell is used, first, to designate an agreement between producers, and then to designate the parties thus associated together. The second use of the term seems, on the whole, to be the more common. The agreement in question varies in form, but is essentially like the pooling agreements with which, in ante-Trust days, our manufacturers were familiar. Its simplest form is an agreement to abide by a certain scale of prices, but it now commonly covers the fixation of the total output and the share thereof allotted to each producer.

These cartells grew in number with great rapidity, first in Germany after 1878, and thereafter in the other great commercial nations of the Continent, especially France and Austria. The even tenor of the cartells' way was early threatened by complaints and recriminations over secret rebates and similar devices. But in this emergency the cartells hit upon an ingeniously simple remedy, namely, the concentration of all sales of products in the hands of a joint agency. To overcome the same weakness in pooling arrangements, nothing would do our American producers but the absolute fusion of all competing plants in the Trust, though this result was often purchased at the cost of "woes unnumbered" in the shape of worthless securities.

In short, the Continental cartell is simply a successful pooling arrangement of more or less stringent nature, made effective by a common sales agency acting for the various concerns which are parties to the agreement. To do the joint selling and buying for the associated concerns, as well as to fix the standard of market prices, determine the total output and its allotment to the individual plants, a separate organization (*Syndicat* or *Comptoir*) of modest size is often organized, sometimes on the basis of a stock company. Its share capital is inconsiderable—that of the German coal syndicate of the Rhine and Westphalia is only 900,000 marks—and its only shareholders are the owners of the properties combined in the cartell. There is consequently no exuberant creation of securities involved in the cartell, which is literally a "pool" without "water." On the other hand, as the author points out, it is of course true that the cartells, allowing as they do each owner of a mine or plant to manage his property in what fashion he will, cannot attain that absolute minimum cost of production which ensues when only the best equipped concerns are operated under Trust control. Certain economies the cartells do, however, realize, such as the avoidance of cross freights; but these savings are moderate when compared with those realized under the Trust régime at its best.

M. Martin Saint-Léon briefly traces the history of the more important cartells in Germany, Austria, and France. He finds that the attitude of the legislator and the courts in both France and Germany is rather favorable to the cartell. In Germany the Reichsgericht has enjoined upon a recalcitrant member of a cartell the specific performance of his contract obligations under the cartell. The kingdom of Prussia, which owns certain potassium mines, is itself a party to the potassium cartell (*Kali-Kartell*). In France, Section 419 of the Penal Code, which was designed to prevent or punish combinations in restraint of trade, has been so twisted by judicial interpretation as not to interfere with the cartells. In Austria alone is the cartell in bad odor. Public opinion is hostile, and the cartell's legal position is precarious. But the Austrian cartell seems to enjoy the *diis inritis*, and is particularly reckless in exacting tribute from the consumer.

While he excepts the Austrian cartells from the benefit of his indulgence, our author seems on the whole to approve of the tolerant attitude manifested towards these combinations. He does this on the ground that they have rarely abused their power over prices, and that they afford an industrial *modus vivendi* where unrestrained competition would make conditions of production and the course of prices very unstable and therefore intolerable. This attitude of mind with reference to combinations of producers may not be one in which we can permanently rest—it is eminently "unfinal"; but beyond this stage of acquiescence the industrial philosophy of this work does not extend.

The latter half of the book, devoted to American Trusts, is of less value, at least for readers in this country. In general the author has followed the best sources, notably Jenks, upon whose presentation he does not improve. An occasional mistake crops out, as on page 118, where it is stated that, as a rule, manufacturers who sold their plants to a Trust, besides obtaining a bonus in Trust securities, received the entire value of the plants in *actual cash*. On page 196 a statement made by the late Francis A. Walker is attributed to "le général Parker." On the whole this study of the American Trust is to be praised. It grasps the main issues. It points out time and again how the tariff creates a covert in which Trusts may readily breed. It discerns, too, the dangers inherent in the in-

flated securities of the Trusts, of which it remarks sagely (p. 125), "Prendre pour base d'évaluation les résultats *futurs* d'une entreprise, c'est déserter le terrain solide de la réalité pour entrer dans le domaine mouvant de la conjecture et de la fantaisie."

Of Mr. Meade's book approximately the first third is a sketch of the promoter's work in organizing the Trust. This in the main is well done, though it occasionally omits a careful balancing of opposed considerations. The bulk of the treatise consists, first, in the enunciation of certain abstract canons of corporate finance, and, second, in the application of these canons to the financial management of our industrial Trusts. The canons are for the most part admirable precepts of financial wisdom, though often set forth in rather sweeping fashion. The analysis of the financial management of the Trusts is shrewd and fair. Towards the close of the book Mr. Meade takes up the questions of watered stock and legal remedies for the evils of Trusts. In a most straightforward way he dissipates many of the confused contentions upon the subject of watered stock; and concludes with expounding a legal panacea which he hopes may transmute industrial shares generally into safe investment securities.

In his description of the work of Trust promotion Mr. Meade points out the doubly favorable opportunity that presented itself in 1898. Just now, of course, both producer and investor are like the "deaf adder" which will not hearken to the voice of promoters promoting never so wisely. But in 1898 the previous long years of lean profits had created among producers the conviction that "while competition might be the life of trade," it was "the death of profits." Enforced economy during the same period among thousands of well-conditioned consumers had created a potential demand for investments which the offerings of extant securities were unable to supply. To satisfy this double desideratum —freedom from competitive rivalry, and abundant opportunity for the investment of new capital—a clever magician was required, but the promoter rose equal to the occasion.

From the very outset the success of the promoter's scheme, as Mr. Meade demonstrates, depended upon the sale of watered stock. Its issue was necessary both to make the owners of desirable properties let go, and to make would-be investors take hold. A plausible warrant for these inflated securities was found in the extra profits conjured up from the vasty deep of extinguished competition and cheapened cost. There is never wanting at the proper psychological moment a seemingly sufficient reason for issuing securities based on hopes rather than on memories. It is therefore quite proper to set in the foreground the hazardous character of the shares issued by the Trusts. It is the key that explains the greater part of the financial sequel; but one may very properly differ from the author's conclusion that the market for these securities was found wholly among speculators, and not at all among bona-fide investors. Not every one who puts his savings into a stock which, on the face of the matter, promises a return of 8 per cent., is a speculator. He may be a very foolish investor, but often he is an investor after all, and his name is legion. In this first part of the book exception may also fairly be taken to the cavalier fashion in which the author relegates to a position of minor importance the saving of competitive waste. Further, Mr. Meade creates an erroneous impression with reference to the effect produced by Trusts upon prices where he says (page 31), without citing dates or figures: "The Standard Oil Trust made a considerable reduction in the price of refined petroleum, and the Sugar Trust, although for some years in practical control of the market, did no more than to restore prices to a living basis."

In taking up the second general task—that of drawing up a financial decalogue for corporations—Mr. Meade insists that the first and great commandment is to subordinate dividend payments in the early stages of corporate management to the accumulation of a surplus reserve. The corporation's chief end is, apparently, to amass a surplus reserve so large that eventually regular dividends shall be guaranteed beyond reasonable doubt. He even lays it down (page 170) "as a basic principle in corporation finance that a manufacturing corporation should not pay to its stockholders, on an average of good years and bad, more than 50 per cent. of its profits." Now this is very heroic, but the attempt at numerical precision in setting the limit of safety, without reference to any particular method by which profits shall be computed, and with inadequate allowance for varying conditions in different industries, must certainly be pronounced premature. It is, after all, a "counsel of perfection," not a demonstrable theorem in finance.

With this high ideal of financial prudence before his eyes, it will readily be imagined that the Trusts, when bidden by their Draconian judge to give an account of themselves, cut a very sorry figure. Some twenty-six of the largest industrial combinations prove upon inquiry (pages 177, 178) to have paid out in dividends more than two-thirds of their profits in the last three years of abounding prosperity. In the same period they have accumulated a surplus reserve of just 3.2 per cent. of their outstanding capital. The poor Trusts, it would seem, never had a chance to reform and become honest. They were always stumbling over their original sin—overcapitalization. With blocks of shares in the portfolio of the promoter and the underwriter to be unloaded on the public, dividends had to be declared even from the very start, and thereafter had to be maintained in order to support the market price of the shares which were being unloaded.

The second table of Mr. Meade's law of corporate finance has to do with the provision of additional capital. A codified digest of this part of his law appears on page 248. Floating debts, he allows, may be incurred only "to anticipate current receipts, and sometimes to anticipate the proceeds of stock or bond sales." By this strict wording of the law it would seem that certain railway corporations which have just recently borrowed millions upon their notes, because of the narrow market for securities, are sinners indeed. If additional capital is required, we are told "the best method of providing new funds is to take them out of profits." On page 221 the author asks: "Shall a corporation limit itself to this single source of supply?" and remarks: "There is much to be said in the affirmative." There is much also to be said in the affirmative of the proposition that the easiest way to get money is to inherit it from one's grandmother. Unfortunately, like the above-mentioned way of providing new funds, it is often "unavailable." In this case, "considerations of safety approve the sale of stock rather than bonds." However, as Mr. Meade himself recognizes, whether bonds or stocks shall be issued to raise additional capital (always assuming that the interest on bonds is kept below minimum income) depends mainly on what prices investors are willing to give for the two kinds of securities respectively. When bond issues may legitimately be made, Mr. Meade disapproves of the establishment of sinking funds except where the specific property pledged as security for the loan is of a character to deteriorate in value, as in the case of coal or iron lands.

When the industrial Trusts are again confronted with the requirements of this perfect law, they "speak a varied language." On the score of funding, they get off generally with a verdict of "not guilty." "They have refused in most cases to run the risk of bankruptcy in order to pay dividends" (p. 254). But the condemnation meted out to the Trusts as a class for augmenting their floating indebtedness in order to obtain capital funds, is severe and probably well merited. To the general verdict there will be wide assent: "The Trust movement considered from its financial aspect is a failure. The profits of the consolidations have not proved sufficient to maintain the values of their securities."

It argues clear-sightedness and self-possession in the author, after his analysis of the havoc wrought by speculative securities in the case of the Trusts, to take up the cudgels so vigorously in favor of stock-watering. "Instead of the much-abused practise of stock-'watering' being dangerous to the public interest," says Mr. Meade (p. 312), "it is, when properly conducted, of great general benefit." By stock-watering is meant, however, the plan of capitalizing a concern upon a legitimate estimate of its earning capacity rather than upon the basis of the actual cash originally invested. The advocates of this latter plan are wont to assert that watered stock enhances prices, conceals profits, and deceives investors. How meagre is the truth of these claims Mr. Meade very clearly demonstrates.

The remedies which are proposed for the evils of Trusts are the familiar ones of Federal control, and publicity, to which the author adds the proposal that a severe reserve requirement shall be imposed upon every industrial corporation. "A requirement that until a certain percentage of reserve has been accumulated, no more than a certain proportion of the profits, say one-third or one-fourth, shall be paid to the stockholders" (p. 375), would, in the author's opinion, "attain the desired end of increasing the number of investment securities." It would, he thinks, so augment the supply of such securities that their price would fall and the rate of interest be appreciably higher. The hopes built upon this project seem both extravagant and a bit chimerical. It may be hazarded that Mr. Meade seriously misap-

prehends the character of the typical investor. The average investor is not so absorbed in the interests of posterity that he is densely indifferent to current dividends. The author is so wedded to his scheme of subordinating dividends to a large surplus reserve that he even quotes without disapproval the remark of the late Collis P. Huntington upon the suspension of dividends upon Pacific Mail: "What does it matter whether they get their dividends in money or ships?" To the average investor it matters a great deal. Cash goes with the grocer, the butcher, and the landlord, while ships and surplus reserves and advancing stock quotations are not yet a legal-tender. If such a reserve requirement could be enacted and enforced, it is likely that much capital would seek other avenues of investment. The idea that such a requirement would convert speculative stocks into investment securities, and so increase the supply of investment securities as to depress their price and elevate the current rate of interest, will hardly stand analysis. If the net result of such legislation were to diminish the risk now run by the lender of capital, the rate of interest would tend to decline instead of increase.

Macedonian Folklore. By G. F. Abbott. Macmillan. 1903.

This very attractive volume, in form and matter, is the result of the author's gleanings during a year spent in Macedonia, "under the auspices of the Electors to the Prendergast Studentship and of the Governing Body of Emmanuel College." The book contains a remarkably complete collection of Macedonian superstitions, tales, and customs, which, of course, resemble closely those of lower Greece and the islands, and have many points of contact with folklore in general. While it is a real and novel contribution to a special department of this subject, this learned matter is presented with so much charm and humor that the book may be commended to any English reader who is interested in human nature and in the rapidly fading relics of out-of-the-way customs and superstitions. The Greek songs and tales and quotations are, in almost every case, translated; moreover, Mr. Abbott introduces us not only to these lingering tales and beliefs, but to the strange and sequestered people who still repeat and believe in them.

The wonder is, indeed, that, eighty years later than Fauriel's excursions into the domain of folk-poetry, Mr. Abbott should have found any corner in Greek-speaking soil where such poetry and such modes of thought survive. But Turkish rule has at least this dubious virtue, that it does not efface the picturesque by a rash development of science and civilization. The Greek Church, too, provides a warm and cosey nursery for the roots of ancient superstitions. It has multiplied greatly the festivals and seasons since Hesoid's "works and days" for a people who glide in a leisurely way through existence, and who have time on their hands to be killed; it has obligingly adopted the Nymphs and Nereids as children of its own fold, and rechristened them as saints who work miracles, presiding over the sacred fountains which they once haunted. "The pale Galilæan" has not in the least conquered these isolated fortresses of ancient ignorance. A resurrected pagan of the date of Alexander would find himself very much at home at a Macedonian wedding or funeral of the present day; he would meet peasants who believe in his own Nereids and Dragons and Lamias; he would encounter the evil eye; he would be comforted with a sight of Alexander's "Palace," and his "Quoits," two solitary rocks on the plain of Serres, and he would be shown "The Princesses," two smooth stones near Demir-Hissar, where King Philip's daughters bleached their linen. He would find these magic names still—literally, names to conjure with; and he might read delirious versions of the exploits of Alexander by the pseudo-Callisthenes in little chap-books that are hawked about the country and bought in great numbers by the peasantry; they keep his memory, as Mr. Abbott says, "fresh and confused."

Other observances are Homeric or pre-Homeric. The women still at funerals improvise their *myriologues* or dirges after the manner of Helen and Hecuba and Andromache; Charon's penny is thrust under the tongue of the deceased, and into the coffin are put books or toys or trinkets that were dear to him, as in the graves at Tanagra. The spectators admire the beauty of a dead youth or maiden with that long heritage of instinctive æsthetic sentiment which makes Priam contrast the lamentable spectacle of ugly old age left dead upon the field of battle with the beauty and strength of the youthful warrior "in whom all that shows itself is fair." The *raconteuse* of Salonica closes her tale of the Foundling and the Fates with a pious saw, on the inevitableness of destiny, which is identical with a line of the Iliad; the Macedonian field-laborer does not dare to rest under the shade of the plane-tree lest he may disturb the nymphs and incur their anger, just as the shepherd in Theocritus fears to disturb the midday siesta of Pan.

There are other points in which the Slavs have left marks of their influence, and which are traced in the very complete dissertations on Funeral and Marriage Rites and Customs; Birth, Divination, Spirits and Spells, and Mythology. Mr. Abbott is not to be reproached as unscientific because he has not gone about his work dryly and sadly; on the contrary, he has dared to extract amusement from the quaint human documents which he has studied and questioned to such excellent purpose.

The Rise and Fall of the Anabaptists. By E. Belfort Bax. The Macmillan Co. 1903.

In this volume Mr. Belfort Bax concludes a series of studies which is collectively entitled, "The Social Side of the Reformation in Germany." We think we are doing the author no injustice when we say that his motive is not primarily that of the historian. As a theologian might approach the Anabaptists with a view to applauding or condemning their doctrines, Mr. Bax, who is, first, last, and always, a propagandist of Socialism, is drawn to them by their advocacy of communism. It is, of course, impossible for him to neglect their theology altogether, but he cares much less for their religious than for their economic heresies. The bulk of existing literature on the Anabaptists of the sixteenth century is to be found in German. From the dearth of English works on the Münster episode, Mr. Bax's book may be accepted *pro tanto* by those who desire a condensation of the main facts contained in Keller and Cornelius. A command of the German tongue is, indeed, Mr. Bax's chief asset as an historian.

Concerning Münzer, Rothmann, Knipperdollinck, Jan Matthys, and Jan of Leyden we shall say little, for in these pages the biographical element is slight. Mr. Bax is mainly occupied with the development of three subjects: firstly, the mediævalism of outlook which marks the "disinherited" and insurgent classes of the sixteenth century; secondly, the peculiarity of the communism that was advocated by the Anabaptists; thirdly, the contrast between the communism of the sixteenth century and the Socialism of to-day. That the Anabaptist movement had its root in mediæval mysticism and in the ideal of fraternity which had been grasped as early as the eleventh century, is clear; but Mr. Bax is inclined to lay undue stress upon the indebtedness of the Anabaptists to the past. He admits that "the tendencies which in earlier periods of the Middle Ages had been sporadic and transitory, now became general and showed symptoms of acquiring permanency." It remains, however, to point out that the intellectual ferment which was engendered in Germany by both Humanism and the revolt from Rome, gave the Anabaptist sects a greater degree of self-consciousness than had been possessed by their mediæval predecessors, and put them in possession of a wider theoretical basis. Their leaders were not scholars and even decried the vanity of learning; but the stimulus that quickened them into action and made them for twenty years a real force in the Teutonic parts of Europe, proceeded from a reaction against mediævalism. In a word, Anabaptist tenets gained precision and definiteness from their combat with the systems of Zwingli and Luther.

The modern Socialist finds much to criticise in the economic programme of the Anabaptists. They were not sufficiently thoroughpaced. They looked only "to the economic product designed for consumption."

"As already pointed out," says Mr. Bax, "the communistic ideal of the religio-political movements of the Middle Ages which culminated in the Anabaptist revolt . . . was invariably based on the notion of a return to the economic conditions of the old village community. . . . Not so does the proletariat of the modern Great Industry look for its emancipation. The aspirations, *au fond* legitimate as they were, of the mediæval working classes of the sixteenth century were historically retrograde, both as regards the end conceived and the means by which it was believed that end would come to pass—and hence they were foredoomed to failure."

Instead of communizing the economic product we must communize the means of production, "concentrated as they are to-day on a great scale," and exploit them for the common benefit. Mr. Bax therefore finds the outlook of the Anabaptists limited, and with their theology he cannot pretend to sympathize; yet there is something which recommends them. "Foolish as their ideas seem to us to-day, who regard the problem from so totally different a standpoint, let us not forget that, with all their follies and shortcomings, they were, in a sense, the forerunners of Mod-

ern Socialism, and, as such, let us spare them a passing tribute of recognition!"

So far as information is concerned, the most useful chapters of this book are those which deal with the siege of Münster and with the Anabaptist propaganda in Holland and England. Mr. Bax investigates the organization of the new Israel, and describes the life of Münster during the siege. Here, on the whole, his mood is one of lenience towards the Anabaptists, and, when it comes to the celebrated question of polygamy, he does not forget the indulgence which was shown by Luther and Melanchthon to Philip of Hesse.

Francis Adrian van der Kemp. An Autobiography. Edited, with an Historical Sketch, by Helen L. Fairchild. G. P. Putnam's Sons. 1903.

There are few Americans, perhaps, who know that the town of Trenton, New York, was laid out as Olden Barneveld and so named, though more recall that here dwelt scholarly Dutch refugees, friends of the United States during our Revolution. Van der Kemp, called by Governor Clinton "the most learned man in America," became translator of the Dutch records of New Netherland in the Documentary History of the State of New York. A letter of his, written in 1792, gave him, according to Governor Clinton, "the original invention of the Erie route" of the great canal traversing New York State. When in Holland he was the persistent champion of the liberties of his country against the steady encroachments of the House of Orange, then half British by blood and associations.

Van der Kemp was born in Kampen in Overijssel, May 4, 1752. The son of an army officer, he quitted the military career, in which his father had hoped to keep him, and entered Groningen University, being specially fond of the classics and science. He took a term also in that hotbed of liberal ideas, in which the movement for the recognition of the independence of the United States originated, and which Napoleon afterwards suppressed—the University of Franeker. Though he rose to be pastor of a Mennonite congregation, the richest of the denomination in Europe, Van der Kemp found much to do in the field of politics, for he aimed to make not only good Christians, but excellent citizens. His warmest friends were those of America and of Dutch freedom, also, and he wrote voluminously against the survivals and abuses of feudalism and the monarchical tendencies of the Prince of Orange.

For over a hundred years it was believed, even by critical students, that Van der Kemp was the author of that famous appeal, "To the People of Netherland" to "protect the liberty of the press, the only prop of our freedom," which, in the present reviewer's copy, on the 76th, or final, page (significant number), thus summons "every man with his musket, bayonet and side-arms" to "follow the example of the people of America, where not a drop of blood was shed till the English struck the first blow." Written at Ostend, September 3, 1781, its conclusion was, "Jehovah, the God of Freedom, who led the Israelites out of the house of bondage and made them one free people, will support our righteous cause." As may be imagined, this document infuriated the Prince and the Orange faction, and their subservient States of Holland and West Friesland offered a sum equal to twenty-five hundred dollars in gold for the discovery of author, writer, or printer, promising protection, secrecy, pardon, and reward to any person turning State's evidence; but "not one person betrayed his trust." A considerable literature has grown up in discussion of the authorship of this literary masterpiece. The Rev. A. Loosjes of Harlem, in 1886, came to the conclusion that the Appeal was written by Van der Capellen. In 1890, his contention was proved by the statement in Van der Kemp's Autobiography, copied and sent him by Mrs. Fairchild. In referring to his own sermon, "A Delineation of the Conduct of Israel and Rehoboam, as a Mirror for the Prince and the Nation" (three times delivered and twice printed), which "caused a great sensation," Van der Kemp says—"the more so as at the same time my noble friend had written a manly appeal to the people of the Netherlands, while I visited him at his country-seat, and entrusted me with its publication and distribution." Hence the persistent supposition that he, and not Van der Capellen, was the author.

Van der Kemp believed in the existence of an armed citizen force or militia, according to the eighth article of the Union of Utrecht, as an offset against a standing army. He helped to form and maintain at Leyden the Society of Manual Exercise for Freedom and Fatherland, and, after morning service on Sunday, put on his uniform and drilled his corps. When finally arrested and thrown into prison, after the treacherous seizure of Utrecht, at night, he was banished from the province, December 19, 1787. Receiving letters of introduction from John Adams, he reached America. Washington advised him to settle in New York "among the posterity of Dutchmen." While he says that "at Mount Vernon simplicity, order, unadorned grandeur, and dignity had taken up their abode," yet he also adds, "There seemed to me to skulk somewhat of a repulsive coldness, not congenial with my mind, under a courteous demeanor; and I was infinitely better pleased by the unassuming, modest gentleness of the lady than with the conscious superiority of her consort."

Van der Kemp, after several years of life at Esopus, made a home on the shores of Oneida Lake, where, in his log cabin, he had the best library of the classics on the continent. He made visits to Boston, received an honorary degree from Harvard University, and, though honored by the great men of the republic, never greatly retrieved his fortunes. He lived, however, to see his native country governed by a national legislature under a constitution whose chief executive is called king or queen, but who wears no crown and has not half the authority of an American President, and enjoying a freedom greater than in the old Republican days.

This volume is of the first order of value to serious students, both of the relations between the new American and the old Dutch republic, as well as of "the time of the patriots." It is true that even some Dutch scholars say that this anti-Orange movement "aided the disintegration of the old republic, produced nothing stable, and has been speedily forgotten." Certainly, because it has also been forgotten, in the prevalent "Orange fever," that "popular representation, no military usurpation of civil authority, and the freedom of the press won, are matters of course instead of being the watchwords of a perilous cause to which the patriot regents solemnly pledged their lives and fortunes."

The editor's notes and list of writings of Van der Kemp, and sketches of other personalities associated with him, are scholarly and commendable, the result of much discriminating diligence. In the list of principal authorities consulted, however, she does not seem to be familiar with the excellent and exhaustive work of Dr. H. T. Colenbrander, 'De Patriottentijd.' which was, on its publication, noticed in these columns. The illustrations are a dozen in number, being portraits and photographic copies of historic documents, some of them rare and valuable.

The Lundy Family and their Descendants of Whatsoever Surname. With a Biographical Sketch of Benjamin Lundy. By William Clinton Armstrong, A.M. New Brunswick, N. J.: The Author. 1903.

The general introduction to this genealogy is written in a pleasant vein and an attractive style above the ordinary in works of its class. It opens with the first known ancestor, Sylvester Lundy of Axminster, County Devon, England, whose son Richard was the emigrant, sailing from Bristol for Boston in August, 1676. He tarried in New England for six years, without leaving a trace of his place of residence or occupation; partly because he took no wife there. He found congenial Quaker surroundings in Pennsylvania, his next and final home, and from this time the record is full enough, even to the registered earmark for his cattle, as in the diagram on page 9. His son Richard, when well past middle life, removed in 1747 to the Quaker Settlement at Allamuchy, New Jersey, and, having a numerous progeny, fixed the associations of the family name more strongly with that State than with any other. The children of Richard of the third generation began, about the time of the Revolution, to exhibit an unrest which led to an exodus so complete "that, so far as known, there is not a single person residing at the present time within the boundaries of the State of New Jersey that can trace his descent in either male or female line from Richard III." Part of the migration was to the Southern seaboard States, but a more significant part northward to Ontario, William Lundy settling on what was to be the bloody battlefield of Lundy's Lane (no "Quaker guns" there). The family still flourishes on "the peninsula," and we believe we are correct in saying that it has quite divested itself of Quaker affiliations.

Of the fifth generation from the immigrant was Benjamin Lundy, born at what is now Greensville, in Sussex County, N. J., forever to be honored as the first American to consecrate himself wholly to the cause of emancipation in this country, and to publish an effective journal in opposition to slavery. He is the bright particular star of Mr. Armstrong's genealogy. A portrait photographed direct from the miniature engraved by Sartain for Earle's Life of Lundy is given; the sketch of his career exceeds every other in fulness; and a number of inedited letters and documents relating to

him are printed. These last are of no great importance, with one striking exception. The general destruction of Lundy's papers by mob violence in the burning of Pennsylvania Hall left untouched the autographic itinerary of his journey from Baltimore to Bennington, Vt., November 11-December 6, 1828, the most momentous of his life, for it ensured a pledge of Garrison's future co-operation with him in editing the *Genius of Universal Emancipation*. The date of this journey caused much perplexity to Garrison's biographers, who concluded in favor of the early part of 1829, and repeated their father's statement that Lundy walked the entire distance, great pedestrian that he was. For reasons not far to seek, this incident was discredited by Gen. William Birney in his filial Life of James G. Birney (p. 395): "He [Lundy] was never in Bennington. That city was six hundred miles from Baltimore by the nearest roads, and forty days of foot-travel would not have been undertaken by Lundy to accomplish what he could have done as well by letter." The itinerary shows, in fact, that Lundy resorted to stage, horseback, and steamboat as well as to his hardy feet. It shows also that Birney's fifteen miles a day was too low an average for our Quaker's capacity. On November 16 Lundy walked 23 miles, and the day on which he reached Bennington he accomplished 20 miles. On November 25 he reports 6 miles afoot in 63 minutes. In his first New England tour, Lundy walked from Leicester to Springfield, Mass., reckoned at 45 miles, in a single day.

It is to be regretted that Mr. Armstrong should not, in displaying his pedigrees, have followed the system adopted by the Boston genealogists. The maze created by his painstaking and cautious researches is threaded by no numerical system and by no index of Christian names. There are numerous portrait illustrations, some maps, and a drawing of the vanished meeting-house at Allamuchy.

Arnold's March from Cambridge to Quebec: A Critical Study, Together with a Reprint of Arnold's Journal. By Justin H. Smith. G. P. Putnam's Sons. 1903. Pp. xix, 498.

The statement of Professor Smith that his object has been to ascertain facts, not to paint a picture, may serve to differentiate this work from previous works of the same author. We have presented here the results of a careful and exhaustive study of the external facts of Arnold's march from Cambridge to Quebec. Without concerning himself with the historical significance of the expedition, its causes or results, the author has been content to ascertain the number of men engaged in it, to trace step by step the ground they covered, to enumerate the difficulties they encountered and the means they used to overcome them, and to estimate the number that finally arrived safely at Quebec. The book is precisely what in its title it purports to be.

For this task the chief requisites are an examination of all the written sources and an intimate knowledge of the geography of the region. Professor Smith has been at extraordinary pains to gain first-hand knowledge of the sources and to acquaint himself with the geography of the Kennebec and the Chaudière Rivers, and he has shown a good degree of skill in using this special knowledge in working out the problem he undertook to solve. The first chapter deals with the route before the time of Arnold. It appears that its military possibilities were often considered, but its difficulties were underestimated on account of ignorance of the geography of the upper Kennebec region. The second chapter is given up to an estimation of the relative trustworthiness of the written sources, most of which are in the form of journals. Here Professor Smith shows carefulness and good judgment, though hardly technical training; and the same may be said of the following chapters, which trace the march step by step from Cambridge to Quebec.

Nearly half the book consists of notes, and in the uses and arrangement of these Professor Smith is, we think, not altogether happy. Each of the 225 titles listed is numbered. The references (which are by number, "to save space") are grouped at the end of the book, while the list of titles is at the beginning. This arrangement makes it necessary to turn first to the notes at the end and then to the list at the beginning if one wishes to verify a reference. If this saves space it wastes time, and, from the reader's point of view, the loss certainly more than offsets the gain. Besides, one finds on closer examination that the note space has not been used to the best advantage. The primary use to which such space should be put is, it is hardly necessary to suggest, to record exact references in support of statements in the text. But Professor Smith's notes, which are so voluminous, contain comparatively few exact references. There are 49 notes to chapter iii., covering 15 pages of rather small type, and yet a hasty examination reveals only 24 exact references, and many of these are to Mr. Codman's book, which the author is at great pains to criticise in detail. In chapter v., in 14 pages of notes, there are ten exact references, exclusive of those to Codman; and in chapter vi. the proportion is still smaller. On the other hand, there are in the text many paragraphs packed with facts for which no references are given. References to "Preserved on file in the House of Representatives," "MSS. files of Congress," "Archives of Congress," abound. Much of the discussion in the notes is devoted to over-elaborate proof of or hypercritical comments on Mr. Codman's numerous slips. Comments that are trivial, or pedantic, or needlessly expanded, are inserted when an accumulation of exact references would serve much better.

Aside from this failure to conform to good models in the use of note space, the work is an excellent and painstaking piece of historical investigation in a field that calls for thoroughness and industry rather than for profound thought. Arnold's journal is here printed for the first time, with notes by Professor Smith. The index is fair.

The Collegiate Church of Stratford-on-Avon, and Other Buildings of Interest in the Town and Neighborhood. By Harold Baker. London: George Bell & Sons; New York: The Macmillan Co. 1902.

Bell's "Cathedral Series" has been noticed many times in these columns, for there are already in the market nearly thirty volumes, each devoted to a cathedral; and it will need to be noticed yet again, as there are still at least four to come. The serial name is stretched a little to cover notices of certain important churches which are not cathedrals, and here it is made to cover a very curious and interesting little guidebook to all the Shakspere associations of Stratford-on-Avon, together with one or two buildings which are not directly associated with the poet. The Stratford church is, however, of such a character that a handbook devoted to it would not be wholly out of place in the series of architectural guides. It is an extremely respectable and, indeed, exemplary English church of the fifteenth century, with large perpendicular-traceried windows, both in choir and nave, in the west end and in the porch. Whatever is of earlier work is concealed, or at least made uncertain, by the decorative applications of the reign of Henry VII. There is an interesting feature of the plan which may be cited for the benefit of the pupils of Professor Goodyear, and that is the deflection of the choir from the direct line of the nave. The angle made by the axis of the church is so great that the transept and choir taken together, and forming a T, are "deflected five feet from the line of the chancel"; by which phrase it is meant that if you measure the south wall of the nave from west to east, you will find it to be five feet longer than the north wall is, if measured in a similar way. Mr. Harold Baker is quite right in his remark that, while such irregularities are found in many old churches, "the deviation is usually not so great as in this instance."

The church, then, has really much architectural interest, and if there were only two or three such churches in England it would be indeed a centre of attraction for all students of architecture; but it is precisely of this epoch that there are the greatest number of parish churches of importance. The style of the building, its plan, its whole structure, and its decoration, are such as we associate with the minor religious buildings of the south and centre of England so completely that it has been chosen as the type for those church buildings of our own time which are identified with the Anglican communion in any of its forms.

The house known as Shakspere's birthplace is pictured and described, and its rather too numerous alterations and restorations are so minutely explained that the imaginative historian can easily put the old building before him. The Guild Hall and the Grammar School over it form together a most attractive mediæval building. The Grammar School Library, which was once the room for the Town Council, forms a wing of the same building. The old Harvard house, too, with its elaborately adorned gable, fronting on the High Street, and some minor town houses, with Anne Hathaway's cottage, a mile distant, all have this especial value for modern times, that the strong literary association which they possess compels thousands of travellers who are not antiquarian at all to look rather closely at the simple buildings of the past, and contrast them with the exaggerated modern demand for comfort plus elegance. It is as if every traveller in these regions were brought face to face with the dwellings of his own ancestors—as if

every such traveller, say, from America, had a great-grandfather's house to visit in a New England or a Warwickshire village—an experience which the majority of us do not enjoy. But we can turn away from these ancient simplicities, so good for the disciplining of the modern spirit, to a piece of ancient splendor, and can visit Charlecote House, the home of the Lucys, and, therefore, of Sir Robert Shallow, and which stands unchanged, a most attractive, a most seemly and dignified Elizabethan mansion.

It will be seen that the book is full of interest, and even of amusement, and the reader must be told besides that there are "fifty-eight illustrations, chiefly from photographs by the author," so that he is sure of a lot of valuable pictures which he has not seen before.

SOME RECENT AND FORTHCOMING SCIENTIFIC WORKS

Noyes's Organic Chemistry. By Prof. Wm. A. Noyes of the Rose Polytechnic Institute. 534 pp., 12mo, $1.50 *net.*

Its most radical departure in method consists in the dropping of the division into "fatty" and "aromatic" compounds and in the adoption of what appears to the author a more fundamental and logical classification.

Prof. James L Howe, Washington and Lee University: "It is excellent."

Cohen's Physical Chemistry. For Physicians and Biologists. Translated by Dr. Martin H. Fischer of the University of California. 343 pp., $1.75 *net.*

This volume attempts to give the results that have thus far been obtained by an application of physical chemistry to the biological sciences.

Prof. L. F. Barker, University of Chicago: "It is undoubtedly the best book on the subject for medical students and physicians which has yet appeared in English."

Peirce's Plant Physiology. By Prof. George J. Peirce of Leland Stanford University. 291 pp., 8vo. $2.00 *net.*

A modern and thoroughly scientific discussion of the general principles of plant physiology, intended for the student or general reader acquainted with the elements of botany.

Waters' Ferns. A Manual for the Northeastern States by C. E. Waters, Ph.D. (Johns Hopkins). With an Analytical Key based on the Stalks. With over 200 illustrations from original drawings and photographs. 362 pp. Square 8vo. $2.75 *net.* (By mail $3.03.)

A popular but thoroughly scientific book, covering all the ferns in the region covered by Britton's Manual.

The Plant World says: "This book is likely to prove the leading popular work on ferns."

Atkinson's Mushrooms. By Prof. Geo. F. Atkinson, of Cornell; and their chemistry and toxicology by J. F. Clark, with recipes for cooking mushrooms by Mrs. S. T. Rorer. With 230 colored plates and illustrations from photographs. Second edition. 320 pp. 8vo. (*September.*)

Valentine and Hunter's Laboratory Manual of Biology. By M. C. Valentine and G. W. Hunter, Jr., of the New York High Schools. (*September.*)

Tarde's Laws of Imitation. Translated by Elsie Clews Parsons. With an Introduction by Prof. F. H. Giddings of Columbia. xxx+404 pp. 8vo.

Chamberlin & Salisbury's Text-book of Geology. Advanced Course. By Professors Thomas C. Chamberlin and Rollin D. Salisbury of the University of Chicago. (*American Science Series.*) 2 vols, 8vo. (*Vol. I. in November.*)

Wells' Practical Chemical Calculations. By Prof. H. L. Wells of the Sheffield Scientific School of Yale University. (*September.*)

The Hossfeld Series

OF GRAMMARS, TEXT-BOOKS, DICTIONARIES OF

Foreign Languages

For the Study of French, Italian, Spanish, German, Dutch, Russian, etc.

A description of the Hossfeld Series

There are many theories as to the best method of learning a foreign language. Some are severe, others are easy. One thing is certain, unless the method be interesting to the student, it is profitless.

The Hossfeld Series is probably as successful in its aim "to strike the happy mean" as an educational series can be. It neither promises accomplishment without effort nor does it expect drudgery of its students.

The Hossfeld Series is planned to lead the the student by increasing interest from step to step in the mastery of languages, keeping in sight all the various points of interest in language-study—the fascination of pronunciation, of suggestive construction and phrasing, of telling idiom.

The Hossfeld Series is of equal value to those studying the written and the spoken language.

NEWEST SECONDARY TEXT-BOOKS

Dresden's German Composition $0.40
By B. MACK DRESDEN, A.M., Instructor in German, State Normal School, Oshkosh, Wis.
Embodies the result of much thought and experience. The material is continuous, and carefully graded in difficulty, commencing with short and interesting anecdotes. Besides the exercises, the book includes a brief review of grammar, explanatory footnotes, and a vocabulary.

Pearson's Latin Prose Composition..... $1.00
By HENRY CARR PEARSON, A.B. (Harvard), Horace Mann School, Teachers College, N. Y.
Combines a thorough and systematic study of the essentials of Latin Syntax with abundant practice in translating English into Latin, and affords constant practice in writing Latin at sight. Review lessons are introduced at frequent intervals, and the references are to all the leading grammars.

Gleason's Greek Primer..... $1.00
By CLARENCE W. GLEASON, A.M. (Harvard), of the Roxbury Latin School.
Can be easily completed in less than a school year. The verb is developed slowly and naturally with ample practice on its forms. The infinitive and participle and indirect discourse are treated at considerable length. The greater part of the vocabulary used is drawn from the Anabasis.

McMahon's Elementary Plane Geometry..... $0.90
By JAMES MCMAHON, Assistant Professor of Mathematics in Cornell University.
Meets any college entrance requirements. Theorems and problems are arranged in natural groups, typical forms preceding special ones. The student is forced to rely on propositions already proved, thus fostering his independence of reasoning. The work throughout aims to develop his powers of invention and generalization.

This volume is everywhere said to be the best book for boys on all kinds of outdoor life. *Cloth, 12mo,* $1.50 *net.*

Published by **THE MACMILLAN COMPANY** 66 Fifth Ave. N. Y.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 10, 1903.

The Week.

President Roosevelt was both paradoxical and happily inspired when he chose for the subject of his Labor Day address at Syracuse the community of interest between all Americans. Before the sturdy farmers of Central New York it was easy to dwell upon that intimate bond which from great capitalist to day laborer links inextricably the fortunes of all citizens of our free state; that doctrine was familiar to his hearers. But the address was, none the less, a courageous as well as dignified utterance; it was really delivered to the labor unions, and it took issue manfully with pretty much all the beliefs which they and their holiday stand for. The President's counsel to those who preach the war of classes might have been more emphatic; it is to any careful reader of his speech remarkably clear. Briefly, he upheld the old American doctrine of individualism. The Government declines to deal with "butchers, bakers, and candlestick makers" as such; it recognizes only citizens. The whole speech was an impassioned plea against that spirit of caste which confines the individual's allegiance to the imagined interests of a class, while subordinating to the artificial average prescribed for the class all his higher ambitions as an individual. Said Mr. Roosevelt, pursuing this theme: "We can keep our Government on a sane and healthy basis, we can make and keep our social system what it should be, only on condition of judging each man, not as a member of a class, but on his worth as a man." (This apothegm deserves to be repeated whenever generalizations about racial incapacity are produced to justify withholding from individuals the rewards of proved capacity.)

The Miller case is still fresh in memory. The President, it will be recalled, reinstated an assistant foreman of the Government bindery against whom no better cause had been alleged for removal than "flagrant non-unionism." While the President was meditating his Syracuse speech, resolutions from the seventy-two unions of the Central Labor Union of the District of Columbia were being read at the regular Sunday meeting of the Central Federated Union. These resolutions declared that the reinstatement of Miller could not be regarded "in any but an unfriendly light." "Friendliness" on the President's part would have consisted in ignoring Miller's rights as an American citizen in Government employ in order to augment the prestige of a small group of American citizens to whom he has given offence by saving money for the Government. The President can very well get along without the approval of the Central Federated Union; but the incident at once lends emphasis to his advocacy of true Americanism, and shows unmistakably where the caste system is a real peril to our democracy. It cannot be said too often that unionism, like African slavery, rests on a peculiarly cruel and inflexible theory of caste. Those who work with their hands are to be aligned according to their several employments. The world is to be divided sharply into unionists and non-unionists. If the latter happen to be laborers they are to be prevented from working, and thus starved into the unions or out of this work-a-day world. If the non-unionists be capitalists, large or small, they are to be treated as enemies.

The announcement that President Roosevelt will hereafter appoint to consular positions only such men as are qualified by previous experience and training, is in keeping with his attitude hitherto towards the diplomatic service. In that branch he has steadily promoted men who had done well in minor positions. As a result, it to-day more nearly offers a life career to young men than at any previous time in the memory of the present generation. In consular matters, Mr. Roosevelt's record has, on the whole, not been quite as good; but in view of his present intention to conserve the best interests of the country and its foreign trade, his occasional surrenders to Senators may be forgiven. It has always been plain that, even without legislation, we could have had a stable and efficient consular service had our Presidents done their duty and lived up to the trust imposed in them, instead of delegating it to the politicians. Coming on top of Mr. Roosevelt's alleged division of the Delaware offices between Addicks and the reputable Republicans, as announced by Postmaster-General Payne, the President's latest move will give his critics another opportunity to point out the frequent inconsistencies between his theory and his practice of civil-service reform.

It appears that Postmaster-General Payne, in removing Miss Todd, postmistress of Greenwood, Del., and appointing an Addicks man in her place, acted on the theory that Senator Allee (Addicks's man) was entitled to dispose of the offices in Kent and Sussex Counties and Senator Ball (anti-Addicks) was entitled to those in the county of Newcastle. It is true that country post-offices are not embraced in the classified service; but, in the mind of a real reformer, that is immaterial. The letter killeth, but the spirit maketh alive. Miss Todd was a blameless officer. She was a Republican, but took no part in politics. She attended strictly to her duties. Even if her term of office had expired, she should have been reappointed, without question. She was removed for no reason except that Senator Allee wanted the place for an Addicks man. Now let us see how many violations of the principles which the Administration professes to hold, were committed in this case. It was one such to displace Miss Todd at all. It was another to remove her before the expiration of the term she had begun. It was a third to recognize Allee's right to the office. It was a fourth, and the most flagrant of all, to do these things in the interest of a discredited politician whose operations as a corruptor of the ballot-box and of legislatures have shocked all decent people during the past seven years.

Smuggling through the mails is the charge against the latest victim of the postal investigation. Mr. Kempner, Superintendent of Registry, has taken advantage of his official position to get Havana cigars duty free and sell them to favored friends. His defence, published on Friday in the *Tribune*, shows a complete grasp of the principles of statesmanship as formulated by Beavers, Machen, *et al.* The fundamental purpose of public office is to furnish plums, perquisites, and plunder for the office-holder, his family, and his friends. The only question is how much he can pocket without running a risk of criminal prosecution. Mr. Kempner is a timid soul—his operations have been far less extensive and dazzling than those of some associates—and he is therefore justly indignant at being called to account. He did not smuggle a warehouseful of cigars; he is no rival to the Tobacco Trust; and he really deserves praise and promotion for his moderation. For the last four years he has been in a position to accept pieces of registered mail containing cigars, sent to him by Cuban admirers. Naturally he has availed himself of his opportunities; but he solemnly protests that the cigars have always come in small quantities. Because his transgression is such a little one, he "cannot conceive" how any one can find fault with him, unless "imposed upon by some one who has a malicious desire to injure his good name."

It was telegraphed from Washington ten days ago, apparently by authority, that Secretary Shaw had $40,000,000 to deposit in national banks where it

would do the most good. The announcement brought an avalanche of applications for shares in the distribution. It now turns out that the Secretary did not authorize the statement, and that he has no intention to deposit his surplus in the banks under existing conditions, or under any conditions like the present. If there should be a serious stringency in the crop-moving season, he would use the discretion which the law gives him to the extent of $40,000,000 if needful, but he now contemplates only the deposit of some small amounts in banks in the agricultural districts where applications had been made several months ago. The policy thus officially announced is sound and sensible, but it forces upon public attention again the need of a radical change in our fiscal system. The collection and disbursement of the public revenue ought not to have any more relation to the money market than the collection of railway earnings and the payment of railway expenses and dividends. In fact, the Government ought not to have a surplus. Its receipts and expenses ought to balance each other within a small sum, and any overplus ought to be deposited in banks from day to day. The Independent Treasury, regarded as a place for the lodgment of money, ought to be abolished. The Aldrich bill of last year was, in this particular, a move in the right direction, but it should have been preceded or accompanied by a bill to reduce taxation to the level of expenditures. The latter measure is perhaps the most needful of all, since the existence of a surplus calls into activity all manner of profligate schemes for spending it.

Secretary Shaw was not so successful at Chicago on the subject of foreign trade as on that of currency reform. Somewhere Mr. Shaw had heard that our tariffs were an obstacle to exporting, but, said he, look at free-trade England, which buys of us $600,000,000 a year, while we buy silk, not of England, but of protectionist France. This was supposed to prove that the French suffered no restriction of their foreign trade through their tariff, while England through free trade actually lost the silk trade. It was a pity to apply the Q. E. D. before so promising an argument had been carried further. Indisputably, we do not buy our Rhine wine in England, nor yet our champagne, nor, for the matter of that, our Havana cigars, Italian statuary, or olive oil. All these things we take from protectionist nations. Thus, by the simple process of proving that we do not buy of England what England does not produce, but do buy of protectionist countries the products in which they have a unique excellence—often a quasi-monopoly—the Cobden Club and its subsidized agents might have been utterly put to rout.

Latest advices from our "Commission of Exchange" are to the effect that the members will return home next week and make a report. As to their main purpose, which was to bring about a par of exchange between gold and silver-using countries at the ratio of 32 to 1, it has notoriously failed. Failure was freely predicted before they sailed. Then, rumor has it, they directed their efforts toward means for coercing or inducing China to adopt a stable national coinage system. This ought not to have been difficult, seeing that China was one of the Powers that prompted us to appoint this very Commission. By way of helping China to adopt a stable coinage system it is said that our Commissioners (but not their Mexican colleagues) labored for the relief of China from "the indemnity pressure." We can hardly credit such a report, since that would be an excursion into the field of diplomacy. However that may be, it is evident that no progress was made toward reducing the indemnity. It seems that some pious but divergent opinions were collected as to what China ought to do with her coinage system. England, France, and Russia think that China ought to have a national currency in place of the existing hodge-podge, but that it should be on the silver basis. Russia and France think that the coinage should be on Government account, while England agrees with Mr. Bryan that the coinage should be free; that is, that the mint should receive all the silver brought to it by private persons, and coin it for them. Our Commissioners urged that it (the Chinese silver coinage) be placed upon the gold basis at the ratio of 32 to 1. It is said that Germany, Belgium and Holland agreed "in theory" with our Commissioners. Finally, a common understanding was reached that China's popular coinage should be silver (it is now copper), and that it should be raised to the gold parity as soon as practicable. This is a conclusion that is not likely to be disputed by anybody except the Chinese. How they will look at it remains to be seen.

We cannot believe that Mr. Edward M. Shepard is feeling highly elated at the reception which his letter to the *Evening Post* in regard to negro suffrage has received at the hands of the press, unless, indeed, he is really a candidate for the Presidency. For this position he was at once nominated by the New York *Tribune*, which pointed out that, as he assured Northerners of his deep regret at discrimination against the negro, and Southerners that he would not for the world reprimand them or give the negro any relief from that same discrimination, his straddle was perfect. Mr. Shepard is also nominated for the White House by the Columbia *State*, or rather renominated, for it first suggested his name for the Presidency several months ago. The New York *Independent* calls Mr. Shepard's letter a "bid for the Presidential nomination," and says that the "great fallacy and vice of Mr. Shepard's seductive letter is in its cowardice." The Boston *Journal* thinks that the letter must prove a veritable boomerang, since he has tried in vain in three columns to formulate a policy.

The Southern press alone is really pleased by Mr. Shepard's expression of opinion. The New Orleans *Times-Democrat* pronounces Mr. Shepard "a statesman with a future." The Charleston *Evening Post* thinks that Mr. Shepard's answer completely disposes of the "would-be mischief-maker" who asked him the questions, which is in startling contrast to the Des Moines *Register and Leader's* opinion that Mr. Shepard's reply is "long, shifty, adroit, and inconclusive." The Springfield *Republican* feels that a fair summary of Mr. Shepard's letter is, "Let us do nothing." "At least," says the Boston *Transcript*, "he has not run away," but it thinks that he has added nothing new or definite to the question. Differing from the Southern papers, the Boston *Herald* thinks that this letter has not bettered Mr. Shepard's chances of obtaining the Democratic nomination. Nowhere outside of the South is the document treated as a statesmanlike production. Nor could this be otherwise, for it has ever been the duty of a statesman to propose solutions for problems of state, not merely to describe evil conditions and then simply to deplore them.

A special dispatch to the *Tribune* reports that the negroes of Mississippi are greatly alarmed by the nomination of Major James K. Vardaman for the office of Governor of that State. Because of his open opposition to negro education, ignorant men of color fear that he not only will limit the number of colored schools, but will force them back into a form of slavery as soon as he takes office. Even one of the wisest leaders of the colored race writes us that, in his opinion, any successful attempt to limit the schooling of negroes in Mississippi would inevitably be followed by an effort to introduce a system of peonage similar to that recently exposed in Alabama. We have already stated our belief that Major Vardaman cannot bring about the change in the laws which he proposes, and that his election by the primaries was not permitted until the people felt that the Legislature would resist any attempt to divide the school funds according to the taxes paid by the two races. Every effort made hitherto in the South to apportion the moneys set aside for educational purposes has been overwhelmingly defeated, whether in Alabama or in North Carolina. In

Mississippi itself a proposition to apply to each school district only the sum raised within it by the taxation of personal property was defeated as badly as it should have been. Should Vardaman undertake to carry out his ideas, he will meet with the opposition of the most enlightened men in the South, who, however they feel about the political treatment of the negro, realize that his educational uplifting is essential to the welfare and progress of their States. On the other hand, the Memphis *Scimitar* argues that Vardaman's triumph means a sound lesson to President Roosevelt for daring to dine with Booker Washington and abolish the Indiano'a post-office. The Memphis *Commercial-Appeal* declares that

"Mississippi has struck the first decisive blow at those ugly children of hate and sectional rancor, those amendments to the Federal Constitution which degrade American citizenship and disgrace American civilization. Other States are sure to follow in the near future, but Mississippi will have the honor of leading the assault."

But why so hot if the amendments are a dead-letter in Mississippi?

Condemnation of peonage formed an important part of Gov. Jelks's message to the Alabama Legislature on September first. In the same document he attacked the newspapers for publishing broadcast the existence of this new slavery. His theory apparently is that such violations of law are private matters, to be dealt with by the local authorities, with due consideration for the sensibilities of the prominent politicians and leading citizens in any way involved. Unhappily, this method of avoiding publicity and pain had already been tried by the State officers and had failed. Before the Federal courts took up the cases, Gov. Jelks knew something of the extent and atrocity of the peonage system; had he been eager to suppress the outrages he could at least have made an effort, but he held his hand. Then it was that Judge Jones and District Attorney Reese, Southern men both of them, stepped into the breach and began their memorable fight for the rights of the helpless. In this contest the State Administration was worse than apathetic: the weight of its influence was thrown with the law-breakers. But, in spite of indifference and opposition, the prosecutions were carried through successfully. Gov. Jelks's message, therefore, has been wrung from him by the victories of the men at whom he has sneered and by that very publicity which he deplores. His rage is not surprising.

The Pennsylvania Democrats have been quick to seize the advantage given them in the passage of the Pennypacker libel law by the Republican Legislature. This statute has been ridiculed and condemned by almost every Republican newspaper in the State. Accordingly, the pledge adopted by last week's Democratic State Convention, to repeal the law forthwith if intrusted with the power to do so, will place the Republican candidates in a difficult and embarrassing situation. One or two of the Republican nominees on the State ticket were members of the Legislature which passed the bill, and, in fact, voted for it. Even in the Republican convention, dominated as usual by Quay, whom Pennypacker sought to shield by muzzling the press, the selection of these ex-members for places on the State ticket was opposed as inexpedient and dangerous. Several Republican newspapers, including the Philadelphia *Press*, spoke doubtfully of their candidacy, not only before they were nominated, but with equal force after the convention adjourned. With the straight-out declaration of the Democratic platform against the libel law, the outlook for these particular candidates, at least, becomes still more cloudy.

The convention in its platform confined itself to State issues, as has been the Democratic custom in Pennsylvania during recent years. This avoids the necessity of a clash with Bryanism, and also serves the better purpose of bringing out more vividly the vices of the Republican ring which controls the State. Not alone in respect to the libel law was the convention this year able to strike some heavy blows. The sham pretence of the legislation of last winter relating to elections furnishes the text for an excellent plank declaring for a personal registration law and a free ballot. To these reforms the Republicans are pledged, as well as the Democrats, but the Republican Legislature year after year has met and adjourned without accomplishing anything along these lines. Election frauds which cannot be prevented under existing law have continued in Philadelphia, blocking every attempt at regeneration there. The Quay Republicans and the Quay Democrats have profited, and the city and the State have suffered. Compared with other States, Pennsylvania's election and primary statutes are like relics of some former age. Will the decent citizens of that State never look about them for a means of relief?

Beloit, Wisconsin, furnishes an interesting example of labor-union tyranny, followed by a disaster to the workingmen who permitted themselves to be made parties to it. Beloit's population is largely dependent upon a number of manufacturing establishments. Prosperity was general when, a year ago, Robert D. Hogan appeared upon the scene. He represented himself as an "organizer," and his scheme was to gain control of the entire industrial system of the city, by means of a union which was to include every Beloit workingman. In forming this he was remarkably successful. Then he began to branch out. Organized labor, he said, was to become the dominating political force in the county. The strike and the boycott were his weapons, and he made an alliance with a corrupt political clique. But presently "Hoganism" became an issue in Beloit. Leading citizens and business men formed an organization to defeat his plans. In the long struggle which ensued they were successful. The striking workmen of Beloit, impoverished by idleness and disgusted with their leader, have now returned to work, and they have not been particular about the terms. They have agreed to give up their union cards and not to form new organizations for at least a year. By that time Hogan, it is believed, will have become only an unhappy memory in Beloit.

There are rumblings of counter-revolution in Servia. It is indeed time for such. Nearly three months have passed since the King and Queen of that country were butchered by high officers of the Servian army in the night, and their bodies flung out upon a stone pavement. Simultaneously, the press was filled with tales of depravity and wickedness on the part of the King and Queen, which made the killing necessary to the peace and good order of the Servian people. So systematic and persistent were these charges and so widely were their distributed that they left upon the minds of most persons distant from the scene of the tragedy the belief that Alexander must have been, if not a madman, at least a very bad fellow under the control of a designing vixen. Yet the reputable sources of information which have gained the liberty of speech since that time, assure us that Alexander and his wife were the opposite of nearly everything charged against them. The offence which resounded most in the public prints was that the Queen was seeking to have her brother nominated as successor to the throne in case there should be no direct heir. In other words, a question of dynasty was pending by reason of the fact that the Queen was childless, and these army officers settled it summarily by murdering the King, the Queen, the Queen's brother, and such members of the Cabinet as they could lay their hands on. Now the news comes that another conspiracy has been discovered—a conspiracy to murder the murderers. Nothing is more likely; nothing could be more appropriate. Later dispatches minimize the affair, but the history of Servia gives no warrant for the belief that the crime of the 12th of June can "trammel up the consequence and give with its surcease success." If Col. Maschin and his fellow assassins do not die with their boots on, they will cheat justice as well as defy precedent.

SECRETARY SHAW ON CURRENCY REFORM.

In a speech at Chicago last week Secretary Shaw presented, not for the first time, but rather more definitely than before, his ideas of currency reform. He said that if he could have his way, he would allow the national banks to issue circulating notes to the amount of one-half of their bond-secured circulation, such circulation to pay a tax of 6 per cent. and to be retired at the option of the bank or by direction of the Comptroller; the mode of retirement to be by depositing lawful money of like amount in the Treasury. Thus, a bank having $100,000 of circulation secured by United States bonds would be allowed to issue $50,000 additional without other security than the assets in its own custody, by paying the tax specified, and it could cease paying the tax by depositing an equivalent amount of gold or legal tender notes in the Treasury. No mention is made of any safety fund for the redemption of the notes of failed banks, but the Secretary assumes that the 6 per cent. tax would suffice to redeem the notes of any banks that might fail.

In this conjecture he is undoubtedly right. The objection commonly raised against the safety-fund system by unthinking persons is that if all or most of the banks should fail simultaneously, the note-holders would lose, the notes not being secured by United States bonds. The fact is that only 406 national banks out of some 6,000 have failed since the system started, and more than one-half of these paid their creditors in full, principal and interest. A tax of one-eighth of 1 per cent. per annum upon circulation would have sufficed to cover all losses from failed-bank notes during those forty years. It is proper to ask, also, what would be the value of United States bonds as security for banknotes if all or most of the banks should fail? In that event the bonds would be unsalable. There would be no money to buy them, and the Government would be unable to pay its current expenses. The theory that there is a fund somewhere in the universe to keep the Government's credit good after bank credit has been destroyed, is absolute moonshine.

In consideration of the 6 per cent. tax the Secretary says that the Government should "underwrite the notes." In taking this position he goes beyond the terms of the Fowler bill or any other measure that has been considered in Congress. All these measures have stopped just short of a Government guarantee of notes not secured by bonds deposited in the Treasury. We think that the Secretary's plan is to be preferred, however, on more grounds than one. The Government ought not to allow any notes to be issued if any doubt exists as to their redemption on demand. If no such doubt exists, the Government can lose nothing by guaranteeing them. On the other hand, the guarantee is probably necessary to reconcile public opinion to any such currency. Probably the majority of bankers themselves would not agree to any scheme of assets currency without it. If our system had embraced this feature from the beginning, the case would be different, but the advocates of such a currency have to face a community which knows only a bond-secured currency and therefore thinks that there is no other kind. At bottom, however, it is only the Government guarantee that people have in mind, and, if this is supplied, political opposition will soon cease. Consequently, Secretary Shaw's suggestion under this head is worthy of all commendation.

It must not be assumed, however, that the Secretary's speech commits Congress, or even the Executive branch of the Government, to any action at the coming session. He is careful to say that the ideas which he advances are only those which he would put in execution if authority were given him. It is unlikely that the Republican leaders will take any risks on the eve of a Presidential election. If President Roosevelt is still of the same mind as he was last spring, they will remind him that if, after passing a currency bill, business should receive a setback from any cause whatever—from an early frost or an outbreak of the foot-and-mouth disease or any other disaster—the evil consequences would be charged to the currency bill, and that it might become the deciding issue of the campaign. They will say, also, that a delay of a year or two in taking up the subject cannot make much difference where so many years have already passed. And they will doubtless have their way. Nevertheless, Secretary Shaw's speech will not sink into the sand. It adds another potent voice to those of his predecessors in office in favor of an enlightened system of banknote issues.

ASPECTS OF THE ALASKA DISPUTE.

The Alaska Boundary Commissioners, now in conference in Downing Street, have before them a weighty matter. Some four hundred miles of the Pacific Coast are in dispute. The granting of the American claim would leave Canada cut off by ten leagues from the sea between Lynn Canal and Portland Channel. Were, on the other hand, the Canadian contention approved, Canada would gain access to the sea through numerous bays and inlets, and the continental holdings of the United States in the disputed region would be reduced to a ragged line of disconnected headlands. A possible compromise between the extreme claims would affirm the title of the United States to the coast strip in general, but would give Canada the port of Skaguay on the Lynn Canal and an outlet for the gold of the Klondike. Or, again, the present Commission, divided as it is equally into three British and three American members, without an umpire, may arrive at no decision, but adjourn in a deadlock.

That would be unfortunate. We believe that our case is so good that it will win over at least one of the Canadian Commissioners, who doubtless entertain a similar confidence. But should this not happen, we believe the matter would still be nearer a conclusion. When either side shall have presented its case *in extenso*, the materials for a decision will be at hand. Both Canada and the United States are interested in having the matter decided, and, in the event of a tie vote at London, the whole materials of the hearing could be laid before the Hague Tribunal, which exists precisely for such purposes, and an impartial decision reached without delay. Of course, a verdict by the joint commission would in every way be more desirable. But we cannot believe that the dispute will in any case be allowed to end ignominiously, short of a settlement.

This outstanding controversy has thwarted all negotiations between Canada and the United States, because it has involved a kind of international irritation. On the Canadian side, it is natural that a certain distrust should be felt in all direct dealings with the United States, which is the stronger party and the party in possession. The reference of the matter to an uninstructed commission should remove such misgivings. It shows that, to establish our claim, we are not appealing to our wealth and population, but to geographical and diplomatic evidence; and that we assume that the Canadian representatives, like our own, are capable of weighing such evidence dispassionately. Secretary Root's resignation, too, has tardily done something to mitigate the impropriety of his serving on the Commission. Even in the event of a decision unfavorable to Canada, we feel sure that the verdict would be received philosophically, and that the relations between Canada and the United States would be improved by the removal of a peculiarly vexatious ground of contention. For, with a quite legitimate sensitiveness, Canada's interest has been chiefly to get a full and fair hearing, and to be free from humiliating pressure, either from Washington or Westminster. Although an unsuccessful pleader, she would still be better off than she has been as a litigant denied access to court, and plagued both by her opponents and by her friends to abate something of her claims.

When all is said and done, the possession of the entire disputed littoral is not to be weighed for a moment with the possibilities of trade across the undis-

puted border of Canada. A very little conference and good will on either side would reduce to a neighborly height the "spite-wall" which now separates the two domains. In the new Canadian Northwest there are possibilities of an enormously increased trade in agricultural machinery, tools, and clothing, while a freer influx of Canadian wheat to our mills and of lumber to our sawmills and factories, would greatly benefit our manufacturers. With our rapidly growing population we could draw far more liberally upon the excellent farm and dairy products of the Dominion without prejudicing our own producers. In short, reciprocity would quickly show its beneficent effects at points as remote as the wheat fields of Peace River and the olive orchards of California; the evergreen forests of James Bay and the cotton mills of Alabama. What has stood in the way of so good a bargain has been precisely the uneasiness and mutual distrust engendered by this Alaskan matter. Once that were out of the way, trade relations could be discussed with some reasonable hope of a happy outcome. Since it was the Alaskan quarrel that, some years ago, brought the sitting of the Joint High Commission to an untimely end, the United States now, assuming that the Alaskan dispute is in way of settlement, should reconvene the Commission. All statesmanlike considerations combine to urge that, after the decision of the only serious difference which parts us from Canada, our entire Canadian relations should be scrutinized by the expert body which exists for that purpose—namely, the Joint High Commission.

OUR OWN PARKS.

It is one of the current tales of the Reconstruction era that a nomination was once sent into the Senate, for the office of District Attorney in a Southern State, of a man known to Senator Carpenter of Wisconsin to be a bad character—not an unusual phenomenon of the period. The Senator took pains to inquire who were the backers of the candidate, and found out that Thaddeus Stevens of Pennsylvania was one of them. He went to Stevens to remonstrate against such an appointment and told him plainly that Mr. So-and-So, the appointee, was an infernal rascal. "Very likely," replied Stevens, "but he is *our* infernal rascal." History records that although the Senator appreciated the sardonic humor of Stevens, he thought that a joke might be carried too far, and therefore took pains to have the nomination withdrawn by the President.

Evidently a considerable number of men in New York, mostly members of the Housesmiths' and Bridgemen's Union, consider "Sam" Parks their infernal rascal, since they received him with cheers when he arrived at the Grand Central Station and again when he reached the familiar precincts of the Tombs. The enthusiasm could hardly have been greater if he had returned from a successful engagement with a foreign enemy instead of coming for a temporary respite from the penitentiary. The respite granted by Judge Sewell does not alter the moral features of Parks's offence in any degree. The certificate of "reasonable doubt" was granted (if we may believe a reported interview) on the technical ground that Parks's threat to call a strike on Mr. Plenty was not a threat to do an injury to person or property, and therefore was not a violation of the law which defines and punishes extortion. This question will be examined by the higher courts and need not be predetermined by the newspapers; but, whatever the decision may be, the fact that Parks extorted money from Plenty under the threat of "calling out" his workmen, and perjured himself to boot, settled his status in the minds of all decent people. Sending him back to Sing Sing cannot lower him in their estimation. Putting him at the head of the procession on Labor Day has not raised him higher.

The return of Parks from the prison walls is perhaps not the worst thing that could befall the community just now. He had been sentenced for the least of the several acts of blackmail for which he had been indicted. The other charges are still pending, but he could not be tried on any of them while "serving time" in prison. He is now within reach of the District Attorney, who will no doubt use due diligence in bringing him before juries on the other cases. At the present stage of the proceedings, the public is more interested to learn whether the rumors in circulation about Parks's alleged employers are true or not. The public wants to know whether he was hired by certain rich men who paid for his services and reaped profits from the strikes which he called in the building trade. The air is full of rumors on this subject, which of course may be wholly false. It has been published that a certain building company brought Parks from Chicago to New York to call strikes on their competitors. It has been reported that Parks made himself useful by calling strikes on his employers also, in emergencies when they met with delays in procuring materials and could not finish their contracts within the stipulated time. Being protected by a "strike clause" in the contracts, it is said that they could take refuge under it to excuse delays arising from other mishaps.

It may be that all these charges are false and malicious, but they ought to be proved false in the course of judicial proceedings, and no proceedings would be so likely to bring out the facts as the trial of Parks on the indictments still hanging over him. Much complaint has been made, in labor circles, against District Attorney Jerome, for his failure to indict the wealthy sinners in this miserable business. He has replied in general terms that he will thankfully receive any evidence showing an infraction of law within the scope of his duties as prosecuting officer, whatever be the station in life of the guilty party. Now, if Parks was employed and paid by anybody to perform the tricks which landed him in Sing Sing, the present interval is a fitting one in which to disclose the facts. Then, if Mr. Jerome fails to take the proper action, it will be time enough to accuse him of favoring rich men while bearing down heavily on the working classes.

Whether Parks finishes his term in the penitentiary or not, whether he is convicted on the remaining indictments or not, the atmosphere has been cleared by the trial of his case. The public has had a glimpse of a lower deep in the affairs of organized labor than anybody had before sounded. The laborers have been the greatest sufferers from the calling of these blackmailing strikes. The losses fell upon them with the greatest force, since the wages lost to-day cannot be recovered to-morrow. There is terrible suffering in the city now in consequence of Parks's operations, in the families of men who are cheering him whenever he shows his shaven head on the street. Class pride and party pride may sustain them and him for the moment, but they cannot remain ignorant of the underlying truth that they have been betrayed by their leader for his own private gain.

HERRESHOFF'S ACHIEVEMENT.

That this year's races for the *America's* Cup, now ended, have proved a grievous disappointment to all interested in the sport, has been patent for some time. The failure of the third *Shamrock* has been so great as to make it evident that somebody has blundered, and blundered egregiously. Whether this is due to a miscalculation of the English yacht's sailing length and a consequent failure to get her down to her racing lines, or to a different cause, will probably not be known for some time—not until after the acuteness of the disappointment has somewhat passed away. Only once—in the second contest—did *Shamrock* come up to the just expectation of those who saw and studied her powerful lines and beautiful hull. Then, even with her smaller sail-spread, she pressed *Reliance* hotly—a performance so at variance with the rest of her exhibitions as not to be wholly explained by the weather conditions. For the rest, it must be believed that *Columbia* could have won a majority of five contests with her, and that *Shamrock II.* could likewise have led her over the course. Mortifying as this showing is, Sir Thom-

as Lipton has every reason to be proud of his own bearing and of the sportsman-like manner in which the races were sailed to the bitter end. He has allowed nothing to mar the good feeling of the contest, and has scrupulously refrained from assigning any reasons for his discomfiture, except that he had the poorer boat. Nothing better can be said of him than that he has heightened the excellent impression made upon the American public in the two previous series of races.

But this unexpectedly poor showing of *Shamrock* takes no lustre from the laurels fairly earned by Mr. Nathaniel G. Herreshoff. For ten years past he has devoted himself to the problem of turning out one 90-footer after another which should each be faster than the last. Barring the uncertainty in regard to *Constitution's* actual powers, he has succeeded so well as to win from Sir Thomas Lipton and the greater part of the English press an extraordinary tribute—the declaration that it is useless to compete with him. Limited to a given water-line length, he has year after year managed to produce vessels of greater and greater sail-spread and with more and more power in their hulls. It does not detract from the sum of his achievements that, during this decade of triumph, he has profited by the experiments of another. It is altogether questionable whether *Reliance* would have possessed all her speedy qualities had there been no *Independence*. But the latter's designer, Mr. B. B. Crowninshield, is willing to admit that, while marvellously fast under certain conditions, she was, all in all, not a success as a racer. Mr. Herreshoff had the skill to profit by Mr. Crowninshield's innovations and to avoid his mistakes. He has never sought to deny Mr. Crowninshield's leadership in the direction of the exaggerated above-water hull—of the scow-like body with an immense fin—but he himself has given to the type what is probably its ultimate power and refinement.

As far as this class of boat is concerned, *Reliance* must be considered the climax. In the face of Mr. Herreshoff's genius it would certainly be hazardous to declare off-hand that he could not successfully carry the racing machine one step further. Fortunately, the new measurement rules of the New York Yacht Club have sounded the death-knell of the type. Should there be another challenge for the Cup from any quarter, Mr. Herreshoff must give his attention to a new problem. That all forms of yachting will profit by this change we firmly believe. For two decades we have been witnessing a scientific digression—a *tour de force*—by which the cruising yachtsman and the merchant ship-owner have profited but little and have been injured a good deal, so far as they have attempted to imitate the Herreshoff machines. When Mr. Crowninshield built the only seven-master afloat, he returned at once to the clipper bow and the moderate stern overhang—a fact which confutes those who profess to see enormous gains to naval architecture in general from the cup contests. And hundreds of small, shallow-bodied, fin-keeled and oversparred imitations of the great machines force their owners into harbors when the breezes freshen, if they do not actually endanger the lives of their crews.

From all this there should be a reversion to the sensible and seaworthy cruising type. Future Cup challengers and defenders will, we hope, be stanch enough to cross the ocean under their normal canvas, as did *America* and many of her successors. We trust, too, that Thursday's race marks the end of the great singlestickers, with their costly bronze hulls and fragile rigging. Smaller sloops or racing schooners afford as much sport and give the designers as much scope as the vessels that now cost half a million dollars or more to build, fit out, and race during a five months' season. Indeed, the enormous sums spent on this year's racers have caused much uneasiness and much justifiable criticism. Certainly, no one can contend that the benefits resulting to yacht racing or to naval designing are sufficient to counterbalance such unduly extravagant expenditure. If the new rules and the outcome of this year's contest together mark the end of yacht racing by aid of millionaires' syndicates, the futile efforts of *Shamrock III.* will mark a turning-point of great importance in yachting history.

COBDEN ONCE MORE.

Those who recall the various phases of the tariff controversy in this country for the past two decades will remember how frequently Republican organs and orators fulminated their anathemas against the Cobden Club for its alleged disbursement of "British gold" among our people for the propagation of free-trade ideas. When a popular majority was registered at the polls for protection, we used to be told that the American workingman could not be corrupted by the jingle of the guinea. When the cause of free trade seemed to prevail at the ballot-box, Republican editors were wont to sit and scrape themselves with potsherds and lament the presence of "the accursed thing" within the camp. The picture of Zeus in the fable lavishly filling the bosom of Danaë with gold shadowed forth only dimly the alleged profusion of the minions of the Cobden Club towards the poor and susceptible American voter.

This canard of an insular British conspiracy against American protectionism has received only recently a death-blow at the hands of no less a protectionist than the Honorable Joseph Chamberlain. Having been taken to task by the Cobden Club in his attempt to fasten upon Great Britain the incubus of protection, he retorts that an answer to the Club's criticisms is unnecessary, as the Club "appears mainly to be supported by foreigners whose interest it is that we [England] should maintain our present system of free imports." It is in vain that the secretary of this treasonable club reminds Mr. Chamberlain that he himself was for many years a member of the club; that the only foreign members of the Club are elected to spread the free-trade agitation in their respective countries; and that these foreign members have neither voice nor vote in determining the Club's policy. No sensible Englishman will be caught by such Jesuitical chaff. Prove to him that the Cobden Club is an engine of "foreigners," and the days of free trade in England are numbered. Whatever be thought of Mr. Chamberlain's political consistency, his adroitness in striking a responsive chord in the breast of the average British Philistine is unquestioned. The Cobden Club's motto is, "The Field is the World." Mr. Chamberlain's motto is, "'E's a stranger: 'eav' 'arf a brick at 'im." There can be little question that "pushful Joseph" is a devout believer in what has been called the first rule in English politics—"When in doubt, kick Cobden."

But, whatever the result of the tariff controversy in England, the disclosure of the true inwardness of the Cobden Club's membership and animus is sufficient to suggest a number of very curious reflections. The conspiracy against protection is evidently no contracted, insular, English plot against American industrial independence, but a world-wide confederacy whose all-embracing malevolence is only less detestable than the hidden craft with which it has for years masked its designs under the outward form and semblance of the Cobden Club. Who are these foreigners? Are they possibly identical with the "Money Power" which the Thespian Bryan tried twice in vain to exorcise? Of their boundless wealth there can be no question, for, as Mr. McKinley taught us, "the foreigner pays the tax," and this little trifle of three hundred millions annually laid down at our custom houses still leaves them a margin wherewith to subsidize the campaign against Mr. Chamberlain and to defeat him in Argyllshire. The field of speculation which this query opens is evidently limitless.

Fortunately there is balm in Gilead. There is a sovereign remedy against the allurements of foreign gold. This is none other than the benevolent Trust. The first penetrating mind to detect and promulgate this truth was that incorruptible patriot, Senator Quay. Speaking upon the amendments to the Wilson bill, and apropos of the assaults upon the Sugar Trust, he said:

"The only serious argument against the

Trust is its large accumulation of profits, and, as I have shown in my introductory remarks, it is necessary that a great industry of this country should have a surplus of profit in view of the continuously threatened attack of the Democratic party."

Our British cousins need not be slow to take the Senator's hint. Let the industrial structure of England become still more thickly honeycombed with industrial Trusts whose surplus reserves are ample for all parliamentary exigencies, and "Britons never will be slaves" to those insidious "foreigners" who seek to perpetuate the industrial and commercial subjection of the tight little island. There is one qualification to the efficacy of this remedy against foreign gold, however, and it may perhaps be added in language which parodies the advice that Sydney Smith in the *Edinburgh Review* so kindly gave to Brother Jonathan:

"We can inform our cousin John Bull what are the inevitable consequences of being too much afraid of foreigners and their competition. Trust prices on every article which enters into the mouth, or covers the back, or is placed under foot; Trust prices on everything which it is pleasant to see, hear, feel, smell or taste; Trust prices upon warmth, light, and locomotion; Trust prices on everything on earth and the waters under the earth, on everything which comes from abroad or is grown at home; Trust prices on the raw material; Trust prices on every fresh value that is added to it by the industry of man; Trust prices on the sauce that pampers man's appetite and the drug that restores him to health, on the ermine of the judge and the rope that hangs the criminal, on the poor man's salt and the rich man's spice, on the wire nails of the coffin and the ribands of the bride—at bed or board, couchant or levant, we must pay. The schoolboy whips his Trust-made top; the beardless youth manages his Trust-manufactured bicycle, with its Leather Trust saddle, on an Asphalt Trust road; and the dying American, pouring his imported medicine which has paid 50 per cent. into a tin-plate spoon which has paid 100 per cent., flings himself back on his taffeta bed which has paid 150 per cent., makes his will on a part of the product of the Paper Trust, and expires in the arms of a physician whose education has come from a Trust-endowed medical school. His whole property is then taxed by direct and collateral inheritance taxes to lessen the Trusts' tax quotas. His virtues are handed down to posterity on a slab bought of the Marble Trust, and he is then gathered to his fathers to be fleeced, we trust, no more."

THE LAST OF THE HUMBERTS.

Perhaps the most striking thing about the trial which has resulted in the condemnation of the Humberts is the ease with which a mystery, impenetrable for many years, has been unravelled in a few sessions of a French court. On the strength of phantom millions the Humbert family floated no less than 700,000,000 francs of notes, much of which went in usury and renewals, but 60,000,000 francs of which they actually received in cash. To understand how a fraud which deceived shrewd attorneys, grasping money-lenders, trained officers of justice, and all Paris, has reduced itself to a very simple and even vulgar lie, one must go back to the time when the peasant girl Thérèse Daurignac lived humbly with her father at Toulouse.

Old Daurignac was a visionary, such as Daudet would have loved. He brought up the family in the expectation of sudden riches from mysterious but certain sources. He imagined himself heir to a Portuguese estate. While his part in the later gigantic swindle remains in doubt, it is possible that he was merely the victim of an incorrigible imagination. In any case, it is interesting to note that Thérèse, driven into a corner by cross-examination, offered as sole and sufficient evidence of the fictitious Crawfords and their millions merely her father's word. Her own beginning as an impostor was apparently the discovery that she could borrow money on the family lies, and her first really characteristic transaction was to outwit her dressmaker into furnishing a trousseau for a brilliant but wholly imaginary marriage.

But the sheer inventiveness of Thérèse's temperament somewhat disqualified her from working out the details of her fictions. This defect she showed constantly at the trial, where she fell back on rather stupid iteration—"The Crawfords exist; the millions exist," etc. Accordingly, it is very doubtful if she would have achieved international renown in falsehood had she not added to herself an ideal confederate in Frédéric Humbert. The son of a highly respected jurist and esteemed member of Dufaure's Cabinet, Frédéric Humbert concealed under the mask of dilettante poet and artist the qualities of a skilled advocate and the capacities of an astute man of affairs. To him we may credit, probably, the invention of an interminable lawsuit with those imaginary litigants, the Crawfords. It must have been the genius of Thérèse that made the lie perfectly safe and permanently available, by obtaining a writ which sealed the supposititious millions against all the world—and herself. For it is only the part played by the empty safe in the Avenue de la Grande Armée which raises the Humbert affair above the average of rogues' comedies. The law had assumed that the safe was full of valuable securities; creditors could do no less. When they pressed for payment Thérèse could show them the safe and bid them be patient, as she was. Her argument was incontrovertible: the millions in the safe were under litigation in the French court; the lawsuit must have an end; sooner or later she was bound to come into possession; the risk was at the worst merely on the scale of a *post-obit* advance. Every bit of this argument was true except that the millions were not in the safe or elsewhere—an embarrassing detail, as Maître Labori later acknowledged for his clients. Before the mystery of her unopened safe Mme. Humbert was impregnable.

Whatever genius there was in the fraud lay in making a legal sequestration take the place of visible securities. The rest was very vulgar lying or primitive legerdemain. For example, M. Dumort, an anxious creditor, was allowed a peephole vision of the inventorying of the estate by the Humberts and Crawfords. He heard people counting what looked like securities, saw palpable coupons cut, and was satisfied. Another creditor was made manager of the fictitious château of Marcotte, about which so insalubrious a climate was promptly cast that he could not be persuaded to occupy his post. The *viveur* brother, Romain Daurignac, habitually played the parts of the younger Crawfords on the rare occasions when any of that persistently litigious family had to appear in person. All this was fraud of a very common kind. Accordingly, we feel that the counsel for the defence had recourse to a wholly untenable paradox when he maintained that the story of the Humberts was too strange, complicated, and consistent to be anything but true. It was, on the contrary, reducible to two simple inventions—namely, fictitious litigants and a legally registered but really uncertified deposit of the contested property under seal.

When the safe was opened and found empty except for a little rubbish, the Crawford millions vanished in the haze from which they had been evolved. For nobody will believe Thérèse Humbert in the incoherent assertions in which she builds a new and less plausible fabrication upon the wreck of the old. She will have us believe that Crawford was the *nom de guerre* of the condemned traitor, Régnier, Bismarck's reputed intermediary with Bazaine. It was—on this theory—the detestable origin of the Humbert fortune that gave Régnier-Crawford unlimited power over the unhappy beneficiaries. And, again, it was by compulsion of the sons of the traitor that the securities were removed to no one knows where just before Mme. Humbert's creditors had the safe opened. By a dire stretch of professional loyalty, Maître Labori asserted his belief in this legend. Few will follow him. It is far easier to see that Thérèse, confounded in the arch lie and cornered by the law, fell back upon the family habit of lying desperately and inconsequentially.

Contrary to expectation, the trial did not disclose official complicity in the fraud. The Humberts had invented premises so plausible and so readily believed that they were able to act upon what would have been honest lines had the phantom millions and the Crawfords ever existed. By the apparent regularity of their current transactions they put everybody off their guard, from the keenest of their usurer creditors to the humble folk who put their savings into the annuities of the *Rente Viagère*. The interest of the deception lay in its extreme simplicity—in the possibility of conducting endless litigation with men of straw, and, in France at least, of obtaining a kind of legal evidence of things unseen.

WAYS AND MEANS OF THE WEST COAST MEXICANS.

MEXICO, 1903.

The west coast of Mexico is often called a desert. During the dry season it certainly has a desolate aspect, but the luxuriant foliage of its almost interminable thickets, and the bush grass on the higher ground, where the oaks, palmettos, and sprawling guajalotes grow, give another and more pleasing impression during the rainy season. It then becomes apparent how mankind can live and thrive here. Even in the dry season the abundant population of Sinaloa would indicate that in some manner food could be easily and cheaply produced. The brown-skinned natives are encountered everywhere. In the very heart of the wilderness they are seldom out of sight. Here you see them clearing ground for a cornfield; there cutting firewood or burning charcoal; again building great stone walls to protect a coming crop of beans. Cutting wattles for a house, or palm leaves for thatching; digging clay for tiles and pottery; constructing ditches for irrigation; trenching a rich piece of ground for a canefield; driving burros laden with onions, or pumpkins, or oranges, to market—everywhere are men, women, children, where you least would expect a living soul, all busy after their fashion, patient, and contented. The roads are always full of people, from the Don who wears a white shirt and has shoes on his feet, mounted in a saddle with silver trimmings, to the peon with sandals, and a big kerchief tied at the corners and swung from one shoulder, containing some cold tortillas and an onion for lunch, and a red zarape for his bed at night.

Everywhere, too, are ranchers, great and small. A good bit of bottom land and a little water are sure to be supplemented by a group of palm-thatched huts and a teeming population. It may excite wonder to see so many people huddled by so small a stretch of cultivated ground, but one must not forget the *monte*, the adjacent wooded upland, where cattle and sheep find food for nine or ten months of the year. This explains part of the mystery. Furthermore, one must remember that these sturdy *peones* will start off merrily on foot for some big sugar plantation or busy mining camp, fifty, a hundred, even two hundred miles away, to earn good wages until the season for planting corn or rounding up their cattle. Distance does not deter these people, for they come of a race of runners, able to travel forty or fifty miles a day without fatigue. On the other hand, their wants are few. They tolerate no impedimenta. They leave their wattle houses without concern, for no one will steal or destroy them (a bit of freemasonry this); and when they return, a day's labor will repair the ravages of a season of disuse. There is something to be said in favor of such a life, after all. It does not promote the virtues which responsibilities are supposed to foster; neither does it narrow existence to a routine of cares. It certainly has the charm of freedom, and it encourages a happy (some might say a happy-go-lucky) disposition. Home life, of the kind which the Anglo-Saxon prizes, does not flourish under such conditions, which nevertheless yield the kind that rejoices the heart of the poor Mexican; and what quarrel should the world have with the way in which a certain people compass enough of happiness to make life worth living? There is often a beauty and picturesqueness in the family gatherings in these humble Mexican dwellings so irresistible that one would regret to have them changed. In the little kitchen—dingy, grimy *cocina* though it be—the women will be chatting merrily about the fire, grinding corn into *masa* on the great stone *metate*, or shaping the cakes with a ringing flip-flap between the open palms, while the men outside in the *portal* will be exchanging jests with the women, or stealing in beside them to toast a morsel of dried beef by the fire, or to get a whiff from a pot of savory *chili-con-carne*. The paterfamilias is almost certain to have the youngest scion of the house in his arms, caressing and playing with it. A charming characteristic of these people is their love for children, their devotion to their families, their self-sacrificing care for their kindred. In town they may drink too much mezcal, may patronize the cockfight and the bull ring, may stake their earnings too freely at the gambling table—but it were wrong not to weigh their virtues against their vices.

A different situation presents itself at the larger ranches. Here the community consists of a master and his men. The master is in his way a petty baron. His house is distinguished by stability, usually a solid structure of adobe, with a tile roof. It may even be plastered and whitewashed, with a blue or pink dado along the front under the generous *portal*. At one end of the porch will be a horizontal pole bearing an array of saddles, bridles, horsehair lariats, and other horse furnishings. His Worship is a horseman, first and last. He is fond of animals, and perhaps lives a little too close to them to suit some tastes. He enjoys seeing the pigs put on *arrobas* of fat, and will let them wallow at the edge of the *portal* under the *enramada*, that awning of branches which extends in front of the porch of every west-coast house. If his spouse has a fancy for flowers, then the pigs squeal dolefully just outside the patio. In the corral the Don will expatiate on the merits of each mule and burro. He looks zealously after his live stock. He keeps his corn well locked in a room in his house. He keeps a record of every *fanega* of this precious corn, every bundle of fodder; nothing on his ranch is too insignificant to enter into his memoranda and accounts. It will be seen that he is no rolling stone, but is of the kind that gathers moss. He is keen to get good prices, and will haggle over a cent. His *peones* get a pittance, and are held rigidly to their tasks. A man can do so much labor of this or that kind in a day. The Don knows precisely the amount, and is vigilant to obtain the worth of the wages paid. The methods of agriculture may look crude to foreign eyes, but the system is perfect, and in practising it master and man know their respective obligations to the uttermost detail. Precisely here lies the wide difference between the native and the foreigner, which causes the one to succeed where the other will fail. The immigrant attempting to operate a ranch of moderate size almost invariably finds himself overwhelmed by a labor account that cannot be curtailed, while the returns are utterly disproportionate to the expenses. A large plantation can be managed more successfully, because mainly of the possibilities which it affords for a division of labor, admitting of better superintendence. But the small immigrant farmer in Mexico will fail dismally where a Mexican would grow rich. It is useless to laugh at the primitive native methods when they produce as good crops as the foreigner can get with his improved ploughs and harrows and drills, and at less expense. The Mexican plough, the same as that used in Asia Minor millenniums ago, is especially an object of Gringo ridicule. It is a crude implement, no doubt, and its use would be impossible in a region where sod was to be turned under, as in the north; but in these light soils, free from obstacles, it is remarkably efficient, even though it does require more labor to prepare a given area. It is by no means the simple crooked stick that some imagine. It consists of eight distinct pieces. There is the *espiga* or plough proper, with its *mancera* and *manga* to guide it, the *timon* to draw it, the *orejera* to preserve the proper angle to admit of deep or shallow ploughing, the *telera* to firmly connect the *timon* and *espiga*, and two *cuñas* or wedges to tighten up all the parts. This complicated structure costs complete but one silver dollar, or about thirty-eight cents gold. If it bears a steel point, this costs another dollar, or seventy-six cents for the whole. The Mexican rancher will look long at the difference in cost between his native plough, which his workmen understand, and the imported article worth three or four times as much, and costing several silver dollars every year for repairs.

The small rancher is equally persistent in his devotion to the ways of his fathers in sugar production. Sugar is the prospective basis of future prosperity throughout Sinaloa; great plantations are already established, and greater ones are being opened up by both Mexican and foreign capital. The soil and the climate favor it. Those who have had experience in sugar culture affirm that the quantity of saccharine matter per ton is appreciably higher in the cane of Sinaloa than in that of Louisiana, and the tonnage per acre likewise greater. Hence the large sugar plantations in the valleys of the Fuerte, Culiacan, and Quilá (or San Lorenzo) Rivers. Here modern methods are in vogue, and not only sugar, but alcohol and imitations of imported liquors, are manufactured on an im-

mense scale. This industry is as yet only in its infancy in Sinaloa, but in a few years, at the present rate of progress, it will make of this State one of the great sugar centres of America. Even the small planter makes money to-day, trenching, planting, and harvesting by hand. He expresses the juice in a home-made wooden *trapiche*, which creaks and groans as the oxen slowly revolve it, grinding a half-dozen stalks at a time. He boils the juice in a great saucer-shaped copper kettle, made by local coppersmiths at $100 silver each; and when the sugar begins to crystallize, he beats it with a paddle until it is ready to cast into little cakes of *penoche*, weighing about half a pound, for which he gets three cents silver each. It is small business, but the Mexican rancher counts and hoards his pennies until he possesses a good bank account. He lets nature and cheap labor help him out as far as possible, and though the system be wasteful he is sure of enough profit to satisfy him. Even in the management of his cattle he is improvident according to Northern standards, but he makes it pay. He exercises no control over the breeding of his stock, and he lets them feed themselves. He sells a portion of his herd readily at from $20 to $25 silver per head. This is nearly all clear profit. He drives his cows in September up into the hills where the best pasture exists, and devotes a month to cheese making. He raises chickens, turkeys, pigs, and goats. Prudent, frugal, strictly attentive to the details of his ranching, he makes no experiments in new methods, but, sticking closely to the ways which he and his workmen know, he grows rich.

Even his land has cost him little. When you come into knowledge of the inner secrets of life here you will find many curious customs. The Don, in his substantial home, will usually be only the possessor of a *derecho*, that is, a "right," in a great tract of communal lands. The people around him, living in *jacales*, and serving him for wages which seem pitifully small, will often be his own relatives, likewise owners of *derechos* in these same lands. They are free to use the uncultivated portions of the lands, and all their natural products, if they choose. The main part is enterprise. The man who can is the man who extracts the good out of the land. If he fences a piece and uses it, large or small, it becomes his as fully as though he owned it in fee simple, until he chooses to abandon it. Thus the more aggressive, energetic men absorb estates, leaving nothing worth having for the other heirs. These *derechos* can be sold, previously giving to each of the other heirs the option of buying at the price offered. The *derecho* may bring little money, but the improvements, houses, corrals, fences, and the like, are the personal property of the man who erected them, and as such can be conveyed. Thus the buyer acquires all the advantage which the original holder of the *derecho* had possessed. The more progressive men, however, watch their opportunities to buy the other rights, and gradually acquire absolute ownership.

But there are uncertainties in their tenure, too, dangers which disturb the peace and serenity of these little barons. The communal holdings for the most part result from ancient grants to Indian tribes, and usually represent the areas tributary to some old mission which may have existed two hundred or more years ago. The limits were loosely determined, and conflicts ensued, leading to efforts at various times to reëstablish the boundaries. Good King Charles the Third, whose methods were eminently sane and business-like, issued a multitude of new titles to put an end to strife and bickerings in Mexico. But parchment requires better care than it receives in the oaken strong boxes of these rural people, and, in default of registry in well-kept archives, there is often great difficulty in establishing proofs of ownership. Also, many communities were careless in fulfilling their obligations to the tax department, or the records of their payments have been lost. Accordingly, great areas were solicited ("denounced" in local parlance) on representations that they were *baldío* or unclaimed lands. Many titles even were issues, to new claimants, covering old communal lands, and this process of absorption is going on to-day. Land grabbing on a large scale has become a profession practised by many who thus find an easy way to enrich themselves. Moreover, the limits of these lands are still uncertain. The law even recognizes classes of lands under the denominations of *excedencias* and *demasías*. *Excedencias* exist when the landmarks are well known and undisputed but the areas included between the side lines are in excess of what was claimed in the grant or title. *Demasías* are those which have been occupied and exploited by the holders of the ancient titles under the belief that they lay within the grant, when in reality they were outside of the lines intended. In either case the title is not valid with reference to such tracts, and serious difficulties often attend the rectification of boundaries, and obstinate litigation frequently ensues. Unfortunately for the owners, they are so prone to persist strenuously in defending their titles, when they might readily take advantage of the provisions of the later laws for their protection, that they become easy victims of the unscrupulous land grabbers. A community with a hazy title has only to redenounce the land as *baldío*, and all questions of ownership will be forever set at rest. Of course the matter of *excedencias* and *demasías* may cause trouble, and belligerent neighbors may refuse to recognize the limits of the new denouncement, but there are ways to solve such dilemmas, and as a last resort the law clearly recognizes prescriptive rights, which will preclude a man in actual occupancy from being dispossessed. But the amount which any person could hold in this way is so small that he would usually lose the great ranges of pasture which mean so much for his prosperity.

The Mexican Government is very wisely seeking to terminate all communal holdings by dividing the land among the several owners of rights. Such partition of lands is being brought about through the increase of towns, the inhabitants demanding local self-government, which is almost invariably granted. This involves a most interesting recognition of the communal basis on which these ancient grants depended. Each community was supposed to represent a group gathered about the old mission station. Surrounding the mission as a centre were the *ejidos* and *fundo legal*, forever inalienable from the community, consisting of a square league, more or less, for the common use of the people. This tract then becomes the modern town site, the head or *cabacera* of the municipality, and the lands beyond are subdivided among the heirs.

This principle is extended to undivided estates, so that on petition of a sufficient number of citizens the town site is set apart in accordance with their desires, and private owners can be compelled to sell the land required when the Legislature of the State grants the petition. The intent of the law is, in one way or another, to make definite the old shadowy titles, and to secure to the people the enjoyment of local self-government. But in permitting the denouncement by individuals of immense areas of *baldío*, or unclaimed, lands, many of the evils of the old régime are perpetuated. The Government, however, does not allow the denouncement of lands or water rights which are not to be used legitimately, and thus the sequestration of property for purposes of extortion are rare, and occur only where those who would suffer by it have not been diligent in making representation of the facts to the authorities in due season. There are few countries in the world where the laws relating to real property are simpler and fairer than in Mexico, and the complications with the old colonial laws are readily untangled if one secures proper legal advice. It is the native Mexican who suffers more than the foreigner, and this is because the bent of his mind disposes him to maintain that what always has been must remain unchanged. If he and his fathers were supposed to own a piece of land, if his possession has been recognized by his neighbors, he is ready to dispute any question of the strict legality of his pretensions, though he has not a scrap of paper to show for them, nor has complied with the laws touching the payment of taxes. He may even undertake to defend his claims with the rifle, and some bloody feuds have resulted in consequence. In equity he may have the right on his side, and one can but respect his attitude, but many of these men represent the spirit of the aborigines who, though possessing ample moral claims to the lands on which they lived, did not effectively occupy and use them.

COURTENAY DE KALB.

THIERS ENTREATING THE POWERS.

PARIS, August 25, 1903.

The 'Notes et Souvenirs' of M. Thiers, printed under the editorial care of his sister-in-law, Mademoiselle Dosne, was first given to but a small number of friends; but several passages in the volume, the publication of which was not authorized, having been indiscreetly cited and even reproduced, it has become necessary to publish it. The work relates to the eventful period of 1870-1871. "M. Thiers," says the publisher, "wrote no memoirs; he left only notes relative to his diplomatic journey in September, 1870, to his interviews with Bismarck on the subject of an armistice in October, 1870, and to the negotiations of the preliminaries of peace in 1871."

The journey in 1870 had for its object to interest the great Powers in the cause of France, which had suffered terrible defeats,

The Government formed on the 4th of September, which called itself the Government of National Defence, confided to M. Thiers a mission which had little chance of success. The Imperial Government had committed an irreparable mistake in declaring war on Prussia, on the most futile pretext; the new Government, improvised on the 4th of September, had not been chosen by the French people represented by a National Assembly; it was a government *de facto*, and nobody could clearly foresee what future and authority were in store for it. The war had, besides, led to successive defeats of France with terrible rapidity; mediation or intervention on the part of a European Power was hardly to be thought of, under the circumstances. M. Thiers undertook his journey almost against hope; but he felt that his activity in Paris after a revolution could not be very great, and he hoped that the consideration which was felt for him in Europe might eventually be of some use to his unfortunate country.

He first went to London, but he left no notes on his interviews with Lord Granville; he sent only two dispatches to M. Jules Favre, the Minister of Foreign Affairs of the Government of the 4th of September. They were published in M. Favre's work on the 'Government of National Defence,' and show clearly that Thiers obtained nothing from Lord Granville, who was courtesy itself, but his polite and kind words were devoid of any real political significance.

Thiers left London on the 18th of September for Russia. He stopped only a few hours at Tours, crossed the Mont Cenis and arrived in Vienna on the 23d of September. He had the next day a conference with Von Beust, whom he thus describes:

"M. de Beust, tall of stature, with some personal pretentiousness, always smiling, acute, witty, the man who, among all those whom I have known, seems to believe the least what he says, noting with pleasure the former mistakes of Austria, not forgetting the error he made her commit when he dragged her, with Saxony, into the affairs of Denmark. . . ."

After having said that France had not desired the war, that even the Ministry had made it in weak concession to the Bonapartist party, "the sole author of this fatal war," Thiers added: "I said that the Republic was the only Government possible at present, and perhaps for a time which nobody could calculate; perhaps forever, if it knew how to behave itself." He said further, that the interest of Europe was not to let Prussia have her own way; the Powers might each in what concerned itself commit the mistake which Napoleon III. made after Sadowa. Beust's answer was very refrigerating. Austria, to be sure, wished for a *revanche*, but did not wish it immediately. The country was recovering its material prosperity, but only in time could the finances be reëstablished and the army reorganized. "This country cannot be an ally for many years." There was evidently nothing more for M. Thiers to do in Vienna. He had, however, a conversation with Andrássy, who merely complained of M. de Gramont, to whom, he said, he had never given any hope or any illusion, and who said finally, "We cannot make war."

On the 24th of September, in the evening, Thiers left for Saint Petersburg. On his arrival he called on Prince Gortchakoff. After a few words on the authors of the war, "we came to the question which in Russia preoccupies everybody, the question of the republic. Prince Gortchakoff, who has the sagacious mind of a true statesman, and who likes to appear devoid of prejudices, confessed that the republic did not cause him any fear, and said that he knew some good republics. 'Yes,' said I, 'a republic (alluding to the United States) is now your best friend, and there will soon, perhaps, be two in your affections; at least, I hope so.' Gortchakoff answered with a smile: 'It would gratify me; but here people ask themselves if the republic is, in your country, anything serious, and if you can affirm that it will last long.' " The Russian Chancellor was convinced of the unstable character of the new French Government, whose credentials Thiers had received. Thiers told him that this Government was not the triumph of a party; that, if it satisfied no one absolutely, it condemned no one to despair. It was composed, in the majority, of wise and moderate men.

" 'This Government is honest, and I affirm that the next elections will place the direction of affairs in moderate hands. You can, therefore, in treating with us today, have the assurance that our pledges will be stable; and if it happen one day that I be not your interlocutor, you will find in my successor the equivalent of my way of thinking.' 'Ah! *if* it be you,' said the Prince; 'but it *will be* you, as I like to think.' "

The Prince added that the misfortunes of France had surprised Europe, and afflicted those who saw, not without inquietude, the prodigious rise of Prussia. When it came to the question of an alliance (and Thiers had full powers to conclude one), the Chancellor said:

"An alliance has always been promised us; Gen. Fleury spoke incessantly of it, but we never saw it come. But I believe you. I know that you can keep your word. However, now is not the time to conclude it. Don't let us make a bargain—we will busy ourselves later with uniting France to Russia; for the moment, let us try to get France out of her scrape."

Thiers insisted on the necessity of acting promptly, and spoke of a collective action of Russia, Austria, England, and Italy.

" 'Oh! collective, collective,' said the Chancellor. 'I understand you, but we don't want any such thing. It would only tend to irritate Prussia, which rejects the intervention of neutrals in the present war, and we should lose the very real influence which we possess in Berlin.' "

We know what this real influence was; it was owing to the personal friendship which the Russian Emperor felt for the King of Prussia. But this friendship was just what hindered the Emperor of Russia from interfering with the plans and actions of his uncle. The audience which Thiers received from the Emperor himself took place the day after news had arrived of the capitulation of Strasbourg.

"As soon as I entered, he gave me his hand, told me he was charmed to receive me in his Empire, and made me sit next to him. The Emperor, who is simple and natural, and speaks French easily, at once brought up the object of my visit to Russia. 'Monsieur Thiers,' said he, 'if people had listened to us, if they had listened to you, we should not be witnessing the cruel war which rends and frightens Europe. I have had a report of your explanation of the origin of this war. It has much interested me.' "

Having nothing more to relate on the subject of the true authors of the war, Thiers explained to the Emperor the origin and character of the new Government. The Emperor listened to him attentively;

"and when I said to him that this Government, issued from necessity, was the only one possible; that it was moderate; that it would be rendered even more moderate by being seconded, he answered me: 'As for myself, I have no objection to make to the republican form of government. Besides, it does not concern me; it concerns only France. I fear only the men of disorder, and especially the instability which is so discouraging when one comes to treat with a Government.' "

To reassure the Emperor, Thiers told him that the coming elections would certainly give a moderate majority. " 'So,' said the Emperor, 'you are not uneasy about the maintenance of order?' 'No, Sire; and the proof that my confidence is founded, is the calm which reigns in Paris under very grave circumstances.' 'All the better,' said the Emperor; 'now let us come to the present situation.' " It was explained with much lucidity by Thiers. He showed the dangers which might arise, even for Russia, from the excessive aggrandizement of Prussia, and extolled the advantages which might accrue to Russia from forming an alliance with France, which, "under a good government, would soon recover her former strength." The Emperor interrupted him here "with emotion," and said: "I know, Monsieur Thiers, how serious for Europe and for my Empire is the creation of a power such as you describe. I would willingly acquire an alliance like that with France, an alliance for peace, not for war and conquest [he emphasized these last words]."

In another interview with the Chancellor, Thiers touched on the attitude of Austria. "Paris was threatened; could not Russia at least allow Austria to succor Paris?" "I understand," said he, "that if he feared the entrance of the French into Berlin, the nephew should have come to the succor of his uncle"; but the circumstances were not the same. Paris was now threatened. "You touch there," answered Prince Gortchakoff, "on a most delicate, most difficult subject. . . . There is an engagement of the Emperor's which we cannot infringe; . . . let us leave this subject, I beg you; there would be no profit in speaking of it now."

These words were eloquent enough in their vagueness: there was an arrangement, a convention, in virtue of which Russia was afterwards permitted to denounce to the great Powers the Treaty of 1856, drawn after the Crimean war at the Congress of Paris, and to free herself from the humiliating clause which did not allow her to keep a naval force in the Black Sea, or to have a military base on the shores of that sea. Russia had seized the first opportunity (and who can wonder at it?) to abrogate a clause which was injurious to her interests and might even, in certain emergencies, imperil her safety.

The denunciation of the Treaty of 1856 was made only on the 12th of November, more than a month after Thiers's visit to St. Petersburg. On leaving the Russian capital, Thiers went again to Vienna, but heard nothing new from Beust or Andrássy. On the 12th of October he was in Florence, where he had interviews with the King, with General Cialdini, with the Ministers. He developed military plans: the presence of 200,000 Italians in the valley of the

Rhone would change the state of things, and force Prussia to end the war. He received, he says, from the Ministers but "poor answers." The King was friendly, but could do nothing without the Chambers, and the Chambers had adjourned. On the 13th of October Thiers returned to France. He brought nothing with him but the promise of safe-conduct, to be obtained by the intervention of Russia, permitting him to see Bismarck with reference to an armistice.

Correspondence.

COLLEGE ADMISSION ON SCHOOL CERTIFICATE.

TO THE EDITOR OF THE NATION:

SIR: Several months ago you printed certain communications on the subject of admission to college on school certificate. The animus of these communications was decidedly against the practice. At the time, I was minded to put in an answer, but refrained, preferring to wait until the new college year should approach and the whole question wear a somewhat more practical aspect.

The data I have to submit, though few, bear directly on the main issue. Last winter the Registrar, at the request of our Committee on Admission by Certificate, made a full tabulation of the examination marks of all the freshmen admitted on certificate. His results were:

1. Schools from which students were admitted on certificate, September, 1902.....	167
2. Students admitted on certificate, September, 1902	306
3. No. of marks received by these students at end of first term, February, 1903.....	1,800
4. Of these 1,800 marks there were below "pass"	177
5. Schools the students from which received no mark below "pass"	100
6. Schools the students from which got one or more marks below "pass".....	67
7. Of these 67 schools the number chargeable with failure in only one subject out of an average of five and one-half taken was....	37

The figures need some interpretation. The round sum 1,800 in (3) is an approximation; the actual number may have been higher. The 100 of (5) means that 100 schools, or two out of three, got their freshmen through the first term without a single failure in a single subject! Number (7) means that, of the 67 schools which fell short of perfection in marks, 37 were chargeable with a mark below "pass" in one subject only. Besides, "below pass" does not necessarily imply total *failure;* it may mean and usually does mean a mere "condition."

Having been one of the doubters, I am free to admit that the conclusions from these data have completely staggered me. The examination marks represented tests of every sort in a multitude of subjects taught in nine distinct faculties. Nor may I overlook the circumstance that the examinations at the end of last January were held under peculiar difficulties. We were then in the beginning of our typhoid trouble; not a few of the students were already suffering from the disease, although neither they nor their examiners suspected this when the examinations were held.

That one hundred schools should get through without a scratch; that thirty-seven more should get through with only a single scratch; that of the remaining thirty only ten or twelve called for the slightest scrutiny on the part of our Committee—these are facts which the opponents of the certificate system will do well to ponder most carefully.

One more consideration. The greater number of our students are admitted on Regents' diplomas; these diplomas represent Regents' examinations. We ought to have a comparison of these Regents' students with the other. But, in the language of Kipling, that is another story, and—let me add—a much longer one. Still, I hope that our indefatigable Registrar may have the time and the patience another year to work out the statistics. J. M. H.

CORNELL UNIVERSITY, September 1, 1903.

Notes.

A series of drawings on wood, by George Cruikshank, only in part cut and none ever published, has been acquired by Henry Frowde. They are in illustration of Bunyan's 'Pilgrim's Progress,' and will be used, upon completion of the engraving, in an *édition de luxe* of that work from the Oxford University Press. One had rather see them popularized, but collectors will be on the lookout for them. They will be printed singly on Japanese paper.

The Century Co.'s autumn list includes 'In Search of a Siberian Klondike,' by Washington Vanderlip, edited by Homer B. Hulbert; 'Thirty Years of Musical Life in London,' by Hermann Klein; 'Theodore Leschetizky,' by the Countess Angèle Potocka, translated by Miss Genevieve Seymour Lincoln; the second part of Howard Crosby Butler's 'Northern Central Syria and the Houran: Architecture'; 'Gallops 2,' by David Gray; and in the "Thumb-Nail Series" a new output of FitzGerald's Omar (three versions), with John Hay's address before the Omar Khayyám Club in London in 1897.

'Vacation Days in Greece,' by Prof. Rufus B. Richardson, late head of the American School in Athens, and 'The Development of the Drama,' by Prof. Brander Matthews, are announced by Charles Scribner's Sons.

A. S. Barnes & Co. have in preparation 'Recollections, Personal and Literary,' by the late Richard Henry Stoddard, edited by Ripley Hitchcock; 'Within the Pale,' the history of a great race question in Russia, by Michael Davitt; 'Life in the Early Colonies,' by George Cary Eggleston; and 'His Little World,' a novel, by Samuel Merwin, illustrated by Alonzo Kimball.

Henry Holt & Co. will shortly issue a new and enlarged edition of Prof. Henry A. Beers's 'Ways of Yale in the Consulship of Plancus'; and 'Thoughtless Thoughts of Carisabel,' by Isabella Carrington Cabell.

Further announcements by G. P. Putnam's Sons are 'The Beginnings of Christianity,' by Paul Wernle, in two volumes; 'Rome and the Renaissance: The Pontificate of Julius II.,' from the French of Julian Klaczko, by John Dennie; 'The Art of the Italian Renaissance,' a handbook, by Prof. Heinrich Wölfflin, with many illustrations; and 'Japanese Physical Training,' by H. Irving Hancock.

The Outlook Co. are about to issue 'The Letters from a Farmer in Pennsylvania to the Inhabitants of the British Colonies,' by John Dickinson—a limited edition with portraits and a colored print; and 'Tolstoy the Man,' by Edward A. Steiner.

'Tolstoy and his Message,' by Ernest H. Crosby; a 'History of Socialism in the United States,' by Morris Hillquit; and 'Connectives of English Speech,' by James C. Fernald, are in the press of Funk & Wagnalls Co.

'Three Masques by Ben Jonson'—of Oberon, of Blackness, of Beauty—is to be produced in a limited edition by Robert Grier Cooke, 307 Fifth Avenue, in two states of attractiveness.

W. A. Wilde Co., Boston, announce 'Out of a Fleur-de-lis: the History, Romance, and Biography of the Louisiana Purchase Exposition,' by Claude H. Wetmore, and 'In a Brazilian Jungle,' by the same author.

Little, Brown & Co., Boston, have nearly ready a book of Webster's best speeches, 'Daniel Webster for Young Americans,' edited by Prof. Charles F. Richardson of Dartmouth.

By a slip of the pen we ascribed Cohn's 'Tests and Reagents' to another firm of publishers than John Wiley & Sons, for whom he is making a new translation of Frezenius's 'Quantitative Analysis.'

J. L. LeB. Hammond's 'Charles James Fox' we lately reviewed at some length. The American market is now being served with this "political study" by James Pott & Co.

From Messrs. Scribner we have a handful of pocket editions, two in the thin paper of George Newnes's "Caxton Series"—too thin to avoid transparency altogether—namely, Cary's 'Vision of Dante' and Lamb's Works, otherwise, very attractive in ornament of frontispiece and title-page and limp cover; and Chapman & Hall's reissue of Carlyle's 'Cromwell' in two volumes, and 'Essays' in three (for eight), with a somewhat thicker and more opaque paper, somewhat larger in size, and similarly bound. The same firm sends us Baedeker's 'Handbook for the Rhine,' the fifteenth English edition as compared with the French seventeenth and the German twenty-third; and 'Berlin and its Environs,' paralleling the twelfth German edition, still striving to keep pace with the city's growth.

Messrs. Appleton have reprinted from the edition of 1837 the Life of John Mytton by "Nimrod." The preface is dated "Calais, 1835," because "Nimrod," who was known to his creditors as Charles James Apperley, preferred the climate of France to that of the King's Bench prison, where his friend Mytton died. The book, with its colored plates, seems curiously antiquated, and gives a rambling and disconnected account of a very eccentric man. The writer's style recalls that of 'Life in London,' by Pierce Egan, which appealed so strongly to Thackeray's sense of humor, and which was already out of date in 1860. Mytton seems to have been a daring cross-country rider, a practical joker, and a spendthrift who squandered a fine property in a few years. He drank from four to six bottles of port a day, and was continuously drunk for the last twelve years of his life; but so vigorous was his constitution that, in spite of these and other excesses, he lived thirty-eight years. In the eloquent language of "Nimrod": "He is now safe in his urn, and let no one attempt to throw more stones at his monument."

The printing of a new edition of Dibdin's 'Bibliomania,' by the Bibliophile

Society of Boston, is justified by the beauty of print and paper, and by the illustrations specially prepared by Howard Pyle. A chatty preface by Dr. Garnett gives some information on Dibdin's rather sad career, and glances at the shortcomings of his character. More practical is Mr. W. P. Cutter's account of the prices paid for rarities in recent years, showing the rapid, though not always intelligible, rise in values. It is a pity that this essay could not have a wider circulation, for it is an interesting record of an extraordinary progress in the value of certain classes of books. Mr. Cutter is bold enough to announce a "law" on the values of books, but it is rather a tendency that he describes than a law.

Mr. George Thomas Ritchie of the Library of Congress has compiled a 'List of Lincolniana' in that Library, and the result is a volume of seventy-five pages. Magazine articles are not included—a wise exclusion, in our opinion—but some newspaper clippings are; a rather dubious proceeding, though justifiable perhaps in the case of a special scrapbook. The list is rather sombre in tone, because so large a part of Lincoln matter is composed of addresses on his death; but we are reminded of another aspect of the man in the joke and song-books, a catechism, and other campaign issues, often scurrilous. The list is printed by the Library of Congress.

'Thomas Gainsborough,' by Arthur B. Chamberlain (London: Duckworth & Co.; New York: Dutton), is a fairly good piece of work, but is far from attaining the standard of the better books in its series, "The Popular Library of Art." To that series we have been accustomed to look for real criticism and an original point of view, and we cannot readily be satisfied with the negative virtues of a volume with which we have, after all, no positive fault to find.

The latest volume of another series, William Bayne's 'Wilkie' in "The Makers of British Art" (London: The Walter Scott Publishing Co.; New York: Scribner's), is acceptable enough as far as biography alone is concerned, but its author's rather phenomenal ignorance of painting leads to great vagueness as to what it is all about. Indeed, a writer who is capable of speaking of "the gems of painting and sculpture, as seen in the productions of Michael Angelo, Titian, and Cimabue," or of calling Correggio "the great Venetian," had best refrain from all topics even remotely connected with art.

'The Life of John C. Calhoun: Being a View of the Principal Events of his Career and an Account of his Contributions to Economic and Political Science,' by Gustavus M. Pinckney of the Charleston, S. C., Bar, has appeared from the press of Walker, Evans, Cogswell Co., in that city. It is a small volume of some 250 pages. Perhaps one-half the space is devoted to lengthy quotations from the speeches and letters of Calhoun. It would have been well if all of it could have been used in this way; for the best that can be said for the author is that he is an undiscriminating admirer of Calhoun, and that he has the courage of what one must call his emotions. The superlative is painfully in evidence. One learns that Calhoun was the greatest statesman, the profoundest political philosopher, the soundest financier, the most brilliant debater, the most successful prophet, the best man; and so on, *ad nauseam*. Apparently there were a few able men before his time, but none at all since. We are, generally speaking, as Carlyle might have said, seventy millions—mostly fools. Mr. Pinckney despairs of our ever being anything else. The evidence of it, precisely, is in the fact that the "protection humbug" still flourishes, and no one seriously considers the necessity of providing for nullification by Constitutional amendment. The suffrage and nullification are the two main supports of liberty; the Revolution furnished one, Calhoun showed us the way to the other. Still, blind as bats, we go blundering on, and so far from providing against the evil days, no one can be got even to listen to a discussion of the subject. The question of nullification, far from being academic, is as open as ever it was, etc. The book is harmless and useless; it is the sort of product one naturally expects from a specialist who attempts in a foreign field something for the accomplishment of which he is not at all fitted.

Mr. Clement F. Rogers's monograph on 'Baptism and Christian Archæology' (Oxford: Clarendon Press; New York: Henry Frowde) has been taken as "an offprint" from *Studia Biblica*, whereof it is part iv. of volume v. It is the fruit of a careful and apparently impartial study of this department of Christian antiquities, and has many illustrations from early and mediæval frescoes. These would seem to support the author's conclusion (p. 304) that the early custom was "the pouring of water over the candidate's head by the Bishop" (why need it be a bishop?), "or the guiding his head under a descending stream, followed by the laying on of hands." At first, baptism, like everything else, was largely in the open; this continued in Syria till the fifth century at least, and would naturally have been in running or standing water. When churches were built and freely used, fonts came in with their other furnishings. One would prefer to think that the early Church exercised ordinary common sense in not being wedded to a given amount of water for this purpose, nor to a fixed shape and size of the vessel (if any) containing it; and since the documents confirm this supposition, let them have all due weight, in view of the question so long pending between sprinkling and immersion. But when did evidence ever settle a religious controversy?

A handsomely printed volume of nearly five hundred pages, rich in illustrations, is Miss Katharine M. Abbott's 'Old Paths and Legends of New England' (G. P. Putnam's Sons). Some of the views are admirable, for instance that of the Munroe Tavern, Lexington, 1695, where Lord Percy had his headquarters. The text, which is animated and entertaining, preserves a due regard for historical accuracy. In these days when the step seems so easy from the snap of a camera to the page engraving, it is fortunate if your bookmaker has a refined taste and some literary skill. Miss Abbott displays more than this, and possesses the gift of lending, through the power of happy description, a new charm to scenes long familiar to the reader. The author loves the theme of which she discourses. If we must needs find a little fault, it is that Chastellux more than once is quoted, and words are stricken out of his sentences with no mark to denote the omission—a liberty that had best not be taken. That Christopher Hussey, the old settler of Hampton, appears as "Hervey," may be charged to the proofreader; but what does Miss Abbott mean when, after speaking of Daniel Webster as a youth, at Exeter, she goes on in the next sentence to say, "An acquisition to the Academy is the celebrated *Puritan Girl* by Martha Hale" (p 254)?

Charles Protheroe's 'Life in the Mercantile Marine' (John Lane) is a routine sea story, one of scores which are being printed to invest with melancholy the disappearance from the seas of square-rigged deep-water sailing ships. It is difficult to determine for what class of readers this book is intended—possibly boys, for whom tales of the ocean have unending fascination. It is hardly ripe enough for mature minds. The narrative covers a period before the advent of steamers in the trade between England and New Zealand. With their coming, the interest is transferred to cruises in the South Seas.

Dr. F. A. C. Perrine's work entitled 'Conductors for Electrical Distribution' appears to have left few problems pertaining to its subject untouched, however minute they may be—from the most economical way of transferring bars from one roll to another to the best way of drawing specifications for telegraph poles—and to have reduced every one to a question of exact science. The vivid clearness of the elaborate descriptions of the manufacture of wire, its finishing, insulation, and wrapping into cables, is like visiting the different works under the guidance of their masters.

Dr. G. S. Fraps has produced a book entitled 'Principles of Dyeing' (Macmillan Co.), which is intended to teach the general truths of that art in the classroom and laboratory to students who have little acquaintance with organic chemistry, and without much troubling them with that subject. We do not doubt that in some of our universities such a plan will be regarded as marking an enlightened appreciation of the educational conditions of our time, while individuals will be found to think it characteristic of an automobiling pedagogy which breaks down the distinction between liberal and professional education and produces something bad from either point of view. Given the plan, it is well worked out by Dr. Fraps.

Dr. C. Krauch's book, 'The Testing of Chemical Reagents for Purity' (D. Van Nostrand Co.), is a standard work of the highest authority and of wide utility. Its translators, T. A. Williamson and L. W. Dupré, have done their work well, and have sometimes substituted references to English books for those to German books, when they have the same value. The author has contributed some emendations.

Karl Verner's 'Afhandlinger og Breve' (Articles and Letters), recently published in Copenhagen through the Society for Germanic Philology, is a book of more than ordinary interest to linguists the world over. Verner owes his chief fame to the discovery of the law bearing his name, but all his investigations bore the stamp of distinction. In addition to the material indicated in the title, the work contains a life, by Marius Vibuk, a facsimile of one of Verner's letters, an illustrated account of Verner's apparatus for the study of

sound waves, and a number of portraits. It is to be hoped that this valuable contribution may be made more generally available by being presented in an English or German translation.

It is common knowledge that in the German universities, in case of a vacancy in the teaching corps, the faculties nominate from one to three men, one of whom the Government generally selects. In Paulsen's new and excellent work, 'Die Deutschen Universitäten,' are found interesting statistics showing how often during the past twenty years the governments have disregarded the proposals of the faculties and made their own selections, the data referring only to the nine Prussian institutions. During this period the law faculties made 140 proposals, of which 125 were adopted; the medical faculties 236, of which 207 were adopted; while the theological faculties made 110 proposals, of which only 82 met with the approval of the authorities, and 38 selections were accordingly made independently. This was done in order that the different theological tendencies might be represented in every faculty, and, with the sole exception of Greifswald, which is headquarters for orthodoxy in the Prussian schools, both liberal and conservative men are found in every Protestant theological faculty. The conservative men appointed against the express wish of the liberal element in the faculties go by the name of "Strafprofessoren," *i. e.*, men appointed to punish the other members for not being orthodox enough to satisfy the official creed of the church. Such "Punishment Professors" are found in Bonn, Marburg, and elsewhere.

The personnel of the Educational Commission which is to sail for this country on October 3, according to the list published in the London *Times*, indicates that Mr. Mosely has secured not only "trained students of education and men intimately connected with its administration in all branches, but also men of light and leading in the more important centres of commercial, industrial and intellectual life." The list of thirty includes a bishop, a mayor, two members of Parliament, three Fellows of the Royal Society, ten professors and university lecturers, as well as representatives of chambers of commerce and members of educational boards. During the early part of their tour, of which an itinerary has been drawn up with the assistance of President Butler of Columbia University, the commission will act as one body. Later it will separate so that the different men may see and report upon aspects of educational work in which they are specially interested, or on which they are specially qualified to form an opinion. These reports will be printed separately and distributed to educational bodies throughout the United Kingdom. The main object of the commission is to study our educational systems in their bearing upon national commerce and industry, and the results of Mr. Mosely's wise and generous expenditure will doubtless prove as beneficial to us as to his own countrymen.

In accordance with the recent enactment of the Parliament, Denmark has now declared its adherence to the agreement of the Berne literary convention. The King has published a decree both announcing and explaining the new rules pertaining to the rights of foreign authors and artists, in accordance with the Berne Convention, even if their works have not been issued by Danish publishing houses.

It has all along been considered a settled matter that Luther's great battle hymn of the Reformation, "Ein feste Burg ist unser Gott," was composed in 1530. Prof. Dr. Groessler, in an address recently delivered in Eisleben, reported that he had discovered this hymn in collections earlier than the above date, and that everything points to its having been composed in the night of April 15-16, 1521, in the inn at Oppenheim, Luther's last stopping-place before entering the city of Worms, where the Diet that was to decide his fate was being held.

The German archæologist, Theodor Wiegand, claims to have discovered the tomb of Hannibal. Classical writers report that it was to be sought on the coast of the Sea of Marmora in Libyssa, not far from Nicomedia, and that the Emperor Severus restored the mausoleum in a magnificent manner. Wiegand searched the whole coast, and found at the place where the Dil River empties into the sea, on a small promontory just below the Anatolian Railroad, the ruins of a mausoleum which he regards as Hannibal's.

Two months ago, at Niagara Falls, the American Library Association discussed with favor a project for a headquarters. The committee appointed to plan details are Herbert Putnam, Librarian of Congress and President of the Association; Dr. John S. Billings, Librarian New York Public Library; C. W. Andrews, Librarian John Crerar Library, Chicago; Edwin H. Anderson, Librarian Carnegie Library, Pittsburg; and R. R. Bowker, editor *Library Journal*, New York.

—The latest addition to the "Legal Classic Series" is an edition of 'Littleton's Tenures,' in English, by Prof. Eugene Wambaugh (Washington: John Byrne & Co.). It is preceded by a valuable introduction, giving a biography of Sir Thomas Littleton (the main external facts of his life are matters of record, but little of personal biographical interest has come down to us), and a very full bibliography of the 'Tenures,' cataloguing (in no less than fifteen pages) all the editions of this very remarkable work. Littleton comes midway among those whom the editor calls the "five masters," *i. e.*, Glanville, Bracton, Littleton, Coke, and Blackstone, but he has the distinction of being the first thoroughly English law writer, Glanville and Bracton having both written under the influence of the Institutes. There is nothing to show that Roman law was ever studied by Littleton, and his subject—a purely feudal one—allowed him to neglect it. It cannot be said to-day that it is necessary for a lawyer to begin his reading with Littleton, but his 'Tenures' will be a classic as long as the history of law possesses any interest; and, as Professor Wambaugh says, even if the lapse of time has made the book superfluous as an introduction to existing law, "its arrangement, conciseness, and accuracy would continue to gain for it the favor of any one who appreciates a masterpiece." The version given is that adopted by Coke, and the work of the present editor is the result of much painstaking research.

—The eighth Annual of the British School at Athens for 1901-1902 (The Macmillan Co.) is made especially interesting by its summary of the results of the Cretan explorations, of which a somewhat detailed account has already appeared in our correspondence columns. To one familiar with Greek antiquities of the classic period, the illustrations of art and domestic life given here are an astonishing revelation of an undreamed-of civilization. A number of porcelain plaques are figured which formed part of a large mosaic in one of the chambers of the palace at Knossos. By a piece of extraordinary good luck, these little plaques represent towers and houses of two or three stories provided with windows, and (in some instances) with balconies where ladies are seen standing. The mosaic, when complete, represented a Minoan city, and was interspersed with landscapes and other scenes. We must assume that the houses were arranged in streets, and were the dwellings of the ordinary Minoan citizen; the plan and pattern are undoubtedly indigenous, though possibly influenced by those of the detached villa of the Eighteenth Dynasty in Egypt. The façades have a strikingly modern appearance, and are quite clear enough to enable us to guess details of construction and coloring. These houses of the bourgeoisie were undoubtedly comfortable. At Palaikastro one of them was provided with a bathroom. The Knossian palace contained many of the conveniences and comforts of an advanced civilization. Mr. Evans gives the plan and section of a large, well-built drain, provided with ventilating shafts, with which were connected several tiled closets or latrines. The primary object of the drain was to carry off the torrential rains which frequently occur in Crete; but provision was also made for regularly flushing the closets. These sanitary arrangements and decencies would put to shame the Paris of a few centuries ago, when the cry of "Gare l'eau!" was to be heard from the upper windows, and gentlemen gave the ladies whom they escorted the inside place on the street as a piece of serviceable gallantry.

—The art pictured in plates ii. and iii. is a further astonishment, as one wonders how it could have vanished absolutely, and left Greece to begin anew with the infantile simplicity of the Dipylon period. These are photographs of ivory figures, probably tinted and chryselephantine, in which the long-limbed spare young athlete flies rather than runs, with arms and legs stretched to the utmost, and with head flung back like the bacchant in Dionysiac processions. "The freedom and *élan* of these figures in some respects," as Mr. Evans says, "seems to overpass the limits of the sculptor's art." This Crete is, indeed, the land of Dædalus, and this is his true period. Mr. H. R. Hall discusses the meaning of the term Keftiu, the people who appear figured frequently in monuments of the Eighteenth Dynasty, *circa* 1450 B. C. He identifies them in a restricted sense with the Cretans, and in a vaguer, wider application with the inhabitants of the northwestern coasts of the Mediterranean from Cyprus to Crete. Mr. R. S. Conway analyzes some pre-hellenic inscriptions of Præsos, with conclusions which point to the probability that this Eteocretan language was Indo-European, and that it was spoken in Asia Minor as well as in the Mediterranean basin in the Minoan age. Its speakers, perhaps, de-

veloped the so-called Mycenæan civilization. Finally, Mr. Bosanquet furnishes a detailed report of the results of the excavations at Palaikastro.

—Many Americans still harbor the notion that, in order to learn to speak the best German, they must go to Hanover. This belief may have arisen from the fact that the less educated classes there indulge less in dialect than elsewhere; but the language of educated Germans all over the empire is practically the same. Eduard Engel calls attention, in the Munich *Allgemeine Zeitung*, to the fact that Berlin is rapidly becoming the "Riesenretorte für das Einheitsdeutsch der Zukunft." Just as, in England and France, London and Paris set the standard for the national language, so Berlin is laying down the law for the whole empire, and dialectic peculiarities are being more and more relegated to the lower classes. The dialect peculiar to Berliners is even now spoken in its purity by few; the children at school learn to look on it as something ordinary and to be avoided, and that seals its doom. Concerning this Berlin dialect very little has been written authoritatively, but recently H. S. Hermann published a book, entitled 'Der Richtige Berliner in Wörtern und Redensarten,' by three local teachers whose names are not given. They look on the Berlinese not as a corruption of German, but as a legitimate language *per se*, with its own words and its own grammatical rules. The semi-humorous accounts given by newspaper reporters of scenes in court constantly violate these grammatical rules, and often do not even get the words right. It takes a sharp ear and a good memory to avoid mistakes, and the language is only a spoken, not a written one. It is only the uneducated, who are little concerned with reading and writing, that speak a dialect correctly. The Berlinese has enough words of its own to fill a hundred double-column pages in the book referred to. Some of them are relics of the French immigration influence of two centuries ago; but these are few, and used mostly in a humorous or playful way; dialects do not favor the *Fremdwörter*. One of the oddest peculiarities is the almost entire absence of the letter *r*, as in Chinese and Londonese. *Verloren* becomes *falooan*, *verfrieren* becomes *fafrian*, *Herr Müller*, *Ha Mülla*, etc. Other sounds are similarly changed. When a street urchin says *zeidomma* he means *zeig doch mal*, and *guten Abend* masquerades as *Juen Aam*. Like all dwellers in large cities the Berliners are fond of superlatives and special ways of expressing them. In place of *sehr* they use *aasig*, *blödsinnig*, *esig*, *eklig*, *haarig*, *klobig*, *klotzig*, *knollig*, *lausig*, *diebisch*, *haarsträubend*, *mordsmässig*, *ochsig*, *rtesig*, *pyramidal*, *kolossal*, *kannibalisch*, *furchtbar*, etc. *Furchtbar* has, it seems, become current among the high-school girls; it was one of Wagner's favorite substitutes for *sehr* preceding *schön*. Amusing examples of caustic Berlinese wit and sarcasm are given, the following being particularly droll: "Wenn *Sie* so lang wärn wie Se dumm sind, dann kennten Se uff de Knie aus de Dachrinne fressen" ("If you were as tall as you are stupid, you could eat out of the eavesgutter on your knees.)

—When Garcilasso de la Vega (1540-1616), a descendant of the Incas, gave expression to his views on animal and plant worship among the aborigines of the Peruvian empire of old, he little knew the coming of "totemism" and its inexhaustible literature. In 'Social Origins,' by Andrew Lang, and 'Primal Law,' by J. J. Atkinson, which together make up a volume of 311 pages (Longmans, Green, & Co.), we have another book on the subject. The author of the second part (published posthumously) was a cousin of Mr. Lang, who spent most of his life in New Caledonia, where he died in 1899. His MS. was edited by his cousin, who states that he is indebted to it for "the conception of sexual jealousy as a powerful element in the evolution of exogamy." Mr. Atkinson's keynote is "the primal law of avoidance" between near relations, out of which has grown a customary rule of conduct. The ideas which gave birth to this "primal law" were in travail whilst man was in the animal stage, and their development made possible the ascent from brute to human. The mother kept the male child by her side (prolonged infancy) until he and his father had ceased to be enemies for sex reasons, and thus the group of the family, from which society was developed, arose. Before this were ages in which the male head of each group of anthropoid ancestors was in direct antagonism with every other male, and forceful disruption of "family" ties was the rule. The "peaceful conjunction" of father and son led to the "peaceful aggregations" which were the germ of human society. Mr. Atkinson's interesting views on "avoidance" should be read in connection with Mr. Crawley's recent work, 'The Mystic Rose,' in which the theory of tabu is elaborated. Mr. Lang's 'Social Origins' is largely a discussion of totemic theories, with the setting forth of his own "nickname" theory of totemism and the origin of the family. A good deal of it has appeared in substance before in the English scientific journal, *Folk-Lore*, etc.

LYLY'S WORKS.

The Complete Works of John Lyly. Now for the first time collected and edited from the earliest quartos, with life, bibliography, essays, notes, and index, by R. Warwick Bond. 3 vols., 8vo. Oxford: Clarendon Press; New York: H. Frowde.

The works of John Lyly have long been awaiting the careful editorship accorded to them in these attractive volumes. 'Euphues' has been accessible in Professor Arber's reprint; this contains no critical apparatus, though without it the difficult and allusive style of Lyly is wholly unintelligible; and the fragment which Dr. Landmann has edited is likewise quite insufficient for scholarly purposes. Fairholt's edition of the plays is inaccurate in the text, and grossly incompetent in such slight apparatus as it possesses. The doubtful 'Maydes Metamorphosis' has been reprinted by Bullen, and the two Anti-Martinist pamphlets assigned to Lyly, one at least with considerable certainty, have also been accessible in modern reprints. All these have been collected by Mr. Bond, and he has added some "Entertainments" and a large number of lyrics, which he assigns to Lyly on what, as we shall see later, seem wholly insufficient grounds.

In rendering the texts of Lyly's work, the first test of all editing, Mr. Bond has been singularly careful and successful. He has collated every edition in the British Museum and the Bodleian, recording the results with clearness and accuracy; but perhaps most of the doubtful passages in the novels and the plays have been cleared up by continual reference to Lyly's sources. Thus, the mysterious terms of 'Euphues,' with the aid of Pliny, Ælian, Plutarch, and Bartholomæus Anglicus, lose their confusion, as when the wonderful "naplytia," which leapeth into the fire wheresoever it seeth it (ii., 132), becomes intelligible as the "naphtha" of Pliny's 'Natural History.' So, also, the "fine wool of Ceres," as it appears in all previous editions of the 'Endimion,' including the recent one of Professor Baker, becomes, more correctly, "the fine wool of Seres," though here Mr. Bond has been more fortunate than thoughtful, for Lyly is not thinking (iii., 505) of Virgil's Georgics, but of Pliny's reference to the Seres, a people famous for their wool and silk ('Nat. Hist.,' vi., 17). On the whole, Mr. Bond has been exceptionally successful in his search for the origins of Lyly's infinite allusions, and he has added much valuable information to our rather hazy knowledge of the sources of Lyly's work. Thus (i., 352) he has established beyond dispute that the 'Euphues and his Ephœbus' was not borrowed directly from Plutarch's treatise on the Education of Boys, but rather from the Latin translation of Guarino Veronese and the English version of Sir Thomas Elyot. He has also cleared up the nature and extent of Lyly's borrowings in the plays.

When Mr. Bond ceases to concern himself with the text, its meaning, and its sources, when, in other words, he attempts the part of biographer, historian, and critic rather than that of editor, the results are highly unsatisfactory, and reflect not only on the accuracy of his scholarship, but even more so on his saneness of judgment. In the life of Lyly he has for the most part followed Professor Baker, adding some not uninteresting details now and then, such as the exact dates of Lyly's two petitions to the Queen, though none of these can be said to illumine the life of the Euphuist in any important degree; of his wild conjectures and fantastic assumptions it is unnecessary to say anything, while the arrangement of his material and the way in which it is scattered without coördination throughout the three volumes can be dismissed with a mere word of protest. The 'Entertainments' at the end of volume i. and the poems at the end of volume ii. are assigned to Lyly on the very flimsiest of evidence; the latter, chiefly on the ground that they bear marked resemblance to the songs scattered throughout the plays. Neither Mr. Bond nor his predecessors have hesitated to accept these last as authentic. They were added by Blount in 1632, where the original quartos indicated the omission of a song; but where or how Blount obtained them is unknown. It should be noted, however, that at least two of those in "Campaspe" had already been published as the works of others: "O, for a bowl of fat canary" in Middleton's "A Mad World, my Masters" (1608), and "What bird so sings, yet so does wail" in Ford and Dekker's "The Sun's Darling" (1623). Further external evidence could be adduced to cast doubts on Lyly's authorship of them, and the

internal evidence is wholly against it, for their tone is that of a later period—Jacobean rather than early Elizabethan. Yet it is by relying on a real or fancied resemblance to these lyrics that Mr. Bond has assigned to Lyly a large number of others, which he has labelled collectively "doubtful," but which he assures us are Lyly's beyond dispute. It is to be hoped that Blount had better reasons for ascribing to Lyly the songs in his 1632 collection than his successor has for adding over fifty songs—some of them doubtless by Sidney, Essex, Southwell, and even Shakspere—two hundred and seventy years later.

On the vexed questions of Lyly's style and of the origin and development of Euphuism, Mr. Bond has much to say, but he has unfortunately dissipated much of the force of his argument by printing it piecemeal in various portions of the three volumes (i., 119, 539; ii., 231, 473, etc.). The point of departure for all such investigations must of course be the well-known theory of Landmann, which is too radical because it limits the influences at work on Lyly's prose to one single source, that of the Spaniard Guevara. The investigations of others, including Child, Courthope, and Mr. Bond himself, indisputably lead to the conclusion that several important Renaissance influences focus themselves in 'Euphues' and the plays. "Traffic and travels," says Lyly in the prologue to "Mydas," "have woven the nature of all nations into ours, and made this land like arras, full of device, which was broadcloth, full of workmanship." But it is not sufficient to find, as Mr. Bond does, a source for single ideas or single passages; the trend of Renaissance thought in its broad outlines must be included, and herein Mr. Bond has for the most part failed.

Lyly's famous novel of 'Euphues' is obviously distinguished from the source ascribed to it by Landmann, Guevara's 'Relox de Principes,' in that the former is purely a love romance. The 'Relox' discusses love on occasion, and its second book is almost wholly devoted to the duties of husbands and wives. But the 'Euphues' is a love romance, and treats love in a way that had hardly ever been attempted before in English prose. The rhapsody on love at the end of Castiglione's 'Cortegiano' was well known through Sir T. Hoby's version in 1561; but that subtle metaphysical discussion of love which characterizes Lyly was due to a series of formal treatises beginning with Ficino's commentary on the 'Symposium,' in the fifteenth century, and including Leon Hebreo's 'Dialoghi d'Amore,' Firenzuola's 'Ragionamenti d'Amore,' Bembo's 'Asolani,' Equicola's 'Libro di Natura d'Amore,' Betussi's 'Raverta,' and other sixteenth-century works. These are all in dialogue form; some of them include novels and love-tales. Their theories were Platonic in origin, their terminology partly Petrarchistic. For, side by side with them, there had been developed a large body of love poetry in imitation of Petrarch which had made certain words, ideas, similes, and especially certain antitheses of heat and cold, sweet and bitter, conventional formulæ to be applied in the treatment of love. The most "conceited" school of Petrarchistic poets was that at the Neapolitan court at the end of the fifteenth century—the school of Serafino dell' Aquila, Cariteo, Tebaldeo, Sannazaro; and nine or ten of Wyatt's poems were directly borrowed from Serafino. Nothing was more natural, then, than that Lyly should make Naples (not Spain or England) the scene of his love romance, which owes so much to the conceited Neapolitan treatment of love. He scarcely ever mentions Spain, but the Italians are in his mind throughout. He knew the Italian poets, for his friend Watson translated some of them in the very collection ('Hecatompathia,' 1582) for which Lyly wrote a commendatory preface. He is always interested in discussing love; the passage in 'Euphues' where, after supper, the company devotes the evening to reasoning about love and beauty, and where the conventional love imagery constantly recurs, reminds Mr. Bond of Boccaccio's 'Filocolo,' but a hundred other examples might be adduced, for such questions of love were traditionally discussed, and their history has been traced at length by Prof. Pio Rajna ('L'Episodio delle questioni d'amore nel Filocolo,' in *Romania*, XXXI. 1 *sq.*, and "Una Questione d'Amore," in the 'Raccolta di Studii Critici dedicata ad Alessandro D'Ancona,' 1901, p. 553 *sq.*).

Besides being a love romance, 'Euphues' is an "Anatomy of Wit," an account of the gentleman or courtier of perfect grace and culture. There were many such discussions in the Italian Renaissance, the 'Cortegiano,' Guazzo's 'Civil Conversazione,' Della Casa's 'Galateo,' Muzio's 'Gentiluomo,' and similar works without number. To these also 'Euphues' owes something, but Lyly has emphasized the side of moral perfection equally with that of manners, and has added the characteristic Renaissance thought, "It is virtue, gentlemen, which maketh gentlemen," in the midst of a long discourse borrowed directly from Plutarch. Certain external elements of structure he maybe derived from the 'Relox de Principes,' and, in that case, 'Euphues' is a romance combining the structure of Guevara with elements derived from the Italian treatises both on love and on manners. So that his style in prose represents exactly what some of the contemporary poets represent in verse—an attempt to apply to the traditional ideal of courtly love, and incidentally of courtly manners, the elements of style encouraged by Humanism and the New Learning. There are also mediæval elements—outgrowths of the manner of the French *rhétoriqueurs*—in allegory, alliteration, simile, mediæval natural history, and in that view of woman which appears in the "cooling card" as in Boccaccio's 'Corbaccio' and elsewhere, even in "Hamlet."

The tricks of style introduced by the revival of the study of rhetoric developed along different lines in Spain and England, as Mr. Bond should have pointed out in greater detail. Thus, Guevara's use of classical allusion is quite distinct from Lyly's—a scholar's or pedant's, quoting directly as Lyly never does; *e. g.*, "Aulus Gellius in the sixth of the third book says," "Plato in the fourth book of the Laws says," and the like; nor is the proverbial wisdom of the Spaniard to be confounded with that of the Englishman, the natural history of Guevara with the "unnatural natural history" of Lyly, while his sententious moralizing may have been derived directly from Plutarch, although the Senecan influence had already started a sententious stream of native English thought which was to lead through Bacon's 'Essays' to Pope's 'Essay on Man.'

One fact, then, is clear. Euphuism represents a single, or national, phase of a disease of style which at that period was international and European. This has been the obvious result of that recent scholarship on the Continent—beginning, perhaps, with Farinelli's review of Child's 'John Lyly and Euphuism' in the *Revista Crítica de Historia y Literatura Españolas*—of which Mr. Bond is so profoundly oblivious. This conclusion is reinforced by an examination of Lyly's comedies, which have largely been neglected by the historians of Euphuism.

They are all classical or mythological in subject; even "Mother Bombie," in the idea of the changed children, employs a theme often used in Latin comedy and more often repeated by the Italian comic writers of the *Cinquecento*. In the subject-matter, and in such characters as Sir Tophas, the witty servants, and the like, Lyly is simply following the traditions of Italian comedy; his greater purity of thought and expression is conditioned by the fact that his plays were performed by the children of St. Paul's before the Queen. He adds, however, certain elements not in the Italian comedies, the rhetoric and the Petrarchistic conceit. There is but one comic source in which Lyly may have found all these elements combined, and it is strange that neither Mr. Bond nor his predecessors should have had their attention called to the Spanish tragi-comedy of the "Celestina," which appeared about 1499, and in an anonymous English version probably as early as 1530. The 'Second and Third Blast of Retrait from Plaies and Theatres' (1580), published just a few years before the appearance of Lyly's plays, mentions a tragi-comedy "wherein the bawdress Celestina inflamed the maiden Melibea with her sorceries." Lavardin's French version appeared in 1578; and there are other reasons for believing that the Spanish tragi-comedy was known, or accessible, to Lyly. Mabbe's version of 1631 (recently reprinted in the "Tudor Translations") shows what an Englishman with a naturally "precious" style could make of the original.

The characters of the "Celestina" are for the most part those familiar to the readers of Lyly. Celestina herself, go-between and sorceress, is like Mother Bombie, Sybilla in "Sappho and Phao," Dipsas in the "Endymion," etc. The hero goes to her for advice and assistance, just as Phao goes to Sybilla. The servants and pages in "Mydas," "Endymion," "Mother Bombie," "Campaspe," "Sappho and Phao" (they are in nearly every play) have two distinguishing qualities, keen wit and learning; their prototypes are Calisto's four servants in the "Celestina," who have, all of them, the same aptitude for witty argument, and who in the same way quote the classics with great readiness; in Latin and Italian comedy, such servants have wit, but seldom learning. Calisto and Melibea are like Lyly's heroes and heroines, especially in another point, their fondness for metaphysical discussions of love. It is in his treatment of love that Lyly differs from all his English predecessors in the drama, and from the Italian comic writers on similar themes. It is not a tragic passion; nor mere physical appetite as in Ovid, Terence, and the Italian comedies. The general sources for this new treatment of love, in the plays as in 'Eu-

phues,' were of course, as we have seen, the Petrarchistic love poetry and the formal treatises on love. But compare this from the "Celestina" (Tudor Translation, page 180):

"*Melibea.* How call you this grief that hath seized on the better part of my body?

"*Celestina.* Sweet Love.

"*Mel.* Tell me then, what thing this sweet Love may be? . . .

"*Cel.* It is a concealed fire; a pleasing wound; a savory poison; a sweet bitterness; a delightful grief; a cheerful torment; a sweet yet cruel hurt; and a gentle death"—

with the following in "Gallathea" (Bond's Lyly, ii., 435):

"*Cupid.* I pray thee, sweet wench, amongst all your sweet troupe, is there not one that followeth the sweetest thing, sweet love?

"*Nymph.* Love? good sir, what mean you by it? or what do you call it?

"*Cupid.* A heat full of coldness, a sweet full of bitterness, a pain full of pleasantness; which maketh thoughts have eyes, and hearts ears; bred by desire, nursed by delight, weaned by jealousy, killed by dissembling, buried by ingratitude; and this is love. Fair lady, will you any?"

There are a few things like this in Guevara (*e. g.*, "the propriety of love is to turn the rough into plain, the cruel to feeble, the bitter to sweet," etc.); the common source is the Petrarchistic conceit. In the "Celestina," however, are to be found most of the characteristic elements of Lyly's style in comedy, his love of rhetorical questions, of repetition, and amplification, his fondness for lists of strange operations, given without metaphorical intention, as well as for proverbs (a Spanish quality), for classical illustrations (a humanistic tendency), and for "unnatural natural history" (a mediæval survival). Both have favorite subjects of discussion—the description of old age, the lists of women's false fangles and allurements, etc. It is impossible, within the limits of a review, to dwell at greater length on these remarkable resemblances: but enough has been said to show that in the "Celestina" there is a source which contains, within the comic structure, Lyly's rhetorical manner and tricks of style, his types of character and subject-matter, his unnatural natural history and fondness for proverbial wisdom, his theories of love, and some of his favorite themes. Whatever he may have owed to the "Celestina," the point to be made is that one need not go to Guevara for some of the essentials of the euphuistic style. Perhaps the forthcoming monograph of Professor Morel-Fatio of the Sorbonne, on the work and influence of Guevara, may clear up some of these doubtful points; the critical and historical matter in Mr. Bond's edition, interesting and suggestive as it often is, can scarcely be said to have done so.

CELTIC TEXTS.

Whatever difference of opinion there may be about the present attempt to revive the Irish language—and bitter disagreements have developed both as to the possibility and as to the desirability of such an achievement—cordial recognition is due on all sides to some of the publications of the Gaelic League. This popular organization has been for the past few years the centre of the language movement in Ireland. It has organized branches all over the country, and waged a lively campaign against everything "Saxon" in the intellectual and social life of the people. On the literary side, most of its energy has naturally gone into the dissemination of controversial pamphlets, or of easy, popular helps to the study of Gaelic. Besides Father O'Growney's 'Simple Lessons,' the first part of which was lately reported to have passed into its two hundred and eleventh thousand, the League has been issuing a series of "Popular Booklets" containing stories and other short pieces, each number sold for a penny; another series of "Students' Handbooks," selling at a shilling apiece; and still others devoted to music, folklore, and the language propaganda, all at correspondingly low prices. These are frankly ephemeral publications, which will have served their purpose if the Irish language is restored in any measure to practical and literary uses. None of them will contribute much to literature or science, except perhaps the series devoted to folklore, which may be expected to preserve some materials of value to the student of Western European traditions. The first volume is an interesting little collection of Monaghan folk tales, edited by Mr. J. H. Lloyd.

Of more general importance than any of the foregoing is a series of Irish texts, of which five volumes have already appeared. By these editions of modern Gaelic writers, the League is happily supplementing the labors of the Irish Texts Society. The authors thus far published have all been poets, and all good representatives of a literature hitherto very inaccessible. The series began with the poems of Geoffrey Keating (better known as the father of modern Irish prose than as a writer of verse), admirably edited by the Rev. J. C. MacErlean. The succeeding volumes have been produced under the editorship of the indefatigable Father Dinneen, who, besides being the author of nearly all the books in the League's series of original Irish works, has also edited Egan O'Rahilly for the Irish Texts Society, and is now compiling a dictionary to be issued by the latter organization. His editions of Eoghan Ruadh O'Sullivan, Seaghán Clavach Macdonnell, Geoffrey O'Donoghue of the Glen, and Timothy O'Sullivan ("Tadhg Gaedhealach"), form respectively the second, third, fourth, and sixth volumes of the League series. The poems of Pierce Ferriter constitute the fifth, which we have not yet seen.

Father Dinneen's qualifications as an editor and translator of modern Irish poetry are good, and not the least of his virtues lies in observing the limitations of his scholarship. He is not a philologist by training, and apparently has no special knowledge of the early stages of his native Irish language. But for the most part he avoids problems for which such technical equipment is absolutely necessary; and on the other hand, he brings to the interpretation of modern Gaelic poetry an immediate acquaintance with the spoken language and with the conditions of Irish life such as is not possessed in equal degree by the masters of Celtic philology. For that matter, the Irish writings of the last two centuries have received very little attention from Celticists of scientific training. Scholars turned first, for many reasons, to the older language and literature, and left the modern field to be exploited by men who, on their side, were similarly ignorant of the earlier periods. Irish studies have suffered from this over-strict division of labor, which has sometimes verged upon hostility. Men of either type have been more willing to abuse those of the other than to learn of them. Yet the modern Gaelic speakers possess information both about linguistic usage and about popular tradition which scholars can turn to account; and certainly the untrained "natives" might have saved themselves from many vagaries in history and archæology by cultivating a little more respect for scholarship. The knowledge of each of these classes of men ought to be at the service of the other; and if the Irish Texts Society and the Gaelic League can induce both types, or representatives of both, to work together, their publications cannot fail to be of service.

Such coöperation will be helped on, we believe, by the work of Father Dinneen, who, though by no means to be reckoned among the unlearned and irresponsible writers by whom the native scholarship has often been discredited, has nevertheless approached Irish studies from the modern side. His translations and glossaries constitute in a way original records of usage and tradition, which for the interpretation of the modern poets must be of some value. His accounts of versification, similarly, which would have no particular authority if Old and Middle Irish metres were under discussion, may be received, we assume, as a trustworthy statement of the way the poems of Owen Roe and his contemporaries are read or recited to-day by the peasants of Munster. Some of Father Dinneen's literary comments, we regret to say, are not equally useful. We quote the following sentences, for example, from the last page of his introduction to Owen Roe:

"His name [that is, Owen Roe's] deserves to be enshrined amongst the few supreme lyric poets of all time. What Pindar is to Greece, what Burns is to Scotland, what Béranger is to France, what nobody in particular, unless it be Mr. Kipling, is to England, that and much more is Eoghan Ruadh to Ireland."

The last remark is doubtless humorous, and may serve very well as a campaign joke in the midst of the present anti-English agitation. But it should not be offered as literary criticism; and the whole characterization is so intemperate that it will neither edify the student nor win the confidence of the judicious reader.

The condition of the Celtic language of Wales is very different from that of Irish, and it is not with a view to saving Welsh from extinction, of which it stands in no immediate danger, that there has been considerable activity of late years in the publication of old Welsh authors. The objects of such editions have been rather learned and historical than practical. A series, recently begun, which promises to be of great value to students of Celtic, is the "Guild Series" of reprints of Welsh prose works of the sixteenth, seventeenth, and eighteenth centuries. It is issued under the auspices of the Guild of Graduates of the University of Wales, and four volumes have already appeared. They are all handsomely printed and edited with great care. The plan in each case has been to select the first edition, or the best available early edition, of the work in hand, and then to reprint it—errors and all—with scrupulous accuracy. In this way it is intended to bring

together a body of trustworthy material for the study of modern Welsh grammatical and orthographical usage. At the same time, in spite of their deliberate retention of old printers' errors and the like, the editors are supplying fine library editions of some of the prose classics of Wales. The introductions in every case contain new and valuable matter. The first volume, edited by Mr. Thomas E. Ellis, comprises miscellaneous pieces (including considerable verse), in both Welsh and English, by Morgan Lloyd. Among them is the celebrated 'Llyfr y Tri Aderyn,' reprinted from the original edition of 1653. The greater part of the verse is here printed for the first time, so far as is known. Mr. Ellis expresses in his preface the intention of publishing in a later volume the remaining works of Morgan Lloyd. The second volume of the series contains the 'Drych y Prif Oesoedd,' the extraordinarily popular history of Theophilus Evans, edited by Mr. Samuel J. Evans from the second edition (1740). The third and fourth volumes contain reprints of two books which contend for the fame of being the first printed book in Welsh: William Salesbury's 'Oll Synnwyr Pen Kembero Ygyd' (literally, 'The Whole Sense of a Welshman's Head Together'), a collection of proverbs obtained from Griffith Hiraethog; and a little handbook of religious information published in 1546 without formal title or indication of author, and ascribed to Sir John Prys, the energetic agent of Henry VIII. Salesbury's book is edited by Mr. J. Gwenogvryn Evans, to whose industry and accuracy Welsh scholarship is already much indebted. Prys's little volume is edited by Mr. John H. Davies, who reprints along with it what appears to have been the first Welsh pamphlet (1550), a defence of sacerdotal marriage by a citation from the laws of Hywel Dda.

Florence: Her History and Art, to the Fall of the Republic. By Francis A. Hyett, B.A., Trinity Hall, Cambridge. E. P. Dutton & Co. 1903.

Mr. Hyett has been moved by the laudable desire to write a one-volume history of Florence which shall be accurate and interesting. He has wished, besides, to unfold the intellectual and artistic evolution of the Florentines along with the political. The task is like that set for Sisyphus. It would not be difficult, indeed, to compile a clear narrative of the development of either the art or the literature of Florence; but to describe in small compass her political growth would require the genius of a Green.

The reason is obvious: the mediæval Italian commonwealths (except Venice) were the work of groups of intensely individualized citizens. They developed on a municipal scale, but their intensity gave them a world-wide significance. Accordingly, to understand what went on in Florence, or Siena, or Lucca, or Milan, you must know intimately what many families and individuals were doing—and this requires a study of details which conflicts with the purpose of an epitome. Yet unless you get as close as this, the play of cause and effect is lost, and the vicissitudes of the Italian republics seem hardly more intelligible than those of modern South American States, or than the writhings of leeches in a jar. This is true of all her neighbors, but most true of Florence, because the individuals who made her history surpassed the other Italians in genius, and endowed her experiments in government, trade, and social reforms with an enduring interest. That, together with her civic life, she should also produce a great literature and a many-sided art, which appear to be more directly than elsewhere the outcome of her political experience, adds immensely to that significance. The fact that her local quarrels were often merged in the vast conflict between the Church and the Empire, served also to relieve their pettiness.

Yet the political evolution of Florence was by no means regular. She did not pass from the semi-feudal condition of the Middle Age to her brief period of liberty, and then to her long term of despotism, without many attempts to go back or to turn aside. The French Revolution shows us the swift descent from absolutism to anarchy, and, after anarchy, the inevitable recoil to despotism; in Florence that process required generations instead of years. The real life of the Republic extends from about 1200 to 1530, when even the pretence of a popular government was abandoned; but the generations vary as greatly in importance as in interest. The period which practically coincides with Dante's lifetime, and saw the ascendancy of the People, the guilds at their zenith, the death struggle of Guelfs and Ghibellines, and the war of Blacks and Whites, is certainly the most dramatic. The fourteenth century is of secondary importance, although it showed, decade by decade, that the drift was setting almost irresistibly towards despotism. Finally, the last hundred years, from the rise of Cosimo Pater Patriæ to the destruction of the Republic, stand out with dazzling interest, especially during the generation which accepted the enlightened tyranny of Lorenzo the Magnificent and presently was swept into piety, excessive but fleeting, by the fervor of Savonarola.

Mr. Hyett devotes about 55 pages to the Dantean period, 125 pages to the fourteenth century, and 220 pages to the Medicean century. By this allotment he is able to trace in sufficient detail the constitutional changes from the days of the Ciompi on, and to follow the devious ways by which the Medici slowly fastened their grasp on power. While he has not slighted the earlier period, we believe that he might with advantage have elaborated his account of it, even at the expense of some of the later details. Still, he makes clear the confusing relations between Blacks and Whites—one of the stumbling-blocks for historians of Florence—and he gives an accurate summary of the organization of the trade guilds. We miss the vividness which we naturally associate with those years for which Dante is, after his epic fashion, the incomparable witness, but we have instead a painstaking, reliable narrative.

When Mr. Hyett reaches Cosimo Pater Patriæ, however, he works with more fervor, possibly because he has proportionately more elbow-room; so that the last half of his book contains the best English history of Florence from 1430 to 1530 written within similar limits. No better evidence of his ability appears than in his treatment of Lorenzo, particularly in the dozen pages in which he discusses Lorenzo's character. Were the entire book written on that plane, it might be that definitive history which lovers of Florence have long awaited. Mr. Hyett is not so successful in dealing with Savonarola, not from lack of sympathy, but because he seems less skilful in analyzing the subtle contradictions in the character and conduct of the great Dominican. Yet he sees the significance of Savonarola's career, as the following passage shows:

"Although the exile of Dante has brought a more lasting reproach on Florence in the eyes of the civilized world, the judicial murder of Savonarola was a greater crime. It was, too, a far more important event in her history. It was the turning-point in her career—the first step on her downward course—the landmark which divides a glorious past from an inglorious future. The story of Florence, from the beginning of the thirteenth to the end of the fifteenth century, was the story of a fierce and constant struggle between Order and Anarchy. Order had generally been able to hold her own, but the struggle had never been an unequal one. . . . Henceforward Order fought a losing fight until, in despair, she flung herself into the arms of Tyranny" (p. 461-2).

In order not to be misled by this generalization, which is essentially true, one must remember that the author regards the government even under Lorenzo as popular rather than despotic.

One feature on which Mr. Hyett has set high hopes, we find hardly satisfactory. He reports that he has "endeavored to tell the story of the political growth and vicissitudes of the city, until its decline, more succinctly than it has been told by previous historians, yet devoting more space to art and literature than they have done." To carry out this purpose he intercalates from time to time a chapter on writers and artists, the total amount of such material occupying about a fourth of the volume. Almost everybody is mentioned, but the information is often scrappy. It would have been better to print these biographies in alphabetical order as an appendix, so that the visitor to Florence could find out at a glance when a given artist flourished and how many of his works can be seen there to-day. Naturally, Mr. Hyett has not himself mastered all the literature and art of Florence, and so he discreetly relies on the criticisms of Ruskin, Symonds, C. C. Perkins, Crowe and Cavalcaselle, Morelli, Berenson, and others, with the result that one gets the impression of a compilation. Yet when he has space enough he occasionally produces a good sketch based on his own study—for example, his account of Michelangelo, the artist; his remarks on Michelangelo the poet are insufficient. But the general method of interrupting the flow of the narrative by inserting large sections of a biographical dictionary is surely a structural mistake.

We could wish, also, that Mr. Hyett had throughout got a little farther away from his authorities, so as to make his readers feel that he had not merely read up his subject, but had come to have an individual view of it. And, indeed, when he ventures on a generalization, we see that he has opinions of his own—witness the passage quoted above, or his concluding remarks on Renaissance art, which end with these sentences:

"The pedantry of Art, in its Post-Raphaelite days, had more to do with its overthrow than its secularization, and for this neither Paganism nor Naturalism can be held responsible. Nevertheless, pedantry was but a secondary cause. The primary cause of the decadence of Renaissance Art

in Italy was that Christianity and Paganism had both become shams" (p. 568).

On the whole, Mr. Hyett has attained his wish in writing the best single-volume history of Florence in English. He pays special attention to constitutional changes and to defining party platforms, and, as there is an unusually good index, the book can easily be consulted as a manual of Florentine politics. It is not so good as Mr. Horatio Brown's 'Venice,' and it lags far behind Green's 'Short History'; but it is clear and accurate, and it abounds in information. Until his better appears, Mr. Hyett indisputably has the field.

We note several misprints, among them these: Baptisterio (p. 2); sestier*i* (p. 25); benche and Rienz*a* (p. 145); the date of the birth of Maso Albizzi is given 1433 and his death 1417 (p. 225); on page 401 it is stated that the only first-rate artists working between 1540 and 1570 were Titian, Tintoret, and Paul Veronese, whereas Michelangelo did not die till 1564; conversazion*i* (p. 414); "Madonna *del* Impruneta" should be *dell'* (p. 448); Trionf*e* (p. 453); quattrocentesti (p. 528); *piu* for *più* and *parlo* for *parla* (p. 545, note); Impan*a*nata (p. 565).

Maxim Gorky: His Life and Writings. By E. J. Dillon. London: Isbister & Co.

Several chapters of Mr. Dillon's book have already been published separately in English reviews, but a good deal of the material is new, including translations of some of the author's short sketches. The Russian writer's autobiography has supplied the tale of his wretched nomadic youth, and the facts are here rehearsed chiefly for their value in explaining and interpreting his work. The method is perhaps the best that could be adopted for presenting Gorky fairly and clearly to foreign readers, because his tales are all drawn from his actual experience and adventures, and his thought is little more than an outpouring of rage and resentment against organized society, accumulated during years of struggle with hunger and cold, and indeed every form of evil fortune.

Mr. Dillon does not write of Gorky to praise him or to endow him with those great human attributes and artistic gifts which have won such wide appreciation for Tolstoy and Turgeneff. On the contrary, he begins by declaring that the vogue of Gorky's productions has been strikingly disproportionate to the intrinsic worth of his achievement; and his words of unmodified commendation are few and carefully chosen. His general criticism is to the effect that Gorky's work is monotonous; that its artistic power is impaired by persistently intrusive didactic intention, and even more by the attribution to every ruffianly tramp of his own dreamy temperament, his own unhappy soul, his own passionate emotions. Of Gorky's ethics he has a poor opinion, saying that "he insists on our completely blotting out the boundary line that divides right from wrong"; that, "with the exception of 'Ilya Lovnyeff' and a few isolated sketches, there are but a few scattered traces of moral purpose anywhere," and that "much of his work appeals to us like a panegyric of vice or an apotheosis of the devil."

Thus Gorky, according to Mr. Dillon, is only a tramp, with a stronger emotional nature than most men, be they tramps or bourgeois or aristocrats; which nature, long suffering in silence, has at last found expression in story-telling. We are not disposed to disagree with this view, yet do not find it consistent with the contention that Gorky has a deliberate didactic purpose to which "he makes his work subservient, and strives to prove, for instance, that life, not abstract thought, makes the true thinker, and that those who have battled with existence and been worsted are greater philosophers than Schopenhauer." Undoubtedly he does believe that wisdom comes from living, not from reflection, and he urgently desires to inform the law-abiding world that he has no respect for its opinions, feelings, and habits; but such intimations strike us more as the emotional utterances of an artist than as the deliberate dicta of a teacher eager to influence and to lead. At all events, to dignify as philosophy resentful diatribes against society, and jibes and jeers at every fine human sentiment, is to take an ignorant, prejudiced, and passionate story-teller too seriously. Gorky's habit of identifying himself with his heroes is to our mind a much more irritating and tiresome defect than are his childish screams and vague speculations; though even of this fault too much may be made.

"Gorky's heroes," says Mr. Dillon, "have but one soul in common, the soul of their genial creator. Hence his *dramatis personæ* resemble one another so closely that a feeling of weariness and depression creeps over the reader who attempts to wade through the five volumes which at present represent his contribution to Russian letters. . . . His heroes are but idealized projections of himself. . . . His portraits are nearly all portraits of Maxim Gorky in different poses, hating like him the lies and hypocrisies of society, bursting through the fine network of convention which hampers the development of individuality, and clamoring for the unattainable."

Against the monotony of this method Mr. Dillon neglects to set the intenser passion and pathos commanded by a subjective writer, and the poetry inherent in such lyrical expression. His unreserved praise is bestowed on Gorky's treatment of nature, and on his perception of a closer sympathy between human beings and the elemental forces. In this romantic use of nature he says that Gorky is unrivalled in Russian literature.

Mr. Dillon's contempt and loathing for the novel entitled 'Foma Gordyeef' are exaggerated. It has, he insists, no continuity or meaning, and the hero is a clumsy "loon with no culture, a boor, a dunce, a sot, a satyr." He rejects as an insult to judgment the assumption that this "brutish dullard" could formulate questions about life and death, and that he could express profound moral indignation at the customs of his associates. Quite a different impression, however, may be derived from the book itself, and it is conceivable that the author meant to represent Foma as the victim of heredity and social conditions, with not enough intelligence to raise himself to higher things, but with enough heart and right feeling to detest all that he himself was, all that he had been born to.

Mr. Dillon's book has defects common to books made up of separate papers. It has not been carefully revised, and there is consequently a great deal of repetition and some contradiction. After reading over and over again that Gorky is an enemy of society and an apostle of brute force, it is surprising to learn that, from certain fragments and touches, "a charming portrait of the *real* Gorky, sympathetic, tender, helpful, self-forgetting, puts itself together for the attentive reader." Still, the contradiction may be only apparent, and conflicting statements may be made reconcilable by the reflection that Gorky's "personality is divided into two," and that the "genuine artist and typical Russian is animated by the humane spirit of the gospel, which the whilom tramp and sansculotte would fain root out of the hearts of men." If Mr. Dillon really believes in the humane and Christian Gorky, he should have taken more pains to impress this figure upon his readers than is implied by a casual sentence.

The Bible in Shakspere. By William Burgess. Winona Lake, Ind.: Winona Publishing Co. 1903.

Michelet, in his history of France (vol. 5, p. 158), wrote: "Je ne me rappelle pas le nom de Dieu dans Shakespeare; s'il y est, c'est bien rarement, par hazard et sans l'ombre d'un sentiment religieux." This utterance, as seen by Mr. Burgess in John Taylor's 'Shakesperiana,' but otherwise unknown to him, led him, after a dozen years of gestation, to bring forth the octavo of 300 pages whose title we give above. But De Quincey, reviewing Michelet, said; "For my part, I am beginning to suspect that the word *la gloire* never occurs in any Parisian journal," and thought a single sharpshooter's bullet enough for the French skit. Mr. Burgess ordered this matter far otherwise. His census of the word "God," which he finds about 700 times in concordances, he tabulates as it appears with relative frequency in each play, from a single instance in "Lear" up to ninety-nine in "Richard III." Two pages of alternate terms for the Most High follow, reminding travellers of the ninety-nine variations of Allah among the Moslem inlays of the Taj Mahal. Lists of Bible characters, facts, and places mentioned in Shakspere complete the tale of statistics. The next twenty pages are filled with texts over against Shaksperianisms which are much like them in words or thoughts. This section is the cream of the book, and, studied by any intelligent reader, will add to his intelligence. Scripture and Shakspere lend and borrow light by mutual reflection.

The next section, "The Religious World of Shakspere," covers seven discourses—which may have formed each a popular lecture or perhaps sermon and are in evidence of the religion, or even religiosity, of Shakspere's writings. They show us Shakspere and Scripture as twin brothers as to heroes and heroines, types of character, plots, moral inculcations, views on the nature of tragedy and immortality, etc. Before certain audiences these effusions would be welcome. The last chapter in the book is unmistakably a temperance lecture, pure and simple, woven or pieced out with Shaksperian scraps.

Half the entire work is called "Scripture Themes," that is, topical extracts from the dramatist. The arrangement is called "cyclopædic" (meaning alphabetical). The selections were such as the author judged

would serve to thicken other proofs which perhaps did demonstrate thinly the bedrock of his conviction that Shakspere was a Christian. Mr. Burgess recoiled in such horror from Michelet's audacious remark that he pushed at once to his antipodes. His own question, "Was Shakspere a Christian?" few would answer till they were sure what the author's definition of a Christian is. Space forbids notice of his arguments to prove Shakspere a Christian, but we may mention one, clearly a favorite, because repeated and set forth as a conclusive sockdolager. The opening words in Shakspere's last will and testament are said "to declare his own absolute faith." That document begins: "I commend my soul into the hands of God, my creator, hoping and assuredly believing through the only merits of Jesus Christ, my Saviour, to be made partaker of life everlasting, and my body to the earth whereof it is made." But this language, as Halliwell-Phillipps, who has most fathomed the depths and shoals of the subject, writes, was "the usual first words in wills which were, like Shakspere's, lawyers' drafts, filled in, item by item, afterward by testators, as may be seen from numerous examples attached to the wills preserved at Somerset House. Nor can any conclusion be drawn from what was then an ordinary and formal disposal of soul and body" ('Outlines,' i., p. 248).

The work before us is carelessly printed. We note: "Our remedies oft in *themselves* do lie" (p. 75)—with as many such possible typographicals as there are pages. There are as many more that cannot be fathered on printers. Thus, Sly, "by education a card-maker, by transmutation a bear-ward, by present profession a tinker," is always declared to have been a tailor. There are more serious faults. Desdemona is stigmatized as "sacrificing race instincts, degrading herself socially, committing a crime against the order of nature, and [as if both were equal] the proprieties of civilized society" (p. 98). While mourning with Mr. Burgess that when his production was still in press the manuscripts and corrected proofs were all burnt in a holocaust of the printing-house, we must as deeply regret that he hurried his resurgent phœnix into this breathing world before its time, with so many imperfections on its head. Possibly it was not worth while to evoke it at all from the ashes of cremation.

Penal Servitude. By W. B. N. New York: G. P. Putnam's Sons. 1903.

Few subjects deserve more and receive less attention than the administration of penal law. Occasionally philanthropists like John Howard and Elizabeth Fry appear, and fairly compel the public to listen to their accounts of the condition of the inmates of the prisons; but as a rule the people of any community will interest themselves in all manner of remote affairs rather than in the penal institutions in their own neighborhood. What goes on in these prisons is utterly unknown except to a few specialists, and yet much goes on that should revolt humanity. The book now before us is welcome because it is readable, and may therefore arouse the interest of many who would not otherwise care to acquaint themselves with the details of penal servitude. The fact that the author is the son of an English peer, and may some time, for all that we know, sit in the House of Lords, will undoubtedly give zest to his narrative of his experience as a convict. Few convicts possess literary skill, or care to display it in publishing their own ignominy. This noble lord, however, not only writes cleverly, but is also quite free from sensitiveness concerning his past years. It is not probable that he will be caught again; but we doubt if he has experienced a change of heart. He may be penitent; but he dwells on the hardships of his prosecution and conviction in a way that indicates a belief that he got more than he deserved.

While the author has no good opinion of the law, so far as his own conviction and sentence are involved, he speaks well of its administration. This testimony is of very high value. No doubt the author conducted himself well while in prison, and thus won the favor of his keepers. But this is not a sufficient motive for representing them as better than they are, and we feel justified in accepting the account as true. If it is, the English prisons are admirably officered, and, on the whole, very well administered. There seems to be room for improvement in the diet, especially in the matter of fresh vegetables. When convicts are employed in gardening, but are forbidden to eat so much as a leaf of lettuce, neither their health nor their discipline is improved. In most other respects the treatment is humane and scientific. First offenders are put in a class by themselves; the weak-minded receive special attention, and those dangerously insane are committed to a prison where they can receive appropriate treatment. Incorrigibles also have their own prison, and the system of hospital treatment and of medical supervision in general is excellent.

In the employment of prisoners, also, a humane wisdom is displayed. Every prisoner, so far as practicable, is set at out-of-door work several months in the year, and receives training in some trade when confined within doors. The barbarous practice of crowding two prisoners into a cell meant for but one, so inveterate in New York, appears not to prevail in England; indeed, communication between prisoners is very strictly regulated. Their life may not be a happy one, but it is on the whole healthy, and conducive to reformation. Good conduct ensures a shortening of the term of imprisonment, and the ticket-of-leave system tends to prevent relapse. That most important function, the inspection of prisons, is thoroughly discharged. The Governor, usually a retired military or naval officer, is responsible to the prison directors. These directors are appointed through the Home Office, and constitute the supreme governing body. They are highly paid, and one of them must visit every prison once a month. While there he exercises almost absolute authority in making investigations of every kind. Any convict with a grievance may appear before him and plead his own cause.

In addition, there is a Board of Visiting Magistrates, unpaid justices of the peace, who visit the prisons monthly and award punishments for all serious offences. Finally, there is a Board of Inspectors of Prisons, composed of retired governors, who make the round of the prisons every few months. As prisoners have also free right of petitioning the Secretary of State, it is difficult to see how they could be more perfectly guarded against maltreatment. No doubt they occasionally suffer injustice; but the law does its best to protect, and, according to our informant, succeeds admirably. Criminal statistics are generally untrustworthy; but, after all manner of deductions, we cannot fail to be cheered by the fact that, while forty years ago the average numbers of persons yearly condemned to penal servitude in England and Wales was 2,800, the population being 20,000,000, it is now about 750 out of a population of 34,000,000. Instead of 13 in 100,000, convicts number now but two, and these two get shorter sentences. The "segregation" of prisoners has had impressive results; less than 12 per cent. of the first offenders separately treated appear to be recommitted.

The imprisonment of this author may not have led to his soul's salvation, but it has enabled him to produce a work of unique interest, and one that may have most valuable results. Convicts are habitually untruthful as a class, and their stories must generally be taken with a large allowance for the personal equation. In this case we have the testimony of a witness capable of taking a broad view of the subject, and unusually free from prejudice. His information is therefore of exceptional value; and it is given with much vivacity. George Selwyn, observing the absence of a waiter whom he was accustomed to see at his club, and asking its cause, was told that the man had been convicted of a felony. "Dear me," he exclaimed, "what a horrid idea he will give of us to the people in Newgate!" Our author's companions in Parkhurst Prison need not be disturbed by any such apprehension. Their failings are discussed with sympathetic discrimination, and the allowances made for defective endowment, physical and mental, are no greater than justice and mercy demand.

History and Chronology of the Myth-Making Age. By J. F. Hewitt, Late Commissioner of Chutia Nagpur. London: James Parker & Co.; New York: E. P. Dutton & Co.

Those familiar with Hewitt's works will know what to expect from this volume. The line that separates learning from lunacy is often passed; but what hippomane especially tempts to madness the unharnessed chargers that gallop over the Akkadian domain? In no other field do common sense and historical sobriety seem to be so utterly abandoned. Even a scholar occasionally errs there, but whoever, like Hewitt, has entered this field without scholarship, once in is lost forever; his discoveries are mares' nests.

How can the credulous laity know this, so well known to the initiate? A journal making some pretence of literary learning recently published a review of this book showing clearly that the reviewer regarded it with mystified awe, as an almost incredible and yet trustworthy revelation of what happened in France and Mexico from 15000 to 8000 B. C. Thus do we renounce our judgment to the specialist, and, accustomed to marvels, fear to say that anything is untrue, however incompetent the specialist may be. Let it be said, then, at once that the myth-making age is still with us and has no better illustration than this last volume of Hewitt—unless, indeed, it be the

'Ruling Races of Prehistoric Times,' also by Hewitt, whom, in characterizing this later work as "le flot montant de ses folles spéculations, de rapprochements et de méprises invraisemblables et d'étymologies absurdes," one of the gentlest but keenest of French critics last year described as an "amateur intempérant, qui paraît bien décidé à mourir dans l'impénitence finale."

Hewitt knows a deal about India's aborigines, but what he says even about them is so confused with what he thinks they ought to think, that even in the one small province in which he might have been useful, he is useless. For years he has published his baseless speculations in any journal that would accept them, and the rubbish he has written anent *sū-astikas* and Akkadians is the worst of its kind. With no scientific training, he jumbles together whatever he finds in Egypt, India, Greece, France, and Mexico, and reconstructs history out of the chimeras of his own abandoned brain. Because a Hindu epic represents its opposed heroes as possessing seven and eleven armies, respectively, the ancients of the second millennium B. C. (according to this book) must have had years with these divisions; the fact that a king's car is dragged by mules shows that he was "born from the union of the sun-horse and the epoch-making three-legged ass" (of Hewitt's imagination). The Sanskrit *su* (*sū*) meaning "well," a frequent prefix, is the Su-bird identical with the Egyptian Akkadian mother-bird, Khu. These examples, found on every page, cast all the Müller-and-Cox sun-myths into the shade. Anybody can prove anything by this means, and we are not surprised to learn that "the merchant classes of India" (in the Bronze Age) taught France how to erect monoliths and then continued their journey to Mexico; that the Finns learned their magic from the Gonds of Central India (because both are expert in magic!); or that hendecasyllables and iambic trimeters (in their Sanskrit form) were invented by the poets of India to symbolize the years of eleven and of twelve months. Nor, to speak frankly, are we surprised to find that the Dravidians are repeatedly said to be "doliko-kephalic" *(sic, passim)*, for in this form is unconsciously reproduced all the hollow pretence of scholarship that characterizes Hewitt's treatment of his main thesis.

In a word, this book is like everything else that Hewitt has written. It is not worth while to read it, but, if any one should read it, it is worth while to know its worthlessness.

Les Insectes Ennemies des Livres; Leurs Mœurs, Moyens de les détruire. Par G. Houlbert, Docteur ès Sciences. Paris: Alphonse Picard & Fils; New York: Dodd, Mead & Co. 1903. 8vo, pp. xxxviii, 269.

A sub-title states that this work embodies "recherches expérimentales sur les insectes qui nuisent aux livres et aux bibliothèques," and the preface explains that it is a prize essay on the subject covered by the title.

That a book of more than 300 pages can be produced dealing with insects that occur in libraries and feed on printed matter or the material enveloping it, seems passing strange, and yet the author has accomplished this feat. Sixty-seven species are enumerated, their life histories are fully detailed, and their particular influence upon the literature that comes under their notice is set forth. The beetles compose about half these troublesome pests, and many of them are old friends of our own—more or less cosmopolites in fact, occurring wherever their food occurs. Really, when we analyze the work as a whole, we find the great majority of these book-destroyers to be such as attack the materials of which the books are made under almost any other conditions. The roaches and the Lepismids will eat paste or starchy materials wherever they find them—on a nicely laundered shirt front or on the calendered leaves and bindings of books. The dermestid beetles will eat cloth and leather under all circumstances, and anything made of wood fibre is an attraction to the larvæ of certain little *Coleoptera*—genuine book-worms, in fact. We might, therefore, use very nearly the entire list of species in a handbook of insects troublesome in the household; only it is not realized that the librarian has to deal with these same pests, and that practically they are obnoxious to his entire stock, while the householder needs to watch only a comparatively small part of his.

"We see, then," the author states in his final summary, "how every part of a book is subject to their attack; it is forced upon us that, as the processes of deterioration vary, so must our methods of defence vary as well." And under a general head we have an enumeration of these methods of defence, while to the discussion of each individual species is appended a suggestion of how injury from it may be avoided. We are taught how books may be fumigated and disinfected, heated and frozen, how they should be kept to avoid attracting some insects, and what difficulties may be placed in the way of others. Excellent suggestions are made to papermakers, bookmakers, and binders; some feasible, others not so likely to win favor. Most of the insects discussed are illustrated, and it is a compliment to the United States Department of Agriculture that the figures from the publications of its Division of Entomology have been so generously copied.

The book is, on the whole, exceedingly well done. As its contents passed the scrutiny of a jury composed of well-known entomologists and librarians, securing the "Prix Marie Pellechet" as the best of twenty-three contestants, its general accuracy may be depended upon.

Four Leading New York Papers
On Charles Battell Loomis's
CHEERFUL AMERICANS*

The *Tribune* says: "The main point is that he is unaffectedly funny, that he devises his little plots with a light and sure hand, and entertains us from beginning to end." The *Times*, taking up this strain, says: "Best of all we like the tale of the young poet. . . . It is worthy of Frank Stockton." And the *Sun* says tersely: "Lots of cheery, good-natured yarns in 'Cheerful Americans.'" While the *Commercial Advertiser* says: "His opera-bouffe portrayals of American types, cheerful and otherwise, are distinctly enjoyable."

*With 24 Illustrations. 2d Impression. $1.25.

Important New Books for Libraries

The Drawings of the Florentine Painters

CLASSIFIED, CRITICISED AND STUDIED AS DOCUMENTS IN THE HISTORY AND APPRECIATION OF TUSCAN ART

By BERNHARD BERENSON

WITH A COPIOUS CATALOGUE RAISONNÉ AND ONE HUNDRED AND EIGHTY FACSIMILE ILLUSTRATIONS

Two Vols. Folio. $80.00 net

This Edition is limited to three hundred and fifty-five copies in all (one hundred and five for America and two hundred and fifty for Great Britain). The type has been distributed.

This is the first serious attempt at a study of the Florentine Drawings. Coming from such an eminent authority the quality and value of the work is not likely to be questioned.

Purchasers are urged to subscribe at once as a large part of the edition has already been taken.

Prospectus with specimen plate to be had on application.

The Arts in Early England

By G. BALDWIN BROWN, M.A.

PROFESSOR OF FINE ARTS IN THE UNIVERSITY OF EDINBURGH.

Two Vols. 8vo. Illustrated. $8.00 net

The first volume is on the life of Saxon England in its relation to the arts. The second deals with ecclesiastical architecture from the conversion of the Saxons to the Norman Conquest.

Isabella d'Este

Marchioness of Mantua, 1474-1539
A Study of the Renaissance

By JULIA CARTWRIGHT
(Mrs. Ady)

AUTHOR OF "BEATRICE D'ESTE," "MADAME," ETC

Illustrated. 2 Vols. $7.50 net

This is the first life of the greatest lady of the Renaissance. For forty years she made the little court of Mantua famous throughout the civilized world.

As a patron of art she saw the finest works of the Renaissance in the prime of their beauty. She came to Florence when Leonardo and Michelangelo were working side by side. At home Mantegno, Perugino, and Bellini sometimes failed to please her.

The immense amount of correspondence dealing with these matters, together with the material from the contemporary and modern authorities, is here brought together for the first time.

The Sculptures of the Parthenon

By A. S. MURRAY, LL.D., F.S.A.

KEEPER OF GREEK AND ROMAN ANTIQUITIES IN THE BRITISH MUSEUM

WITH NUMEROUS LARGE PHOTOGRAVURES AND OTHER ILLUSTRATIONS OF THE WHOLE REMAINS

4to. $6.50 net

NEW BOOKS OF REAL VALUE

AMERICAN TARIFF CONTROVERSIES IN THE NINETEENTH CENTURY

By Edward Stanwood

2 vols. Large Crown 8vo, $5.00, *net*. Postpaid $5.19.

The most thorough and comprehensive work on the tariff ever produced. Mr. Stanwood's earlier books have established his reputation as a writer on both the political and economic aspects of this subject. *(Ready Sept. 25)*

MY OWN STORY

By John T. Trowbridge

With many illustrations. Large Cr. 8vo. $2.50 *net*. Postage extra.

A delightful autobiography of the veteran story-writer and poet.

THE CLERK OF THE WOODS

By Bradford Torrey

$1.10 *net*. Postpaid, $1.20.

The record of a year in the woods and fields of New England.

AIDS TO THE STUDY OF DANTE

Compiled by Charles A. Dinsmore

Illustrated. Cr. 8vo. $1.50 *net*. Postpaid, $1.64.

A handbook of collateral reading for Dante students.

ESSAYS ON GREAT WRITERS

By Henry D. Sedgwick, Jr.

Crown 8vo, $1.50 *net*. *Postage extra.*

Nine essays distinguished by a remarkably fresh and vital note and dealing with great men of letters.

WITNESSES OF THE LIGHT

By Washington Gladden, D.D.

Illustrated. $1.25 *net*. *Postage extra.*

Clear and vivid biographical sketches of six great historical figures—Dante, Michelangelo, Ruskin and others. The book is the outcome of the Noble Lectures, delivered by Dr. Gladden at Harvard University last spring.

HOUGHTON, MIFFLIN & COMPANY, Boston and New York

Hon. JOHN HAY

writes as follows of Ridgely Torrence's new play:

"I have read 'El Dorado' with the greatest interest and pleasure. . . . It is very strong, both in poetic and dramatic qualities."

EL DORADO

A Tragedy

By RIDGELY TORRENCE

12mo. $1.25 net

Ready September 17. Orders for the first edition should be sent in at once

Mr. Torrence's stirring and beautiful play narrates in blank verse an incident in the story of the thirsty quest for the land of gold with its seven cities of Cibola. The hero, Don Coronado, who commands an expedition thither, is followed into the unknown territory by his lover, Beatrix, in disguise. Their fates are the subject of Mr. Torrence's Tragedy.

Send us your address on a postal card, and we will mail you, free, our new Fall List, Illustrated.

JOHN LANE, 67 Fifth Avenue, NEW YORK

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 17, 1903.

The Week.

While Postmaster-General Payne is explaining the removal of Miss Todd, President Roosevelt deals him a most unexpected blow by referring the Tulloch charges to Messrs. Bonaparte and Conrad, his special investigators, for a decision as to their correctness. Mr. Roosevelt is really very unkind; did not the Postmaster-General say months ago that the Tulloch charges were merely "hot air"? And did he not "dispose of them" at least six times, each time admitting that there was more truth in them than he previously conceded, while declining to apologize for his abuse of Mr. Tulloch? Things have, indeed, come to a pretty pass when the President declines to take the word of a Cabinet officer, particularly when he is such an authority on wind and air. And then there are Charles Emory Smith and Perry S. Heath, both most estimable gentlemen. Does not the President remember their indignation at Mr. Tulloch's audacity, and the character of their explanations? Really, this campaign against poor Mr. Payne is going too far. Here are the *Press* and *Tribune*, the leading Republican papers of this city, abusing him in the most outspoken language. What base ingratitude for his past services to the party and his readiness to turn States over to Senators!

The appointment of Charles J. Bonaparte of Baltimore to act as Government investigator of affairs in the Indian Territory will be warmly received on all sides. Mr. Bonaparte not only is a man of national prominence, but is a member of the Indian Rights Association, which recently preferred the charges against Government officials. It is, therefore, as if Secretary Hitchcock had gone to the critics and said, "I will name one of you to tell me the facts as to your own assertions." The Indian Rights Association can in no way take exception to such treatment, while the Indians themselves are to be congratulated upon the certainty of a just hearing which Mr. Bonaparte's appointment insures. The practice of calling upon some outsider of prominence to investigate irregularities for the Government is steadily growing. In Indian affairs the special examiner unconnected with any bureau or department is almost a familiar figure. Mr. Bonaparte himself has been probing into the postal scandals for the President. We might even see in the future the permanent appointment of such a man as travelling investigator, were it not that the value of these special investigators lies in the fact that they are fresh from their own professions, and free from the bias of office-holding.

The Pension Commissioner's annual report bids fair to be as melancholy reading as usual, if one may judge from the abstracts printed last week. Mr. Ware has brought out the pension iniquity more clearly than ever by showing that the Government has paid out $2,942,178,145 in the past thirty-eight years, of which five and one-half millions have already gone to "heroes" of our war with Spain. We must be thankful, as Mr. Ware doubtless is, that more than 200,000 claims were rejected last year, particularly as there were 226,002 new applications for Government aid. No less than 11,970 of these applications were from warriors of 1898 and 1899. Of these veterans 12,862 already have secured places on the pension roll in return for their patriotism—as many, doubtless, as were actually under fire at Santiago. Commissioner Ware makes two excellent suggestions for new laws—one that men convicted of infamous crimes shall be ineligible to receive a pension, and must forfeit it if they have one; he would also deny aid to women who married pensioners after they were receiving Government money. Both of these recommendations should have been on the statute-books fifty years ago. Mr. Ware also urges a new system of examining applicants for pensions, to be placed under the civil-service rules, which we applaud the more heartily since Mr. Ware has seemed on one or two occasions to drift away from a strict merit system in the administration of his office.

If, as is alleged in the Washington dispatches, the Secretary of the Treasury were to adopt a formal policy of "punishing" banks which reduce their note circulation, we should have a rather odd chapter in political economy opened. This country, having been a fruitful field for all sorts of monetary experiments, has tried at least half a dozen expedients for currency maintenance or expansion; but currency obtained by threats would, we believe, be a new contribution to the record. So far as we are aware, there are two motives for the recent retirement of circulating notes by national banks. One is the rise in price of Government bonds deposited as collateral on the issues; the other, extension by the Treasury of deposits of public moneys in the banks—deposits which have to be secured, unless under special dispensation, by these same Government bonds. The rise in price of "governments" invites the banks to sell them and get the profit; the offer of public funds invites them to transfer United States bonds from collateral against circulation to collateral against deposits. The odd part of this whole movement to retire the bonds on which circulation is now based is that the motives inducing it arise directly from the Treasury's own action. Not only does the extension of public deposits itself invite transfer of collateral from note circulation, but it also raises the price of Government bonds because of the demand created by banks which buy them to pledge against such deposits. The whole movement is a vicious circle; yet we do not see how the banks are to be blamed.

Senator Hoar, speaking at Salem, Mass., resuscitated the moribund Iowa idea, with a difference, however, for the originators of the idea have not committed themselves to times and seasons, whereas Senator Hoar is convinced that there is one, and only one, time to revise a tariff—namely, the year after a Republican President has been elected. In comparison with most Republican utterances on tariff revision, Senator Hoar's is refreshingly definite. It is, for example, better than the usual offer to reduce the schedules "when that will not cause uncertainty." Now the senior Senator from Massachusetts takes the robust view, and declares that this disqualifying "uncertainty" is removed every time a Republican President is elected. It is an admission for tariff reformers to cherish, for in all human probability "uncertainty" will thus be dissipated after the next Presidential election. At that time we shall not fail to remind Senator Hoar that the hour and the bridegroom have come. It should then be his especial care, since he alone knows tariff times and seasons, to wake the sleepers, brush the dust from the reciprocity treaties, and burnish the lamp of "reform of the tariff by its friends."

The St. Paul *Pioneer Press* affirms that Minnesota and the Northwest generally "are to-day almost unanimously in favor of tariff revision," and that the only way they can be held in line—that is, kept in the Republican column—is by the ratification of the Kasson reciprocity treaty and the offer of reciprocity to Canada. The latter step is the one which Minnesota particularly desires. She sees in her Northern neighbor a market for merchandise exports and for grain and lumber imports, both of which are now closed by an artificial barrier called the Dingley tariff. If this barrier were thrown down, both countries would be better off, but how shall the change be brought about, how shall the

Chinese wall be levelled? There are two ways. We can resume the sittings of the Joint Commission, which came to an end in 1899, and see if we can agree on a treaty. Failing that, we can repeal our own duties on grain and lumber. That will accomplish one-half of the end in view. Our purchases will be free, although our sales will still be handicapped. As it is now, we deprive American millers of a grist lying in their own vicinity, and American railways of a valuable freight, an American laborers of the wages they might earn by handling the crops of Manitoba. The only persons who gain by our tariff on wheat are the millers, railways, steamships, and wageworkers for foreign countries. We are glad to know that the people of Minnesota are becoming alive to the opportunities for trade with Canada which they might have enjoyed any time during the past quarter of a century if they had firmly demanded it.

Dispatches from Chicago affirm that an attempt will be made at Kansas City next week to oust Mr. Buchanan from the Presidency of the International Association of Structural Ironworkers, and put Sam Parks in his place. The difficulty of keeping Parks out of prison during the next two or three years seems to have presented itself to some of his admirers in Chicago, for later dispatches say that the Kansas City Convention will merely overrule Buchanan, and restore to the New York union (Local No. 2) the charter which Buchanan cancelled. Mr. R. G. Wall, who holds in Chicago the same relative position that Parks holds here, is quoted as saying that "Local No. 2 has not been guilty of any conduct contrary to the rules of their organization." This means that violating a written contract is not contrary to the rules of the organization. It means, also, that if Parks and Wall can have their way, the International Society will hereafter be based upon the principle of violating contracts at their own pleasure. Such is in fact the basis of the typographical union, as shown in the Spokane case. The disease is catching, but it cannot continue long without destroying the organizations attacked by it. Loyalty to the union cannot supersede for any considerable time allegiance to truth, fidelity, legality, and self-respect. There will always be a sufficient number of believers in common honesty to disrupt any organization based upon the denial of it. The Kansas City Convention next Monday can elect Sam Parks its President, or it can rescind Mr. Buchanan's action, but if it does either of these things, it will cut its own throat, as Local No. 2 has already done.

"An initiation fee" is the latest euphemism for blood-money. Sam Parks has been indicted again—the fifth time—for extortion. In December, the men on three large buildings on which the Tiffany Studios was doing work struck without warning. Their only reply to questions was, "See Sam Parks." Parks was an expensive person to see; indeed, he was the costliest thing on exhibition in this city last winter. He charged the Tiffany Studios $500, and when asked what the money was for, he answered, "It is in the nature of an initiation fee." The statement was exact so far as it went; the $500 certainly initiated the Tiffany Studios into the mystery of Sam Parks and his union. The encouraging thing about the present situation is that so many contractors are now coming forward to confess that they paid an exorbitant price for their knowledge; and that the accumulated experience and energy of the neophytes promises to terminate the public career of Parks.

When the Sunday sessions of the Central Federated Union of this city are chiefly given up to disciplining its constituent unions, one cannot fail to perceive that its authority is correspondingly waning. On the 13th instant, for example, it suspended the Blacksmiths' Union for promising an employers' association not to call sympathetic strikes. On this occasion the Central Federated Union propounded a very illuminating definition of the sympathetic strike, namely: when a union strikes to support another union's fight with capital, that is not in any obnoxious sense a sympathetic strike; but when a union strikes to support another union against a rival, that is a sympathetic strike, and illegal. In other words, as against capital all's fair in war; as between unions, a fair fight and no favors. The blacksmiths, who have been willing to fight fair in both cases, will, we imagine, lose little sleep over their suspension. Indeed, the Central Federated Union took occasion to emphasize its inanity on Sunday by memorializing the Hon. Jacob A. Cantor as the friend of labor, and by regretting his threatened withdrawal from the sphere of reform politics. That action pretty effectively prevents the remaining business of the meeting from being taken seriously.

More than two months have elapsed since the new law against the importation of adulterated food went into effect, and the first detention of a shipment of foreign product on this account was made only a fortnight ago. No one, of course, will construe this as meaning that there never was any danger of deleterious substances in imported foods and wines. Doubtless the same acuteness which led the Europeans to make truffles out of bits of silk and snails out of cattle's lungs deterred them from sending these delicacies to us when their detection became likely. Yet the almost daily reports of health officers in one State or another show how much greater is the need for a general pure food law at home. The articles for the table which we import are for the most part luxuries and in many cases beyond the reach of the average family. The impure products which we produce at home, on the other hand, are staple articles, and, whether actually harmful or not, defraud those least able to stand extra expense. Dairy and Food Commissioner Warren of Pennsylvania, for example, has just ordered thirty-six additional prosecutions against food and liquor dealers. Ice cream bought in a Philadelphia park contained boric acid. Strawberry preserves contained some strawberry seeds, but were composed mainly of coal tar dyes, starch, and glucose. Eight samples of sausage and Hamburg steak were well loaded with preservatives and aniline dyes. A quince jelly made in Baltimore was found to be compounded of glucose, starch, and pear juice. It is in just such a case that a national food law would be useful. As it is, if Maryland fails to suppress such products at the factory, their export goes on unchecked, and it is a hopeless task for the neighboring States to attempt stopping the sales at the retail grocery store.

As was expected, the Fusion Conference last week once more selected Seth Low to lead in the fight for good government in this city. Its action is, of course, not binding upon the bodies whose delegates made up the Conference, but probably foreshadows their ultimate decision. The Mayor can enter upon his third campaign with a good conscience. Every day the real significance of his Administration and the remarkable character of the work done by him and his heads of departments have become clearer and clearer. That the Mayor has erred or been deceived in some of his selections for office has been from time to time pointed out by friendly critics. But he has steadily grown stronger and more sure of himself; of better courage and with cleared perceptions of the people's needs and rights. He never appeared to better advantage than in the letters before the Conference. He was perfectly willing that Mr. Russell, one of his own Commissioners of Accounts, should oppose his nomination. As for the Conference, Mr. Low made it plain that it was free to act without the slightest reference to his own feelings. He subordinated himself to the cause, and announced his readiness to step aside, in language so manly and fitting as to call for especial commendation, as does his plea for the renomination of Mr. Grout and Mr. Fornes. His refusal to take seriously the charges of Mr. Rid-

der and his henchmen that he has been conspiring with President Roosevelt and Gov. Odell to run the city government in the interest of the Republican party, must make them feel exceedingly small.

Mr. Jerome's hostile attitude towards the renomination of Mayor Low is regrettable. So far as can be gathered, he is opposed to the Mayor's candidacy, not because he has any vital criticism to make of the Administration, but because he thinks that Mr. Low cannot win at the polls. In this he shares the views of Mr. Russell, the Commissioner of Accounts, and is directly opposed to Mr. R. Fulton Cutting's judgment, while his cue has been eagerly followed by the *Staats-Zeitung*, which now declares that it will oppose the return to power of Tammany Hall. No one of those who would see another candidate at the head of the Fusion forces, has any name to suggest. We do not believe that Mr. Jerome himself could point out any one, Democrat or Independent or Republican, whose reputation is so great or whose personality is so attractive as to give promise of a better run than Mr. Low would make. Were such a man in sight, it would have been the duty of the Fusion Conference to select him, precisely as Mayor Low suggested. Under existing circumstances Mr. Jerome and those who feel like him are imperilling the great cause by insisting on their personal predilections when they should be aiding it by presenting a united front to the common enemy.

The Beirut business is simmering down to its essentially insignificant proportions. At the joint request of France and the United States an efficient Vali has superseded a weak one. This has been effected, or rather expedited, by the presence of two United States cruisers in the harbor. It has not yet appeared that foreign Christians were in peril before the cruisers arrived, and the single riot of any importance took place only after their coming. So far as obtaining satisfaction for the attempt on our Vice-Consul's life was concerned, the presence of the cruisers in Turkish waters would have been sufficient, without sending them to Beirut. Mr. Roosevelt has had the satisfaction of making a somewhat sensational and apparently gratuitous display of force. In a sense, all's well that ends well, but the sober judgment of the people will hardly bear out the President in his hasty recourse to the high hand at a time when the Near Eastern question is critical. Apparently, the Christian community at Beirut was in none but the chronic uneasiness, and the time was ill-chosen to press old claims or collect old debts. The whole affair is an unwelcome illustration of that hot-headedness in all foreign negotiations which the President showed so signally during the recent Mantchurian pourparlers.

Mr. Chamberlain was undoubtedly prepared for hard knocks when he launched his fiscal scheme; its rejection by the Trades Union Congress at Leicester is a staggerer even beyond his anticipation. Only two of the union delegates were found to vote for the dear loaf and Imperial reciprocity. "Mischievous and dangerous" were the words of the resolution of condemnation. The incident suggests that when Mr. Chamberlain said that he was prepared to enter every cottage in England to prove that the corn tax would not increase the cost of living, he was rather describing the necessities of his campaign than using a figure of speech. Obviously, under trade-unionist roof-trees his work is all to do. Of course, the Leicester Congress was in favor of Government old-age pensions, and Mr. Chamberlain may get some sorry crumb of comfort out of labor's acquiescence in the spending part of his plan. The only consolation he gets for the free-trade resolutions of the Congress is the determination of the trade unionists to support a distinct Parliamentary labor party. Such action would reduce the Liberal strength, and may or may not run with Mr. Chamberlain's ultimate ambitions. Meanwhile the sturdy rejection of his protection nostrum by the people who have been reading his Birmingham circulars shows that the real progress of the preferential campaign has borne no relation to the noise with which it has been conducted. After this signal repudiation by organized labor, Mr. Chamberlain will surely see fit to cut his project down to an inoffensive minimum. And here, be it said, there is more peril than in the larger and more vulnerable scheme.

The inefficiency of the British universities and the illiberality of the British public towards institutions of learning were Sir Norman Lockyer's text in an address delivered last week before the British Association for the Advancement of Science. The speaker contrasted the number of richly endowed or State-supported universities of Germany and the United States with the handful of English colleges which languish without either private benefactions or Government aid. So serious seemed the emergency to the speaker that he advocated a Government fund for increasing the "brain power" of the nation, and suggested the immediate appropriation of £24,000,000—the amount of the naval budget for 1889-90—for new buildings and equipment for existing institutions. Such a suggestion would hardly get a hearing in Parliament, but the fact that it is made in all seriousness by a noted scientist reinforces the familiar criticism that in educational matters, and especially in technical instruction, England is many years behind the times. Of course, there is little likelihood that during Capt. Mahan's lifetime England will be willing to strike a budgetary equilibrium between "sea power" and "brain power," but it is possible that the Government may be forced into supporting at least one central school. For we are inclined, with Sir Norman Lockyer, to doubt if the American invasion is complete enough to have inculcated the American habit of lavish giving for educational purchases.

Diplomacy must evidently learn to distinguish a simple evacuation from an evacuation *à la Russe*. And the latter kind will bear examination. On October 8 next, Russia, in fulfilment of treaty obligations, is to evacuate Southern Mantchuria, making only the following conditions: Russia is to retain control of the military telegraph line—this probably authorizes the retention of the present military garrison; China shall not alienate, except to Russia, any of the restored territory. To this Russian Monroe Doctrine we may hardly object—in fact, we are at least nominally the gainers by the Russian stipulations, for when these go into effect we gain free entry at Mukden and Ta-tung-Kao. To be sure, Mukden is a river port remote from the Gulf of Liao-tung, and Ta-tung-Kao, on the Yalu estuary, is a fourth-rate haven at best and closed many months by the ice—but the granting of the two ports is a valuable strategic gain. When once the retiring Russian has thus yielded to the principle of the "open door," Secretary Hay will know how to ask for better ports, and should get them. Probably a Mantchurian traveller who should view the country before and after evacuation would be inclined to fall back upon the well-known proverb, "The more it changes, the more it's the same thing."

Whether the Agrarian element in the Prussian Landtag will again oppose successfully Emperor William's plan for a great interior waterway connecting the Rhine, the Weser, and the Elbe, at an expense of at least $60,000,000, remains to be seen. The Prussian Cabinet has determined to present the scheme once more. The opposition appears to be based upon the same arguments as those used by the enemies of the Erie, Oswego, and Champlain Canals in this State. The Prussian farmers are afraid that the canal will cost too must and will not benefit them when it is completed. The Government formerly acceded to this view to the extent of offering large tariff concessions to the Agrarian interests in return for the sanction of the canal project. The concessions were accepted, but the favorable vote was not forthcoming. The plan persists, however, and may meet better fortune.

TREASURY AND DEPOSIT BANKS.

Secretary Shaw's recent announcement that he would place two and a half millions of the Treasury surplus with the St. Louis banks, on collateral of high-grade securities double the value of the money deposited, attracts notice less from the nature of the step itself than from its possible serving as a precedent. Even in the latter aspect, it is more likely to excite curious conjecture than angry criticism. The case is this: St. Louis banks have advanced five or six million dollars to the projectors of next year's Exposition at that city. Since St. Louis is also one of the Western "reserve centres" from which small banks of the harvest States draw currency when the crops are moved, a double drain on the resources of the institutions was impending, which, in the prevalent scarcity of money, might be somewhat awkward. The Treasury, under the Secretary's recent interpretation of the statutes, is at liberty to transfer from Washington to depository banks money already collected through internal taxes. It has a considerable surplus of this sort. Therefore, it is proposed to select certain St. Louis banks as depositories, and to place Government money in their hands on the terms described. If the public surplus is to be located arbitrarily, such a disposition of it would appear to have something in its favor. It will probably be regarded by many people as no great stretch of authority beyond that assumed by the Secretary, for instance, on the frequent occasions when a serious money stringency at New York has been met by increasing public deposits with the banks of this city.

The novelty of Mr. Shaw's action arises more from the Secretary's assertion of his right to transfer money from the Treasury to the banks than from the fact that the Secretary selects the point where the money shall be placed. The theory hitherto adopted by Treasury administrators, when they increased public deposits in the banks, was that the Government was drawing to itself, through a redundant revenue, the circulating medium which the money market needed. To avert what might be an unpleasant outcome of this process, checks received in payment of internal revenue were collected by the banks. These institutions, after providing collateral of Government bonds, were allowed to retain the money, crediting the Government with so much in a deposit account, and then, by loaning the money out again, were able to keep it in circulation.

Now it was possible, theoretically at least, that this device might be so employed as to place in bank all the internal-revenue receipts, leaving the Treasury itself to collect nothing but the customs. Even so, however, the process would have been gradual; the banks would have been drawn upon for public expenditures, as the Exchequer draws on the Bank of England; and, in the main, the surplus money taken in taxes from a given market would have been left at the service of that market through the banks connected with it. The general circulation would not be changed. Thus analyzed, it will be seen that the practice hitherto adopted was something very different from the arrangement now proposed. These new deposits, and all which are made on a similar plan, will not necessarily be gradual; the money lies in the Treasury to-day, and may be moved to-day wherever the Secretary orders. This is quite true of the two and a half millions to be placed by the Treasury at St. Louis; hence that is not a case where the draining of a market through excessive taxes is averted. Nor is it, apparently, contemplated that the money deposited shall be utilized at will by the Treasury through drafts on the St. Louis banks against current expenditure. That it will, in due time, be "gradually recalled," the Secretary's announcement stipulates; but the real nature of the operation is pretty well indicated by the Secretary's further language, which describes it, not as a deposit of public funds, but as a "temporary loan."

In other words, we appear to have been brought to a situation where the entire surplus of the Treasury is in theory at a Secretary's disposal, to lend to such national banks as he chooses, and, inferentially, to withhold from such as he may choose. No interest is charged, but perfectly safe collateral is required. Not much discernment is needed to see that this is an unusual situation, which should be considered with caution. We have said that the use made by Secretary Shaw of his asserted powers in the case of the St. Louis banks, has arguments in its favor. We do not doubt that Mr. Shaw would, in his further use of the same power, do his best to serve public interests justly and impartially. He may, in fact, never assume the same arbitrary power again, except where the money is offered on equal terms to all national banks. But the power has been assumed and the precedent created; and, in our judgment, the power is one which no state is likely to grant deliberately to its finance ministers, and the precedent is one which might, under conceivable circumstances, be grossly abused. It is not at all difficult to picture the use which a crafty politician, in the Treasury on the eve of a campaign, might make of it. If such control over public funds, habitually exerted, did nothing else, it would infallibly revive the suspicions and accusations which surrounded the similar use of the Treasury's surplus moneys throughout the political struggles of the thirties.

The moral is, we should say, that no time ought to be lost in providing clearly and unmistakably, by statute, how and on what conditions, open to all national banks alike, the public surplus may be placed with depository institutions. The existing status has always been dangerous financially; but the Secretary's latest moves have made it dangerous politically. It would not be possible to carry very far the plan of removing blocks of money from the Treasury and lending it to a designated group of banks, without giving ample material for campaign literature for the Opposition. Nor would it help matters, in this respect, that the loan is made without interest, and in face of the fact that the representative body of New York financiers last winter advised that if the system of depositing national surplus should be enlarged, the Treasury should fix a charge for the use of it.

THE TYPO'S OATH.

The great International Typographical Union has been brought freshly before the bar of public opinion by an incident occurring at Beloit, Wisconsin. A Roman Catholic priest at that place has refused absolution to a printer because he had taken an oath which made his duties to the union superior to those which he owed to the Church and the Government. The oath to which members of the Typographical Union subscribe contains, among other pledges, an affirmation that "my fidelity to the union and my duties to the members thereof shall, in no sense, be interfered with by any allegiance that I may now or hereafter owe to any other organization, social, political, or religious, secret or otherwise."

The issue made by the Beloit priest has stirred both religious and labor circles, and seems likely to precipitate a crisis in the affairs of the International Typographical Union. It could hardly do otherwise, for if we are to give a literal interpretation to the words of the oath, it makes the allegiance of the members to their own organization superior to that which they owe to the Government of the United States as well as to the Catholic or any other church. That the drift of unionism is in that direction has been shown lately by the attempt of unions to expel members who serve in the militia, and also by the pretension of the Bookbinders' Union at Washington City that they can force President Roosevelt to discharge Foreman Miller from the Government employ because he has been expelled from that union. This attempt is still persisted in, and it has received the endorsement of the Central Federated Union at Washington City. The issue raised by the Beloit priest gives a new significance to the Miller case, for at bottom they rest upon the same foundation. Miller's discharge is asked because the rules of the union are superior, in the

eyes of its members, to the civil-service laws of the United States. That is the real issue, and it cannot be obscured by going back twenty years and finding that Miller's marriage at that time was irregular.

The position of the Roman Catholic Church on questions of this kind has never been doubtful. It has been at war with the Masonic order and all other secret societies from time immemorial, because those orders either claim an allegiance superior to the Church, or so conceal the terms of it as to make it doubtful which is the superior. The newspapers contain interviews with a number of prelates approving of the action of the Beloit priest. Bishop Scannell of Omaha says that no man can be a good member of the Roman Catholic Church who adheres to the typographical obligation, since the keeping of it would render all government, ecclesiastical or civil, impossible, and render null and void all courts of law. The clergyman temporarily in charge of the archbishopric of Milwaukee, to which the Beloit priest is attached, approves of the action of the latter. On the other hand, Mr. Jerome F. Healy, Secretary of Typographical Union No. 6 of this city, says in a published interview that he knows of nothing in the obligations of members of the union which would interfere with their duty to their churches. In other words, he thinks that the oath should be interpreted not strictly in accordance with its terms, but in a kind of Pickwickian sense. Recent events in another quarter have shown a tendency on the part of this union to take a broad view of its duties, and not to "stick in the bark" when its members are reminded of their legal obligations. The case of their broken contract with the *Spokesman-Review* newspaper of Spokane, Wash., is still unsettled, we believe.

The Roman Catholic Church refuses to take the terms of the typo's oath in a Pickwickian sense. How ought the public to look at it? In the interpretation of any instrument it must be assumed that the makers of it meant exactly what they said, and that the subscribers to it were in like manner intelligent and serious when they gave their pledge of obedience and fidelity. They promise that their duty to the union shall not be interfered with by any "allegiance" owed to any other "organization," social, political, or religious. The word allegiance means, first of all, duty to one's government, and it must have been used in this sense by the framers of the typo's oath. So the oath means that those who take it will not allow their duties to the municipality, the State, or the nation to interfere with their duties to the Typographical Union. This was the position taken by the Schenectady unions when they expelled the militia member for obeying the orders of his superior officer. It is the position taken by the Bookbinders' Union at Washington when they demanded the discharge of Foreman Miller. Before public opinion can sanction such a pretension it must first trample the love of country under foot, abandon government by the ballot-box, and substitute in its place government by walking delegates.

THE CASE OF MISS TODD.

The Sunday newspapers contained a statement, given out by Postmaster-General Payne, of his reasons for removing Miss Todd from the office of postmaster of Greenwood, Delaware. It begins by affirming that there is no law, rule, or regulation forbidding the removal of a fourth-class postmaster at any time, except an informal rule, adopted during the Administration of President McKinley, that an arbitrary removal should not be made until the incumbent had served four years. When Mr. Payne himself became the head of the Department, he says that he endeavored to prevent the removal of such postmasters even after they had served four years, but that "there was never such a rule formally adopted." The question arises here, What is a formal rule? Any public statement setting forth the principles by which a department is to be conducted falls under this definition. The "endeavor" which Mr. Payne says he made when he came into office, was couched in the following words, bearing date of February 14, 1902:

> "The policy of the Administration is not to make removals of fourth-class postmasters without cause. The removal of an officer is a proposition entirely different from the naming of a successor at the expiration of a postmaster's commission. It is therefore desired that removals be not made except for some good reason which affects the service, or at the request of a Senator or Representative endorsing the petition for such a change made by patrons of the office in question. In some sections of the country, notably in the South, not represented by Republican Representatives in Congress, these demands for changes in fourth-class post-offices are made, not for the good of the service, nor for any proper purpose, but to subserve the interests of rival factions."

Whether this rule be classed as formal or informal, the only reasons admissible under it for making removals are those which "affect the service," or the fact that a petition for a change has been made by patrons of the office, and supported in writing by a Senator or Representative.

How to bring Miss Todd's case within the terms of his own rule has evidently taxed Mr. Payne's ingenuity. In his statement to Miss Todd herself, in the presence of Senator Ball, he said that he had removed her because she was "particularly and personally obnoxious to Senator Allee." Upon this ground Mr. Payne rested his case for one week and until President Roosevelt called for a report upon it. It was not affirmed that Miss Todd had failed in any particular in discharging the duties of her office. There was no hint of a petition for a change from the patrons of the post-office. For seven days Mr. Payne's justification rested on the personal representation of Senator Allee that Miss Todd was particularly and personally obnoxious to him. Now, however, he has shifted his ground and advanced a charge that Miss Todd allowed her office to be made the headquarters of a political party, or a faction of a political party, and that she and her family were "the most active factors in a factional quarrel inside the Republican party."

That this charge has been trumped up since Miss Todd was removed is manifest, but even if it were true, it would not come within the rule which Mr. Payne prescribed for his own conduct. If Miss Todd allowed her office to be used as headquarters for a political faction working against another faction inside of the Republican party, and if she was an active member thereof, those facts should have been signified by a petition from patrons of the office, endorsed by a Senator. Then there would have been a basis for action under the rule applicable to such cases. It would naturally have occurred to a fair-minded person having the decision of the case, to acquaint Miss Todd with the charge against her and hear her defence, if she had any. A country post-office is usually too small an apartment for political meetings, and the postmaster is usually too busy sorting and delivering the mail to listen to the chatter of people waiting for their letters on the other side of the boxes. If some of these persons are talking politics they have a right to do so, and there is no way for the postmaster to prevent them. The country post-office is usually the headquarters of the social, religious, and business gossip, as well as political gossip, of the town, and he would be a bold and unpopular postmaster who should seek to set limits to it.

But, it is said, Miss Todd and her family were the most active factors in a factional quarrel inside the Republican party. Miss Todd is not a voter, and the Delaware newspapers say that she has never meddled with politics. Very likely she has her opinions of J. Edward Addicks and his henchman, Senator Allee—she would not be the reputable member of society that she is if she were indifferent to the debauchery which Addicks has introduced into the politics of the State; but no evidence of her activity in politics had been presented or even thought of before now. What her relatives may have done is perfectly immaterial. She has no family of her own and she cannot be held responsible for the others. The fact that they are introduced in Mr. Payne's statement shows that he has no good case against herself.

Finally, Mr. Payne falls back on his oft-repeated assumption that he must treat all Senators alike, and that Sen-

ator Allee stands on the same footing as Senator Hoar. So he does if we allow that there is no difference between right and wrong.

THE M'CLELLAND APPOINTMENT.

The facts surrounding President Roosevelt's offer to appoint Senator Charles P. McClelland a member of the Board of General Appraisers are now fairly established. The offer was made a couple of months ago, considered by Mr. McClelland, and, in spite of many protests, finally accepted. This involves his retirement from the State Senate a year before the expiration of his term, but, so far as we are aware, he has not yet sent his resignation to the Governor. Neither has he been formally appointed. The offer never should have been made. Having been suggested by the President, it ought to have been indignantly declined by Senator McClelland unless he is willing to became the pawn of his own party's enemies in a political game. Moreover, we hold that, although the steps preliminary to the appointment have been taken, it never ought to be carried out. Mr. McClelland is still free to withdraw his acceptance, and President Roosevelt still has time to save himself from the charge of assisting in a new "rape of the Senate." If Mr. Roosevelt wants precedent for it, he need go no further than the history of his own State Administration, in the case of the unspeakable Plimley, who was far nearer appointment than McClelland, but who is still reposing in the grateful obscurity of private life.

Briefly stated, the appointment of McClelland is the crucial part of a scheme to hand back the control of the State Senate to Platt. We are prepared to hear that the President is innocent of any such design. We do not know whether he is or not. It is not for us to say what his motives are; we deal only with his acts. And in this case his act is the first of a series, carefully planned, which will reëstablish Platt's domination at Albany, unless the scheme breaks down somewhere. Platt's control of the Assembly was as strong as ever last year. In all human probability it will be unshaken this winter. The holdover Senate, however, consists of twenty-eight Republicans and twenty-two Democrats. Three of the Republicans, Senators Elsberg, Brackett, and Brown, have taken their stand irrevocably against Platt. They refused to vote for his candidate for floor leader. They supported Elihu Root instead of Platt for United States Senator. In short, from the moment the session began they declined to "take orders" from the Boss, and until final adjournment exercised their own individual judgment upon each legislative problem as it presented itself.

Platt domination was impossible under these circumstances. Small schemes which he and his henchmen were accustomed to slip quietly through the Legislature on the plea that "the Old Man wants it," could no longer be whispered to passage. As they could not be defended openly, they all failed. The situation was bitterly annoying to Platt and to all accustomed to employ his intimates as legislative brokers. It resulted in some scandal, too, since "dealing with individuals," as the dispatches described the new process of securing legislation of a well understood kind, occasioned inevitable talk in the newspapers and elsewhere. But when the Legislature adjourned and the enacted statutes were examined, it was found that one year's emancipation from slavery to Platt had resulted in vast benefit to the State. "Jamming through" had been impossible. Not a single bad bill against which public opinion had expressed itself clearly, found its way into the session laws of 1903.

Seeking escape from these baffling conditions, Platt chose as his aids Roosevelt and McClelland. McClelland, a Democrat, had been elected Senator by a narrow plurality in a district which went Republican in 1900 by more than 3,000. Circumstances surrounding the defeat of the Republican candidate led to the belief that it would not be repeated if a special election could be held in 1903. How to get McClelland out then became the problem. Col Jewell, one of the Democratic members of the Board of General Appraisers, had just retired. The law required that he be succeeded by a Democrat. The place is one of great responsibility, is practically a life position, and the salary is ample. As a ready excuse for the President there was the fact that McClelland was once a Deputy Collector of the Port, and that as an attorney his practice had been largely around the Custom House and before the Appraisers' Board. The fly was cast temptingly in the Senator's direction, and he rose to it with eagerness.

The Constitution of New York has done all in its power to prevent scandals like this within the State. No member of the Legislature can be lured from the performance of the duties intrusted to him by means of any appointment within the gift of the State or any of its municipal divisions, for such appointments are prohibited. Correlatively, State and local offices cannot be used for the purpose of juggling with the Legislature. But the State has no power in its fundamental law or statutes to protect itself if the Federal Executive chooses to engage in this sort of manipulation. Public opinion has done what it could to erect a barrier, but the State must still chiefly depend for safety from attacks of this sort upon the faithfulness of the legislator and the conscience of the Federal appointing power. If both fail, the State is helpless, but an outraged public will sooner or later have its reckoning.

THE SITUATION ON THE ISTHMUS.

Dispatches from Bogota inform us that the Committee of the Colombian Senate having charge of the Isthmian Canal question have reported a project for a new treaty with the United States whose leading features are these:

"First—The United States to pay to Colombia $20,000,000 outright for the privileges specified in the Hay-Herran treaty, with the exception that Colombia shall retain absolute sovereignty over the canal zone, including the administration of the law.

"Second—The United States to pay to Colombia an annuity of $400,000, to be increased 25 per cent. at the end of each century.

"Third—The new Panama Canal Company to pay to Colombia $10,000,000 for the privilege of selling its concession to a foreign Power, this privilege not having been granted thus far by Colombia.

"Fourth—The reversion of the Panama Railroad to Colombia."

It is a safe prediction that none of these terms will be conceded by the United States. They will be refused by the Executive branch of our Government. They are so far beyond the limits of reason that they could not command 10 per cent. of the votes of either branch of Congress. But the inevitable question recurs, "What next?" Shall we take up the Nicaraguan route, or wait awhile, and see what consequences follow this dashing of hopes on the isthmus itself?

It has been shown that if a revolution should break out in Panama, it would be almost certain to interrupt the operation of the transit railway, and that it would then be a duty as well as a public necessity for us to land a force sufficient to restore order. We are authorized by treaty to do so. We are accustomed to take such action when war or rioting occurs there. We have exercised this right, or rather have performed this duty, once within the past twelvemonth. After restoring order it would be incumbent on us to restore the territory to the Chief Executive of Colombia, who happens to be the man who signed the treaty which the Colombian Senate rejected. What he would do next we need not anticipate. If he should deem the building of the interoceanic canal his chief duty and the greatest interest of his own country, he would probably find means, with the backing of the French Company and the moral support of the United States, to bring about that result. It is a trenchant fact also that we shall be released, on the 22d of September, from the payment of the $10,000,000 bonus if the treaty is not ratified meanwhile. The money will be in the Treasury of the United States subject to the disposal of Congress. It will be available as a payment to Panama if a new government should be established there, and it would go far to strengthen such a government.

But, however much we may desire to forward the work of opening water communication between the oceans, we can neither incite a revolution on the isthmus nor take part in it. Nor can we do less than execute our own neutrality law if armed expeditions should be fitted out on our shores for the purpose of aiding such a revolt. Important as the canal enterprise is, the moral standing of the nation is still more so. We must use only lawful means and we must bide our time. Probably the sellers of the canal will provide all the disturbance that is needed on the isthmus. They have sufficient provocation in the new demand formulated at Bogota that they shall pay $10,000,000 for the privilege of selling their property to us. This demand, calling for one-fourth of the purchase money, is little better than blackmail. We are very sure that it would not be allowed, even if we should consent to the fresh demands upon our treasury. It will, however, be strongly resented at Paris, and will doubtless prompt the company to appeal to the local authorities at Colon and Panama to take steps to protect them against such ruinous extortion.

The advocates of the Nicaragua route are insisting that President Roosevelt shall proceed immediately after the expiration of the time for ratification of the treaty to negotiate with Nicaragua and Costa Rica. The Memphis *Commercial-Appeal*, for example, makes the demand that he take this step without waiting for future action of Congress. That discerning sheet has strong suspicions of the motives of those who think that it would be advisable to wait a few weeks and see what view Congress may take of the new and unexpected situation. It has no doubt that this suggestion of delay "is born of a desire to obstruct the project," meaning the project of any canal. It hints at a mysterious influence, doubtless the Pacific railroads, controlling and directing the opposition to the Nicaraguan route. This is not worth notice, but it is safe to say that Congress will never find fault with a President who waits to get further instructions from it in an unexpected emergency involving such vast national and international interests.

THE RISING IN THE BALKANS.

Bulgaria has added another to many protests against Turkish atrocities in Macedonia, and this time the appeal to the Powers is accompanied by the intimation that if they will not, Bulgaria will come to the rescue of the tortured population across her borders. A few days will tell how serious that promise of intervention is; meanwhile it justifies technically, at least, the desperate campaign which the *komitajis* of Macedonia have been waging for six weeks past. For the object of that hopeless warfare against the Turks has not been immediate success; Boris Sarafof and his comrades know well that their bands will speedily be cut to pieces or driven back to the mountains. But these partisan leaders hope meanwhile to provoke the Turkish soldiery to such inhuman outrage that Christian Europe shall, for very indignation, intervene. And there are, indeed, indications that the comparatively feeble Balkan States may undertake an enterprise before which the Great Powers quail.

Only upon this theory of a campaign of provocation are the events of the past few weeks explicable, for the insurgents have been the losers in departing from their guerrilla tactics and fighting in companies or battalions. But this policy, though it has cost the lives of some thousands of revolutionaries in the Monastir district alone, has apparently effected its purpose. It has brought an army of Turks into the centre of revolt, and has subjected that region to so horrible a campaign of reprisals that Bulgaria at least seems ready to fight against overwhelming odds on the chance of putting a stop to the dreadful business. Meanwhile, the Muslims have been still further irritated by alarming but ineffectual attempts to blow up railroads and public buildings with dynamite. Shocking as the policy of provocation deliberately adopted by the Macedonian Committee must seem, it contains their only hope. Under Turkish rule there is neither peace nor safety. Successive programmes of reforms solemnly drawn by the European Concert have been disregarded from the moment of publication. No native Christian of the peasant class is able to say that to-morrow his goods, his cattle, his children, or his wife will surely be his own. Bulgarian emissaries tell him that across the border in the new states torn from the Porte life and property are safe, and a good woman's honor. It is the desire for these elementary rights and the despair of getting them from the Turkish tyrants that make a revolutionist out of the shepherd or ploughman. For years past the committees supported from Bulgaria have supplied schoolmasters, missionaries, and rifles, and these agencies have been almost equally efficacious in building up a new Bulgaria out of many races, and in creating a small but brave force, composed of mere handfuls of men, who should, between the winter season and that of work in the fields, harass the Turkish garrison, the prosperous Greek minority, and all the enemies of the Bulgaria idea.

But the present revolt differs in important respects from these perennial disorders. In the first days of last August, a full month before harvest and the annual outbreak, regular military operations were begun by the revolutionists in the vilayet of Monastir. The capture of the little city of Krushevo by the Macedonians, its recapture by the Turks, and the massacre of its inhabitants, are the latest additions to the bloody chronicles of the Turkish empire in Europe. The taking of Krushevo was the signal for a series of operations in the Monastir region. In general this has been the only part of Macedonia in which the insurgents have made a consistent campaign and have won substantial successes. The details of the small fights of the past few weeks are of inextricable perplexity. The dispatches frequently have set both geography and probability at defiance. Suffice it to say that until the middle of August the insurgents had very much their own way, that after that time the Turks were reinforced and began a campaign of extermination, and that between the two parties more than one hundred villages have been destroyed in the region between Ochrida and Kastoria—the centre of the revolt. It is as unlikely that 65,000 people—one of the higher estimates—have been killed during this campaign as it is that the revolutionists have ever been in a position to lose 1,000 men in a single battle—one of the wilder reports; but the simple truth would be heart-rending enough. Many thousands of non-combatants have been ruthlessly slain, many more have been driven from the pillaged fields to the forests and mountains, to probable starvation, and the worst instances of unspeakable brutalities to women and children are confirmed by a Russian representative, M. Mandelstamm, who was sent there for the purpose of making out the best possible case for the Turks. In a sense the revolution about Monastir has been crushed out, but men who have lost their possessions and their families are rather more than less inclined to continue the feud against those to whom that loss is due. Furthermore, the reports of the outrages in the Monastir zone are ably doing the work of revolution, while the revolutionists themselves are driven back to their original condition as isolated guerrilla bands.

Minor features of the rising may be thus summarized. To the east, between Adrianople and the Black Sea, the revolutionists celebrated the advent of the Russian fleet, August 19, by burning a score of villages, destroying lighthouses and the like. The revolt was more or less of a surprise; it was dangerously near the Bulgarian border, and the Porte has taken vigorous and apparently successful measures of repression. About Uskub, in Old Servia, the Turks have been active in persecution, although revolutionary activity has been slight in that region. These acts of oppression are in irritating proximity to the co-religionists of the sufferers in Servia and Bulgaria. An apparently unsuccessful attempt to transfer the revolt begun about Monastir to the valley of the Struma above Demir Hissar might be-

come important in case of Bulgarian intervention, for the Struma is one of two main routes across the Bulgarian frontier.

One way or the other, the fate of the revolution will soon be settled. The Powers of Europe have given the Sultan a free hand, with all that that implies. His policy is to do the work of proscription so swiftly that the neighboring states will have neither time nor courage to interfere. The plan of the Macedonian revolutionaries is, contrariwise, merely to prolong the struggle until help comes from outside. Bulgaria appears to be on the verge of a decision. Should she bravely decide to become the open ally of the revolution she has covertly brought about, a new set of problems would arise. The Powers would try to isolate the war as they did unsuccessfully with the Balkan Confederation in 1876 and successfully with the inglorious Greek war of 1897. Should they again succeed in boxing up a war in the Levant, the Near Eastern question would be merely postponed, not settled. Settled it cannot be until the Ottoman garrison is finally expelled from Europe.

ACROSS THE SIERRA MADRE IN DURANGO.

MEXICO, 1903.

It was the time of the plague in Mazatlán. All Sinaloa was in a state of subdued excitement and fear. Rumors of fresh outbreaks of the dread malady were spread by every courier, and the frightened people put up new crosses in their houses, and pasted on their doors printed prayers for deliverance from the past. The State of Durango closed her gates against Sinaloa—that is, she established rigid quarantine on every road leading in from the stricken State, and communication with the western coast was severed. The natural route of travel from west Durango, by way of Culiacan and Altata, to the north being barred, there remained only the alternative of two mule trails over the Sierra Madre to the central plateau. One was relatively short, but beset with difficulties. The other was an ancient highway, arduous enough, as it turned out, but leading always where food and water could be had.

The start was not propitious. Heavy clouds hung over the serrated mountains. The air was sultry; and this in January, in a land of unflecked sapphire skies, was a phenomenon that caused the *mozos* to cast uneasy glances toward the line of peaks that marked the eastern limit of Sinaloa. The road followed closely the Humaya River; and following a stream in Mexico means to be in it a large part of the time. It is usually one extreme or the other—either floundering through water to the dismay of mud-hens, cormorants, and stone-chats, or scrambling over ridges amidst rocks and dust, brushing against bearded *pitayas* or other merciless cacti, and dodging thorny acacias that overhang the way. How utterly my little white Barbary steed detested it all! He was a creature of the plains, never happier than when rounding up cattle, steady as a rock when he braced himself for the shock of a lassoed steer; but he groaned over the irregularities of these mountain roads, and if there was a *chalote* hole within reach he was certain to have a foot caught in it. These little gophers were only a cause of torture to him, but to the dusky Indian, who knows every secret of the hills, they often render a peculiar service. If there is anywhere a bit of ferruginous soil, the *chalote* will infallibly choose it for his burrow, and so reveals many a hidden capping of a metalliferous vein. The ores of this region quite generally present no conspicuous indications on the surface. They seldom exist in the harder rocks which, resisting denudation, form the saw-toothed ridges and cañon walls that tower above the water courses. It is not an attractive country for the prospector, but the man who knows how to win his way to the native's heart will find that the land has been searched by keen eyes possessed of a sort of second sight in finding minerals. Taught by the experience of others who have been defrauded of their rights, the mountaineer discovers his treasures only to conceal them again. In every *jacal* are samples of ore. Ask where they came from, and the master of the house puts a stop to further discussion with that universal Mexican interrogation, "Quien sabe?" If he should offer to show you the vein, beware! He will show you the wrong one, unless you have truly made him your friend beforehand. You will lose less time with such a one as that old Indian of Tabahueto who summed up his ambition in the words, "Soy esperando la muerte." Satisfied with life, awaiting death—for the phrase will bear no pessimistic interpretation—this is the peaceful state of the great majority of the dwellers in these hills. Against such imperturbable contentment there is neither argument nor persuasion. If they possess some of the instincts of the miner, they are nevertheless essentially ranchers and agriculturists.

At San Jorge de Norotal is an example embodying all that makes life worth living at its best in these mountain fastnesses. The road turns off from the Humaya River into a wild *quebrada*, mounts high among the sharpened pinnacles, winds around dizzy precipices, plunges again into a deep gorge where pools of crystalline, beryl-tinted waters lie half hidden in grottoes worn into the cliffs. It wanders from one side of the water course to the other under great wild-fig trees, and climbs on toward the springs where the stream takes its rise. In this semi-arid country men seek the source of the waters to make their homes. Presently signs of human activity appear—walled fields where the corn has recently been harvested and the beans are ripe; and just beyond lies the ranch of San Jorge, a cluster of tile-roofed adobe houses, one above the other on stone-walled terraces, embowered in orange trees ablaze with yellow fruit, while high above on the steep mountainsides are fields of stiff, grayish-green mezcal plants extending up to the oaks and pines that cap the summits. Down in the arroyo are patches of brilliant sugar cane, and groves of *guayabas* sending up a perfume from ripening fruit, and everywhere the wide-spreading domes of stately *papayas* lift themselves above the surrounding vegetation. Here also are glossy mangoes, and *aguacates* (alligator pears). On the terrace walls bloomed roses, pinks, balsams, and violets, while the hanging gardens, if those curious Mexican garden plots on stilts may be so called, were resplendent with hollyhocks, here more euphoniously termed the *flor de San José*. Don Pedro Angulo stood on the great porch wrapped in a purple zarape with black stripes, a peaked straw hat on his head, and *guaraches* on his feet, just such sandals as had been worn by a long line of ancestors stretching back to the days of Abd-er-Rahman. What courtesy there was in his greeting, and what dignity! He had the air of a baron, of a man used to authority and ease. On every side were evidences of rural abundance. His granaries were filled with corn; he had stores of sugar and honey; cheese and milk and fruits were plenty. His corral was full of mules and cattle; pigs and chickens were ubiquitous. He showed with pride his *trapiche*, a great home-made sugar mill, and two huge coffee kettles for boiling down the cane juice; and farther up the arroyo, past a stream of sparkling water, he led to the mezcal still, an ingenious backwoods contrivance for making fiery liquor from the plant which is at once a financial boon and a moral curse to Mexico. The still consisted of a copper kettle, set over a fire-box, having a wooden cover with a hole in the centre, from which a wooden pipe conducted the vapors to an inverted kettle cooled by a stream of water trickling over it, a double system of troughs serving to keep the water separate from the distilled liquor. The mezcal is cut at seven years of age, the long sabre-like leaves severed close to the trunk, and these fibrous pulpy trunks, called *cabezas* (heads), are packed in alternate layers with dry wood in a pit dug in the earth. The wood is kindled, and the mass allowed to smoulder for some days (after the manner of making pit charcoal), when the fire is quenched, the heads macerated and fermented, and the ferment distilled. By this method fifty heads of mezcal yield three barrels of twenty gallons each of a clear white liquor, worth $20 Mexican silver per barrel at the ranch.

From his mezcal and cattle, his sugar and cheese, this mountain baron derives an income which renders him independent, and sustains a half-dozen dependent families and a retinue of servants, male and female. But, with all his rural comforts, he lived on a plane no better than his *peones;* his palate was familiar chiefly with tortillas and beans; he had no books, no newspapers; the outer world and its stirring affairs were all unknown; he had no conception of the use or management of a common kerosene lamp which was tendered as a gift; and his poor bedridden wife was afraid of simple remedies which were offered to relieve her suffering. The old woman lay in the best room in the house, which was a dark cavern with rough adobe walls, having only one little barred window, two feet square, near the ceiling, draped with cotton print to exclude whatever health-giving light and air might have tried to enter. Five home-made chests, some clothes on the wall, and three cots, were the only furnishings; and in this dismal prison the wretched creature had lain for three long years.

The cheery song of a wren (*saltapadero*) on the adobe wall overhead ushered in a

new day with promise of fair weather after the rain, and our party was soon on the road winding up the arroyo towards the pine woods. Peones were shelling corn into a square *trocha*, made of canes, screening it through an *ixtle* sieve, as we passed the last *jacal* of the settlement. The floods still poured down the narrow defile, washing the rocks overgrown with rich green vines, whose hidden recurved thorns aptly entitled it to the native name of *diente de culebra* (snake's-tooth). Semi-tropical plants soon gave way to oaks, the young plants everywhere covered with compact woolly balls of a pink hue, called *borrego de encina*. Above the oaks came the pines, still mingled with hardwoods, for the altitude was not great, and in a short distance the summit was passed, the road leading down through mezcal fields to another ranch, notable for its gorgeous flowers, giant daturas with thousands of white pendent bells, and flaming poinsettias, by the Mexicans not inappropriately associated with Christmas eve in the name of *Nochebuena*. Here again were spacious houses, set upon walled terraces devoted to blooming plants. Here were fruits in abundance, and cane fields, laboriously irrigated by sweeps lifting leathern bags of water to troughs leading to the ditches.

There is an indefinable charm in this simple life, in the rude makeshifts by which men manage to achieve comfort in these remote wildernesses, setting up standards of thrift and industry and leisure at variance with those of the rest of the world, yet compatible with a peace and contentment that others, born in what we choose to call more favored circumstances, in certain moods might envy.

From these elevated ranches three days of difficult travel down the Norotal and Siánori valleys led to Tamazula. The distance was short, but the rivers were in full flood. The cañon was a wild, seething mass of water; and after an adventure in a dangerous ford, where one of the party barely escaped death by drowning, we retreated to a camping-ground to await the subsidence of the stream. From this dilemma a benevolent rancher extricated us, offering to serve as guide over an obscure and roundabout trail through the Sierra. With implicit faith we followed; the very name of our deliverer, Celestino Niebla, being a good omen for those needing some one to lead them out of the wilderness. It was a wild ride, among the pinnacles and domes of lofty mountains, along dangerous cliffs and over perilous *lajas*, where the smooth, slippery stones slanted towards the edges of precipices at appalling angles. The views were stupendous, embracing thousands of square miles of jagged mountain and rolling plain, stretching into the distant blue towards the Pacific Ocean. Finally, from the edge of a mighty cliff, we could look straight down upon the Tamazula River, with the little town of Aguas Calientes so far below that it resembled a toy village more than the abiding-place of men. After two days' additional travel, we were once more under this cliff, looking up from the village plaza at that goat's path where it seemed almost incredible that any horse could have passed in safety.

Tamazula is the most considerable town of western Durango, belonging geographically to Sinaloa, but by some political freak linked with the destinies of a state of the central plateau. It was an important Indian town before the days of the Conquest, and it can never be forgotten in Mexican history as the birthplace of that distinguished patriot Juan Felix Fernandez, better known as Victoria Guadalupe, first President of the Republic. Its ancient church bears witness to the energy of early missionaries and to the devotion of generations of zealots. It is full of treasures—gorgeous braided *casuyos*, and stoles embroidered in silver and gold, handed down through a long succession of priests. Its copy of the famous *tilma* of Our Lady of Guadalupe, painted in 1776, bears the mark of a master hand, and the massive silver frame is a superb example of the silversmith's art. The vestry is peculiarly rich in specimens of that curious folded linen work (*encarrujado*), in which the Mexican women reveal a skill and taste as remarkable as in their better-known "drawn work." The crusade against the public spitter has also reached Tamazula, where the *cura* exhorts the worshippers to cultivate neatness, posting on the church door in rude rhyme,

> "Ama el aseo del templo,
> Pues en el un Dios habita.
> De escupir al suelo evita,
> Dando de este modo ejemplo."

The old highway from Culiacan to the City of Durango passes through Tamazula. A few leagues above the town it takes chances with the floods in the great Quebrada or cañon of the Tamazula River, one of the wildest, most picturesque, and most dangerous gorges in western Mexico. As the stream reels from side to side between its crowding walls, the road makes counter loops, crossing and recrossing, until the effort to keep dry becomes too painful, and the traveller allows his legs to hang down and be drenched. In the narrower portions of the cañon the road deliberately follows the bed of the stream, and many a death-cry has sounded above the floods between these beetling precipices. From the entrance to the Quebrada to the junction with the Canelas arroyo, a distance of about fifty miles, there are two hundred and thirty-five fords across the Tamazula River.

Canelas arroyo is short but steep, and booming with cataracts. Near its head the mountains swing in a semi-circle of magnificent precipices around an extensive mesa, cleft in the middle by a gorge, on the edge of which clusters the most unique town in western Mexico. From any direction the entrance to this little city of Canelas is through winding lanes, walled with stones now green with moss. Beyond the walls are visions of beautiful gardens, with beds of lettuce and onions, *garbanzos*, *chiles*, squashes, and cabbage, with groves of orange and lime trees, apples, pears, peaches, luxuriant bananas, and papaws with their melon-shaped fruit clustering around the stems up to their very crowns. The walls are often overrun with brilliant nasturtiums and rich-foliaged gourds. To the delight of these beautiful gardens is added the charm of rippling waters, which flash across the lanes and sing through the orange groves, making the air musical wherever one turns. The buildings are quaint, and suggestive of infinite romance, of mysteries, of dark conspiracies and sunny loves. They seem to have jostled each other rudely before coming to settled peace, so that each one defies the lines which its neighbor tried to establish for a street. Balconies reach out from under the eaves of the peaked tile roofs; *miradas* break the sides of the structures into fascinating retreats where one may see and remain unseen; stairways are indifferent whether they run up on the inner or outer walls; and narrow alleys wriggle between the houses, dodge under arches, and lead to pleasant intimacies with pretty patios, or dusty rambling corrals, or verdant gardens with their limpid laughter of sparkling rivulets. The plaza was choked in its growth to a pitiful half acre, but it puts on a gay bravado of glowing bloom, and smiles up at one of the most picturesque churches imaginable, which developed in gables and wings as defiant of geometrical symmetry as the streets themselves. Only the tower grew into stately, well-proportioned dignity, with a belfry whose big bronze bell peals in solemn disdain of the jangle from the little bells in the belfries that sprung erratically out from the churchyard walls. Canelas may not be a paradise, but it is one of the loveliest spots in the world, a place of surpassing beauty, perfectly salubrious, the meeting-point of all climes. Her broad wheat fields lie green side by side with sugar cane, and the fruits of the tropics grow luxuriantly in the same gardens with those of northern latitudes. Grim pines on the mountains, with their feet in the snow, look down upon banana orchards only a mile away.

It was a severe change passing from these balmy airs to the icy Sierra. The change in the character of the country was also startling. The rugged hills, the towering cliffs, the dimly lighted cañons, all were past. These belong to the deeply eroded western fringe of the great mountains. The Sierra proper was only a vast rolling plain overgrown with lofty pines and massive hemlocks. Now and then the scenery was diversified by a low range of hills, or a gorge cutting back toward the continental divide. Provisions became scarce, for the settlements were far apart, and the people mostly existing in miserable poverty. At Llano Grande was some evidence of prosperity, shown chiefly in an *atajo* or band of splendid cargo mules. The ranch itself possessed the appearance of a Siberian penal station; the houses of logs, with hemlock shingles held down with heavy stones instead of nails. A high stockade of pine poles surrounded the gloomy structures. Indoors was a total absence of common comforts. There were no chairs, nor a single bed. A room filled with corn had to be cleared out to provide us with quarters, where we rolled up in blankets on the cold floor to pass the night.

Beyond Llano Grande conditions grew worse. Chickens and eggs and milk were not to be thought of. Except for squirrels and red-winged flickers which we shot, we should have had but little meat. The most difficult problem was to find corn and fodder for the animals. At Ciénaga a poor woman, living in a squalid log hut, with a half-witted boy and a shrinking little girl, after answering every request for provisions with a drawling "No hay," confessed to the ownership of fifteen bundles of fodder, only half enough for our famishing mules, and she could be persuaded to sell eight of these only at an exorbitant price, offering as her excuse that other travellers

might come, and she would have nothing to give them! It thus became necessary to shorten each day's journey to afford the animals a chance to graze. It was monotonous travelling, the road winding league after league through the giant woods, with seldom an opening, save where some boggy savanna gave rise to a stream. Occasionally the solitude was broken by trains of cargo-mules laboring toward the mines of Topia or San Andrés de la Sierra. For a few minutes the wild cries of the *arrieros*, "ú pale!" "acho!" and their sharp yells and piercing whistle, would resound through the forest, and then only the soughing of the wind through the pine needles would disturb the solemn stillness.

The highest point on the road is reached at Camellones, said to be ten thousand feet above the sea, a wretched ranch, surrounded by fields walled in by cliffs of sandstone sculptured into fantastic forms. The master of the place is a son of a once famous bandit, who still practises his father's art in a modified form, the trick being to secrete a mule and await the proffer of a reward for "finding" it. The trick in this instance failed to work, and came near landing the rascal in the merciless hands of the *rurales*, the Mexican gendarmerie.

It was interesting to observe how the vegetation gradually changed as the great plateau was approached. The hemlocks disappeared, the cedars grew less, the tall pines gave way to scrubby species and to one form like the umbrella pine of Italy. Madroños with their red-flushed branches, and thickets of manzanillas became abundant. Tunas and other cacti clustered on the hillsides, and lechugillas, like giant "hen-and-chickens," spread over the parching ground. The wind blew, and blinding clouds of dust whirled down the arroyos. The soft airs of the west coast, the verdant plains of the high Sierra, were exchanged for the harsh conditions of the arid plateau. The River Nazas tried to redeem the desolation. Women were washing clothes on the bank below the dull brown hamlet of Rincon which clustered about its white Church of San José. A league beyond was Santa Catarina de Tepehuanes, with another church, a green plaza, stores, hotels, a bull-ring, and the Mexican International Railway. It almost seemed like civilization, after twenty-two days of horseback travel in the wild Sierra Madre, to exchange the camp for a house built with some suggestion of northern style, and to feel that the way was open for rapid transit to Durango and the land of "Tio Sam."

COURTENAY DE KALB.

Correspondence.

MANUFACTURING CAPITAL AND THE CENSUS.

TO THE EDITOR OF THE NATION:

SIR: My attention has been called to an article entitled "Suicidal Protection," in the *Nation* of August 20, 1903, in which the statement is made that "the Census figures show there has been a striking diminution in the ratio between the capital of American manufacturing industry and the value of the product"; a statement the truth of which the article undertakes to establish by drawing numerous comparisons between the census statistics of 1880 and 1900. Permit me to call your attention to the fact that the comparisons here made are worthless, and all the deductions you attempt to draw from them are without foundation, so far as the Census statistics are concerned.

The reasons why such comparisons are worthless are fully stated in the Census reports, and should have been obvious to any careful student of them. Attention is frequently called to the fact that, up to and including the Census of 1880, the inquiry regarding capital took no cognizance of the live capital employed in manufacturing, and that the enormous increase in the amount of capital invested, shown by a comparison between the censuses of 1880 and 1890, was due to the fact that the latter census for the first time included in its capital inquiry all forms of capital—that is to say, cash on hand, bills receivable, unsettled ledger accounts, raw materials, stock in process of manufacture, finished products, and other sundries. In view of this fact, it was stated at page lxi. of Part I. of the report on manufactures for 1900, and elsewhere in that report, that

"In the inquiry concerning capital, comparisons have no statistical value prior to the Census of 1890. The form of the inquiry regarding capital at all censuses down to and including 1880 was so vague and general in its character that it can not be assumed that any true proportion exists between the statistics on this subject as elicited prior to 1890. . . . The form of this inquiry of 1890 and 1900 was so similar that comparison may be safely made."

Assuming that you will not desire to make the Census responsible for false conclusions when it has taken all possible pains to guard against these conclusions, and that you will desire your readers to know that the editorial above referred to has no real basis in Census statistics, I venture to write you this letter.—Very respectfully,

S. N. D. NORTH, Director.

CENSUS OFFICE, WASHINGTON, D. C.,
September 10, 1903.

[The United States Government publishes each year a volume of statistics entitled 'Statistical Abstract of the United States.' On the fly-leaf is the statement, "Prepared by the Bureau of Statistics, under the direction of the Secretary of the Treasury." On page 512 of the latest number (that for 1902) is a mass of statistics headed "Summary of Manufactures, by Specified Industries, 1880, 1890, and 1900. From reports of the Census." A footnote to this caption explains that the summary is exclusive of statistics of eighty-five Governmental establishments in the District of Columbia. Nothing is said regarding the peculiar character of the 1880 figures referred to by Mr. North, and a publication which has hitherto been regarded as authoritative, turns out to be a slovenly and untrustworthy affair. The editorial on "Suicidal Protection" was based on the figures contained in the Statistical Abstract.

Mr. North's statements do not, however, invalidate the argument outlined in the editorial on "Suicidal Protection." Discarding the 1880 figures, and employing those for 1890, with which Mr. North says the 1900 figures may safely be compared, we still find that the tendency of capital has been towards a lessened turnover. While capital increased about 50 per cent. between 1890 and 1900 (according to the 'Statistical Abstract'), value of product increased less than 40 per cent. We have gone over every article of manufacture specified in the editorial on "Suicidal Protection" and have made a comparison between 1890 and 1900. We have found, as we very well knew we should, that in practically the whole list the tendency was pronouncedly in the direction of a lessened turnover of capital.—ED. NATION.]

RACE PROBLEMS.

TO THE EDITOR OF THE NATION:

SIR: I have been reading, with pleasure, your valued paper ever since the days when its editor had the courage to criticise the actions of the greatest of all the Federal generals, after he had become President of the United States, and had committed what your paper very naturally considered some serious blunders as President. It is therefore with regret that I have of late noticed a decided tendency on the *Nation's* part to deal harshly, and as I think unjustly, with the South, its customs and policies. In your issue of September 3d, for instance, in commenting upon Mr. Shepard's answers to the questions propounded to him by the *Evening Post*, as to his attitude on the race question, you say that "his words indicate how hollow will ring the Democratic protest against the oppression of the Filipinos while there is Democratic acquiescence in injustice to the negro." You go on to say that a Democratic campaign in this respect would be one of overflowing love for the brown brothers whom they cannot see, but of callous disregard for the black brothers whom they can see. A little impartial investigation and consideration, Mr. Editor, might convince you that the failure to appreciate the many virtues and beauties of the black brother is not confined to Democrats or to Southerners "steeped in ignorance and vice."

No better evidence of this fact could be given than is to be found in the recent conduct of the people of Waterloo, Ia., a city of 20,000 inhabitants, in politics overwhelmingly Republican, where the cry has gone up, "We want a white city"—not a clean city, or an orderly city, but a white one, free from negroes. In speaking of the matter, a well-known and prominent citizen of Waterloo said:

"We are in earnest. We do not intend to persecute the negroes, but they are given to understand they are not wanted here, and that is all there is to it. We believe the city will prosper more and its people will be better off without them. Up to recent months our colored people, being few, have been as desirable a class of citizens as people of this race can well be, but if their increase in the make-up of the population of this city is allowed to continue in the proportion seen at Des Moines and Marshalltown, it would certainly be a detriment to the city."

Waterloo is a sample case of the negro problem in the North. It is astonishing what a sudden change of sentiment occurs in a Northern Republican community when

it has a chance to study the negro problem at close range. A. C. READER.

NEW ORLEANS, September 9, 1903.

[But this is not the negro problem at all. In Boston, at the time of the anti-Irish riots in 1837, it would have been called the "Irish problem"; in San Francisco it is the "Chinese problem"; in the coal regions of Pennsylvania it is the "Slav problem."—ED. NATION.]

Notes.

The A. L. A. Publishing Board, 10½ Beacon Street, Boston, expects to issue early next year its 'Index of Portraits Contained in Books and Periodicals,' edited under the direction of Harvard's Librarian, William Coolidge Lane, and Nina E. Brown. The two volumes will contain more than 100,000 references to portraits in periodicals, published collections and illustrated works. "Practically all the material in the large libraries of Boston and vicinity and in those of New York, that was thought desirable," has been availed of. The portraits in genealogies and local histories have had to be neglected, as a rule. Six years have been employed on this most valuable production.

Ex-President E. Benjamin Andrews reappears as an author in 'The United States in Our Own Time: A History from Reconstruction to Expansion,' which Messrs. Scribner will publish along with 'An Unpublished Essay by Jonathan Edwards on the Trinity,' edited for subject and author by Prof. George P. Fisher, and 'In African Forest and Jungle,' by the late Paul Du Chaillu.

'My Favorite Book-Shelf,' a body of selections from famous authors by Charles Josselyn, is promised by Paul Elder & Co., San Francisco.

Following the fashion which substitutes photographic *tableaux vivants* for imaginative illustration, Doubleday, Page & Co. have just issued a new edition of Kipling's 'The Light that Failed,' with scenes from the dramatic version rendered by Mr. Forbes Robertson and Miss Gertrude Elliott. They have in hand a Life of Gen. Samuel C. Armstrong, the founder of Hampton Institute, by his daughter Edith (Mrs. Talbot).

A Life of the late Senator James McMillan is to be prepared for private circulation by his confidential secretary, Charles Moore.

Henry Holt & Co. announce 'The Regency of Marie de Médicis,' by Dr. Andrew Power Lloyd, with five rare portraits; Tarde's 'Laws of Imitation,' translated by Elsie Clews Parsons; 'Dante's Influence on English Poetry,' by Prof. Oscar Kuhns; an Italian Grammar, by Prof. Mary V. Young of Mt. Holyoke College; and a new edition of Lavignac's 'Music and Musicians,' with an added chapter on "The Present State of the Art of Music," by H. E. Krehbiel.

McClure, Phillips & Co. have nearly ready 'Letters from a Chinese Official,' and 'Falk,' three short love stories by Joseph Conrad.

Forthcoming from Macmillan Co. are a new volume of poems by William B. Yeats, 'In the Seven Woods'; 'Venice and its Story,' by Thomas Okey, elaborately illustrated; 'The Anonimo Morelliano,' translated by Paolo Mussi; 'Benozzo Gozzoli,' by Langton Douglas, with many illustrations; 'Millet and the Barbizon School,' by Arthur Thompson; 'The History of Portrait Miniatures, from the Time of Holbein, 1531, to that of Sir William Ross, 1860,' by George C. Williamson, gorgeously illustrated; 'Hans Holbein,' by Gerald S. Davies; 'J. McNeill Whistler and his Work,' by Arthur G. and Nancy Bell; 'The History of American Painting,' by Samuel Isham; 'A History of American Sculpture,' by Lorado Taft; 'The History of American Music,' by Louis C. Elson; volumes 3 and 4 of 'A History of English Poetry,' by W. J. Courthope; 'Studies in German Literature in the 19th Century,' by Prof. John F. Coar of Harvard; a luxurious edition of the Works of Matthew Arnold in 15 volumes; another, of Hakluyt's Voyages in 12 volumes; 'The Bible in Browning,' by Minnie Gresham Machen; 'A History of the Appointing Power,' by Prof. Lucy Maynard Salmon of Vassar; 'Roman Society from Nero to Marcus Aurelius,' by Prof. Samuel Dill; 'The Native Tribes of the Northern Territory of Australia,' by Prof. Baldwin Spencer; 'Two Centuries of Costume in America,' by Alice Morse Earle; 'Old Quebec, the Fortress of New France,' by Sir Gilbert Parker; 'The Foundations of Modern Eurcpe,' by Dr. Emil Reich; 'A History of Modern England,' by Herbert W. Paul, the first two of five volumes; 'Lectures on the French Revolution and on General Modern History,' by the late Lord Acton; 'South Carolina as a Royal Province,' by W. Roy Smith; 'The Industrial History of the United States,' by Prof. Katharine Coman of Wellesley; 'Contest for Sound Money,' by A. B. Hepburn; 'A Manual of Old French Dialects,' by Prof. L. E. Menger of Bryn Mawr; a Life of John Fiske; and Morley's Life of Gladstone.

J. B. Lippincott Co. expect to publish next month 'The True History of the Civil War, Illustrated,' by Prof. Guy Carleton Lee of Johns Hopkins, in 500 pages, illustrated.

Prof. W. E. Burghardt Du Bois, author of 'The Souls of Black Folk,' is at work on a novel which will likewise bear the imprint of A. C. McClurg & Co., Chicago.

Dr. Henry J. Morgan purposes bringing out a second edition of his valuable 'Canadian Men and Women of the Time.' It will contain a necrology.

Mrs. Zelia Nuttall, we learn from the Bollettino of the National Central Library of Florence for August, will shortly publish her second volume on the anonymous Spanish-Mexican codex in that library, 'Libro de la Vida que los Indios antiguamente hazian.' She will follow up her facsimile with the Spanish text, an English version, and a commentary, the labor of ten years.

The Burrows Brothers Co., Cleveland, extend their elegant series of American historical reprints with John Miller's 'New York Considered and Improved' (1695). The work has been twice publisned—in 1843 by Thomas Rodd, London; in 1862 by William Gowans, New York, with Dr. J. G. Shea's annotations. For the present edition recourse has been had to the original MS. in the British Museum, and a new editor has been found in Mr. V. H. Paltsits of the New York Public Library, an institution which chances to own two works from Miller's collection. Miller, who, after graduation at Cambridge, came over in 1690 as military chaplain, describes the city topographically with much care, and adds a not very flattering report on the state of public morality. He gives plans of New York and Albany, and of Fort William Henry at the Battery. Mr. Paltsits has succeeded in enlarging our previous knowledge of Miller, and has usefully provided this edition with notes, appendices, and an index. Miller's scholarly hand is shown in a facsimile of the concluding page of his MS.

The sixth volume of the Quarterly of the Texas State Historical Association contains a great variety of matter, in which form is often (and properly) subordinated to substance. This is conspicuously the case with the reminiscences of Judge C. C. Cox, who served as a lad of fourteen in the Texan navy, which reflected all the cruel traditions of the American navy, as that did of the British; who was drawn to California by the gold fever, and afterwards entered reluctantly into the war of secession on the losing side. He bears witness to the demoralizing after effects of the war in Texas. His illiterate narrative describes some old customs which furnish curious reading. He pays a sincere tribute to Mexican character. There is mentionable also a brief but valuable sketch of the slave trade in Texas, to which there was much popular and official opposition; but the simple remedy of abolishing slavery was not proposed. However, the trade attained no great proportions, though as late as 1856 slaves were introduced under the guise of "camels."

The special summer number of the *International Studio* (John Lane) is devoted to three "Masters of English Landscape Painting," namely, Cotman, David Cox, and De Wint. The three short monographs are of varying degrees of merit, those on Cotman, by Laurence Binyon, and De Wint, by Walter Shaw Sparrow, containing some intelligent and intelligible criticism, while that on Cox, by A. L. Baldry, contents itself for the most part with biography; but the important things are the very numerous illustrations, in black and white and in colors, which give us a better opportunity than we have hitherto enjoyed of estimating the work of these painters. Although the color reproductions seem to be unusually good, it is dangerous to judge of coloring from reproductions alone, but one should be able to form a pretty fair idea of other qualities. Of the three, David Cox comes out least well. His color, if pleasing, seems rather conventional, and surely no painter ever achieved a great reputation who had less sense of form or of composition. One is left in wonder as to what his fame is based upon. De Wint makes a better impression, especially in some of his rapid sketches from nature, which have a vigor and dash not unlike the water-color work of Winslow Homer, but his more elaborate compositions are rather commonplace. The only one of the three who seems to approach greatness and to justify the title of "master" is Cotman, whose work shows dignity and even majesty of composition, strong draughtsmanship and classic beauty of line, a fine decorative sense, simplicity and directness of method, and a feeling for color alternately subtle or splendid. Though none of these men was very successful or much appreciated in his lifetime, the greatest of the three had by far the hardest life and suffered the most from consistent neglect. They all painted, more or less, in oils,

but the bulk of their work, and, so far as the reproductions enable one to judge, the best of it, was in water-color, their oil paintings having a certain air of translation.

A "Société Amicale Gaston Paris" has been organized in Paris, the purpose being to keep the magnificent library of the recently deceased French prince of Romance philology intact and to publish his literary remains. The widow has entrusted all the papers to the Society, of which Prof. Antoine Thomas is the President.

A comparatively complete report of the reforms instituted in the higher grade of schools in France, modelled to a certain extent after German precedents, is given by J. Caro in No. 5 of the *Monatsschrift für höhere Schülen*. According to this, the school work is begun by a five years' course in elementary branches, followed by three years corresponding to the first three years in the gymnasium. Then comes the *enseignement secondaire* proper, covering a period of seven years and divided into two parts. The first is four years long, corresponding to the middle gymnasium classes, with obligatory Latin but optional Greek in the two higher classes, and with considerable prominence given to the sciences and modern languages. The last three years present considerable choice of subjects, there being four courses—(1) with Latin and Greek; (2) with Latin and modern languages; (3) with Latin and natural sciences; (4) with modern languages and natural sciences. The first, second, and fourth correspond in general to the three kinds of German secondary schools, but the third is unique for France. Caro explains the existence of this course by the French demand that every educated man be acquainted with Latin. This combination of four courses will be found only in the larger *lycées;* the smaller must be content with one or two. The graduates of any of the courses secure the bachelor degree, corresponding to the German *testimonium maturitatis*, and likewise entitling its recipient to enter any department of the University and prepare for any of the professions.

It has now been definitively decided to establish a new Academy in Posen, as part of the German element's struggle for the mastery of the intellectual life of the Polish province. It has been organized, with the approval of the Government, by the Deutsche Gesellschaft für Kunst und Wissenschaft, which has arranged the work for several years to come. The work begins on the 21st of October with a rector in charge and a corps of assistants numbering about a dozen. It is expressly declared that the Academy is to serve the interests not only of the city, but of the whole province. The rector chosen is Dr. Kühnemann, hitherto professor in the Universities of Marburg and Bonn.

The Seminar für Orientalische Sprache in Berlin, the leading school in the world for the practical acquisition of Oriental tongues, reports a total attendance of 229 in the present semester. Although it is not an integral part of the University, the director is the university professor, Sachau, and its students can attend the academic lectures. Each language has at least two representatives in the teaching corps, one German who does the scientific work, and one a native to conduct the practical drill. During the present term Chinese is being studied by 24, Japanese by 7, Arabic by 20, Persian by 7, Turkish by 8, Suali by 26, Haussa by 8, English by 61, French by 42, modern Greek by 8, Russian by 41, Spanish by 14. The students are chiefly candidates for positions as missionaries, dragomans, Governmental and mercantile servants in the Orient. Only five women are enrolled. At the close of the last academic year twenty-eight students passed the examinations.

The Œcumenical Patriarch of the Greek Church, Joachim, residing in Constantinople and representing the non-Russian section of his church, has recently, together with his bishops, addressed an official communication to the Holy Synod, representing the Russian section of the church, asking that body to arrange for the substitution of the Gregorian Calendar in the place of the Julian, for practical and scientific reasons. The Synod has now replied, declining to take such steps, for the reason that the matter is very complicated and really belongs in the province of scholars. Moreover, "considering it from a purely scientific point of view, competent Russian authorities are inclined to give the preference rather to the Julian Calendar than to the Western. Hence, the church authorities are inclined to hesitate to make the change, which would also seriously affect the sacred festivals and confuse the average Christian."

—It is pleasant to note that the twenty-fifth anniversary of the International Literary and Artistic Association, founded in Paris by Victor Hugo, in 1878, is to be held on German soil amid the classic precincts of Weimar, with much promise of intellectual interchange and sincere good-fellowship. The time of meeting is from the 24th to the 30th of this month, and, in addition to the opening meeting, there are to be eight working sessions. The programme includes papers on copyright protection, for engineering works, by the French engineer, Pesce; works of architecture, by Georges Harmond of Paris; photographs, by the well-known authority, Alphonse Davonne, the president of the Society of French Photographers, and on art as applied to industry, by Raoul de Clermont. The further revision of the Berne copyright convention is to be discussed by the Paris lawyer, Georges Maillard; Intellectual Property from the Point of View of Theatrical Art, by M. Giraud; the better protection of historical works and criticism, by Alfred Vaunois of Paris; while a special report is to be presented on mechanical musical instruments in relation to copyright, and reports, by various hands, on copyright movements in the principal countries. A contribution of special note is that promised by the president of the Association, Eugène Pouillet, on the sale of works of art, and publishing contracts in relation to artistic productions. Saturday afternoon and evening are set aside for an excursion to Jena, and Wednesday for visiting Eisenach and the Wartburg, while the intervening Sunday is to be devoted to the various points of interest in and about Weimar, including the Belvedere, and the tombs of Goethe and Schiller.

—The September instalment of Andrew D. White's diplomatic reminiscences in the *Century* deals largely with persons eminent in the learned world. Lepsius, Ernst Curtius, Von Sybel, Droysen, Du Bois-Reymond, Helmholtz, and Hofmann were among those whom he met at Berlin. Among teachers of history he speaks with especial praise of Oncken, whose lectures at Giessen he regards as the best in manner of presentation he has ever heard, with the exception of Laboulaye at the Collège de France, Seelye at Cambridge, and Goldwin Smith at Cornell. With Knaus, Carl Becker, Anton von Werner, Adolf Menzel, and other artists he also formed pleasant acquaintance. Diplomatic vacations gave him opportunity to travel and form friendships outside of Germany. In France especially he met many eminent men of letters, statesmen, artists, and teachers, for whom he professes a profound respect. "It is a thousand pities that a country possessing such men is so widely known to the world, not by them, but by novelists and dramatists largely retailing filth, journalists largely given to the invention of sensational lies," and a low order of politicians. He speaks with great affection of Frederick III., "that embodiment of all qualities which any man could ask for in a ruler of a great nation." An article by Cardinal Gibbons, on the Character of Leo XIII., might almost be called a "scoop" if the *Century* were in the field of modern sensationalism. No one will question the sincerity of the Cardinal's characterization of Leo as an eminent religious leader and scholar, a man of courage, strength, and understanding. John Gilmer Speed contributes an interesting study of horse-breeding in America, condemning with good reason methods of breeding for speed which result in only about two per cent. of success, with a residue of ninety-eight per cent. of failures which cannot profitably be utilized for any other purpose.

—In the September *Atlantic* we have the first instalment of Sir Leslie Stephen's promised reminiscences. It is somewhat disconcerting to find at the outset an emphatic assertion of unfitness for autobiographical writing because of a treacherous memory, but the reader will take this self-depreciation with the same kind of allowance which one makes for the confessions of atrocious wickedness by a Bunyan. Sir Leslie's memories flow with a broader sweep, with less of piquant detail, than is found in Andrew D. White's opening chapters in the *Century*, but they promise a rich feast none the less. He is rather disposed to congratulate himself that he owes no debt of gratitude to some Carlyle, Emerson, or Newman for arousing his slumbering intellect and convincing him of the possession of a soul. "Spiritual guides are very impressive, but sometimes very mischievous persons. Prostration before a prophet is enfeebling." The Cambridge teachers of his time were not given to enthusiasms, but preached common sense, and common sense said, "Stick to your triposes, grind at your mill, and don't set the universe in order till you have taken your bachelor's degree." Lyman Abbott answers for women the question why they do not want the ballot; but the most important suffrage question of to-day is not whether women could give serious attention to politics without too heavy a draft upon the time and strength needed for the duties necessarily imposed upon them by their sex, but whether men can be induced to take from other pursuits and

pleasures the time and strength necessary to even a passable discharge of the political duties resting upon them. Practical objections to female suffrage must be sought along other lines than the probable absorption of woman's interest to the exclusion of more important concerns.

—The article of most evident interest in the September *Scribner's* is a chapter of Senator Hoar's forthcoming 'Autobiography of Seventy Years.' The noted jurists of his day and acquaintance form the subject of this paper, Chief Justice Lemuel Shaw naturally taking the foremost place. Frederic Irland describes at length the Wyoming game stronghold, where the elk, antelope, and deer still flourish much as they did before the white man's arrival, and Capt. T. Bentley Mott tells of the life of the military attachés of our diplomatic system. The remainder of the number is given up chiefly to fiction and poetry.

—Is it possible that Sir Norman Lockyer displays an understanding of British human nature, in endeavoring to stimulate it to vast expenses for universities, by pointing out that in this respect that country is far behind Germany and America? If such were the best argument to use, England would be looking into a dismal future. What people conscious of great vitality and genius was ever fired with the idea of following in the wake of others? One would not find much response to such an appeal in Washington, nor in Paris. Would not Sir Norman do better to address his countrymen in some such language as this? "For the last three centuries every single idea of really sovereign preëminence in science has been largely (in most cases undisputedly) of British paternity: the Inductive Philosophy, the Corpuscular Theory, Attraction, the Differential Calculus, the Atomic Theory (and the type theory of chemistry), Natural Selection, the Mechanical Theory of Heat (or that first principle of it which was the solid core of the great doctrine of the Correlation and Conservation of Forces), the Theory of Light as transverse vibrations, followed up by the true Theory of Electricity, the Electro-magnetic Theory of Light, and the Electron Theory of Matter. The new science of radiations, if it has importance enough to be mentioned in this connection, has grown directly and uninterruptedly out of Crookes's experiments. To continue these services to civilization is no more than our plain duty. *Noblesse oblige.* They must be continued; they will be continued. British soil is fertile in men of the highest types of genius. It shall not be found that their fruit is not forthcoming because Great Britain's purse was not long enough to sustain British science against foreign competition." The above are the sober facts; they will bear scrutiny. If they were put before the British Parliament and the country, would not patriotism be moved?

—The librarian world had a sudden and not long preparation for the news of the death of Charles Ammi Cutter, librarian of the Forbes Library of Northampton, Mass., at Walpole, N. H., on September 7, in the sixty-seventh year of his age. Mr. Cutter was a native of Boston, and was graduated at Harvard in the class of 1855. After some study of divinity, he became assistant in the college library. In 1869 he succeeded the late William Frederick Poole as librarian of the Boston Athenæum, from which, after twenty-five years, he passed to the new foundation in Northampton, selecting its many thousand volumes and fixing its character. In this congenial place and service he remained till death overtook him. His monumental work at the Athenæum was his completion of its printed catalogue in five volumes. In the art of cataloguing he was past master. His Rules are universally known and widely observed as standard. His system of classification also made him eminent in his profession, which reckoned him among the half-dozen foremost American librarians of his time. Some traits he probably lacked for the highest efficiency in administration. He was a man of slender body and shy presence; little demonstrative; with a low voice; more genial than forceful. He used to quote the saying that the librarian who reads is lost; but he both read and wrote admirably. His culture was very wide, and the evidences of it are embalmed in the *Nation*, to which he was a voluminous contributor (in the mass) for thirty-five years, with slight interruption. His odds and ends of leisure were naturally employed for "Notes" rather than for longer essays, which were, however, not wanting, in the shape of articles or book reviews, or, a few years ago, in a charming series of letters from England and France, in which his architectural interest was plainly revealed. In the Forbes Library his love of art was gratified by collecting photographs of the masterpieces, and these were frequently displayed in special exhibitions in the upper hall. For twenty years or more the *Nation* relied mainly upon him for its reports of the meetings of the American Librarians' Association from the Atlantic to the Pacific Coast. We part with regret from this modest and lovable character.

—The idea of erecting a statue in honor of the author of "Hamlet" at Elsinore, forever made famous by Shakspere's drama, seems to be gaining strength in Denmark, where it was first started by the sculptor Hasselriis, who even went so far as to model the statue. As was to be expected, the project has particularly taken the fancy of the little town by the Sound, where enterprising innkeepers have already not only caused a Hamlet's grave to be forthcoming, but also had a statue erected of the ill-fated Prince of Denmark. The Elsinore *Gazette* seems to be especially interested in the project, and comes out in a supplement to its number of August 12 with a richly illustrated, semi-scholarly article strongly advocating the idea. The writer has delved deep into church registers and old archives, not to mention such household works as Brandes's book on Shakspere, and for a small provincial paper the article is very well written with regard to what is known about Shakspere's early relations to the Amleth story, and his later connection, through William Kemp and George Bryan, with Elsinore. There is even a hint of the possibility that Shakspere himself may have visited the city in the disguise of the "boy, Daniell Jones," who in 1582 played there for the court in the company of William Kemp of Leicester's troupe. Among the illustrations is one which, by a clever trick of the photographer, prophetically shows the Shakspere statue in the centre of the market-place of Elsinore. The actual erection is pronounced a national obligation. There has been some opposition manifested, chiefly among the younger generation of authors, one of whom does not care to honor the man who has forever linked the name of Denmark with "something rotten."

THE TIMOTHEUS PAPYRUS.

Timotheos: Die Perser. Herausgegeben von Ulrich von Wilamowitz-Moellendorff.

Der Timotheos-Papyrus. Lichtdruck-Ausgabe. Leipzig: J. C. Hinrichs'sche Buchhandlung; New York: Lemcke & Buechner. 1903.

The papyrus which is here deciphered, and edited, with a graceful dedication to the Royal Irish Academy, is very remarkable in several respects. It is the oldest papyrus that has come down to us; it goes back to the time of Aristotle and Alexander the Great, and it antedates the founding of the great Alexandrian Library. It is, therefore, not very far removed from the period of Timotheus himself. Singularly enough, the characters, which are of great beauty and clearness, are modelled after those of monumental inscriptions on stone of the period, and show no traces of the cursive script which must have been employed even at that date.

The publication of this bit of flotsam from Egypt has been awaited by scholars with curiosity and expectation. Timotheus was known as the greatest lyric poet of the later classic period from 400 B. C., as a daring and successful innovator in lyric forms, and as a master of the newer music, whose development he aided, and whose vogue persisted for centuries. He received the approval of Aristotle. It was hoped by some scholars that this poem might yield a new source of history for the battle of Marathon, to be placed beside the narrative of Herodotus and the drama of Æschylus. There was no very good reason for these expectations, and they are certainly disappointed. This fragment gives us no history, it mentions no famous name, it touches no lofty note of sentiment or patriotism. There is no attempt at the pedantry of reproducing details of the actual methods of naval war in the period of Themistocles. We are presented simply with an imaginative description of a typical sea fight (such as the writer may have seen) of the period of Thucydides or somewhat later, containing some expressions which find their explanation in his narrative of the Sicilian expedition. No useful comparison is possible, therefore, with Herodotus or with the great drama of Æschylus; only contrasts are possible, which are not enlightening or instructive. On the other hand, Wilamowitz quotes a rhetorical description by Ephorus of the battle of Cynossema, which forms an exact parallel of the picture given by Timotheus; in places it reads like a paraphrase.

The fragment, which includes only the latter part of the poem, takes us into the thick of the fight. The poet sketches onsets and retreats, the sallies of boarders, tiers of oars shorn off by collisions, the plunging and rearing of vessels under the impact of rams and "dolphins," till they capsize or sink with a toss of the head; the showers of missiles quivering as they light; hurtling masses of lead and fiery balls, "while

the emerald-haired sea has its furrows crimsoned by the droppings of the ships." This is told with a fine frenzy and rush of words, in phrases sometimes tortured and obscure, but in the main vivid and picturesque. The incidents and their order are not quite clear, partly by reason of *lacunæ* in the text, partly by reason of the fine phrases of the poet. What are "the droppings of the ships"? Are they streams of blood or flaming timbers?

The poet next turns to the fortunes of individuals who are typical or representative; and here we reproduce one of these episodes, so far as our English serves:

"Some landsman of the Phrygian plains, lord of estates that stretch a day's journey, now ploughing the watery plain with his legs and smiting it with his hands, swam on, turned islander perforce, and, buffeted by the winds, searched for ways of escape. . . .

"The foaming rain, unquaffed of revellers, poured down his throat, and as the brine gurgled back and gushed from his lips, with shrilling voice and frenzied mood he gnashed his teeth and uttered threats against the sea for its despiteful usage. 'Bold though thou art, thou didst yield thy haughty neck erstwhile to the yoke and wert curbed in hempen bonds; and now again, my lord and master—mine—shall harass thee with pines sprung from the mountain, and with his roving glances shall encompass thy plains where sail the ships. Abomination that I hate of old! thou frantic wanton, faithless paramour of the blast that sweeps the whelming surge!' So spake he, panting, with faint voice, while from his lips he belched foul froth and spewed the brine."

He pictures next the flight and rout of the Persian fleet, the long chain of ships dashing one another to pieces—the sea "bestarred" with white corpses, the headlands filled with shivering, naked fugitives, wailing and crying to the Mountain Mother for deliverance. They fling away their arms, they tear their faces with their nails, they rend their garments; and Xerxes (who is named only as the King), when he sees his routed host, utters a brief lamentation, as he calls for his chariot and bids his followers burn their tents and bear away his countless treasure. A lively episode sketches some captive of Celænæ, dragged by his long hair, and stammering petitions to his captor in barbarous Ionic Greek of Asia Minor. The poem closes with an invocation to Apollo, and a curious and highly interesting bit of personal confession and declaration on the part of the poet.

The brief abstract in which we have attempted something between a translation and a paraphrase is of course a misrepresentation more or less. It omits rhythm, the fabric of the compound words; it betrays slightly, perhaps, the color and the sense—one cannot take his oath to its fidelity. For one thing, it is impossible to reproduce in English a fashion of speech which is more than half made up of compound substantives or adjectives. Wilamowitz himself declines the task of translating this; and as he has at his command the resources of the German language in ready-made compounds and its license for new coinage, we must bow to his judicious example. He confines himself instead to a paraphrase in very plain Greek prose, after the style of the scholiasts to Euripides or to Lycophron; and this reserve on the part of a scholar whose literary gift matches his learning, may be taken as a signpost marked "no thoroughfare." But our version of the episode does not seriously misrepresent two features of the author's style—his dithyrambic magniloquence and the hardiness of his realism. This is the innovator who "outraged music with his twelve (?) strings," imitated a storm at sea—a "tempest in a teapot" some one styles it in Athenæus; who dared to express musically the birth-pangs of Semele, and offended by his daring the conservatism—perhaps, too, the Puritanism—of the Spartans. For this reason we have given a taste of his manner which is not entirely "traitorous."

So far as his matter is concerned, our author does not soar, or, if he soars, he tends to fall. The ship fight and the rout, in spite of offensive mannerisms, is a busy, rapid, and vigorous scene. The prayer of the fugitives to their own Asiatic goddess for salvation is appropriate, and contains many natural touches of what we call "local color"; the lament of Xerxes even condescends to simplicity and sincerity. The seasick Phrygian landlubber is a trivial and sorry figure, and his brag strikes a false note. It is a bit of empty, unnatural bombast; for the boast of Xerxes in Herodotus which it echoes was a sort of madness quite in character with that despot who had not the wisdom of King Canute; but his courtiers, surely, when indulging in an unofficial fit of seasickness, had no motive to express anything but a candid opinion of their master. On the other hand, the long-haired rustic of Celænæ makes an excellent bit of comedy as he stammers solecisms and dialectic remonstrances to his captor: "When I'm to home, I live down to Ecbatana." This particular variety of realistic expression was familiar to Sophron and Plato and Aristophanes, and is grown of late distressingly familiar to ourselves. The dialectic man of Celænæ is at any rate the least tedious of his tribe; for he sputters briefly—and, under Wilamowitz's commentary, most instructively—in a little speech that is prophetic of later Hellenistic forms and syntax.

One feature of style is here carried out to the utmost, and that is the use of compound words, often newly coined, as epithets or elements of the sentence. Two, or even three, are frequently packed together, each one built of two, and occasionally of three, simple words. The Mountain Mother is not only fair-armed, but she has golden-braided hair, and a dark-leaf-broidered robe. This peculiarity of expression is, of course, perfectly familiar in all Greek poetry; such formations were facile and native to the genius of the language. They have persisted from Homer down to Bikelas's versions of Shakspere. But these *nova verba*, as Horace calls them, were especially at home in the domain of the dithyramb; to judge from this specimen—which, though called a nome, is transformed by the dithyrambic spirit—they were a fashion of speech *de rigueur*. This freedom of coinage, then, was a privilege of the craft—a privilege which Timotheus abused and carried out to license and extravagance. But the tortuous audacities which he affected, the superfine phrases, the verbal tricks and riddles, show a graver taint which infects the very body of his style and presages dissolution. He must not call a spade a spade. The oars to him are anything but oars; they are the ship's *hands*, or its *feet*, or the *mountain-grown pines*. The sea is emerald-*haired*, and it is *starred* with clusters of white bodies. A lance or javelin is the *murderous thong-bound Ares sped like fire* upon the foe. There is no mistaking the drift of these meretricious whims and turns of fancy. They mean simply degeneration and decadence, the descent toward sheer vaporing and insipidity, and false strained ingenuity which gave rise to the proverb, "Sillier than a dithyramb"; they are a portion of the antics and vagaries of expression which Aristophanes satirizes in the "Clouds." They mark the transition from classic restraint to rhetoric, and the passing of rhetoric over to Asiatic floridity, to euphuism and bombast and cold, petty conceits.

Timotheus is an Asiatic, and a rhetorician rather than a poet; he represents the flood-tide of his musical art, when the music was supported by an adequate and striking libretto. He is quite capable of an occasional fine phrase or lofty sentiment, which struck the hour, so to speak, and lived. Several of these occurred in the "Persæ," and contributed toward making its fortune. "'Tis Ares," he says in a line transmitted by Plutarch, "who is lord and master, and Greece is not afraid of gold," alluding to the apprehension of Persian bribery and despotism. In fact, we hear of this very piece being produced about two centuries later in Arcadia, and one of its phrases being applied with applause to Philopœmen. Two centuries is a very respectable life for a poem of this kind, and this longevity was due to some solid qualities independently of the music. Timotheus was an artist of ideas, of force, of boldness and cleverness, a finished and scientific metrician, a dexterous rhetorician; a poet with the divine spark he certainly was not. And indeed he himself makes no such claim. "I am a musician," he says in the closing lines (or *seal*, technically so-called), "and an innovator in my art, with my lyre of eleven notes. I am the successor of Terpander, as he was of Orpheus." This novel music, with its virtuosity, had already captivated Euripides, and had led him to compose monodies to be sung by trained vocalists, as well as pretty odes whose trills and runs are derided in the "Frogs." Tragedy was beginning to surrender to its handmaid, music. The "Persæ," then, was a libretto written for a score, a sort of oratorio accompanied by mimetic action. The music was the important and principal thing; the libretto was secondary. As libretto we may admit its merits—its dash and verve, its talent and cleverness, the varying fitness and perfection of the rhythm—probably, too, the suitability of the sonorous language to the music. As a poem, however, if we only think what Archilochus might have given us, "who knew how to make the dithyramb when thunder-smitten with wine," or what Simonides might have given us in a complete "Danaë," it reminds us that the mummy case is a tantalizing lottery. Or suppose that the papyrus had brought to light for the first time the "Enchantress" of Theocritus or the "Thyrsis," which bewitched the ear of Milton and inspired some of the cadences and turns of thought of "Lycidas," should we have doubted for an instant that these little waifs, not differing much in length from the fragment of the "Persæ," were true gems, and, in their own rank, things of beauty to be treasured forever?

From another point of view, we may resign ourselves with equanimity to the decrees of fortune which have buried almost

completely this branch of literature. Chance, in this case, has not been so very blind. It has doubtless saved the scholar much labor, and the littérateur some vexation of spirit. This particular relic leaves hardly a word to be changed in previous estimates of Timotheus, and confirms the best verdict of antiquity as to the merits and vices of his school. As a specimen to fill an empty niche in the history of Greek literature, it is invaluable, especially when illuminated by the commentary of such an editor as Wilamowitz-Moellendorff.

This scholar points out (page 64) that the "Persæ" itself bears witness to two things, viz., that Timotheus was proud of his musical innovations, and that he also felt the need of defending them. Chief among these innovations, in the eye of the unskilled, was the addition of one, or, as another tradition has it, of four strings to the lyre, or the cithara. This conflict of traditions leads Wilamowitz to reject the well-known story of the Spartan police breaking from Timotheus's lyre the four added strings. He justly regards as more probable the other tradition, which tells of the gradual extension of the scale from seven to eleven strings, and even names those who successively added one to the number already in use. If we might venture on a conjecture which would reconcile the conflicting traditions, it would be that while Timotheus himself may have added only the eleventh string, he may have been the first who had ever dared to present himself at the *agon* of the Spartan *karneia* with an instrument of more strings than the seven of Terpander's lyre. When the Spartans accused him of bringing the older music into contempt, Timotheus's own defence was that he had not innovated as boldly as their revered Terpander. Orpheus first contrived the shell of many lays; Terpander yoked the muse to ten strings; Timotheus sings to a cithara of eleven. Our author very justly regards this as special pleading, based, not on historical fact, but on the presumed ignorance of his judges.

In this connection Wilamowitz lays it down as unquestionable that the three or four-stringed lyre was a mere speculation of the theoretical musicians and at no time a real thing. Few students of the history of music will accept this dictum, for an original seven-stringed lyre almost necessarily implies an original seven-note scale, whereas all musical history compels us to believe that every race of men has begun with an incomplete scale; and there are excellent *a-priori* reasons for holding that the first lyres must have had strings for the tonic, the dominant, and the sub-dominant, and if a fourth string, then either the octave or the sixth, but no more. If the Hellenes started at once with a complete diatonic scale, they differed quite incredibly from every other race of men; while if they delayed the adoption or the invention of the lyre until they could give it seven strings, they were far behind the rest of mankind. The fact that one of the Homeric hymns gives seven strings to Apollo's lyre merely proves that the lyre had that number when that hymn was written. If we were bound to take such expressions literally, we should also have to accept the synonymity of lyra and cithara, which the poets use interchangeably, while from more exact writers we learn that they differed in shape and also particularly in their difficulty—the cithara being beyond the capacity of any except professional players.

While Timotheus probably carried innovation much further than his predecessors, the real author of the sudden revolution in citharody was his immediate forerunner, Phrynis. As Aristotle ('Metaphysics,' I^b, 1) puts it, "If there had been no Phrynis, there would have been no Timotheus." To understand the true nature of this revolution, we should conceive the music of the nome to have been analogous to our traditional hymn tunes (such as "Dundee," "Germany," etc., etc.). These established nomes were used with new words without much regard to fitness, as is the case with our old hymn tunes. This custom was reformed by the innovators, who now wrote new music for new poems, whether their own or not, just as has happened with our church music, and with much the same result—that the new nome was no longer adapted to ordinary musical talents, but required highly trained artists for its performance.

While these changes were going on in citharody, a similar development affected the dithyramb, into which, though confined at first to the dactylic measure, the freer verses were gradually introduced. These appear in the choral songs of Bacchylides, which the grammarians have called dithyrambs and which our author distinguishes (p. 102) as "narrative dithyrambs." Of the ancient dithyramb like those of Xenocrates (or Xenocritos) we have no example; but in the narrative lyric we see, as to-day in Wagner's work, what would naturally follow when the musician was also a poet. The fetters of the traditional style were broken, and measures were used which would afford the utmost freedom to imitative musical composition. The nome, and side by side with it the dithyramb, departed from the ancient models until they came so near each other that, from a musical point of view, the difference between them was merely in the name.

Technically, the changes introduced by Phrynis and Timotheus consisted in substituting for the sober and statuesque simplicity of the traditional melodies a style overloaded with ornaments and technical difficulties, including a richer instrumental accompaniment, a greater variety of modulations, a striving after surprising effects and striking contrasts. Whether or not it be true, as Gevaert affirms, that during the Peloponnesian war (431-405) the dithyramb was altered, in sympathy with the new citharody, from a choral composition to a *bravura* solo suited to display the skill of a *virtuoso* performer, like the Theban Dionysius, who was music-teacher to Epaminondas, or Stratonicus of Athens somewhat later, there can be no doubt that the innovators in each of these nearly allied styles encouraged and stimulated those in the other. For some reason—perhaps that aggressiveness which we detect in more than one of his fragments—Timotheus seems to have been regarded as the chief among the revolutionary reformers of music, and to have been selected as such by Pherecrates as the special object of his invectives against the then "Music of the Future." If we call Phrynis, as Gevaert does, the Rossini of Greek music, we should perhaps be justified in naming Timotheus its Wagner; and, if there is any truth in the story of the encouragement and consolation offered to him by Euripides, his words would seem to imply that the tragic writer also regarded him as the standard-bearer of musical reform.

French Music in the XIXth Century. By Arthur Hervey. E. P. Dutton & Co.

It is a pleasure to come across a book so sane in its opinions, so free from bias, as Mr. Hervey's. He is not one of the pessimists who, having no sense of humor or knowledge of the history of criticism, forever parrot the opinion that all the great things in the world were achieved by men who are now dead. Nor has he any sympathy with those "sham aristarchs of taste" who recognize Brahms as "about the only modern composer." It was to writers of this class that Gluck referred when he spoke of "the pedants, doctors in taste, a species unfortunately too numerous, which in all periods has been a thousand times more pernicious to the progress of the fine arts than that of the ignoramuses." A venomous professional critic like Dr. Hanslick may be witty and entertaining, but an enthusiastic amateur like the late Sir George Grove does infinitely more good in the musical world. Music probably is, as Mr. Hervey remarks, the most disheartening of all the arts. For most musicians the struggle for recognition is extremely hard, and the period of popularity and fame very short. It is well, therefore, to seek for what is best in the living, and to dwell on and attempt to rescue what was best in the masters of the past. This is what Mr. Hervey has done in the present volume, and what helps to make it the best and most useful book on its subject.

Referring to the liberal subsidies granted by the French Government to the two opera houses in Paris, the author remarks: "The magnificent operatic harvest that has been gathered in Paris during the past century is eloquent of the good that accrues from State intervention, and speaks volumes in favor of Government subventions. It also points triumphantly to the great part taken by the French in the musical movement of the age." To be sure, not a few of the prominent names in the history of the Parisian opera are those of foreigners. But the very fact that Lulli, Gluck, Piccini, Cherubini. Spontini, Rossini, Meyerbeer, and Donizetti came to Paris to seek a home at the Grand Opéra bears witness to the wisdom of the French policy and the beneficent results of the French love of dramatic music. Even Wagner, at the beginning of his career, tried his fortune in Paris; but the time was not propitious for him. Grétry, whose opinions were considerably in advance of his music, had, indeed, predicted in his 'Mémoires' (1789) that "one day everything that is not strictly in accordance with the poem will be rejected by the educated public; singers who add vocal ornamentation to their parts will be sent from the theatre to the concert room; roulades will seem so absurd that they will be employed only to imitate the nightingale." Gluck had not only preached, but practised such principles; but his operas were forgotten in the delirium of the Rossini fever, caused by music that violated all these principles; and the Rossini fever had been followed in Paris by the infatuation over the music of Meyerbeer, which retained much of what was meretricious in Rossini.

Mr. Hervey is not one of those who condemn Meyerbeer *in toto*. He makes no attempt to palliate his shortcomings, admitting that "there is something pathetic in the spectacle afforded by this richly endowed man seeking to curry favor first with one, then with the other; fearing to impose his ideas on the public, timorous of the opinion expressed by the obscurest journalist, ready to be the humble servant of the vocalist, and to gratify the whims of any prima donna by supplying her with vocal acrobatics"; but he nevertheless holds that Meyerbeer was a great man, who is now considerably underrated; and he calls attention to a point which his detractors have not sufficiently taken into consideration. Being, as a dramatist, certainly superior to Rossini, he was "gradually initiating the public in the understanding of a better class of music." Had he been as uncompromising as Wagner, he would at that time have frightened the masses away; whereas by making concessions he attracted them, and helped to prepare them for the understanding of the music drama. From this point of view Meyerbeer might even be regarded as a martyr, who benefited the cause of dramatic music by partly sacrificing the honorable place he might have held in the history of opera.

In a similar conciliatory spirit Mr. Hervey writes of that other Prussian Jew, Offenbach, who became the idol of the Parisians before the days of anti-Semitism. Although it was his musical buffooneries that won fame and fortune, there was a serious side to Offenbach. In the days when he was a musical critic he severely condemned "mercantile music," praised Mozart and Weber, and championed Berlioz. Through his buffo operas, moreover—and this is the screaming paradox of musical history—he became the ally of Wagner! Both in their librettos and in their music the Offenbach operettas were burlesques on the operas of the period, and as, especially in Paris, nothing is so fatal as ridicule, Offenbach thus helped to clear away the débris and pave the way for Wagner. Nor were his merits merely of this negative sort. He was an original melodist, and he had a genuine vein of musical humor on which Mr. Hervey does not dwell sufficiently.

Of the fourteen chapters in this book the best four are those on Berlioz, Gounod, Bizet, and Saint-Saëns. In common with most writers on music Mr. Hervey teaches that Berlioz "inaugurated a new epoch in the art of instrumentation." This is giving him more honor than he deserves. His first great orchestral work appeared several years after Weber's "Freischütz" and "Euryanthe," and Schubert's Unfinished Symphony. In these three works, much more than in those of Berlioz, lie the germs of the orchestral splendors of Wagner, Liszt, Dvorák, and other great modern colorists. Berlioz needs no apostle; he is at present over rather than under-rated. Ideas, after all, are much more important than colors. Berlioz himself wrote that "sound and sonority rank below the musical idea"; and since our author agrees that Berlioz was not gifted with a rich vein of melody, his themes being often "poor and trivial," and that he did not "shine appreciably as a harmonist," he evidently should have denied him genius while allowing him talent, instead of the reverse; for musical genius consists chiefly in the power of originating new melodies and harmonies. The point in which Berlioz most resembled Wagner and other men of undoubted genius was in his audacity—his bold defiance of artificial rules and his determination to write as he saw fit. In his operas we miss even this audacity; they are conventional, and have never enjoyed any success.

In America, Gounod means "Faust" and "Romeo and Juliet." In France he means incomparably more. For a time his vogue and influence were almost as great as Mendelssohn's in England. At present there is a reaction, but the best of his work will live, and it will include much more than the two operas named. "Among all the composers of the nineteenth century," says Mr. Hervey, "probably not one has appealed so much to the heart of woman as Gounod"; and since women constitute nine-tenths of our musical audiences, it is not likely that they will forego the pleasure of hearing his sweet, emotional melodies. They should try to make propaganda for his sacred music in this country; and they would do well to read pages 127 to 129 of Mr. Hervey's book, where he calls attention to the fact that Gounod's genius is at its best in the prelude and first act of "Faust," to which most hearers pay little attention. Our author's remarks on Saint-Saëns also are to be highly commended to the attention of professionals and amateurs. Saint-Saëns is, as he points out, the only modern master who may justly claim to have achieved success in all the great branches of music. Not only has he reached a high level in the French specialty—operatic music—but "he is the first Frenchman who may be said to have successfully competed with German composers on their own ground, that is, in the domain of symphonic and chamber music." He is, at the same time, of all composers the most difficult to describe; and that makes him interesting to write about. Mr. Hervey devotes sixteen pages to him; and in his last chapters he brings the story of French music up to our day with Bruneau and Charpentier, who represent the Wagnerian phase of Gallic art. Optimist to the last, he declares that the musical situation in France has probably never been so promising as it is now.

Wordsworth. By Walter Raleigh, Author of 'Style,' etc. London: Edward Arnold. 1903.

Mr. Raleigh's 'Wordsworth' will not disappoint the reasonable expectation of those who read his 'Milton' a short time since. If the later book is the less satisfactory, it is because Wordsworth is a more difficult subject than Milton, and presents problems of a more subtle character. Mr. F. W. H. Myers's 'Wordsworth' was one of the best of the "English Men of Letters," and that one who remembers it can read Mr. Raleigh's book with keen delight and with no painful sense of difference and inferiority, is liberal praise. More exclusively critical than Mr. Myers, Mr. Raleigh is less biographical. To appreciate Wordsworth's poetry, he does not think it necessary to pay much attention to his life after the publication of "The Excursion." He had then thirty-six years more to live, but his work was done, save for a few fitful gleams. On the other hand, we are assured that we cannot profitably neglect those parts of Wordsworth's poetry published before "The Excursion" which are commonly least esteemed, and especially by those who think themselves the special guardians of his fame. We cannot, thinks Mr. Raleigh, attend too carefully to those theories of his art which meant so much to Wordsworth, and to the poems which illustrate those theories. "Are not his professions and his method worthy of the closest examination even where he seems to have failed?" We can understand a great poet as little as a great soldier without attending to his defeats. "Indeed, it is from the defeats that most may commonly be learned, for there the same genius and boldness that lead to victory are seen overreaching themselves, planning too ambitiously, trusting too superbly, until at the crisis and height they are broken by their own excess." With Wordsworth it is preëminently so. Mr. Raleigh is not the first to claim that the wisdom of Wordsworth's theories was justified by their children, but he claims this with a boldness and emphasis which few of the later critics of Wordsworth have approached. He does not deny the failures, but he insists that some of the most notable successes were distinctly illustrations of those principles upon which Wordsworth's detractors and admirers have flung themselves with equal rage.

If but little more than half of Wordsworth's lifetime signifies for the student of his poetry, the part that counts cannot be attended to with too patient care; hence Mr. Raleigh's chapters, "Childhood and Education" and "The French Revolution: Coleridge." "There was nothing Wordsworthian, so to say, about the boy Wordsworth," is a wide departure from Wordsworth's own persuasion that

> "The child is father of the man."

What availed for him was his "emotion recollected in tranquillity," his return upon his early life with nature after the failure of the hopes which rose upon him with the dawn of the French Revolution and set behind its storm-tost, blood-red clouds. He had to free himself not only from the hallucinations of that period of storm and stress, but from the imitative zeal of his earliest poetical production. It is an interesting and valuable criticism that here his emancipation never was complete; that in some of his more admired passages he is a pensioner upon the art of others, clothing his sentiments in the phrase and manner of Shakspere. If these passages were the best he had to offer us, Mr. Raleigh would feel his occupation gone. He quotes one of them from "The Affliction of Margaret," and compares its sonorous roll and pomp with another passage from the same poem of a purer and more wonderful beauty, in which Wordsworth's practice is a perfect illustration of his theory. Much more important than his early love of poetry was his early delight in natural scenes and sounds,

> "A feeling and a love
> That had no need of a remoter charm
> By thought supplied, or any interest
> Unborrowed from the eye."

This sensuous passion lasted until the fevers of the French Revolution supervened and drove it out. It never was renewed, but it fed the roots of Wordsworth's poetical mysticism until that, too,

faded away into the common light of those conventional sentiments and opinions which were the pale illumination of his later years. It would, however, be a great mistake to suppose that his revolutionary ardors left no deep impression on his mind. They initiated him into mysteries of pain and darkness but for which his voice never could have vibrated with the intensity it often manifested. Henceforth there were for him *lachrymae rerum*: through all the gladness of the world there was a pathetic undertone of human misery which he must try to understand and to resolve into some deeper harmony.

The study of Wordsworth's relation to Coleridge abounds in interesting matter. It abates considerably from the praise commonly given to Coleridge's criticism of Wordsworth's doctrine of poetic diction, contending that, in so far as this doctrine broke down in practice, it was not because the speech of humble folk and ordinary life had not the value assigned to it by Wordsworth, but because the arrangement of words is quite as important as their meaning or their associations. But Wordsworth's poetic diction has a chapter to itself of extremely fresh and valuable appreciation. It is commonly argued that just in proportion as the poet failed to observe his own rules he wrote well, whereas Mr. Raleigh insists that he seldom obeyed his own rules, and that such poems as those describing Michael and Margaret, in which he most nearly observed his rules, are among the best he wrote. A comparison of Coleridge's "Ancient Mariner" with Wordsworth's "Peter Bell" carries the discussion to its highest point of interest. The two began "The Ancient Mariner" in collaboration, but their respective manners proved so radically different that the experiment broke down. "Peter Bell" is Wordsworth's "Ancient Mariner." His attempt to achieve an effect as profound as that of Coleridge's supernaturalism without supernatural means failed most lamentably, the unexplored associations of Peter's ass proving as fatal as those of the idiot-boy in the poem seldom named but with contempt. Nevertheless, we are assured, and this convincingly, that in these failures Wordsworth was knitting up his strength for such successes as were attained only a little further on.

A chapter called "Nature" and one called "Humanity" are the two most subtly reasoned of the seven which make up the sum of Mr. Raleigh's book. In the former he takes definite issue with Mr. John Morley, where that writer says, opposing Wordsworth, "No 'impulse from a vernal wood' can teach us anything at all of evil or of good." Mr. Raleigh contends that Nature was what she was to Wordsworth in virtue of no "pathetic fallacy," but because of his resolute determination to see her in her simplicity and reality, with a "wise passiveness." Nor did he blink the "red with ravin" side that Nature turns to the biologist, but "joy in widest commonalty spread" was the pervasive fact which no tragic circumstance could long obscure. The "Humanity" chapter successfully rebuts the notion that Wordsworth's interest in nature was fatal to his sympathy with human life. The next chapter, "Illumination," sometimes gives us momentary wonder whether it is of Wordsworth or of Emerson that we are reading. The whole doctrine of Wordsworth on the lessons of Nature is quoted in one noble passage. "If it is didactic, it teaches not by forced parallel, but by perceived identity." His moral reflections are never homiletic in their intention, but are the surprises of wonder and awe that come to him in the true mystic fashion, which is not to look *through* things, but *at* them till they speak. It does not seem possible that any one can read Mr. Raleigh's book and not feel with its author that, however signally and obviously Wordsworth failed in some particulars, "it is a good discipline to follow that intense and fervid spirit, as far as may be, to the heights that denied him access."

The Angevin Empire (A. D. 1154-1216). By Sir James H. Ramsay of Bamff, M.A. With maps and illustrations. The Macmillan Co. 1903.

M. Aulard, in writing the political history of the French Revolution, affirms that he has made no statement which cannot be justified by an appeal to original authorities. Sir James Ramsay might almost repeat this claim on behalf of his 'Foundations of England,' his 'Lancaster and York,' and his 'Angevin Empire.' The latest of his works is marked by the same qualities of diligence and thoughtfulness which have distinguished its predecessors, and follows the same methods. The military motive is again emphasized, and we observe once more a strong desire to determine particular facts; but, from the nature of the subject, the antiquarian element is less conspicuous in the 'Angevin Empire' than in the 'Foundations of England.' For the political, administrative, and military history of England during the reigns of Henry II. and his two sons, this volume is a learned and valuable compendium of facts. Of the three rulers whose acts are here traced, Henry II. must be styled the founder of the Angevin Empire and its chief representative, for Richard was no politician, and John, by the failure which attended his crimes, merited the title of "Lackland." Considered from the standpoint of the Angevin dynasty, Henry's reign is by far the most interesting of the three, and the political success of the father in everything save his domestic policy gives him clear precedence of his sons. Accordingly, in the present notice, we shall confine our comment to Sir James Ramsay's judgment of Henry II., especially as more than half the narrative is devoted to his reign.

The paradox of Henry's career is, that, while building up an empire, he should not have been actuated by an imperial policy. There can be no doubt concerning the degree of prestige which he enjoyed throughout the whole of western Europe. The Conqueror himself had not been so famous nor so courted. As Sir James Ramsay says:

"Henry's management of foreign affairs was undeniably successful. He held France in the hollow of his hand. He built up and kept together in a marvellous manner a Continental dominion in which the antipathies of Norman and Gaston, of Breton and Poitevin, as well as the instincts of Feudalism, had to be mastered and held down. These possessions were protected by friendly alliances with Germany, Maurienne, Arragon, and Castille. He established a footing in Ireland, and effectually asserted the supremacy of England over Wales and Scotland. With respect to the latter country, we must especially praise the tact with which Henry kept his hold on William the Lion without irritating the Scots by interference in their domestic affairs. All this was due to the moderation of his aims and his persistence in following them up."

But over against these triumphs must be set the pathetic humiliation of Henry's last days, and that spectacle of filial disobedience which, at the distance of more than a hundred years, impressed itself upon the imagination of Dante (*Inferno*, xxviii., 130-142). Not only did the Angevin Empire lack coherence, but its greatest ruler had no conception of perpetuating it, as can be seen from his scheme of heritage partition. Sir James Ramsay, while crediting Henry with cleverness, activity, and unusual diplomatic gifts, calls him "ignorant of human nature and of the world in which he lived." Otherwise, after crowning Henry, he could not have declared Richard heir to Aquitaine; and again, after the "young king's" death and Richard's designation to the crown, he could not have planned to make John the lord of Ireland. Feudalism and nationality both stood in the way of an Angevin Empire; but more fatal to it than either was the family policy of Henry II. With a dynastic position which in many ways anticipated that of Charles V., he pursued a different policy, for Charles desired Philip to be Emperor, while Henry had no sense of structural or even nominal unity.

Sir James Ramsay has selected a picturesque title, and one which can easily be justified by a reference to the Continental interests of Henry II. and his sons. As a matter of fact, however, this volume is a contribution to English history in a somewhat limited sense of the word. References to Continental affairs cannot fail to occur at frequent intervals, but English authorities have been followed very largely, and the rôle of the Angevins is considered with a view to its English rather than to its European associations. One of Sir James Ramsay's specialties is the Becket controversy, which he approaches with the design of showing what "Liberty of the Church" meant at a time when the words possessed real significance. His personal estimate of Becket is one that would have satisfied Froude rather than Freeman—to recall an historical *cause célèbre*:

"An undoubted martyr, but no true saint, he fought and fell in the cause of sacerdotalism pure and simple. The ascendency of the clergy in matters temporal was the ultimate end for which he strove. He would have subjected England to a virtual hierarchy, of all known forms of government perhaps the very worst. No sense of patriotism, no regard for the cause of the poor, for the advancement of education, or even of religion, except as resultant from clerical domination, can be traced in his words or acts. Fighting what might be supposed to be a spiritual cause, and with spiritual weapons, he conducted the struggle in a thoroughly secular spirit. With all his Biblical jargon, he fought as a politician and the leader of a political party; and such, but for his end, would have been the unanimous verdict of history."

Sir James Ramsay's account of the Angevin invasion of Ireland opens up an interesting question—the more so as he admits the authenticity of *Laudabiliter* in opposition to Mr. Round, and also to Professor Thatcher, whose study apparently he has not seen. The point is too involved and too technical for discussion here, but we certainly think that Sir James Ramsay

advances no satisfactory grounds for the acceptance of this much-debated document. The only other matter upon which we shall touch is a general one. Sir James Ramsay, like other investigators, has found that the mediæval chroniclers are utterly mendacious in their exaggeration of numbers and amounts. Going a step further, he endeavors to set up a standard by the aid of which the statistics of twelfth and thirteenth-century annalists may be reduced to their proper dimensions.

"I have lost," he says, "no opportunity of testing these, wherever possible, by comparison with more authentic personal or Record evidence, the last being the only authority really trustworthy. The result is that I find that multiplication by ten might almost be called a normal rate of amplification. Whether dealing with the strength of an army or the produce of a tax, the student *prima facie* will do well to take one-tenth of any given number if he would arrive at a prudent estimate. In some cases that proportion would be found too large."

Here is another interesting sidelight on the Ages of Faith!

Studies in the Evolution of Industrial Society. By Richard T. Ely. The Macmillan Co. 1903.

The author of these essays, which appear as a volume in the "Citizen's Library of Economics, Politics, and Sociology," states it to be his conviction that "scientific work in the field of the humanities may generally be made interesting to intelligent citizens through cultivation of clearness in statement and literary style." He adds that it is his aim, as editor of this Library, to bring every volume up to the present standard of science, and that he hopes even to push forward the boundaries of knowledge. The statement of these aspirations, he thinks, will prove helpful to the reader, who is in some danger of going astray in that immense borderland where economics, ethics, biology, and sociology meet.

We concur in the view that scientific work may be made interesting in the manner proposed, but we can think of no definition of scientific work that would include such matter as is here collected. The book is largely compiled from miscellaneous writings and speeches, and furnishes little evidence either of "cultivation of clearness in statement and literary style," or of careful observation and sound reasoning. Very few of its conclusions, indeed, make any pretence of being logically deduced. They seem to the author to be established scientifically when they please the public, or are in harmony with his own predilections. The lessons of experience are frequently ignored altogether; sometimes they are grossly misstated. The dedication of the book is significant of its quality, being to Justice Holmes of the Supreme Court, "in appreciation of the enlightened philosophy so conspicuous in his opinions, which is laying a firm foundation for a superstructure of industrial liberty"!

In this enlightened spirit the author assures the intelligent citizen whom he addresses that "for a long time, in this country, under the influence of eighteenth-century philosophy, we were inclined to regard men as substantially equal," but that it is now plain "that this theory works disaster, and is indeed cruel to those who are in the lower stages, resulting in their exploitation and degradation." The bearing of this on our slaughter of the Filipinos is grimly humorous. Such doctrine is not rendered more palatable by the platitude that "processes of readjustment in human relationships always have brought suffering, and doubtless always will bring suffering, although the suffering may be greatly mitigated by a better will and a higher intelligence." The author is on surer ground when he informs us that where differences of wealth pass a certain point—of uncertain position—they operate as a social barrier. Those who contest this proposition may know that it has been recognized by philosophers from time immemorial. It is equally safe to assert that those who sympathize with the employing class read with approval newspapers which express their sympathies, while those who entertain the views of the working classes read with approval the diametrically opposite utterances of the labor press. "The effects of classes are both good and evil," we are told; those who would know more than this are assured that "it rests with us to see whether or not the forces of social union shall triumph over the forces of social disintegration." In the name of the Prophet—Figs!

As to the formidable question whether the vigor of a population may not be decreased by the modern provisions made for saving the lives of those who would have formerly perished of their weakness, the author explains that the apprehensions felt by Charles Darwin and Professor Marshall are unwarranted by the facts. "There has been a great deal of talk on this subject, but no strictly scientific work." Several "thoughts and observations" convince the author that the vigor of modern nations is increasing; but he admits that his views are not final. "What is here stated must be regarded as only suggestions, which, it is hoped, will be followed up by others, and upon which the writer will be glad himself to do further work, if leisure therefor can be found."

It is rather startling to read that "competitive price is uniform"; "where we have perfect competition working, we have one uniform price charged for the same article at the same time." Some account of the existence of such a state of prices, drawn from experience, would be of much interest. Much is said of the "cause of labor," by which is meant the claims of the participants in those monopolies known as trade unions. Nothing is said of the rights of those unfortunate laborers who are deprived of employment by trade-union policy; nor is there any reference to the system of piracy called the protective tariff. That scandalous piece of political jobbery, the Industrial Commission, is highly praised, especially because of the large number of "economists" who secured remunerative employment thereunder. According to our author, these persons were selected in response to the demand of public opinion. Other influences, it is well known, operate in the distribution of this form of political patronage; and there are worse cases than that of the Industrial Commission.

We are not surprised that the taxation of inheritances finds great favor with this author. His scheme, he complacently observes, will stand every test that can be applied to it. It is so perfectly in keeping with true democracy that the purer the democratic countries have become in which this reform has been tried, "the more they are inclined to move further along the same line. . . . It antagonizes no other line of progress, but helps forward every other true reform. . . . It lays a burden heavy to be borne on no one." As a matter of fact, this "reform," to take the State of New York as an example (the rate of taxation there, by the way, is incorrectly stated), has been attended with outrageous corruption, and is carried out by the odious practice of paying spies and informers. The burden is a very heavy one, as every lawyer knows who has to settle an estate; and few estates can be settled without the aid of a lawyer. A small estate is often mulcted in an amount equal to that received by the State. The process of settling the tax is frequently vexatious to the last degree, and it is speaking moderately to say that no other tax is so expensive in collection or so annoying to its victims. The tax "meets with approval" because politicians and demagogues think that it falls on the rich; but they ignore the forces which cause the diffusion of taxes, and the resort to informers proves that the incidence of the tax is unequal. To say that such a tax meets every test that can be applied to it shows the superficiality of Professor Ely's views. His intentions are doubtless benevolent; but the boundaries of our knowledge are not pushed forward by pouring a collection of platitudes and fallacies into a menstruum of sentimentality.

George H. Hepworth: Preacher, Journalist, Friend of the People. The story of his life, told by Susan Hayes Ward. E. P. Dutton & Co. 1903.

Mr. Hepworth could not have had a biographer more disposed to give a favorable account of him. If the note of personal loyalty obscures that of the judicial biographer, it does this so obviously that due allowance can be made. Mr. Hepworth was not a great man. He was not a fresh and original thinker, nor a powerful one; he was not an editor whose rank was with the first or second best; his stock in trade was a handsome face, a good voice, and a fund of good nature and good fellowship. There was nothing in his character or his achievement to justify an elaborate biography, and Miss Ward's must be regarded as a tribute of that private affection of whose fond exaggeration we are many of us beneficiaries to an appreciable degree.

Several aspects of Mr. Hepworth's life present a surprising if not contradictory appearance. He was apparently still-born (1833), yet grew up to be a "muscular Christian," rejoicing in his strength, which he cultivated by "deep breathing" and gymnastic exercises, while yet again his proud health proved unstable; for many years he was an heroic sufferer, and he died midway of his seventieth year. Entering the Unitarian ministry when he was but twenty-two, after a brief settlement in Nantucket he went to Boston, where he sided with the radical Unitarians, and on the death of Theodore Parker pronounced a generous eulogy upon him and administered a rebuke to Dr. Bellows for saying that Parker had not complied with the conditions of salvation. Two of his Boston ventures excited particular attention—one, the institution of theatre-preaching, a showy but futile enterprise; the other, a theological school

corrective of the pretensions of "a learned ministry." The results discredited the method; and the Harvard Divinity School, after emulating for a time its bad example, adopted higher standards for entrance and graduation than had been insisted on before.

The Church of the Messiah in New York with a big debt and a small congregation, and suffering from an overdose of "scholarship," resolving on the opposite extreme, called Mr. Hepworth, who by this time (1869) had so far abjured his theological radicalism that he engaged with heart and hope in an attempt to foist a creed upon the Unitarian Association. For her account of this business Miss Ward has gone to Dr. A. P. Putnam, Mr. Hepworth's principal coadjutor. They thought they had secured Dr. Bellows for their great ally, but in the moment of their anticipated triumph he turned and rent their project in a fatal manner. Dr. Putnam thinks he was captured by the young radicals, but Dr. Hedge's influence is a likelier explanation. Dr. Putnam seems to have forgotten that Dr. Hedge's heavy guns did quite as much as Dr. Bellows's Rupert charge to ruin the reactionary line of battle. What Mr. Hepworth had failed to do in the Unitarian Association he attempted the next year in the National Unitarian Conference, and his persistency was rewarded by some measure of success. But it was far short of the lengthened dogmatism of the creed drawn out in eight elaborate articles to which he aspired. The next step was one of the surprising contradictions. In default of a more definite Unitarian creed, he resorted to one definitely orthodox. He would gladly have made over his church into his own likeness, but there were difficulties in the way, and a painful situation was developed. In the excited Unitarian imagination Mr. Hepworth was hardly to be distinguished from "the man who stole a meeting-house." Finally, he joined the Congregationalists, and in 1872 the Church of the Disciples was built for him—a huge monstrosity of corrugated iron, its "squatty dimensions" affording an outward and visible sign of a mortgage of $200,000 on the property. To lift this might have been possible had not the crash of 1873 supervened. In 1876 the building was sold at auction and bought back by the trustees for a fraction of its orginal cost—a transaction in which the children of this world were not wiser in their generation than the children of light. Even when Mr. Russell Sage had cleared the church of debt, Mr. Hepworth found the burden of its pecuniary anxieties greater than he could bear, and he resigned his charge in 1879.

He had already become a writer for the New York *Herald*, and for the remainder of his life the best part of his energy flowed into the columns of that paper, yet never in a manner that was significant of detachment from his original calling. The "play impulse" was strong in him, but he liked work better than play, preaching better than yachting; and for some years he did regular preaching in Newark in connection with editorial work on the *Herald*. When in 1885 he was made superintending editor of the *Herald*, his formal connection with the Newark church ceased, but not his preaching then or ever. Besides, the *Herald* afforded him a pulpit from which he addressed a congregation larger by many thousands than that which he had gathered in the Church of the Disciples. Mr. Bennett of the *Herald* had other affinities with him than those of the yachtsman; he liked his preaching, and proposed to him a series of editorial sermons. These delighted a great multitude of readers. They avoided controversy, they pleaded for "the unity of the spirit," they went far to identify religion with the moral life. On similar lines Mr. Hepworth wrote a number of small books which were particularly acceptable to that large body of people who like to have the mysteries of a future life treated with happy confidence, and Mr. Hepworth wrote of them as knowingly as of Ireland and Armenia after his visits to those countries. He died June 7, 1902, and his body, which he had always respected, was cremated in accordance with his wishes and commands.

The Mental Traits of Sex: An Experimental Investigation of the Normal Mind of Men and Women. By Helen Bradford Thompson. The University of Chicago Press. 1903.

The comparative psychology of men and women has been one of the last things seriously to interest mankind. A few questionable generalities about the minor distinctions of sex, an occasional newspaper paragraph on the relative sensibility of the sexes, sufficed for the curiosity of the lay public, always rather impatient of such comparisons; men of science, until lately, left psychology to the Philosophers, who are seldom minute. Mathematics and, one by one, the rest of the sciences long since shook off the guiding hand of philosophy; psychology is the baby among them, now sharply reminded that she is precocious, now warned that she must walk alone. With much energy and still more uncertainty of result, she does now, in fact, walk alone. In all reputable colleges psychology now has a separate chair. Ten years ago Mr. Havelock Ellis, in his 'Man and Woman,' drew up a very clear and popular summary of the results of modern study of sexual differences, ranging over the whole field of those differences as they are displayed by the human being from birth to death. Some of the conclusions which he quoted have achieved a popular success—that woman is centripetal, her motions tending inward from right to left, as man is centrifugal, with his motions outward from left to right; that Tennyson went far when he denied that woman is undeveloped man, but not far enough—the truth being that man is undeveloped woman, since woman approximates more closely to the infantile type, which is higher in the line of evolution than the adult type. This interesting generalization is supported by the marked effeminization of highly civilized man. But, after all, valuable as it is, Mr. Havelock Ellis's report left the reader with a conviction of the profound inconclusiveness of all the evidence that may be fairly called subjective, and the conflicting character of the rest. Even on the objective question of the relative weight of the brain, the statistics conflict. All agree that a man's brain weighs more than a woman's, but only absolutely; relatively it is lighter; which raises the question, relatively to what? To difference of weight or difference of measurement? The point is still debated. But it is not till we reach the field of such experiments as Miss Thompson's that we appreciate how elusive is the subjective and how completely we are at the mercy of shifting statistics. Lombroso in Italy finds the sense of touch more obtuse in women; Jastrow at Wisconsin University finds the same sense more obtuse in men. Who shall calculate and allow for all that differentiates the Italian woman of the middle and lower classes from the American girl who goes to a co-educational college? Those who range over a different manor cannot expect to put up the same game.

Miss Thompson's little volume of 188 pages is a report of careful experimental work in a narrow field. The subjects of her experiments were twenty-five men and twenty-five women chosen from the undergraduates and younger graduate students of Chicago University. Colleges and prisons are the favorite experimenting-ground of psychology. But it must be admitted that at present the college woman is not exactly comparable with the college man. She is usually the cleverest girl of her family, urged by ambition or poverty or incompatibility of temper to leave her home; he goes to college as a matter of course, whether for the training or the athletics or the social prestige. Time will adjust this difference and color Miss Thompson's results with anachronism. The number of her subjects is fatally small; another set of fifty students even drawn from the same university might reverse all her results.

Miss Thompson's experiments covered the various senses, motor ability, intellectual processes, and affective processes. Her tests of taste by a series of solutions went to prove that men have a keener discrimination for strong tastes in all cases, except for salt; this fact has no doubt secured to men the profession of wine and tea-tasting. Miss Thompson does not seem to have taken into account that her men subjects probably smoked while the women almost certainly did not. It is hard to believe that persistent smoking does not lessen the keenness of perception for the weaker solutions. The method employed in this test was that of Messrs. Nichols and Bailey, who reached a conclusion precisely opposite. Miss Thompson's results, however, fall into line with those of Ottolenghi. One of the Chicago men could not distinguish sour, another did not know sweet from bitter; these cases could scarcely be called normal, and for so small a number they would destroy the value of an average. In the test of smell, also by solutions, the women had lower thresholds—*i. e.*, were slightly more sensitive to the weaker solution—while for strong odors, as for strong tastes, the men were more discriminating. The popular way of stating this would be that a woman detects a faint smell more easily, while men more readily find a strong scent too strong. But the evidence from other experiments on smell is, so far, conflicting. The same is true of hearing. Jastrow, Galton, and Lombroso found the hearing of women more acute; Miss Thompson's experiment revealed a slight superiority of women in pitch discrimination. No conclusive test has as yet been made; probably the masculine monopoly of piano-tuning is, *en attendant*, fairly significant to the lay mind.

Like nearly all investigators, Miss

Thompson found that women have the better memory, while men have far greater ingenuity. The competition in general questions showed that women were ahead in mathematics, biology, and English literature, equal with the men in chemistry, inferior in history and physics. This is obviously a test that, in the case of only fifty students, has no value at all for sex-discrimination. All the authorities agree on the greater motor ability of men. In factories the manufacture of the best cigars and cigarettes—a good test of deftness and speed—is never intrusted to women. In card-sorting the women were more rapid, but here color-blindness, so frequent in men, comes into play. The discovery that, among fifty students, the women devote less time than men to study, or that women for their recreation prefer the opera while men prefer outdoor sports, is again wholly without significance.

Miss Thompson's tests were made with great care, and probably reached a high pitch of accuracy. While some of them seem to be valueless, it is, at any rate, certain that if definite conclusions on any or all of these questions are to be reached, it must be from an enormous amount of cumulative evidence, based on such tests as these. Her work is in this sense a contribution. Its value for statistics lies partly in the fact that she was not, like some psychologists, content with averages; the numerous diagrams in the volume are of curves which show at a glance the abnormal man or woman whose presence in a group of twenty-five would have stultified an average. Miss Thompson betrays no bias. Her general conclusion is that psychological differences of sex are largely due

"not to difference of average capacity, nor to difference in type of mental activity, but to differences in the social influences brought to bear on the developing individual from early infancy to adult years. . . . If it were really a fundamental difference of instincts and characteristics which determined the difference of training to which the sexes are subjected, it would not be necessary to spend so much effort in making boys and girls follow the lines of conduct proper to their sex" (p. 181).

Generally speaking, Miss Thompson's work and her summary of results obtained by others tend to show that the clear distinctions of such writers as Lombroso are being gradually superseded. Lombroso, confronted with the athletic American girl of to-day, might well have been more tentative. One of the compensations for women to which Mr. Ellis drew attention was the fact that if the male is, as Lombroso asserts, everywhere and in all respects more variable than the female, that same variability gives us the preponderance of male idiots no less than of male geniuses. Karl Pearson has vigorously attacked this theory on the ground that the sex which produced the greatest abnormalities of genius and idiocy would not necessarily produce the widest normal variations. In any case, it seems to be the pretty general opinion that it will be safer for women not to "lose the childlike in the larger mind." Meanwhile, the fluctuations of sexual psychology rival the fluctuations of the Homeric question.

R. F. and H. L. Doherty on Lawn Tennis. New York: The Baker & Taylor Co. 1903.

In a chapter of this book comparing lawn tennis with other games, Mr. Eustace Miles makes the strong statement that, with this precious volume in their possession, "there is now no reason why beginners and others should continue in error." We have never believed it possible to learn any game by precept alone, but certainly any young player who will read this book carefully and try to adopt, in his daily practice, the principles laid down by the Messrs. Doherty, can hardly fail to improve. The authors have just added the American championships to a long list of similar honors, and are undoubtedly the best living exemplars of this excellent game; and in their preface they declare that they have kept back nothing, but have given all their secrets to the world. The most important of their injunctions, and one that is repeatedly insisted on, is the necessity of keeping the eye on the ball, instead of yielding for an instant to the temptation to see what the opponent is doing on the other side of the net. This is quite as important as the analogous necessity in the game of golf. Then comes the overhead or smash stroke, the accurate execution of which is the sure indication of a fine player; and lastly—and perhaps most important of all—the young player is advised to cultivate a moderate first service which will practically always land in the court, rather than a severe one which will generally be a fault.

The writers appreciate the difficulties of what is known as the American service, but they have shown in recent games that these difficulties can be successfully overcome. Of the leading American players they have a high opinion, and consider that when they fail their failure is due to lack of steadiness, to the effort to achieve severity rather than certainty, and to their weakness in executing the low volley. Presumably this judgment was in print prior to the Newport tournament, and its correctness was signally demonstrated by that event.

VACATION DAYS IN GREECE

By Rufus B. Richardson. Formerly Director of the American Archæological School at Athens. Fully illustrated. 8vo, $2.00 *net*. (Postage 20 cents.)

Professor Rufus B. Richardson, during a residence of eleven years in Greece as head of the American Archæological School in Athens, has had an unexcelled opportunity to visit many parts of Greece less frequently visited by the tourist, but most picturesque and interesting. He describes his excursions into these regions in a series of sketches of great informal charm, told from the picturesque rather than from the archæological and scholarly point of view, although the two are so judiciously combined that the book will be indispensable both to the student and to the general traveler in Greece. The sketches are attractively illustrated by unfamiliar and beautiful photographs.

THE STORY OF THE REVOLUTION

By Henry Cabot Lodge. A new edition in one volume, with all the illustrations, 178 in number, of the original two-volume edition. 8vo, $3.00.

"Writing of this sort," said the *New York Tribune* of the two-volume edition of this standard work, "needs good illustration, and Senator Lodge is to be congratulated on just about the most brilliant pictorial accomplishment with which any such scheme as his has been blessed of late years" The success of the six-dollar edition here referred to was remarkable for so expensive a work, and it is felt that this one-volume edition, containing, as it does, every feature of the original at half the price, ought to reach a very large circulation.

THE DEVELOPMENT OF THE DRAMA

By Brander Matthews. Uniform with the author's former volumes. 12mo, $1.25 *net*. (Postage 11 cents.)

EDMUND CLARENCE STEDMAN writes:

"Writers should be grateful to Professor Matthews for placing within their reach his lectures on the evolution of the drama. As brought togeth r they form a consecutive and lucid treatise, and a valuable one, by our most practical American authority on comparative dramatic literature. He treats the question of poetry for the stage with fairness and common sense."

New volume of the International Theological Library

OLD TESTAMENT HISTORY

By Henry Preserved Smith, D.D., Professor of Biblical History and Interpretation, Amherst College. Crown 8vo, $2.50 *net*. (Postage 18 cents.)

This book gives a history of Old Testament times. This it does by a narrative based upon those Biblical books which are historical in form. The nature of these books is carefully considered, their data are used according to historical methods, and the conclusions of recent criticism are set forth.

THE DIRECT AND FUNDAMENTAL PROOFS OF THE CHRISTIAN RELIGION

By George William Knox, Professor of the Philosophy of History and Religion, Union Theological Seminary. An essay in comparative apologetics, based upon the Nathaniel Taylor Lectures given before the Divinity School of Yale University. $1.20 *net*. (Postage 12 cents.)

This work does not follow the lines of traditional apologetics. It is not a treatise on the historic creditability of the Gospel narratives; it is neither an attack on Science nor an attempt to harmonize its teachings with historic doctrine. It sets forth the essential principle of Christianity and shows its validity and its adaptation to the ethical and religious needs of man.

SUCCESSFUL FICTION

JUST PUBLISHED
McMAHON'S ELEMENTARY PLANE GEOMETRY
90 Cents
By **James McMahon,** Assistant Professor of Mathematics in Cornell University.

THIS carries out the spirit of the suggestions made by the Committee on Secondary School Studies appointed by the National Educational Association, and meets the most exacting college entrance requirements in this subject. It offers a combination of demonstrative and inventional geometry. The subject is presented with Euclidean rigor; but this rigor consists more in soundness of structural development than in great formality of expression. Many changes from the usual methods of presentation have been made, and independence of reasoning is fostered by compelling the student, no less in the demonstrated theorems and problems than in the original exercises, to rely on the propositions already proved. The work throughout aims to develop his powers of invention and generalization. The book is decidedly practical both in plan and scope.

THE STORY OF A BOOK

In Three Chapters

CHAPTER I.—THE MEN WHO MADE IT

ONE HUNDRED years ago Noah Webster—journalist, scholar, patriot—was brooding a great undertaking. He had worked with Jay and Hamilton for the adoption of the Constitution and the support of Washington's administration; freedom and order were established; now for a science and literature worthy of the young republic! At the foundation of all is language. Webster had already made a Speller which speedily became and long remained a text-book for the entire people, training to uniformity of spelling and pronunciation, and yielding the author a maintenance which enabled him to carry on the vast and uncompensated work of "An American Dictionary of the English Language." In the exposition of that language no real advance had been made since Johnson's dictionary sixty years before. The new age and the new country had produced a flood of new words and usages for which there was no interpreter or arbiter. Webster essayed to cover the whole literature and the living use of the English-speaking race, with special inclusion of the new nationality. He brought to the task a natural genius for language, a special aptitude for lucid, exact, and terse definition, a ripe scholarship, and a tireless industry. With his work well begun, he stopped to broaden his knowledge, and mastered the main vocabularies of twenty languages. He studied for a year in Europe. Johnson worked intermittently for eight years on his dictionary; Webster spent twenty years on his. He gave it to the world in 1828—a splendid monument of scholarship, and in its substance fitted to every-day needs. But it was in two bulky volumes; its price was $20, it contained a few eccentricities of spelling, and the American public was not yet emancipated from deference to English authority. The first edition of 2,500 copies was enough for thirteen years. Webster stood to his guns, bated no jot of his peculiarities even where most unpopular, revised the work on its original lines, and brought out a new edition, at $15, in 1841. That, too, found little sale; and in 1843 Webster passed away, after a full and happy life, but with his *magnum opus* lying stranded like Robinson Crusoe's boat, a vessel too big for the builder to launch.

One hundred years ago, to a country printer in western Massachusetts was born his first son, George Merriam. The second son was Charles, and then came a flock of brothers and sisters. The boys were educated in the district school and the printing office; they toiled early and late; when their father died they gave their slender patrimony to their mother and sisters, and pushed their own way; and in 1831 G. & C. Merriam began business as retail booksellers in Springfield, Mass. They gave to business every hour not given to their families or their church. They began publishing in a modest way, notably an admirable series of school readers—the "Child's Guide," "Village Reader," etc.—compiled by the elder brother. When at Dr. Webster's death, his book came into the market, they discerned something of its potential value, and bought the unsold edition and the publishing right. That purchase marked an alliance of business and scholarship which has borne fruit for sixty years. The new publishers' first care was to fit the scholar's wares to the public's want. They employed Prof. Chauncey A. Goodrich, Webster's son-in-law and literary heir, to re-edit the book; the eccentric spellings were dropped and the reasonable changes retained; such scientists as Silliman and Dana were employed as contributors; and in 1847 the full work was brought out in one volume for $6. The public favor was instantly won and never was lost. Webster's executors had appraised the copyright for the unexpired ten years at $3,000, and the Merriams bought it for that. They so increased its value that when the copyright was renewed for fourteen years they made terms with the Webster family by which during that period they paid to them, for the large book with its Abridgments and the Speller, a quarter of a million dollars. The Merriams leased the Abridgments and the Speller to other houses, and concentrated their whole energy on the large book.

In 1850 it was proposed in the Massachusetts legislature, unsuggested by the publishers, that a copy of Webster's large dictionary be placed in every district school. Before the legislative committee the advocate of a rival book sneered at Webster as an ignorant pretender. Professor Noah Porter of Yale College replied with so eloquent a vindication of Webster's scholarship and services that local prejudice was conquered. The schools were offered their choice, and 3035 took Webster and 105 its competitor. Soon after, New York state placed 10,000 copies of Webster in its schools, and thus began its acceptance as a school standard which to-day extends over the entire country.

When the enlargement of Worcester to an illustrated quarto was announced in 1859, the Webster publishers made a prompt counterstroke. They put into a supplement a large number of classified illustrations—a new feature in an American dictionary—added a supplement of new words which had long been accumulating; appended a valuable table of synonyms by Prof. Goodrich; and brought out their enlarged work well in advance of the new Worcester, which never approached it in popularity.

Then they set to work on a radical and thorough revision. Under Dr. Porter's supervision, with the aid of a group of eminent scholars, the advances in linguistic science and in popular usage were inwrought with Webster's solid groundwork. The period of this revision was that of the Civil War; business fell off; the Southern market was lost; the income from the Speller was intermitted, and payments to the Webster family were by amicable arrangement postponed; war taxes were heavy; but the three brothers (Homer Merriam being now included) pushed steadily the revision, while they supported the war, and looked for the return of peace and prosperity. So came to birth the great book of 1864, known familiarly as "The Unabridged"; its predecessor being completely superseded and withdrawn from the market, until revamped and foisted upon the public under false pretenses half a century later.

A battle of pamphlets turning largely on the question of spellings; the general prevalence of the Websterian practice, and an eclipse of all rivalry in the commercial field; a fresh supplement of new words in 1879; the gradual addition of biographical and geographical tables—these were incidents preliminary to the next great revision. To this revision—a work covering ten years and costing over a third of a million dollars—were given the fuller elaboration, the larger permanent staff, the freer employment of specialists, and the exact attention to every detail, which accord with the advanced methods of modern scholarship and business. In a work carried on thus through generations, there has developed a special art of dictionary-making, with an invaluable tradition of experience, yet progressive and always expanding to meet the new conditions. The result appeared in 1890 in a work whose title marked the supremacy won throughout the English-speaking world, Webster's International Dictionary.

Its improvement has never ceased for a day. New matter has been added; tables have been scrupulously brought up to date; the accumulation and sifting of new words and meanings has gone steadily on. A Supplement of new words in 1900; tables of biography and geography substantially made over in 1902; a steady accession of improvements with no special announcement—this has been the later history of the book. To the chief editorship so long and ably filled by President Porter has succeeded Dr. W. T. Harris, United States Commissioner of Education and a scholar of world-wide repute.

It is to the alliance of scholarship and business sagacity that Webster has owed its success and growth. From that alliance has sprung a harmonious aim and a comprehensive plan of work. Before setting forth that ideal, a word more may be given to the personnel of the combination, past and present. On the publishers' side the force was strengthened in 1877 by the addition of Mr. O. M. Baker, trained as an educator and a school superintendent; an experienced and able bookseller. Mr. H. C. Rowley, came in two years later; the change by incorporation to "The G. & C. Merriam Company" in 1892 was a change of form only, the same hands still manning the ship; to the directors was added Mr. K. N. Washburn, who had been long engaged in the company's service; and while the first two Merriam brothers have passed away, the directorship includes two of the family name, and Homer Merriam still presides in a hale old age.

At the head of the editorial force have been in succession three scholars of high repute; Dr. Goodrich, the heir of Dr. Webster in mental acumen; President Porter, with a rare combination of original intellect, acquired knowledge, and practical sagacity; and Dr. Harris, officially the first man in the American educational world, and eminent in a wide variety of studies. Next to these have been a group of contributors of the highest standing in general scholarship or special branches, such as Dr. Mahn of Germany, Prof. W. D. Whitney, President D. C. Gilman, Professors Hadley, Lounsbury, Sheldon, Remsen, Verrill, Justice Brewer—the list could be indefinitely prolonged. Of highest practical service have been men perhaps less famous who have through arduous years perfected themselves in the technical art of dictionary-making; as chiefs of staff should be named, among the departed, William A. Wheeler and Loomis J. Campbell, and, among the living, F. Sturges Allen. With these have been scores of faithful and serviceable workers, whose lot has been "to widen knowledge and escape the praise."

So much for the men who have made the book; the ideals they have followed and the methods they have used will be given next week.

NEW BOOKS JUST READY

NEW FICTION *PUBLISHED THIS WEEK*

The Beaten Path **By Mr. RICHARD L. MAKIN**

Human work-a-day life and the way its burning industrial problem touches the average man and woman are dramatically displayed. *Cloth,* $1.50.

Blount of Breckenhow **By Miss BEULAH MARIE DIX**

Tells of the love of a brave man for a noble woman in the face of a family tragedy as common now as in the days of 1642. By the author of "The Making of Christopher Ferringham," "Hugh Gwyeth," etc. *Cloth,* $1.50.

NEW FICTION *PUBLISHED LAST WEEK*

McTodd **By Mr. CUTCLIFFE HYNE,** Author of "Thompson's Progress," etc.

The hero is the Scotch engineer, nearly as popular with Mr. Hyne's readers as his peppery "Captain Kettle." *Cloth,* $1.50.

The Literary Sense **By E. NESBIT,** Author of "The Red House," etc.

A collection of such clever and original short stories as might be expected of the author of "The Would-be-Goods." They illustrate the curious tendency of man to "rise to the occasion"—usually at the wrong mo ment; hence the title. *Cloth,* $1.50.

ILLUSTRATED BOOKS JUST READY

The Land of Heather **By Mr. CLIFTON JOHNSON**

An attractively illustrated volume on Scotland, uniform with "Among English Hedgerows," etc. *Cloth, crown 8vo,* $2.00 *net.*

A Pleasure Book of Grindelwald **By DANIEL P. RHODES**

A charming volume on the delights of one of the most popular resorts in Switzerland. *Fully illustrated, Cloth, 12mo,* $1.50 *net.*

The Care of a House **By T. M. CLARK,** Author of "Building Superintendence," etc.

The book is a volume of suggestions of the greatest value to every owner or prospective builder, landlord or tenant, as preventing the waste of a hundred times its cost many times over. *Cloth, 12mo,* $1.50 *net.*

A NOTABLE BIOGRAPHY *PUBLISHED THIS WEEK*

Robert Morris PATRIOT AND FINANCIER **By Mr. ELLIS P. OBERHOLTZER**

An important and attractive biography, which throws a flood of new light on the inner history of the Revolution. *Illustrated, cloth, large 12mo,* $3.00 *net.*

COLUMBIA UNIVERSITY PRESS PUBLICATIONS

Irish Life in Irish Fiction **By HORATIO SHEAFE KRANS**

Cloth, 12mo, $1.50 *net* (postage 9c.).

Platonism in English Poetry **By JOHN SMITH HARRISON**

Cloth, 12mo, $2.00 *net* (postage 10c.).

New volumes in the series of *Columbia University Studies in Comparative Literature.*

The English Heroic Play **By L. N. CHASE**

Cloth, 12mo, $2.00 *net* (postage 10c.).

A Study of the Elizabethan Lyric **By JOHN ERSKINE**

Cloth, 12mo, $1.50 *net* (postage 9c.).

New volumes in the series of *Columbia University Studies in Romance Literature and Philology.*

Published by **THE MACMILLAN COMPANY** 66 Fifth Avenue New York

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 24, 1903.

The Week.

The Ohio campaign has been opened in the good old-fashioned style. Voters of that State are to be asked to vote for a Republican candidate for Governor and for a Republican Legislature which will return Senator Hanna to the United States Senate, principally on the ground that by so doing they will "uphold the hands of President Roosevelt" and "sound the bugle call" for the Presidential campaign of 1904. Few persons in Ohio, so far as we are aware, will venture to reply that the Governorship has nothing to do with national affairs, and that Senator Hanna's attitude toward Mr. Roosevelt has not always been such as to render the reëlection of the former an enthusiastic endorsement of the latter. Unfortunately, the Democrats of Ohio are in poor position to take advantage of their opponents' choice of national rather than State issues in a State campaign. The Democratic convention did not consider its work complete until it adopted a resolution inviting Bryan to stump the State.

"Tom" Johnson's path to the Governorship of Ohio is not strewn with roses. His friends assure us that his convention methods were honest and aboveboard, despite the popular belief to the contrary. But Mr. John L. Zimmerman's followers do not think so. They declare that Johnson threw out Zimmerman delegations regardless of all rules and precedents, and they feel so badly that they are not willing to aid the candidate in his campaign. Conservative Gold Democrats cannot be got to support Mr. Johnson, either, and are preparing to take to the woods on election day—to their bitter regret, for they would gladly help to defeat Hanna's hopes of a return to the Senate. Despite the visit of demagogue Bryan, the Ohio free silverites are not particularly happy because of the endorsement of a Gold Democrat for Senator. If Johnson is likely to make gains in the cities, there is, on the other hand, rising opposition to him among the farmers because of his single-tax views. Still, many Democrats and Republicans long for an end of Hanna's domination.

Speculation has been toying with the names of Senator Quay and Gen. James S. Clarkson as possibilities for the Chairmanship of the Republican National Committee. This, of course, on the supposition that Senator Hanna will retire. Either Quay or Clarkson would be a worthy successor, for each is a perfect specimen of the robust spoilsman; each has that superb digestion which enables a man to stomach anything in politics; each can sleep soundly and happily with the strangest lot of bedfellows. But there is one man whose accomplishments in this line make Clarkson and even Quay seem like mere amateurs—Edward J. Addicks of Delaware. Addicks is under deep obligations to the Republican national organization, for Hanna and Quay have been his good friends; he is an energetic campaigner; he is the embodiment of those qualities that distinguish national chairmen: a heart of iron, a face of brass, and a hand full of gold. If Quay or Clarkson, why not Addicks?

President Roosevelt's admirable declaration that he will not use his position to influence in any way any municipal election will have a good effect, not only upon the coming contest in New York, but upon municipal politics throughout the country. Publicists are generally agreed that one of the most potent causes of corruption in our city governments is the maintenance of party lines in purely local elections. If thousands of well-meaning men did not vote for Tammany under the delusion that they were forwarding the Democratic principles of tariff reform and abolition of class legislation, the complete destruction of Tammany would be a comparatively simple task. But in spite of Lewis Nixon's warning that a voter may support Fusion this year and cast his ballot for a Democratic President next year, hidebound Democrats cling to the theory that Murphy, Sullivan, Grady, and Finn are the precious vessels in which the saving truths of Democracy are preserved. President Roosevelt has done all in his power to commit the Republicans to the idea of non-partisanship in city elections. We hope for an equally explicit and stimulating utterance from Gov. Odell. He can help the cause of Fusion in New York in no way so much as by making it plain that the fortunes of the State Republican machine are not bound up with Mayor Low's reelection; by avoiding not only interference, but even the appearance of meddling. President Roosevelt should in consistency take one more step—withdraw the McClelland appointment. He has unwarrantably thrust his hand into the politics of Westchester County, and strengthened the grasp of Platt there by nominating Senator McClelland for the Board of General Appraisers.

If Capt. Mahan or George Haven Putnam should be nominated for Alderman following Mr. Cutting's excellent lead, and should accept the nomination, the example would be an inspiration to good citizenship which, we believe, would extend far beyond the limits of New York. Other equally good names mentioned are those of President Butler of Columbia University and Professor Seligman of the same institution. With such men to choose from, the friends of good government cannot go wrong. This is a case where each of the gentlemen named would prefer that another than himself should be chosen for the office—a case where the office seeks the man, not the man the office. The city of Chicago has led the way to a high sense of duty in the choice of a city legislature, and she is now reaping her reward in the feeling of absolute security and trust in her Board of Aldermen. It was supposed, or rather hoped, that New York had achieved a similar blessing two years ago, but when the Pennsylvania tunnel project came before the Aldermen she found reason to doubt. That enterprise, although sanctioned by all the higher city authorities and by public opinion, was "held up" by frivolous objections purporting to come from "labor." How these objections were overcome has never been revealed, but the fact that they existed at all, and that they blocked the way of a needed public improvement, was a disagreeable surprise. Chicago has no "hold-ups" of this kind, and no "let-goes" that cannot be satisfactorily explained.

The indictment of a State Senator on the serious charge of bribery and conspiracy must bring with it a sense of humiliation and shame to every citizen of the State. Fifty men make up the higher branch of a Legislature which is law-giver to more than 7,000,000 persons. Senator Green, who was arrested on a Federal warrant on Saturday, is not only one of the fifty; he is also a member of the majority party in that body, and a person of influence, closely associated with the Chairman of the Republican State Committee, Col. Dunn. In other words, one of the leading officials and most influential Republicans of the State has been charged with bribery and conspiracy by a Federal grand jury. Senator Green was President of the International Time Recording Company. As such, he is alleged to have paid bribes to George W. Beavers, the Post-Office Department official who is under indictment. The two men are also charged with conspiracy in the sale of time recorders to Government officials. Mr. Green has given out a statement in which he denies the charges. He very properly announces his retirement from

the chairmanship of his party organization in Broome County. We can, of course, make no comment on the probable outcome of the proceedings.

Chicago "hustle" has already invited Mr. Chamberlain to address the Illinois manufacturers on the crippling of their trade through his retaliatory duties; and doubtless, such is the artless enthusiasm of our nation, many other organizations, from Tammany Hall to the Epworth League, will hasten not to get left by Chicago. But Mr. Chamberlain really cannot be turned over to Major Pond's successor until the secret of the fiscal scheme is out. That duty he owes to his countrymen. Revelation would not now embarrass the Ministry, and it seems proper that Mr. Chamberlain should say just what duties he desires Parliament to impose, and precisely the preferential tariffs which he means to advocate as between the mother country and the colonies. The period of inquiry is finished, and he cannot go before the country on a vague principle of Imperial solidarity. A blind taxation pool, such as Mr. Chamberlain has been promoting since last May, cannot long retain its allurements for the sturdy British voter. But, most of all, Mr. Chamberlain owes a full and complete explanation of the fiscal plan to Mr. Balfour. The author of 'Philosophic Doubt' should not be allowed to break his political shins over the Chamberlain stumbling-block without at least having the opportunity of examining the obstacle philosophically.

The Washington Central Labor Union has requested all central unions throughout the country to petition the President for the removal of W. A. Miller, the Government Printing-Office foreman. Their solemn resolutions reveal once more the megalomania from which trades unions everywhere are suffering, for they liken themselves and their cause to the thirteen original States which founded this Government. Perhaps, however, we should be truly thankful that they do not openly insist upon that superiority to the Federal Government which the oath of the typographical union indicates. The Washington union is trying to make Mr. Roosevelt understand that he is its servant, and that he must take its view of the Miller case under threat of political punishment. His just treatment of the foreman they dub an "unfriendly act," and they call upon him to discharge Miller forthwith. The test which the President may thus have to face is a severe one, but one which your true statesman and your strong servant of the people cannot flinch from, whatever the cost. Mr. Roosevelt understands so clearly and has expounded so frequently the baneful influence of the craven and the weakling among us that he must welcome this chance to practise what he preaches. Having done what is right, we have no more fear that he will allow himself to be terrorized by the labor vote than that he will be moved to do injustice to the negro by the criticisms of the South.

The local Housesmiths' and Bridgemen's Union has written itself down for Samuel J. Parks. The conservative members who tried to rescue it last week were soundly defeated by the followers of Parks, and have given up the fight. As a result, the local delegation has gone to the Kansas City Convention backing Parks for the international presidency. The plain meaning of the incident is that there are not enough honest men in the union to make a successful stand for decency; Parks, the blackmailer, has captured the union bag and baggage. If it were possible for the union still to have a standing among sober and responsible employers of labor after Parks's career of extortion, that possibility has been destroyed. It is difficult to conceive of any basis upon which a building contractor can now deal with this organization of the housesmiths and bridgemen; he cannot trust the word of the accredited leader, he knows that the rank and file have no honor to lose by violation of agreements. The union cannot expect public or private consideration when it has deliberately put itself very near the level of the "Monk Eastman gang" that terrorized the East Side of the city on Tuesday week.

The relations between capital and organized labor in the hat-making industry at Danbury, Conn., which have attracted attention from all parts of the country since the strike of 1893, have lately entered a new stage. It appears that the members of the Hatters' Union, which has been persecuting the firm of D. E. Loewe & Co. with a boycott since last March, have been very much disturbed by the bringing of lawsuits against them and the levying of attachments on their property at the instance of the boycotted firm. D. E. Loewe & Co. had refused to discharge non-union men from their employ. The union had accordingly sent notices to all dealers in hats directing them not to buy those manufactured by Loewe & Co., under penalty of being themselves boycotted, and had in other ways curtailed the firm's sales and injured their trade. Many members of the union in Danbury own the houses in which they live. They are in comfortable circumstances. Some of them do not work more than two or three days in the week. They are enjoying a well-earned rest. Their condition is such as all Americans must contemplate with pride and satisfaction. Naturally, they do not bother their heads much with the doings of the union. The leaders, the business men, the walking delegates, conduct their operations mostly in secret. Their plans are not divulged even to their followers, and the latter do not desire that they should be. So long as the results are satisfactory they do not concern themselves with methods. This is human nature. The stockholders of the New York Central Railroad do the same. These men have been startled by attachments levied upon their property at the instance of Loewe & Co., who have sued them under the State law for damage to their property and business resulting from the boycott, which they affirm is an unlawful conspiracy. Action has also been brought against the same parties under the Sherman Anti-Trust act—the same under which an action was brought against the Northern Securities Company. This form of retaliation is a disagreeable surprise to the property-holding members of the Hatters' Union. It operates as a cloud upon their titles, which nobody likes to have. Even if they have considerable confidence that it will be eventually cleared off, it causes uneasiness. Nobody knows what view of the subject the court of last resort may take.

The police courts are daily furnishing us with examples of what labor-union tyranny may mean to the worker who has not had a share of the "graft." For the second or third time within ten days there was a case on Thursday of a man being brought before a Magistrate charged with larceny committed in order to keep his wife and children from starving. Thomas Gowan was the offender—a well-recommended driver employed by a firm of coal-dealers. The union ordered him to strike on Labor Day because the firm would not give its men a holiday. Unable to obtain work, he went to his home to find his wife and children suffering for want of food. In his despair he stole a few doorknobs, only to be detected at once. When ordered to strike he had but $4.12. The heartless union forced him to spend $4 of this for a cap, a belt, and a cane, with which to parade on Labor Day. We are informed that there is a great amount of similar destitution in this city—but not among the Parkses, the walking delegates, and the leaders. Truly there is no crime which may not be committed and no suffering among innocent women and children which may not be caused in the name of Labor.

An exhibit that attracted much attention at the National Irrigation Congress held last week at Ogden, Utah, was a model irrigated farm of twenty acres. A praiseworthy desire to illustrate practically the methods of irrigation, and to show the results of a wise use of ditches, led the State to set aside a tract of land used by one of its institutions, and on

this model farm a complete system of canals and laterals has been contructed. All the modern machinery for measuring water and controlling it has been installed. Crops of every sort that can be raised on irrigated land are growing there, as well as most kinds of early fall fruit. Practical irrigators piloted delegates and visitors over the model farm, explaining in detail the processes of ditching and the proper application of water. This was an admirable experiment for bringing to the visitor whose knowledge of the subject was vague and theoretical a vivid illustration of what irrigation means to the arid West. Upon this point one need not fully accept Mr. Roosevelt's enthusiastic view, as expressed to the Congress last week, that the passage of the National Irrigation bill was one of the greatest steps forward in the "progress of all mankind," to realize what great possibilities the movement holds in store. The President wisely called attention to the fact that forestry and irrigation should go hand in hand. It would be well if the delegates could also have an object lesson at hand to convince them visually as to the pressing truth of this statement.

Mr. Justice Brewer's suggestion that the right of appeal be abolished in criminal cases has aroused the protest of members of the bar throughout the country, as well as of the public in general. It has, nevertheless, performed an excellent service in sharply calling attention to the evils of undue delays in the execution of criminal judgments, caused by merely dilatory appeals. This subject is discussed in an article in a current number of the New York *Law Journal*, especially in its relation to outbreaks of mob violence. Two excellent reforms are suggested in this article: First, that by every legitimate means the possibility of delaying the execution of criminal judgments by means of frivolous appeals be curtailed; and, second, that the special favoritism toward criminal defendants, traditional in American procedure, be discontinued. The writer cites a number of cases in which the Court of Appeals of this State has exhibited an inclination to further both of these ends. Power to override mere technical exceptions, and to sustain a verdict clearly based on sufficient evidence, though legal errors of an immaterial nature occurred at the trial, is granted in the Code of Civil Procedure; and in a recent case, People vs. Conklin, the Court of Appeals, in a unanimous decision, administered the policy of that statute against the defendant.

The decision of the Philippines Government to collect duties on military supplies sent thither by the United States Government may be correct in point of law. Almost anything may be done under the decision of the Supreme Court in the Insular Cases, which decision, Mr. Dooley said, "was rendered by Mr. Justice Brown, eight judges dissenting." It may be defensible in other aspects also, although it seems odd that Uncle Sam should incur heavy expense to maintain his army and navy in the Philippines and then pay duties on the articles he buys for their support. However that may be, we trust that the Bureau of Statistics, in its future statements of the growth of our commerce with the islands, will separate the military and naval supplies from our other exports to them. It will be easy to do so after the practice of paying duties begins, since that will be an additional expense to Uncle Sam, and ought to be noted as a separate item. The reason assigned for levying the duties is the familiar one based upon protection to home industry. The Manila merchants cannot sell their goods to our soldiers and sailors if they have to compete with free importations by the Government. That is an argument which the American Protective Tariff League will be prepared to maintain before any tribunal here or elsewhere.

At a manufacturers' convention at Toronto on Thursday, Mr. Birge, the presiding officer, affirmed that American manufacturers not only sold their goods 10 to 40 per cent. cheaper to Canadians than to their own people, but that they shipped goods partly or wholly finished to Canada, by way of England, in order to take advantage of the preferential duties which Canada grants the mother country. As to the former charge, we presume that nobody on our side of the line would take pains to deny it. Such things are done all the time. The process is called "dumping." We fix our tariff so high that the foreigner cannot "dump" on us, and then, when we have more of any particular goods than the home market can take, we use any dumping ground that we can see. As Canada is the nearest, we use that in preference to any other. It is quite likely, too, that some American goods reach Canada by way of England in order to take advantage of the lower duties; but what reason has Mr. Birge for imputing that heinous offence exclusively to us? Does not the English merchant also perceive that source of gain? What is to prevent him from coming into our market and buying any goods that are ready for dumping, and then sending them to Canada via England? If it is worth while for the American to do this, it is worth while for the Englishman, and is equally lawful, defensible, and proper. Mr. Birge suggested a higher tariff in Canada to meet both of the evils mentioned. He had not then heard of the grand crash of Mr. Chamberlain's scheme for preferential duties in favor of the colonies. Perhaps he will now favor abolishing Canada's preferential duties altogether.

The news that the Macedonian revolt has really spread to Melnik is of very considerable significance, since the scene of the new outbreak, which was rumored two weeks ago, is directly on the main line of communication from Sofia into Macedonia. Apparently, the Turks have dispersed the insurgent bands in the Monastir region, and the refugees have succeeded in starting a fresh revolt beyond the Struma River. Here, in the Rhodope mountains, the insurgents have the best kind of country in which to keep up their guerrilla warfare, and are near enough to Bulgaria to draw supplies and to keep in close touch with their Bulgarian sympathizers. Whether the London *Times's* estimate of 10,000 fighting men in Melnik and Demir-Hissar is correct or not, there can be no doubt of the seriousness of this new turn which the uprising has taken. With fighting going on so close at hand, it will be more difficult than ever to hold back the Bulgarians and their rulers. The transfer of base seems, indeed, to have been timed with a view to producing a sensation at the very moment when Bulgaria must come to a decision. If the plunge into war is to be taken, this is the hour.

Herr Bebel, addressing the Social Democrats at Dresden, seemed to fear that the party was dying at the top. He warned the proletariat against learned leaders who are always the friends of compromise and at present are trying to make the Social Democrats accept a Vice-President in the Reichstag, and thus become a parliamentary party. Orthodox Socialism demands that its adherents foment the war of classes and remain in irreconcilable protest against all existing institutions. Herr Bebel's sincerity and consistency have had the effect of postponing the compromise with parliamentarism; but no one can doubt that the future of the German Social Democrats lies with the "academicians" whom Bebel so heartily scorns. A glance at Italian Socialism under the intellectual guidance of Ferri, and of French Socialism as represented by Millerand and Jaurès, shows that as soon as the collectivists come into political power and responsibility they invariably turn from their original programme and become simply Radicals. As such they work for definite social reforms, and seek rather to benefit their constituents immediately than in the future to set up the ideal Collective State. Bebel's overwhelming triumph in the Socialist Convention at Leipsic is another splendid tribute to the power of this man's personality. His unsullied character is the mighty fortress in which he is entrenched.

MR. BALFOUR'S MANIFESTO AND MR. CHAMBERLAIN'S EXIT.

The British Premier has adopted the singular expedient on the eve of a great political crisis of addressing the public in a pamphlet, sold by the trade for a price, and entitled 'Insular Free Trade.' It is to be accepted as the official commentary on the bulky report presented simultaneously and containing the data upon which Mr. Chamberlain's fiscal plan is to be based. Mr. Balfour's position required that he should take the lead, or seem to take it, in announcing the Government's policy. Instead of making a speech from the platform for this purpose, according to his usual custom, he "asked leave to print." There must have been a reason for this, and it is not far to seek. He does not understand the subject under debate. He has no command of the arguments for and against free trade. He would be at the mercy of his audience in an off-hand discussion of that theme. The arguments advanced are very musty. Every one of them was refuted with inextinguishable laughter in the *Catechism of the Corn Laws* as far back as 1844. A reprint of that precious document seems to be called for at the present time.

That British trade is still increasing under free trade, Mr. Balfour is ready to admit, but its rate of increase, he says, has, on the whole, seriously declined. In some departments there has been no increase, in others there are symptoms of decay. Argal, give us a little protection. It has perhaps never occurred to Mr. Balfour to look into the causes of any particular decline—as, for instance, the exhaustion of certain natural resources, such as Bessemer ores, the increasing cost of coking coals, etc. Is a protective tariff likely to increase the supply of British ores or coke? If not, how is it going to help the British steel trade? Again, it may be that America and Germany have gained advantages over England by better technical means of handling their natural resources. We have been reading many contributions to this purport in the *Times* and other British newspapers of late. Is the technical superiority of other nations to be overcome by protective duties or preferential tariffs?

Involved in a confusing tangle of words, the idea is advanced by Mr. Balfour that since other nations have protective tariffs, England must have them also in order to have standing ground for free trade hereafter. The *Catechism of the Corn Laws* riddled this argument completely. Trade, it said, consists of exports and imports; that is, of sales and purchases. If France, by a protective tariff, puts an obstacle in the way of our sales, that is no reason why we should put a similar obstacle in the way of our purchases. Free trade means no artificial impediment on either side of the Channel. We cannot control the French side. We can control our own. France can destroy one-half of the profit of our trade with her. The other half remains. How does it help us to destroy that other half? Do you say that we shall teach France a lesson and bring her to a better understanding of the subject? What? Shall we change her ideas by following her example? On the contrary, she will say that we have now acknowledged that she was right from the beginning. That is exactly what the protectionists of the United States are saying now, in anticipation of England's change of base. So far from laying the basis of a treaty of reciprocity between England and America, the adoption of the Chamberlain policy will be hailed with joyful acclaim by the protectionist politicians and the protected trusts from one end of the country to the other. They are much in want of a new argument. Will England supply it to them after her sixty years of free trade?

The simultaneous resignation of Mr. Chamberlain and Mr. Ritchie from Mr. Balfour's Cabinet bears a very simple explanation. Mr. Balfour, in his pamphlet, has conceded too little for the protectionist, too much for the free-trader. The Prime Minister has here adopted about half of Mr. Chamberlain's programme, committing himself to a vague policy of retaliatory duties against protectionist nations, but refusing for the present to propose food taxes or to enter upon preferential negotiations with the colonies. That is a compromise which both parties have naturally rejected. To free-traders it offers the perils which they associate with the whole plan of Imperial reciprocity; to convinced advocates of the Chamberlain scheme it slurs the very principle upon which their propaganda rests. It is obviously an evasion, for Mr. Balfour, in his letter to Mr. Chamberlain, practically declares his belief in the idea of Imperial preferential trade. Plainly, then, Mr. Balfour is considering not the future of the Empire, nor the immediate well-being of England, nor, for the matter of that, any principle whatsoever, but simply how to keep himself in office.

Mr. Chamberlain advised him to accept defeat on the scheme in its integrity, believing that it could be carried after a brief Liberal interregnum. But Mr. Balfour hopes to win piecemeal. He is willing to preach the doctrine of retaliation and negotiation from the Treasury bench, while Mr. Chamberlain, outside, furnishes the pure milk of the preferential word. It is, we believe, a mistake, as well in the immediate expediency as in the ultimate political principle involved. Mr. Balfour, who should and probably will go before the country for a mandate, is quite as likely to be beaten on the half programme as on the whole. And Mr. Chamberlain, who writes of conducting his own campaign while preserving his Unionist loyalty, has no logical course except to add a new chapter to his already distinguished career as a schismatic—this time from the Unionist party. How Mr. Balfour has been led to so lame and impotent a conclusion will be apparent when the influences to which he has subjected his judgment are studied. Unfavorable bye-elections have frightened him away from food taxes, discontented and timorous elements in the City and in the manufacturing centres have insisted that something be done for their interests. They have driven him to do something now to prevent the imagined ruin of British prosperity in the remote future. Accordingly, his policy emerged unglorified by Mr. Chamberlain's large dreams of Imperial unification, and disfigured from the first by all the sorry and sordid paraphernalia of a protectionism which England long ago repudiated.

Mr. Chamberlain, on the contrary, has not been disobedient to the preferential vision, and stakes his political future upon nothing less than the whole cause. This lends a strongly personal and almost a dramatic interest to his resignation, for it may well mean the disappearance of Mr. Chamberlain from the political stage. With his support Mr. Balfour might have won on the half programme. Then, had retaliatory duties been imposed by England, the way would have been open to some very small tax on food, and that would have rendered possible, nay, made almost inevitable, preferential negotiations with the colonies. But Mr. Chamberlain has characteristically refused to take the circuitous way. Upward or downward he carries his head high. There will hardly be energy enough in his declining years, and there certainly is not truth enough in his cause, to carry the working masses of England, upon whom he now casts himself. But the endeavor, however mistaken politically and economically, has in comparison with Mr. Balfour's sop to the speculative operators something heroic about it. Its obstinacy is conspicuously in the character of Mr. Chamberlain. It would be fitting if his career should thus close upon its dominant note.

Looking backward a little, there seems a peculiar irony in the fate which has committed the hard-headed boss of Birmingham to a cause fantastically impossible of realization. In a remarkable letter of Cecil Rhodes to Sir John Macdonald—when they were Prime Ministers of the Cape and of Canada, respectively — the great empire-builder asked, "Can we invent some tie with our mother country that will prevent separation? It must be a practical one, for future generations will not be born in England." That was written in the spring of 1891, and from about that time, by a curious coincidence, Mr. Chamberlain has been at the audacious task of

"inventing" a bond of empire. As well invent a law of gravitation or of magnetic attraction—the student of history will exclaim.

Of the immediate political prospect, one may only say that Mr. Balfour, having espoused a cause without enlisting its enthusiasms, is pretty certain to be beaten in the general election, which cannot now be long postponed.

PAYNE'S LATEST BLUNDER.

The latest developments in the case of Miss Todd, who was removed from office to oblige Senator Allee of Delaware, have made the affair more than ever one of national interest. Because of her dismissal the astonishing discovery has been made that fourth-class postmasters are included in the classified service. We say astonishing, because neither the spoilsmen, nor the press, nor the public, have been aware that these officials were brought within the civil-service laws by the new rules which were signed by the President on March 20 last and went into effect on April 15 of this year. The Civil Service Commission itself has had no occasion up to this time to call public attention to the new order of affairs, notwithstanding its great importance.

Not for some years has so stalwart a blow been struck at the spoilsmen in and out of Congress. Previously fourth-class postmasters could be removed at the will of the President for any and all reasons. They were universally appointed because of their politics to oblige local bosses, Congressmen, or Senators. The custom of allowing an appointee to serve four years has had no foundation in law, so that there has never been even a fixed term for these creatures of the politicians. But when the new civil-service rules were drawn up last spring so as to cover all persons not employed as laborers or subject to confirmation by the Senate, the fourth-class postmasters were inevitably included. This does not mean that they are now within what is known as the merit service. No examinations are required before appointment. The President may still designate as fourth-class postmasters any men or women he chooses to. He can remove them at will without even filing the grounds for his action—except for two reasons: he must not discriminate against them because of their *political or religious* affiliations. This is positively forbidden by the second paragraph of the first of the civil-service rules. In removing Miss Todd to please Senator Allee, the Postmaster-General has therefore plainly violated the law, for his only reason—an evident afterthought—was the alleged pernicious activity of Miss Todd in the interest of the respectable Delaware Republicans.

Naturally Mr. Payne is indignant. Every drop of the spoilsman's blood is protesting. "Surely no sane man," he declares, "will contend that fourth-class postmasters are in the classified service." But Commissioner Greene is still perfectly sane, and so are the officers of the National Civil Service Reform Association. They have the law, in black and white, before them. They know that Commissioner Foulke and his colleagues drew the new rules with the deliberate intention of including the fourth-class postmasters. It was done entirely above board, and if the Federal heads of departments were not aware of the changes it is their own fault. The proposed rules were all sent to them long before adoption.

We take no stock whatever in the stories that the President was unaware of the far-reaching effects of the rules which he signed. He who was long the foremost champion of civil service reform in public life, and for six years a Civil Service Commissioner, cannot, it seems to us, have been blind to the purport of the new regulations. But if he has been in ignorance, he, too, has only himself to blame. If there is any such thing as consistency, he must rejoice that the fourth-class postmasters are at last within the classified service, and he should, moreover, welcome their inclusion as a step towards their being placed within the merit system. Not one of the reasons which Mr. Roosevelt so earnestly urged as Civil Service Commissioner for the putting of clerks and minor officials under the rules but holds good in the case of the village postmasters who have so long been the tools of political corruptionists. Since Mr. Roosevelt has become President, we have seen no more incredible dispatches in regard to him than those which credit him with anger at Commissioner Greene's ruling, or, as it is called, this "annoying" a Cabinet officer at so inopportune a time. Aside from the fact that every believer in good government thinks this the time to "annoy" Mr. Payne with demands for his removal, it is preposterous to assume that Mr. Roosevelt can be angry at any official who does his sworn duty. This is the sum of Commissioner Greene's offending.

For the President to take any other course than to sustain Mr. Greene would be to break with the most creditable part of his past official life. We cannot believe this any more than we can credit the story of his planning to take the fourth-class postmasters out of the classified service by a new executive order. Such a step would forever prevent his representing himself as a true friend of the civil service. On the contrary, we shall expect that the Postmaster-General's latest blunder will once more open the President's eyes to the necessity of ridding himself of Payne the spoilsman. Whether it is also to be Payne the mendacious remains to be seen, for the President cannot too speedily settle the direct question of veracity which has arisen between Miss Todd and the Postmaster-General. There are three reputable witnesses who are prepared to testify against the Cabinet officer. Every day that he remains in his Department the discredit to Mr. Roosevelt grows. Of this the denunciation of Mr. Payne in the Republican journals everywhere affords the best proof.

THE PUBLIC-LAND PROBLEM AND IRRIGATION.

The National Irrigation Congress at Ogden, Utah, just ended, with its large attendance of delegates representing every Western State and Territory, and including scores from the Atlantic slope, has shown how widespread and earnest is the interest in arid-land reclamation. Through the convention's proceedings it has been made manifest that in the coming session Congress will be asked to do much more to further the work already begun for transforming the desert into fertile lands. The efforts, however, thus far made under the new irrigation law have shown that the undertaking is subject to great hindrances by reason of abuses existing in public-land distribution. The Government is constantly being defrauded by speculators who absorb, either for ranches or for purposes of speculation, lands that properly should go to actual settlers.

The rapidity with which the public land is disappearing is not generally realized. The Secretary of the Interior in a recent report stated that, "owing doubtless to the commercial depression that existed from 1893 to 1897, there was no great activity in entries under the Timber and Stone act, but that with the revival and return of prosperity in 1897 activity in such entries became so great that from 357 entries in 1897, embracing 40,609.95 acres, they increased until in 1902 the entries numbered 4,022, embracing 545,253.98 acres." He also called attention to the fact that the reports from one public-land State alone for the quarter ending June 30, 1902, show the number of timber and stone entries to have been 331, covering 48,585.50 acres. During the quarter ending September 30, 1902, the number of entries went up to 1,183, embracing 181,052.02 acres, an increase of 852 entries and 132,466.52 acres. In another State, during the same period, there was an increase of 294 entries and 45,086.28 acres. The acreage laid claim to in desert-land entries was also shown to have increased from 174,201.19 acres in 1897 to 929,230.23 acres in 1902.

The startling character of the information thus disclosed brought a favorable report on a bill for the repeal of the Timber, Stone, and Desert-Claim acts and of the commutation section of the Homestead law, but the measure failed of enactment. When it is remembered

that a single cattle company has under fence over 1,000,000 acres; that fences run for fifty miles without a break, embracing whole townships of public land, and that "hobo" filings are so common as to outnumber the actual entries in some sections of the West, the importance of the problem is manifest.

It is expected that during the next decade the progress of irrigation under national control will add not less than 15,000,000 acres to the tillable portion of the public domain, and that eventually, through the workings of the irrigation law, 35,000,000 acres will be made fertile. These lands should be reserved for the families of our westward-moving population, to be transformed into farms. The nation has a right to ask that our legislators devote their attention to the solution of this problem, which affects the entire surplus population of the country. The demand for homes comes from the new generation, and so long as the Government retains an interest in its public domain it should so safeguard its disposition as to insure its being allotted to those whose ownership is likely to benefit the nation most. If the actual settler can be protected by the repeal of the existing homestead laws or by any portion of them, there should be no hesitancy in amending or repealing the statutes. The great West is especially interested in the outcome. It has direct and positive advantages to gain from a fair distribution of public lands. To bring to the Western States bona-fide settlers and their families means added prosperity and richer harvests; to give the public lands to speculators and cattle ranchers means squandering a portion of our national wealth, and a wasteful spending of the West's greatest resource—its farm soil.

It is estimated that the westward tide of emigration takes across the Mississippi more than 400,000 home-seekers annually. The fertile lands having already been occupied, values have reached figures that are practically prohibitive to the man in a "prairie schooner." If it be not for these that the costly irrigation enterprises upon which the Government is entering, then who is to be benefited? Those already well to do and able to finance their own ditch undertakings—the wealthy speculators and range-owners? Irrigation congresses are attended largely by men of wealth or representatives of rich enterprises, to whom Governmental assistance will be of vast value, particularly to the ditch companies with extensive interests in the arid lands, a class of property that is rapidly increasing in popularity with the investor, as the profitable use of water is better understood. It is all the more necessary, therefore, that the public should realize that the greatest good from irrigation should accrue to the modest home of the settler, and that unless there is an attendant recognition of his rights in the distribution of the public land, the carrying out of the extensive plans proposed will be both wasteful and unfair.

The present confusion of land matters, together with the varied charges that the allotment of Indian holdings is tainted with fraud, and with the assertion of irregularity in the settlement of the free range, makes this the proper time for some aggressive and positive measures in regard to the disposition of public land. This is quite as important as the suggestions of the Irrigation Congress. If, as Mr. Roosevelt says, this irrigation work is one of the greatest public undertakings ever begun in any age, not a moment should be lost in overhauling the land laws. Otherwise, the country will have to face the reproach of having spent millions upon millions in the interest of speculators and syndicates, with but slight regard for the home-builder.

CAN MAYOR LOW BE RE-ELECTED?

Whatever Mr. Jerome says merits careful reading and respectful attention. This the public owes him for his great services in its behalf. He has come out with a letter saying, first, that "Mr. Low should not be renominated because of his personal unpopularity, caused not by adherence to the principles of reform, but springing from the personal character of the man." His second point is that the victory of 1901 was won by the sincerity of the campaign. "Should Mr. Low be renominated," he concludes, "we should commence the campaign patently insincerely," and he elsewhere reiterates his belief that Mr. Low cannot be reëlected. But can Mr. Jerome in reason expect a Citizens Union convention and several other bodies composed of thinking men to accept his say-so and to put aside an executive whose official acts he in no way criticises? It is idle for the District Attorney to quote the unfavorable opinions of Republican district leaders. The same sentiments were attributed to them two years ago. Yet when the time came they did their part, however grudgingly. It would, moreover, not be difficult to match Mr. Jerome's prophecy of defeat for Mr. Low with many others made two years ago. Tammany Hall, for instance, professed to rejoice over his selection and to count the victory won as soon as he was nominated.

Failing any criticism of Mr. Low's purely executive acts, Mr. Jerome lays stress upon Mr. Low's personal weaknesses. Everybody knows the Mayor's foibles, he says, and he avers that they were obvious when he was a candidate for the Presidency of Columbia University and for the Mayoralty in 1897. So doubtless they were. Mr. Low did not arouse any marked enthusiasm in his first campaign. There were plenty of workers at the Twenty-third Street headquarters who freely expressed their disappointment with him as a candidate when he went down to defeat in 1897. Then as now he lacked personal magnetism and warmth of manner. But the Seth Low of 1901 was not different from the Seth Low of 1897. Why, then, did Mr. Jerome not oppose his nomination two years ago on the ground of personal unfitness? He has not to-day a single reason to offer for his charge of insincerity against the Fusion conferees and the Citizens Union which would not have been equally valid then. Mr. Low's supporters were not then actuated by the belief that they were voting for a "jolly good fellow." Was there for that reason any insincerity in their support of him as a reform Mayor?

In short, Mr. Jerome would have us dispense with a most valuable executive because that official has not the same faculty of winning personal adherents and creating popular enthusiasm which he himself possesses. The Mayor, he substantially says, is an egotist. Therefore turn him out and nominate some one who cannot be charged with so grave a shortcoming. It is a counsel of perfection which he offers. Should the Convention accept it, they would deprive the city of the right to vote for a Mayor who has had a remarkable training for his position and has clearly shown sterling integrity, unusual executive powers, special fitness for dealing with financial problems, and unswerving devotion to the city's interests. An unblemished official record must be forgotten because of unsympathetic personal manners! And all this when Mr. Jerome himself has no candidate to suggest who would have all of Mr. Low's good qualities without his weaknesses.

In brief, Mr. Jerome's indictment of Mayor Low is an indictment of the citizens of New York. He attributes to them such narrow minds and such violent prejudices as will make them refuse to overlook the shortcomings with which all worthy candidates are more or less burdened. If, in fact, Mayor Low cannot be reëlected, something is radically wrong with the electors. They are being weighed in the balance in this canvass far more certainly than even the Mayor is. He has had his trial during the last two years. Elected or defeated, as an executive he is a fit subject for praise and emulation. He has erected a standard of civic administration. It is his standard and that of the men who rally around it. It will be the standard of a majority of the people of the city when they adopt it at the polls. In 1901 they voted in the hope that such a standard would be set up. They had only seen it from afar in Mayor Strong's time. It is possible that they did not fully understand what clean government

involved, and that they do not like it now they have had it. If they wish to continue it, how can they fail to reëlect Mayor Low? If he is renominated, and they do not reëlect him, will it not be a fair inference that the desire for good city government is not yet really grounded in the people? That possibility must be faced and that test made. Prating about Mr. Low's personal popularity only obscures an inevitable issue.

Of course, the Fusion officials, as well as the community at large, are similarly on trial. Their devotion to principle, ability to rise above personal considerations, and perseverance in right-doing will also be under examination. That this is already well understood is evidenced by the haste of individuals to protest that, whatever they think of Mayor Low's chances, they themselves mean to vote for him if he is renominated. The discredit involved in voting against Mr. Low under such circumstances is fully recognized by those who are violently objecting to his renomination. Why, then, should they deny to the rest of Mayor Low's old supporters the ability to exercise so obvious a loyalty? We, at least, do not believe that abnormal sensitiveness and finical political casuistry prevail in the larger public, whatever may be the case within a little circle of malcontents.

Sincere and well-meaning doubters should take courage from an examination of past election figures. Instead of being a poor vote-getter, Mayor Low has always proved exactly the contrary. In 1881 he carried his until then Democratic city of Brooklyn by a plurality of nearly 5,000. After election he proved as independent as a Mayor as he was successful at the polls. When he was renominated, two years later, it was predicted, as now, only far more emphatically, that he could not be reëlected. Besides his failure to please the politicians, it was argued that Brooklyn was really Democratic; that the approach of the Presidential campaign of 1884 would cause a return to old party lines. This false prediction had greater force then than its recent echo, because the doctrine of non-partisanship in municipal affairs was then in its infancy, if indeed it had yet been born.

In 1897, when Mayor Low first came before the electors of Manhattan, his vote of more than 150,000 was phenomenal, in view of the fact that the national parties each had a candidate in the field, as had the followers of Henry George. In that year there was every indication of marked public confidence in him as a successful municipal administrator. The Committee of One Hundred early selected him as the man to lead the fight, and were willing to carry his campaign on even after it became impossible (thanks to Messrs. Platt and Quigg) to unite all the anti-Tammany forces. It was recognized by all that Mr. Low's election would insure far better government than that secured to the city by Mayor Strong. Between 1894 and 1897 the better element had learned to recognize that the kind of administration which suited them in 1894 would not do at all in 1897. The President of Columbia represented to them the higher needs of the hour. They counted upon him because he was familiar with the science of good government when they had welcomed Mayor Strong three years before merely because he was a representative of a kind of heavy business respectability. Again, in 1901, when he polled nearly 300,000 votes, Mr. Low was well at the front of his fellow-candidates, Comptroller Grout alone securing a slightly larger total. Mayor Low has in the past proved fully as strong as the cause which he represented. There is no good reason to suppose that it will be otherwise this year.

THE OPEN MIND.

When Mr. Balfour said he viewed Mr. Chamberlain's proposals for preferential tariffs with "an open mind," he struck a sympathetic chord; for if there is one thing on which the modern advanced thinker prides himself, it is his open mind. He looks with such horror on the bigotry of his ancestors, their perseverance in error, that he is hospitable to every opinion. The Bible is probably inspired, but probably also it is not; free trade is unquestionably sound in theory, but so is protection; lynching is a horrid crime, but nothing else is possible under the circumstances; the moral law should always be supreme, but we need not apply it strictly in practice. In short, our minds are not only open, but open at both ends. Easy-going tolerance, the ability to believe contradictories, to regard the utterances of a fool as seriously as those of a wise man, have been the mark of certain temperaments in all ages. Balaam was ready to curse either the children of Israel or the Moabites, and naturally he was guided in his decision by the words of an ass. He stands as one type of the person with broad views; another appears in Voltaire's 'Zadig.' In that witty tale there is a memorable supper at which men of different races begin to display their prejudices. The discussion is growing warm when the highly superior Man from Cambalu chimes in: "I have a profound respect for the Egyptians, the Chaldeans, the Celts, for Brahma, for the bull Apis, and the beautiful fish Oannes." This dictum of the Man from Cambalu is the note of latter-day emancipated souls, who believe one thing is quite as true as another, if not truer.

In the church a lack of conviction is, religious leaders agree, the root of evil. We no longer hold to any tenet fiercely enough to burn the infidels; but, what is more, we are so doubtful about our creed that we will not even back it with our money, let alone going to the stake for it. When a person allows that millions of heathen are doomed to perdition for ignorance of the Christian gospel, common humanity will prompt him to subscribe to missions; but when he has discovered that Confucius and Christ are both right, that Pagans and Christians can look forward alike to a happy hereafter, he will not sacrifice his automobile for an equivocal benefit to distant and disagreeable Chinamen. The devotee to whose imagination the pains of hell are as real as his own existence cannot but prefer a half hour of boiling oil to eternity in the brimstone lake; but no one will choose the oil vat in order to escape "the symbol of an outraged conscience" or "a forcible metaphor."

In the world of finance we are equally ready to grasp new and comfortable doctrines, to display a wide-open mind—especially when we may thereby gain a dollar. Not long ago some of our shrewdest financiers began urging, "Why do you cling to the antiquated prejudice that two and two make four? Consider this subject in a more enlightened way. Admit that two and two may often make ten, and sometimes one hundred." The appeal was irresistible; our fathers might have been mistaken, for they usually were; and, then, if two and two made ten, we were more than twice as rich as we had supposed. Accordingly, there was general assent to the proposition, except among a half-dozen fogies. They were quickly seen to have petty conceptions of finance, worthy of a pack-peddler, to be stupid and malicious enemies of progress. Oddly enough, however, the discarded dogma is again finding many adherents, while the men with a wide outlook and liberality toward fresh ideas are nervously figuring on the stock-table and unable to apply the recent rules in arithmetic; for whatever two and two might have made last year, the sum total is four to-day.

In politics, too, we refuse to be zealots. Time was when Americans rose in white fury to defend the thesis that governments derive their just powers from the consent of the governed. But our brightest wits have long since outsoared such provincialism; they admit that consent may be desirable, but insist that as much may be said in behalf of dissent. They call the Declaration of Independence a glittering generality. Learning it by heart is a good memory drill for children, like learning the alphabet, the multiplication table, the Ten Commandments, or any other empty formula. Our protest in 1776 against the monarchical theory was well meant, but quixotic. The maxims of imperialism are as sound as any others; and the sooner we lift our hand against our weaker brother and the more ruthless our blow, the larger our share of his property. The meek shall

inherit the earth only so long as the aggressive do not want it.

A few of us are growing skeptical about the Fifteenth Amendment. Millions of people once swore by high heaven that the right of citizens to vote should not be abridged on account of race, color, or previous condition of servitude; and for that ideal poured out their best blood. But in the year of our Lord 1903, fashionable statesmen are filled with philosophic doubt. In the same breath they assert that the ideal is a worthy one, but that in the rough field of practice the white man must strangle the black, regardless of the latter's intelligence and character. Ideals, after all, are only so much paper to burn. Under the new dispensation nothing is simpler than to eat your cake and have it, too. The soil of slavery nourishes the fairest fruits of liberty, and we can lay the foundations of freedom upon the solid bedrock of injustice. These are the precepts of statecraft which our subtle leaders ask us to follow.

But though the world is moving swiftly, not all the wisdom of the ancients has even yet become folly. In the long run the multiplication table and a few other shreds of principle may survive our progressive iconoclasts. Those inborn traits which make men prefer honor to life itself will not be blotted out by an intellectual ambition to reconcile opposites. Uttering paradoxes can never be an amusement for the masses of the American people, whose home-bred sense we may trust to keep them steady in the old political faiths.

THE AMERICAN COLLEGE PRESIDENT.

Columbia University reports a probable deficit for the coming year of more than $100,000, most of which must be begged by President Butler from wealthy friends of the university. Not long ago an Eastern scholar was called, at a generous salary, to the presidency of a Western university, and, on his arrival, bidden to go out and collect his salary. Another university president, a noted metaphysician, has recently resigned his position because he found the periodic canvassing for funds too difficult and distasteful. Upon this superior form of beggary Mr. Booker T. Washington, in his remarkable autobiography, casts a very pleasant light, but he was sustained by an uncommon enthusiasm and by the inspiration of a new cause. Even so, the duty of collecting funds was largely incompatible with his function as chief of the Tuskegee School, and when Mr. Carnegie endowed that institution liberally, the gift was applauded largely on the ground that it enabled Mr. Washington more fully to exercise personal leadership and to give up the distracting occupation of an itinerant collector.

Plainly, the business management of a modern college is in many respects incompatible with academic leadership. As an executive officer, a college president needs to be on terms of easy intercourse with his faculty and graduates, and on terms of respect with his students. This means that he should possess certain qualities of a man of the world. But he should be also the most philosophical mind of his faculty, capable of understanding the educational significance and wider bearings of the studies towards which his professors have necessarily a myopic view. He should be capable of representing his college on public occasions with intellectual distinction. He should be in all senses the finished and well-rounded product of the academic life. Something of aloofness necessarily goes with such an ideal. Our intellectual aristocrat should grace any table at which he may sit, but it must be humiliating to him deliberately to haunt the tables of the rich and systematically to cultivate the acquaintance of those who neither value academic culture nor possess it. A few college presidents are broad enough, or sturdy enough, to come to terms with commercialism while retaining their academic ideals intact. An Eliot and a Gilman, in a sense, have conquered the general public without flattering it; but it is doubtful if these two great university presidents representing more emphatically the more disinterested studies—for example, the humane arts—would have had an equal success, while it is certain that in many cases college presidents have undergone a subtle moral deterioration in the pursuit of riches. Worse yet, the undue emphasis placed on money-getting has resulted in the formation of a small but somewhat influential class of university "bagmen" who adopt the vocabulary of culture without grasping any of its informing ideas.

What results when a president of this type shapes his university after his own mind is shown by a correspondent of the Springfield *Republican*, who, though he writes with some rancor, is evidently a professor in such a college and painfully sure of his facts. He describes an institution in which the President's ideal is money-getting through advertising. By the familiar methods of the syndicate promoter X University is ever kept before the greater public. This notoriety the president offers to his millionaire patrons in lieu of dividends. Professors are expected, nay, exhorted, to do "popular" things. A succession of press interviews becomes a more valuable asset than a *magnum opus;* a flash-in-the-pan reputation as a *littérateur* is more highly appreciated than years of faithful service as a teacher or international reputation as a scholar. In this gloomy picture there is doubtless some exaggeration, but it undoubtedly indicates at least a trend towards the commercializing of our larger institutions of learning. One cannot forget that the sage Tolstoy, recalling a meeting with one of our most talked-of college presidents, declared that he was a "barbarian" and utterly incapable of understanding the things of the mind.

If this destructive tendency exists in academic life, we must seek a remedy either in finding presidents who can combine the commercial and academic disposition, or else we must cut presidential duties to suit the men we can get, and delegate the surplus duties to others. The latter is the more hopeful course. Indeed, it has been suggested that the college presidency in America should be made largely honorary, like the chancellorship of a British or German university; that the term should be limited, and the executive functions divided between a treasurer and—for purely academic matters—committees of the faculty. This would undoubtedly "decommercialize" the college presidency, but it would constitute a disastrous break with all American traditions. We believe that the president should be something of an autocrat in his proper domain, and that faculty government would be bad government. But we are convinced also that every board of trustees should appoint a kind of chancellor of the exchequer, who should have general oversight of the university budget. The office has long existed in the older institutions; it is as much needed in the smaller. This policy would allow the President greater leisure in which to exercise the more personal duties of his office and to revive the traditions of the great presidents of simpler times.

Naturally, no college president of today can live in a supermundane contempt of the main chance. His influence will be potent in inspiring donors, who will naturally value his advice and wish to deal with him personally. All one can ask is that, in the matter of making academic ends meet, there should be all feasible division of labor, and that no college president should be expected to reinforce the qualities of the promoter with the practices of the sycophant.

GASTON PARIS'S COLLECTED ESSAYS.

PARIS, September 9, 1903.

The friends of M. Gaston Paris have just republished in a volume, under the general title of 'Legends of the Middle Ages,' several articles which he had inserted in various reviews. The three first articles, "Roncevaux," "Le Paradis de la Reine Sibylle," "La Légende du Tannhäuser," were composed between 1897 and 1901, and appeared not long before the death of Gaston Paris in the *Revue de Paris*, and he may have meditated giving other articles on similar subjects to this review and to form a volume out of the whole. His friends have added to the three articles above named two more, "Le Juif Errant," which

appeared in 1880 in the 'Encyclopædia of Religious Sciences,' edited at the time by M. Lichtenberger, and "Le Lai de l'Oiselet," which was contributed in 1891 to the *Journal des Savants*. This last study had served as an introduction to a limited edition of the little poem in question, which was not shared with the general public.

A worldwide reputation has been given by the genius of Wagner to the legend of Tannhäuser:

"When," says Gaston Paris, "Richard Wagner composed, in 1842, his musical drama, he was not yet fully in possession of all the ideas which he afterwards seized and realized with so much strength; but they were already floating in his mind, and he had at least indicated in the 'Flying Dutchman' the idea which dominates and resumes them all, and which he incarnated so powerfully in 'Tannhäuser.' I mean that grandiose conception according to which music, closely allied to poetry and emanating from the same soul, ought to be the deepest and most pathetic interpretation of the mystery of human existence, suspended between love and death, between egoism and sacrifice, between ideal aspiration and the fascination of the senses."

This complete union of poetry and music was more easily derived from popular legends than from history. History is too precise, and does not give scope enough to the imagination of the poet. Wagner sought his legends in the German poems of the Middle Ages, knowing little of their origin in antiquity, unconscious that they were not purely Germanic, but Celtic, that they expressed the feelings of the race to which belonged the Gauls, the Irish, the Gaels of Scotland, the inhabitants of Wales and of Brittany. Wagner did not take the legend of Tannhäuser directly from a German poem of the thirteenth century, but simply from a much more recent popular song, which he found in Heinrich Heine. "What an admirable poem!" said Heine in speaking of an old *Volkslied* which he reproduced. "Except the Song of Solomon, I don't know a song more burning with love than the dialogue between Dame Venus and Tannhäuser. This song is like a love-battle: you see flowing in it the reddest blood of the heart." Wagner became enamored of this legend, and saw in it an expression of the struggle between carnal love and pure and ideal love. In reality, it is something different: it is the adventure of a man who, thanks to the love of a goddess, penetrates the supernatural regions where reigns perpetual spring. Wagner added to the legend of Tannhäuser the episode of the poetical war of the Wartburg, which has nothing to do with it. He added also the element drawn from the personage of Elizabeth, whom he created wholly, and who plays such an important part in his musical drama.

The story of the knight Tannhäuser, of his entering the Venusberg and coming out of it, does not appear in Germany before the middle of the fifteenth century. Hermann von Sachsenheim wrote in 1453 a long poem on the enchanted mountain where Venus kept her court with her husband, Tannhäuser. About the same time there appeared a small poem in which Tannhäuser expresses his regret for having entered the Venusberg, and tells how the Pope Urban IV. refused to pardon him. Another little poem, of the middle of the fifteenth century, in the form of a dialogue, represents Tannhäuser declaring to Venus that, notwithstanding her reproaches, he counts on obtaining pardon of Jesus and his mother. But it was only in the sixteenth century that appeared the song which gave to the legend its present form, and which was so much admired by Heine. It ends with censure of the Pope for his refusal to pardon Tannhäuser. "No Pope, no Cardinal, ought to condemn a sinner, be the sin never so great. God can always forgive."

The curious emblem of the dry stick which becomes green and bears flowers again is a mere spontaneous invention of the popular imagination. In the legend, as it was transformed, we see the unforgiving Pope telling Tannhäuser that he would be pardoned only when his stick became green. Already, in Homer, we see Achilles swearing by the wand which he carries in his hand, and "which will bear no more leaves or branches, since the sword has taken from it its foliage and its bark." M. Gaston Paris will have it that in the legend the name of Venus was substituted for that of the Sibyl, and that the Venusberg was originally a mountain not of the Thüringer Wald, but of the Apennines in Italy.

"The Italian legend travelled to Germany, probably through Switzerland. The name of the Sibyl was replaced by the name of Venus, and the Venusberg long became for the Germans an object of terror and of desire; only they did not know where to place it. . . . It was in Italy that the legend must have taken its religious form, localizing itself in the mount of the Sibyl. . . . The journey to Rome seems to indicate this. It is not far from the Sibylline hills to Rome, and it is said that in fine weather the dome of St. Peter's is visible from their summit. . . . The legend of Tannhäuser as it appears in Germany in the fifteenth and sixteenth centuries is not of Germanic origin; it goes back to the legend of the 'Monte della Sibilla.' "

It must be added that this religious form of the Tannhäuser is only an adaptation to Christian ideas of a legend anterior to Christianity and probably of Celtic origin, brought to Italy from the distant shores of the Britannic sea.

A great part of the interesting volume of M. Gaston Paris consists of an elaborate study of the Legend of the Wandering Jew:

"It is generally thought," he says, "that the legend of the Wandering Jew spread over Europe during the Middle Ages; and because of the antiquity attributed to it there has been a tendency to see in it a deep and mystical sense. But there is nothing of the kind: no trace is found of the Everlasting Jew in the vast collection of the Greek or Slav apocrypha, nor in the traditions of Oriental Christianity, nor in the abundant legends of the Latin Middle Ages. The popularity of the Wandering Jew is restricted to certain countries in the northwest of Europe—to Germany, Scandinavia, the Low Countries, and France. It is of recent date, and has been propagated, not orally, but purely in a literary way.'"

Some old legends have a certain relation to the Wandering Jew. As has been remarked, Cain may be called the first Wandering Jew. The Jews of Arabia have their Samiri, who fabricated the Golden Calf and was sent away by Moses from the seats of Israel. A *chanson de geste* speaks of the leper cured by Jesus Christ, who strikes him and becomes the object of a peculiar damnation. (This was made the explanation of the incurability of leprosy.)

The curious legend of Marcus or Malc is still popular in Venice, Naples, and Sicily. The celebrated monk of St. Albans relates that in 1278 an Armenian archbishop came to England and, among other marvellous stories, spoke with much particularity of one of the witnesses of the Passion who was still alive. This archbishop repeated the same story at Cologne and Tournai, and it found its way into the Chronicle of Philippe Mousket, who wrote at Tournai about 1243:

"When the Jews were taking Jesus to the cross, this man bade them 'Wait for me; I am going too to see the false prophet on the cross.' Jesus turned round, and, looking at him, said: 'They will not wait for me, but you shall.' And he still waits, not having died since. Every hundred years he becomes young again. They say that he was baptized by Ananias; he will die only on the Day of Judgment."

We must pass to the beginning of the seventeenth century to find a reappearance of the legend of the Wandering Jew; but the art of printing gave it at once an immense popularity. The oldest edition of the 'Marvellous Relation of a Jew Called Ahasuerus' appeared at Leipzig in 1602. Paul von Eitzen, Bishop of Schleswig, is said to have told several persons that he saw Ahasuerus at church—"a tall man, with bare feet, standing near the pulpit during the sermon, and bowing every time the name of Jesus was pronounced." After the sermon, Eitzen asked him who he was. Ahasuerus was his name; he had been a witness of the Crucifixion, and gave many details of the Passion. "When Pilate had pronounced sentence, knowing that Jesus was to pass before his house, Ahasuerus ran to his home, told his people to come and see, and, taking his little child in his arms, stood before his door." He was a cobbler. Christ stopped a moment before his door; and he, believing him to have been justly condemned, told him to hurry along and go where he was ordered to go; upon which Jesus looked at him intently and said: "I will stop and rest, but you shall march till the last Judgment." These items were given in a letter by Eitzen, who acquired some celebrity from the part he took in the struggle of the Reformation. The legend was popularized by images, by pamphlets, by songs, and was transformed in its details in every country. Without speaking of all these transformations, we will say only that Goethe had contemplated writing an Ahasuerus. He conceived the subject with originality; he thought of giving the cobbler of Jerusalem a character combined of good common sense, of narrowness of mind, and of irony, which would have allowed him to take a personal attitude contrary to the movements of humanity. He wrote a sketch of his poem and then renounced the composition of it, and devoted himself, fortunately for us, to the legend of Faust.

Correspondence.

THE WASHINGTON ARTILLERY.

To the Editor of The Nation:

Sir: In a recent issue you comment editorially upon the Dick law, commencing your editorial by saying that the famous Washington Artillery of New Orleans has disbanded. That is a mistake. The Washington Artillery has not disbanded, and, furthermore, does not intend to disband. It

is as active as it ever was, and as it ever will be.—Sincerely,

WM. KERNAN DART.

BAY ST. LOUIS, MISS., September 19, 1903.

[The source of our information was a New Orleans paper.—ED. NATION.]

ARNOLD'S MARCH TO QUEBEC.

TO THE EDITOR OF THE NATION:

SIR: The reviewer of 'Arnold's March from Cambridge to Quebec,' in speaking of the "exact references" in my notes as "comparatively few," chanced to overlook one point. The book is based mainly on journals, which consist of dated paragraphs, and therefore the citation of a journalist in connection with a dated event constitutes an exact reference. Such citations are certainly not few. For example, in the case of Chapter V., I think that the figures should be 74 instead of the reviewer's 14. A page reference would be less precise; and, if made to the MSS., might be worse than useless. JUSTIN H. SMITH.

September 11, 1903.

TITIAN'S "SACRED AND PROFANE LOVE."

TO THE EDITOR OF THE NATION:

SIR: Signor Umberto Gnoli's suggestion, contained in the *Nation* for July 2, that the great Borghese Titian, popularly known as "Sacred and Profane Love," should be called "Venus and Medea," is interesting; but does this new title, to use his own words, "quite succeed in fully explaining the composition of that masterpiece"? It is, by the way, worth remembering that Morelli, in his learned critique, suggests that the picture is distinctly Giorgionesque; and Mr. Eugene Benson, the American artist, long resident in Venice, informs me that he is confident that this picture is one of the unfinished canvases left by Giorgione at his death, and afterwards completed by Titian, who bought the contents of the younger artist's studio. Mr. Benson's profound practical studies of the methods of the Venetian masters peculiarly fit him to speak with authority on the subject. He points out that, while the brushwork is undoubtedly Titian's, the subtly suggested thought of the picture is much more typical of Giorgione.

What is this thought? Signor Gnoli is evidently somewhat astray when he asserts that *all* the critics have considered the nude figure a Venus; for the suggestion of Messrs. Crowe and Cavalcaselle that the picture should be called "Artless and Sated Love" is based on the fact that the nude figure is, from its evidently virginal quality, *not* a Venus, but an innocent maiden, unlearned in the mysteries of life and love. Notice how intensely earnest she is; how nervously perched on the edge of the water-filled sarcophagus, twisting her legs together like a schoolgirl, and searching, with deeply stirred, inquiring gaze, the face of the completely clothed, quiet woman who sits at ease in an attitude and with a countenance betokening an entire absence of passionate desire. This woman's expression seems to be that of one contented, who remembers and gazes off as if questioning the future.

Back of this sarcophagus, at either end of which these female figures are seated, stands Love (Cupid), who turns away from the contented woman, while he stirs the water; and it is to be noted that the woman also turns away from him. In the background behind her, a pair of rabbits (symbol of fecundity) quietly graze, side by side, and a cavalier gallops off to the battlemented town in the distance. Evidently, like the hero of Browning's "Night and Morning," this gay rider feels

—"the need of a world of men."

It is noteworthy that this theme is repeated in the carved design on that portion of the sarcophagus on which this woman sits. The carving there represents Cupid as helping the lover to mount and ride away. But beneath the nude maiden figure, Love is represented in the carving there as waking the sleeper with lashings, and a lover seeks a maid, both of whom have an arm round the trunk of a tree.

Noticeable, too, is the fact that the roses are all gathered on that side of the rose bush nearest to the woman, who holds one in her lap beneath her hand, while another fades on the marble beside her. Had Signor Gnoli more attentively studied the picture, he would have noticed that the object guarded by this woman's encircling arm is neither "a box, basket, nor jewel casket," but a dark covered bowl of semi-transparent glass, through which we observe that it is already partly filled with that water of life which Cupid is busily pressing toward the shoal crystalline dish which the maiden has placed beside her on the fountain's rim. On the side of the maiden, too, the flowers still bloom ungathered. The stream issuing from the front of the sarcophagus, that shrine whence Death has departed, floods and freshens these unculled roses, which the innocent maiden, as yet, leaves unheeded on the stem. Behind her the rustic lovers embrace, and the white lambs of innocence feed, the frightened hare flees from her pursuer, and the two cavaliers come racing hitherward. Signor Gnoli remarks that she holds a lighted lamp aloft with the arm over which floats off her crimson robe; but is this lamp, as he says, the Cytherean censer and placed there as an attribute of Venus, or only a symbol of love, or is it the lighted lamp of a virgin who awaits the bridegroom's coming?

It *is* quite true that the whole picture breathes of love. But, if we cannot agree that we are to see in this virginal figure a representation of Venus, shall we not find it yet more difficult to discover therein an idea which has been expressed by the long misused phrase "Profane Love"? Can we even imagine a humanist of the sixteenth century, who professed to adore with antique fervor all the phases of passion as a manifestation of the divine recreative power, so characterizing the innocent longing of an evidently inexperienced maid? Does not the misapplied title of "Sacred and Profane Love" in itself imply an ascetic view of the subject quite foreign to the whole tenor of the age which saw the production of the picture? And where shall we find therein an incident that justifies its application? Is it not rather a glorified vision of a scene common enough in Italian roadsides, where an antique sarcophagus has been utilized to form a fountain-basin for a bubbling spring, whither matron and maid may come and tarry and chat of their experiences while they fill those household vessels they chance to have brought with them to carry home the water they seek?

We recall that Titian, writing to one of his correspondents, says he sends him another "poesia" (*i. e.*, poetical, pictured allegory), in which he "will find many interesting things about life." Are not these "many interesting things," the every-day incidents of this picture, glorified by the poetical thought of the whole? He says we shall find here a poem. Let us then give a metrical form to our recollection of these incidents, and thus attempt to see how far they lend themselves to that intention. So recalling them all, must we not conclude that, as they all illustrate this theme and cannot all be included in another theory, the theme of this picture is therefore necessarily

LOVE—INNOCENT AND SATISFIED.

Who linger seated by this fountain side?
What wave refills death's long deserted shrine
Where Love is stirring? Ah! whose limbs entwine
Restlessly? Who, more calm, would beauty hide?

Why then turns Love from her, and that full tide
Of living water toward yon crystalline
Shoal glass still presses? What would she divine
With that fixed gaze on one so satisfied?

The woman heeds not that her lord to-day
Would seek man's world; that gathered rose of hers,
And that filled bowl, she guards, content to stay.

The restless maiden leans toward Him from whence
Those stirred waves come; and fruitful Love prefers
To fill with life that crystal innocence.

WILLIAM P. ANDREWS.

ROME, July 20, 1903.

Notes.

John Lane's fall list embraces 'New Letters of Thomas Carlyle,' edited by Alexander Carlyle, who also makes rejoinder in 'The Nemesis of Froude'; 'Émile Zola, Novelist and Reformer,' by Ernest A. Vizetelly; 'After Worcester Fight,' contemporary accounts of Charles II.'s escape, edited by Allen Fea; the fourth volume of Helps's 'Spanish Conquest in America'; 'Africa from South to North through Marotseland,' by Major A. St. H. Gibbons; 'Juniper Hall,' by Constance Hill; 'The Life of St. Mary Magdalen,' from the Italian by Valentine Hawtrey; a new illustrated edition of William Morris's 'Defence of Guenevere'; a new volume of Essays by Gilbert K. Chesterton; 'Hortus Vitæ,' moralizing essays by Vernon Lee; 'The Poet's Charter, or the Book of Job,' by F. B. Money-Coutts; 'The Ethics of Garden Design,' by Thomas H. Mawson; two illustrated volumes, 'A Hundred Fables'—of Æsop, of Lafontaine, and a third, 'A Hundred Anecdotes of Animals'; 'Cornish Ballads and Other Poems,' by Robert Stephen Hawker, and his 'Footprints of Former Men in Far Cornwall'; 'The Ancient Halls of the City Guilds,' drawn in lithography by Thomas R. Way; and 'A Book of Country Houses,' nineteen examples by Ernest Newton.

From D. Appleton & Co. we are to have 'Admiral Porter,' by J. Russell Soley; 'The Life of Lord Beaconsfield,' by Wilfred Meynall, in two volumes; 'My Literary Life,' by Madame Adam (Juliette Lamber); 'Chronologies of the Life and Writings of William Cullen Bryant,' with a bibliography of his prose and verse, by Henry C. Sturges, and a memoir by R. H. Stoddard;

Bryant's Poetical Writings in a Roslyn edition; 'Stately Homes in America,' by Harry W. Desmond and Herbert D. Croly, illustrated; 'The Story of Rapid Transit,' by Beckles Willson; 'Steps in the Expansion of Our Territory,' by Oscar P. Austin; 'Rocky Mountain Exploration,' by Reuben G. Thwaites; 'Paris before the War,' letters by Madame Northpeat; 'The Book of the Short Story,' by Alexander Jessup; 'The Psychology of Adolescence,' by President G. Stanley Hall, in two volumes; 'Garden Mosaics,' by Alfred Simson; and 'The Modern Bank,' by Amos K. Fiske.

Little, Brown & Co. have nearly ready 'The Indians of the Painted Desert Region,' by George Wharton James; 'Pioneer Spaniards in North America,' by William Henry Johnson; 'The Adventures of an Army Nurse in Two Wars,' from the diary of Mary Phinney, Baroness von Olnhausen; 'Famous Actors and Actresses and their Homes,' by Gustav Kobbé; 'Ballads of New England,' by Dr. E. E. Hale, his family and others; and a popular edition of Renan's Writings, translated and edited by Joseph Henry Allen.

Fleming H. Revell Co. will publish 'The New Era in the Philippines,' by Arthur J. Brown, D.D.

'The Encyclopædia of Household Economy,' by Emily Holt, and 'The Way of the Sea,' stories of Newfoundland fisher folk, by Norman Duncan, are in the press of McClure, Phillips & Co.

'The Poems of John Cleveland,' the seventeenth-century poet, edited by John M. Berdan; 'Months and Moods: A Fifteen-Year Calendar,' by Edward Curtis; 'The Twentieth-Century Chronology of the World,' by C. N. Horwitz; 'History of Ancient Wethersfield, Conn.,' by Henry R. Stiles, M.D.; 'The Handbook of Columbia University,' by George H. Butler, jr.; 'Starting a Printing-Office,' by R. G. Mallette and W. H. Jackson; and 'Republics versus Women,' by Mrs. Kate Trimble Woolsey, are among the fall issues of the Grafton Press of this city.

The Baker & Taylor Company will bring out an enlarged edition of the 'New Library of Poetry and Song,' originally selected by William Cullen Bryant; and 'How to Judge Architecture,' by Russell Sturgis.

Several sonnets have been added to the collection of his own verse, 'Sonnets and a Dream,' by Dr. William R. Huntington of Grace Church, and the volume will bear the imprint of Thomas Whittaker.

A new volume in the choice historical reprints of Burrows Bros. Co., Cleveland, is to be Gabriel Thomas's 'Historical and Geographical Account of the Province and Country of Pensilvania; and of West-New-Jersey in America' (1698), edited by Cyrus Townsend Brady.

The Arthur H. Clark Company, Cleveland, announce an extension of the scope of their documentary collection, "The Philippine Islands," without increasing the number of volumes (55). Instead of stopping short with the nineteenth century, they will continue on to 1898.

The California Promotion Committee, whose headquarters are in San Francisco, have deemed it pertinent to their objects to print in a neat volume the crumbs of eloquence and patriotism let fall by the President during his tour of the coast in May last ('California Addresses by President Roosevelt'). As the cover design imports and one of the many photographic illustrations demonstrates, the speechmaking was often from the train's end; but there are addresses as well as passing remarks. The President's doctrine of expansion is developed along the usual lines, with equal praise of Wood and of Taft "simply as examples." He has also a timely word for "brotherhood in its broadest sense; brotherhood that does not recognize the difference of sections, and that recognizes just as little the difference of class; that treats a man on his worth as a man, and, if he is square, stands by him."

The list of small handbooks on Greek sculpture is enlarged, but not made greater, by Miss H. Edith Legge's 'A Short History of the Ancient Greek Sculptors' (London: T. Fisher Unwin; New York: James Pott & Co.). Written in an hysterical style, in English not always undefiled, and with occasionally an unpardonable blunder—as when she tells us (p. 78) that Mt. Pentelicus "lay on the *west* but a few miles from the city [Athens]," there is nothing new or suggestive in the book, unless it be the author's individual impressions of the works she describes. These are at all events original. Speaking of the room in the Acropolis Museum which contains the archaic female statues, she says that "sometimes it is almost eerie to go into that room and see these figures ranged round one"; though why it should be at certain times rather than others, or indeed at all, her readers may never know, unless the "veritable effort to be alive" is held to account for it. The statue of the Doryphoros makes an impression of "self-contained exactitude," whatever that may be; but here again the impression does not seem to be constant, as we are told that it is gained when we "look again at the statue." That the distinguished authority who provides the introduction to the book could have encouraged its publication, passes one's comprehension, having in mind the excellent manuals of Ernest Gardner, Tarbell, Paris, and Collignon, with no one of which is Miss Legge's worthy to compete.

The seventeenth volume of the 'Account of the Operations of the Great Trigonometrical Survey of India' is devoted to a description of the electro-telegraphic longitude operations for determining the difference of longitude between Karachi and Greenwich. Before 1900 two values of longitude had been employed in mapping the survey of India. The Atlas sheets were based on Lambton's value of 1805, and the standard sheets on Warren's value of 1815. In 1878 these values were found to be too large, and it was necessary to add to all maps a footnote stating that all longitudes required a correction of 2′ 30″. In 1893 Capt. Burrard and Lieut. Conyngham were ordered to undertake new measurements, and the total distance from Karachi to Greenwich, 5,163 miles, was divided into four sections. The first part of the present volumes contains a description of the instrumental equipment and of the operations generally; the second, an abstract of the operations and the reduction of the results. A map and several illustrations accompany the volume.

"Bulletins of the Geological Survey of Victoria" is the title of a new serial published by the Department of Mines of that Australian State. The first number contains an account of the "Geology of the Berry Lead at Spring Hill and Central Leads," by J. W. Gregory, Director of the Survey.

For a frank looking of a gift horse in the mouth, commend us to the "Report of the Committee on the Authenticity of the First Meeting-house in Salem," which fills the greater part of the July number of the Historical Collections of the Essex Institute. Nearly forty years ago the frame of a dilapidated little outbuilding was presented to the Institute by those who credulously saw in it the meeting-house. It was furnished with new roof and walls, a door and windows, and became a very proper worshipful relic. The doubters from the start gained little attention, but in 1900 the issue was sharply raised and the above-named committee was appointed, with the result of discrediting the legend altogether. The documentary research is given in full, with views, diagrams, and plans of Salem sites and properties; and this work of the well-known Essex antiquary, Mr. Sidney Perley, was well worth doing.

As usual, echoes of the Commencement oratory sound in the September issue of the *Harvard Graduates' Magazine*. William James's spiritual picture of "The True Harvard" fits in well with Professor Shaler's indictment of athletics as the cause of the "serious degradation of the capacity for attention in the less studious half of the men"—as the "disease which is ravaging the educational system of our English people." The more thorough, one might infer, the organization and official establishment of athletics, the profounder the attack on the precious gift so admirable in infancy when all impressions are fresh, and that wanes so steadily with the increase of adventitious aids to knowledge. Yet praise seems to be due to Professor Hollis, whose notable six years' incumbency of the Athletic Committee's chairmanship is here commemorated with a portrait, as are the careers, so honorable to Harvard and so divorced from athletics, of the late George Shattuck Morison and Henry Barker Hill—engineer and chemist among the foremost.

Professor Hirth, the new professor of Chinese in Columbia University, was recently the guest of honor at the regular meeting of the Munich Orientalische Gesellschaft, delivering on that occasion a noteworthy address on "Bilder aus der Chinesischen Kulturgeschichte." The full report is published in the *Beilage* of the Munich *Allgemeine Zeitung*, No. 160. Prominent among the points emphasized is the evidence furnished that all efforts to connect the oldest Chinese civilization with that of any Western people have failed. As far as can be determined now, Chinese civilization is an absolutely native and independent product. A considerable part of the address was devoted to a presentation and discussion of the new hieroglyphics that go back to the second millennium before Christ, and out of which the modern Chinese characters have been developed. Hirth reports that some years ago he and the deceased Professor Ebers had carefully compared the Chinese with the Egyptian hieroglyphic system, and had reached the conclusion that they were independent products of the two peoples employing them, the similarities between them being accidental and in the nature of things. It is only natural that in each system the sun

should be represented by a circle and the moon by a crescent. The first evidence of the influence of the Western culture in China appears in the second century B. C., as a consequence of the expedition of the Emperor Wu-ti in a western direction, resulting from a previous visit of the Chinese General Shang-Kian to the court of the Indo-Scythians in the regions of the modern Bokhara. The speaker found traces of Hellenistic and Western Asiatic influences in the architectural ornamentation of that period. A brief reply, casting doubt on these conclusions, appeared in the following issue of the *Beilage*.

Some most instructive information on the inner workings of the German book trade and its relations to learned research is furnished by a small volume of 244 pages, recently published by Dr. Karl Bücher, lately elected Rector of the University of Leipzig, and bearing the somewhat enigmatical title, 'Der Deutsche Buchhandel und die Wissenschaft.' The declaration of the sub-title, according to which it is a "Denkschrift im Auftrage des Akademischen Schutzvereins," shows that it is a quasi-official work. The whole is a protest, in the name of the learning of Germany, against a ring which has been formed by the "Sortimenter," *i. e.*, the retail book dealers of the whole country, and directed against the author, the publisher, and the public for the benefit of the middle-man. The Akademischer Schutzverein, in whose name this booklet is sent out, has its headquarters in Leipzig, but has branch societies all over Germany, Austria, and Switzerland, chiefly in the university towns, and authors from all over the country are invited to join it, the fee being but three marks. Bücher is not the first to raise his voice in protest. Some months ago the noted Professor Paulsen of Berlin, in the *National-Zeitung*, scathingly denounced the sins of the German book traders, in an article entitled "Vom Bücherkaufen und von Bücherpreisen in Deutschland," which produced considerable newspaper polemics, and called forth a formal reply from the Göttingen publisher, Ruprecht, in which the attempt was made to defend the exorbitant prices charged by the German dealers. Bücher's book is published by Teubner in Leipzig, at 1.60 marks, the profit all going to the Verein.

The last number of the *Zeitschrift des Deutschen Palästina-Vereins* (*Band* XXVI., *Heft* 4) contains a map of Palestine according to the Onomasticon of Eusebius, laid down on the excellent hand-map of Dr. H. Guthe and Dr. Hans Fischer, and this entire number of the *Zeitschrift* is taken up with a discussion of the Onomasticon, its text, its sources, and the meaning and value of its contents. In conjunction with the Orient-Gesellschaft, the Palästina-Verein is at the present time conducting excavations at Mutesselim-Lejjun, supposed to be the site of Megiddo-Legio, on the southern edge of the plain of Esdraelon, under the immediate direction of Dr. Schumacher, the American Vice-Consul at Haifa. The Emperor of Germany, who, since his visit to Palestine a few years since, has shown a keen interest in Oriental research, is said to be one of the largest contributors to the fund to defray the expenses of these excavations. He is also concerned in the excavations at the extraordinary ruins of Mesheytta, on the east side of the Jordan, presented to him by the Sultan. It is further reported from Palestine that Dr. Sellin, the Austrian explorer, intends to resume work this autumn at Ta'anach. Among the results of his last excavations at this site were some clay tablets with cuneiform inscriptions, throwing light on the worship there of Hadad Rimmon. Outside of Tel Hesy (Lachish) this is the only place in Palestine where inscribed clay tablets have yet been found.

—Professor Lounsbury's discussion of the "Standard of Pronunciation" in English, in the current *Harper's*, demonstrates the absurdity of taking any English dictionary as an infallible guide. "The truth is, that the pronunciation of every dictionary expresses the preferences and prejudices of the particular person or persons who have been concerned in its compilation." The dictionary is of value as a practical assistant, but there is no obligation of unquestioning obedience to the decisions of any one of them when they conflict, or even of all when they agree. They can record no final standard of correctness, simply because the language is in such a constant state of change that none exists. The Director of the Jenner Institute of Preventive Medicine, London, gives the results of recent experiments on the effects of low temperatures upon organic life. Series of bacteria were subjected to the extremely low temperature of liquid air, and even of liquid hydrogen, for long periods of time without loss of vitality. This use of liquid air is manifestly of great practical value. Natalie Curtis writes of her attempts to learn something at first hand of the native music of the Hopi Indians, "an art that is now fast passing away beneath the influence of the Moody and Sankey hymn-tunes and patriotic songs taught the Indians in the Government schools." In rhythm she regards the Hopi songs as surpassing our own. Their melodies are rich and beautiful, though harmony is almost completely lacking, as would be expected in so primitive a race. She had the good fortune to secure a phonographic record of a newly composed "Katcina dance" song, sung into the instrument with great zest by the composer himself, and received with enthusiasm when reproduced before a Hopi audience. Both the music and the words of this song are given, together with a translation.

—P. S. King & Son, London, have brought out the second edition of Edwin Cannan's 'History of the Theories of Production and Distribution.' During the ten years which have elapsed since the appearance of the first edition, this work has won wide recognition, and it remains to-day the most important contribution ever made to our knowledge of the field which it covers. Mr. Cannan is able, indeed, in the new preface, to say that the researches of the last ten years have not affected the substantive conclusions of the earlier edition. In fact, such work as has been done upon the genesis of the 'Wealth of Nations' confirms his original conjecture of the manner in which Smith's scheme of distribution was evolved. Mr. Cannan considers it needless, also, to alter any of those sharp, and sometimes flippant, references to the work and opinions of contemporary economists which have made the book seem breezy or undignified, according to one's point of view. With sublime confidence he calmly remarks that "what appeared to be ill-tempered blasphemy in 1893, will now be seen to be the calm statement of undoubted fact." The new edition contains few changes of greater importance than "the conversion of 'Mr. Giffen' into 'Sir Robert Giffen,'" and the correction of a few misprints and grammatical blunders. Mr. Cannan has, however, added about a dozen pages which treat of more recent changes in economic theory and the usefulness of modern contributions to the subject. Here he presents some of his own theories with a confidence that is surprising in one who has devoted so much study to the rise and fall of past systems of thought; yet his work in his special field has been so useful that no one will feel like begrudging him this one little fling. Then, too, it will make capital material for some future historian of economic theories in England.

—Filial biographies might sometimes best be left in manuscript for domestic benefit; apart from natural affection, it is a fine thing to have had an eminent man in the family, even at long range. But it is often Hobson's choice between this sort and none; and perhaps 'The Life of Philander Chase, First Bishop of Ohio and [of] Illinois, Founder of Kenyon and Jubilee Colleges,' by his granddaughter, Laura Chase Smith (E. P. Dutton & Co.), is as well done as could be expected at this distance from the facts. It tells a good deal about its subject's ancestry and youth, and not as much as might be of his later life in Illinois, 1835-52; but of this latter there may be not much to tell. The Ohio episcopate, 1818-31, was the most memorable part of his career, and certainly Jubilee College counts for less than Kenyon. In more than one instance Chase was badly used; but to call the objection to his consecration "one of the most inexplicable and malicious, almost diabolical events, which cannot even now be accounted for except by the agency of some evil spirit from the nether world," is to use large language. Fortunately, the attack upon his administration in 1831 and his consequent resignation are here narrated by "one perfectly unbiassed." It appears to be true that "he had nourished and brought up children, and they rebelled against him." Whether genius or no, a bishop who, in hope to save some part of his work, could throw up his office and take his family into a remote wilderness, there to create a farm and mill and to labor as an independent missionary, was at least a character. A hardy and indefatigable pioneer, forceful and fearless, he more than once attempted great things under huge difficulties. What he accomplished was at his own expense; indifference, opposition, slander, physical hardships, perils, and broken bones, affected him only as they hurt his work. The results are appreciated now as they were not at the time. Neglected in the East, he made warm friends in England; but, masterful as he was, he failed to attach and control his subordinates. To his sincerity and devotion was joined "a human pride of opinion and an unmistakably bellicose spirit." "The saint's is not the hero's part"; but hero and saint were queerly mixed in him. There should be more anecdotes, such as his answer to a query, "How does spiritual religion prosper at your college?" (pp. 327-8), and his forcing the passengers on an Ohio

steamboat to kneel for prayers. But he had no Boswell, and the romantic phases of his career found no adequate narrator.

—The fourteenth volume of the Harvard Studies in Classical Philology (Cambridge, published by the University) is appropriately dedicated to the memory of the late Professor Greenough, through whose efforts the original endowment of this annual publication was secured. It contains four articles. The first is a sympathetic memoir of Greenough by Prof. G. L. Kittredge, the greater part of which is devoted to an account of that remarkable pamphlet entitled 'Analysis of the Latin Subjunctive,' and to Greenough's review of Delbrück's 'Conjunctiv und Optativ.' The former little monograph, being privately printed, never in itself won much attention. The latter drew forth from Delbrück a most appreciative letter, which is here first printed. As Professor Kittredge points out, there can be no doubt that the indirect influence exerted upon syntactical study by these two productions has been very great, because their methods and results were applied in that Latin Grammar which made Greenough's name familiar all over this country. What happened in this case was no single phenomenon in the life of this generous-minded scholar. Into his many text-books "he put, in the form of notes, comments, and *obiter dicta*, the ripest fruits of his scholarship and the most brilliant of his discoveries, seldom taking the trouble to designate them as anything new." Thus they became common property, and there can be no doubt that many scholars are quite unaware of the actual source of some of their most familiar doctrines. In the second article in the volume, Mr. Warde Fowler of Lincoln College, Oxford, makes some observations on the Fourth Eclogue of Virgil, dealing chiefly with the last four verses. These, he thinks, may be applied as a touchstone to the interpretation of the poem as a whole, and certainly his treatment of them is both sane and sound.

—The rest, being more than five-sixths, of the volume consists of two articles on the illustrated manuscripts of Terence, and must in future form an indispensable part of the critical apparatus of that author. The author of one of them, Mr. K. E. Weston, while a member of the American School in Rome, became interested in these MSS., and copied the miniatures of the "Phormio" in the four of most importance. His sketches are here reproduced in ninety-six plates, so that for the first time these works can be seen and studied side by side. It becomes obvious at once that the pictures in all these MSS. are "derived from a common original, so completely do the positions of the figures, the gestures, and the general action of each scene or group coincide." With this first conclusion by Mr. Weston we think that all will agree, and almost as many with his second, that the gestures show that the common original was earlier than the time of Quintilian. Perhaps these two contributions were enough to expect from one young scholar, yet those who are familiar with the questions which have been raised about these miniatures will recall at once several to which the information in his possession might have enabled him to give answers. And all readers will recognize a certain feebleness and vagueness of statement in the written part of his production—faults which the editors of the volume might readily have removed. The final and longest article is a much more scholarly performance by Mr. J. C. Watson, who speaks of himself as a student of classical philology in Harvard, but who writes apparently at Cornell. Its title is "Relation of the Scene-Headings to the Miniatures in MSS. of Terence." Our space does not admit even of a résumé of this important treatise; suffice it to say, that the histories of the scene-headings and of the miniatures are found to hang closely together, and that the author is able to prove that the widely accepted views of Leo and Schlee about the relationship existing between the several classes of Terentian MSS. are not sound. In parting for the moment from this interesting volume we must not omit to mention the opening elegiacs, signed "C. L. S.," and evidently written by one of Greenough's colleagues. They are a sign that the gentle art of Latin versification is still lovingly and successfully practised at our oldest university, and they form a prelude of a kind which was dear to the heart of the genial and brilliant scholar to whose memory they are addressed.

THE LAW OF COPYRIGHT

A Treatise upon the Law of Copyright in the United Kingdom and the Dominions of the Crown, and in the United States of America. By E. J. MacGillivray. London: John Murray; New York: E. P. Dutton & Co. 1902. Pp. xxxvii., 403.

The Law of Copyright. By Thomas Edward Scrutton. Fourth edition. London: William Clowes & Sons. 1903. Pp. xxv., 331.

With two such satisfactory books on the subject as Mr. Copinger's extensive compilation and Mr. Scrutton's admirable compend, there would seem to be little room for another volume in English on copyright. But Mr. MacGillivray explains in his preface that he had found in his own law practice great need of a textbook on this subject which should be exhaustive of the case law, and at the same time contain a concise and clearly arranged epitome of the statutory provisions. He has been successful in meeting this need in a useful and convenient work which, while displacing neither Copinger nor Scrutton, will admirably supplement them.

Dismissing the history of copyright in a few pages of introduction, with the explanation that the subject has already been fully dealt with by Copinger, Scrutton, and Drone, and by Professor Birrell in his Lectures on Copyright, he devotes separate chapters to the subject-matter of copyright —books, engravings, sculpture, paintings, drawings, and photographs; the ownership of copyright; infringement; right of representation; colonial and international copyright; common law in relation to copyright, and the agreements between authors and publishers in relation to printing and publishing. Very wisely he has departed from the usual method, and has printed as a separate division of his book the five short chapters (67 pages) devoted to the law of copyright in the United States. An appendix contains the statutes in force (the repealed sections being distinguished by italic type), and the texts of the Berne convention. The book is well printed in a large, readable type, and there are very few typographical or other errors. Some misprints occur in the titles of American cases, the most noticeable being Nifflin for Mifflin (page 256), while on page 258 the term of United States copyright protection is inadvertently given as thirty-two instead of forty-two years, and two copies of the title-page are said to be required instead of one. The act of June 18, 1874, seems to be not fully understood, the statement being erroneously made regarding labels and prints for articles of manufacture that "as trade-marks they will be protected if registered in the Patent Office"; whereas, the registration required by the act cited is for copyright, and is not under the trademark law.

All the important copyright cases have been cited, but the Supreme Court decision in the case of Bleistein vs. Donaldson doubtless failed to reach the author before his book was printed. This reverses the decision of the court below, and his statement (p. 246) that "a poster with colored drawings of a circus performance had been refused protection" should therefore be changed to read "was granted protection." The contradictoriness of the decisions in copyright cases is very manifest, and comments expressing doubt or dissent from the judicial interpretations—such as "It is almost certain that this is bad law," "I doubt if this is sound," "It is almost certain, however, that this decision would not now be accepted as sound," "This, however, is not law"—are frequent; while in the cases of directly contrary opinions the remark not unfrequently occurs, "Which is the correct view it is difficult to say." The author is doubtless wise in warning his English professional brethren that, while the decisions of the American courts may afford valuable precedents, they should not be cited at random, and before quoting them it is essential to compare the statutory provisions of the two legislations to ascertain whether the decisions are really applicable. Of the copyright legislation of Great Britain, Mr. MacGillivray asserts that it is "perhaps the most complicated and obscure series of statutes in the statute-book"; that the present law is "bad both in substance and form," and that "there are probably more pitfalls for the unwary in dealing with copyright than with any other branch of the law." The long delay in securing the hoped-for reform of this legislation—it is now a full quarter of a century since the Royal Copyright Commission made an elaborate report—is due, he thinks, to dissensions among those who are interested in copyright, failure to come to a satisfactory arrangement with the colonies, and want of time at the disposal of the Legislature.

The author confines himself wholly to an interpretation of the law as it stands, and it is only indirectly that there is any expression of his opinion as to the legislative policy that should be followed in copyright legislation. Incidentally, however, glimpses are obtained showing his attitude towards mooted points. In speaking of the English act of 1842, he says: "Perhaps the other most important change (it cannot decently be called a reform) is the reduction of registration at Stationers' Hall to a mere use-

less and troublesome technicality. Instead of being, as formerly, a condition precedent to protection, and therefore a useful index from which one could ascertain whether a book was copyright or not, it is now made merely a condition precedent to action." In discussing the situation of copyright in Canada, the author, while expressing a doubt whether the act of July 18, 1900, is not *ultra vires* of the Canadian Legislature, nevertheless considers that it would be satisfactory to see this act obtain the hitherto withheld imperial confirmation. This act embodies an interesting variant of the typesetting and prohibition-of-importation provisions of our act of March 3, 1891. A possible unsuspected effect of the typesetting clause in the act of March 3, 1891, is pointed out when discussing the perpetual copyright enjoyed by the universities of Oxford and Cambridge in the case of books bequeathed to them. It seems that this perpetual privilege subsists so long as the book is printed only within the respective universities or colleges, and for their sole benefit and advantage. "*Quaere*, if some of Jowett's works, for instance, were printed in the United States in order to acquire American copyright, whether that would destroy the perpetual copyright by reason of copies being printed outside the University."

Mr. Scrutton's work occupies a unique position in English literature relating to copyright. It was originally published in 1883 as a revised edition of the successful Yorke prize essay of the University of Cambridge for 1882 on the subject, "The Law of Property in Literary Compositions: The Principles that ought to regulate it, and How far such Principles have been acted upon in Different Countries." The first edition of the book was therefore largely historical and theoretical, and was published under the title, 'The Laws of Copyright: An Examination of the Principles which should regulate Literary and Artistic Property in England and Other Countries.' The work attracted favorable notice because of its admirable conciseness and clearness of statement; and a second edition, entirely rewritten, omitting the theoretical portions, revising the parts dealing with the law then existing, and adding the texts of the statutes in force, was published in 1890, and a third edition in 1896. The present, fourth edition, with very little increase in bulk, shows careful revision, and leaves the work a most useful, up-to-date handbook of the English law on this subject. Colonial copyright, however, receives but half a dozen pages, with a mere mention of Canada, while international copyright is granted but a single brief chapter, of which only a few pages deal with the United States law. The author is outspoken as to the need of revision of the present British statutes, which he refers to as the "existing chaos of legislation." The inadequate act which went into effect October 1, 1902, to give additional protection to musical copyright, he calls "a striking object-lesson of the difficulty of getting Parliament to extend to literary and artistic property the protection they would hasten to afford to pheasants, were they threatened." Mr. Scrutton does not so frequently as Mr. MacGillivray express his own opinions as to the value of the decisions rendered, but of the much-discussed decision of the House of Lords in the case of Walter *vs.* Lane, protecting the copyright claimed in a reporter's edition of unwritten speeches, he speaks very frankly:

"But for its decision, it would seem startling that a person should be the author of a work to which he has contributed neither the words, nor their arrangement, nor the ideas contained in them, when his only relation to that work is that he has correctly copied from dictation the language of the speaker who composed the thoughts in words. The so-called author shares his authorship with the mechanical phonograph, but, under the protection of the House of Lords, acquires a property in his copy from dictation. . . . It is idle to discuss whether decisions of the House of Lords are right; otherwise there is much to be said for the view of the Court of Appeal and Lord Robertson that a mere copyist does not produce a 'book' within the Copyright Act, and that the phonograph is not an 'author.'"

Mr. MacGillivray, who discusses this decision at length, insists that the essence of the case is that the reporter was entitled to copyright because it was he who first reduced to "book" form the literary composition contained in Lord Rosebery's speeches. It seems desirable, however, not to strain the application of Walter *vs.* Lane, and to seek an explanation of that decision in the facts of the case. Lord Rosebery delivered his speeches without manuscript. The *Times* went to the expense of taking them down in shorthand and printing them. The defendant reprinted them from the columns of that paper, without authority of the proprietors. The Lord Chancellor in his judgment said:

"I should very much regret it if I were compelled to come to the conclusion that the state of law permitted one man to make profit and to appropriate to himself the labor, skill, and capital of another. And it is not denied that in this case the defendant seeks to appropriate to himself what has been produced by the skill, labor, and capital of others. In the view I take of this case, I think the law is strong enough to restrain what to my mind would be a grievous injustice."

It is probable that very similar reasoning led to the recent decision which so aroused the ire of Mr. Furnivall in the case of Parry *vs.* Messrs. Moring and Gollancz, granting an injunction against a new edition of the 'Letters of Dorothy Osborne to Sir William Temple.'

THE POPISH PLOT.

The Popish Plot: A Study in the History of the Reign of Charles II. By John Pollock, Fellow of Trinity College, Cambridge. London: Duckworth & Co. 1903.

The attempts of the English Catholics to secure toleration and to gain power have already furnished a fruitful theme to the historians of the seventeenth century. Gunpowder Plot, the most dramatic of all political conspiracies with the exception of St. Bartholomew, has recently been recalled to memory by Gardiner's debate with Father Gerard. In this case the learned chronicler of the Stuarts made himself a detective, and sought, by the most careful scrutiny of all available records, to show that Gunpowder Plot was something more than the successful angling of an *agent provocateur*. Guy Fawkes and his confederates were bent on doing serious mischief. The evidence against the alleged promoters of the Popish Plot is by no means so clear. Many writers, indeed, who cannot be suspected of fidelity to the Roman cause, look upon the plot merely as the invention of perjurers like Oates and Bedloe—the ghastly fiction of human vampires. Mr. Pollock's attitude towards it may be gathered from a line out of "Absalom and Achitophel" that stands upon his title-page:

"Some truth there was, but dashed and brewed with lies."

There is detective work in the present volume, and historical disquisition as well. Mr. Pollock divides his subject into four parts: "The Designs of the Roman Catholics," "Sir Edmund Berry Godfrey," "Politics of the Plot," and "Trials for Treason." This arrangement has the merit of great clearness, and it also permits us to touch upon each of the author's main topics.

Titus Oates came forward with his story of a popish plot against the life of Charles II. in September, 1678. A hundred years later, when rationalism and toleration had taken the place of religious bigotry, Hume declared that none but a confirmed Whig could believe in the existence of such a conspiracy, while Charles James Fox, the bulwark of contemporary Whiggism, declared the whole tale to be spurious. Mr. Pollock is not quite at one with these historians of the eighteenth century. He makes no attempt to rehabilitate Oates, for it would be past the ingenuity of the most accomplished whitewasher to defend such an utter rascal; but he does say that "unless he made a prodigious guess, the most fortunate in history, Oates must have acquired [at St. Omer] hints dropped on the subject of the movement in England." Plotting is one thing and a mature plot is another. Mr. Pollock adduces evidence which proves that the Jesuits were plotting for the restoration of Catholicism in England long before James II. came to the throne. That a conspiracy against the life of Charles II. was a part of their programme, cannot be established by evidence of the same validity, but it can hardly be doubted that such a subject was discussed.

Those who are familiar with the career of Robert Parsons and with the nature of the tradition he founded, can readily understand how the hope of the Jesuits went out toward the sons of Henrietta Maria. In the days when Milton was exclaiming, "Avenge, O Lord, thy slaughtered saints," the prospects of the English Catholics could not have been bright, but the Restoration permitted hope to revive, and the Treaty of Dover might well seem a long step towards the redemption of the realm from heresy. Unfortunately for the Jesuits, Catholicism with Charles II. was a means and not an end. For the sake of escaping from a niggardly Parliament and of making himself absolute, he was willing to accept a French pension and the religion of the King of France. But the Treaty of Dover was in reality, as Lord Acton has said, "a plot under cover of Catholicism to introduce absolute monarchy, and to make England a dependency of France, not only by the acceptance of French money, but by submission to a French army." However, this shameful compact led to nothing save the abortive Declaration of Indulgence in 1672. A year of war with Holland, along with the domestic complications it involved, convinced Charles that he would not gain absolutism through the Catholic interest. Accordingly, in 1763, he repudiated the Declaration of Indulgence by accepting the Test Act; and at the same moment, the hope of

the Romanists, deserting him, went out to the Duke of York, whose adherence to the ancient faith was less contingent upon politics.

The King's change of front at once led to fresh projects, and Mr. Pollock looks upon the summer of 1673 as a time when intrigues began which five years later suggested the embellishments of Oates. Until the close of 1675, the course of the plotting can be traced with considerable clearness in the correspondence of Edward Coleman, a Jesuit and the Duchess of York's secretary. Throughout his letters there is much treason, construing treason according to its legal sense, for Coleman aimed at nothing short of turning England to Catholicism by French gold or Austrian gold or papal gold—it matters little where the money comes from. With Coleman, who was an enthusiast, the propaganda is religious and not ecclesiastical. After 1675, the nature of Jesuit designs is more difficult to trace. During Danby's ministry the Catholics had little to hope from the court, and after 1676, when the Duke of York avowed his conversion to Rome, the relations of the King and his brother became difficult. So much depended upon the length of the King's life! With what we know about Edward Petre in England and Père La Chaise in France, how can the fact of Jesuit activity be doubted? What the details were, the world may never know. Mr. Pollock is cautious, and confines himself to the following general statement: "This much only can be said with safety, that the brothers hated each other, that the death of the King was talked of in Jesuit seminaries on the Continent, and that James was not above tolerating, if he did not direct, an attempt to murder the husband of his daughter."

We have already said that Gardiner played the detective in his little book on the Gunpowder Plot. The atmosphere of Scotland Yard also pervades the present volume, for, besides the political plotting of the Jesuits, there lies embedded in the midst of the Oates conspiracy the mysterious death of Sir Edmund Godfrey. Was he murdered, or did he take his own life, as L'Estrange would have us believe? If he was murdered, who were his murderers, and what was their motive? To these dark and tragic questions Mr. Pollock applies his ingenuity. He will not accept the judgment of Hume that the problem is insoluble, nor is he content to follow Macaulay and Ranke in calling it unsolved. Rejecting the opinion of Sir James Stephen and Mr. Sidney Lee that Oates himself was the murderer, he evolves a very interesting theory which is largely founded on the testimony and career of Miles Prance. His conclusion is that Godfrey had accidentally come into possession of a secret the revelation of which would have prevented the Duke of York from succeeding to the throne. Godfrey was on good terms with the Catholics, but he was also a magistrate, and might impart this fatal piece of intelligence to the Government. He was therefore murdered by the Jesuits in Somerset House, the Queen's residence, and his body was kept there for several days before being taken to Primrose Hill, where it was discovered.

Mr. Pollock finds the cornerstone of his theory in a statement which Oates was constantly reiterating, namely, that a Jesuit congregation had been held "on April 24, 1678, at the White Horse Tavern, in the Strand, where means were concerted for the King's assassination." The particular allegation is untrue, though a congregation of Jesuits was held in London on the date in question. This meeting, however, took place not at the White Horse Tavern, but at St. James's Palace, the residence of the Duke of York, as may be seen from Sir John Reresby's 'Memoirs,' and Father John Warner's 'Persecutionis Anglicanæ et Conjurationis Presbiterianiæ Historia.' Warner was a provincial of the Jesuits in England, and a confessor to James II. The constancy of the Jesuits is proved by the fact that nine of them suffered death during the course of the Popish Plot rather than reveal the secret which would have destroyed the future of Catholicism in England. Had this secret been divulged, the Opposition would have been masters of the situation. Mr. Pollock is perfectly moderate when he says:

"The discredit into which Oates would have fallen would have been of little moment compared to the extent of the gain to the Whig and Protestant party. To Shaftesbury the knowledge would have meant everything. Witnesses of the fact would certainly have been forthcoming, and James's reception of the Jesuits in his home was a formal act of high treason. The Exclusion Bill would have been unnecessary. James would have been successfully impeached, and would have been lucky to escape with his head upon his shoulders."

To return to Sir Edmund Godfrey. On September 6, 1678, Oates had come to him as a magistrate and sworn to the existence of a Catholic plot against the King's life. Oates's story was carried by Godfrey to Edward Coleman, who, if we accept Mr. Pollock's theory, disproved it—at least to Godfrey's satisfaction. In the course of a conversation held between the magistrate and the Jesuit at the house of a common friend, Mr. George Welden, on September 28, Coleman disclosed by word or hint Oates's perjury regarding the meeting of the Jesuits at the White Horse Tavern. In order to establish his hypothesis, Mr. Pollock must persuade us that Godfrey knew when the congregation was actually held, and that the Jesuit body knew him to be possessed of their secret. Three days after his meeting with Godfrey, Coleman was committed to Newgate. What was the nature of his part in the plot against his friend, the magistrate? Having given Godfrey the information, did he become a party to his death? This is a point of some consequence, and one upon which Mr. Pollock does not throw much light. As Godfrey disappeared upon October 12, the design against his life hurried rapidly forward, and Coleman in durance could have afforded little direct aid. It is clear that Godfrey believed Oates to be a perjurer, and also considered his own life to be imperilled by the chain of events which began with Oates's deposition in his presence.

For the rest, Mr. Pollock opens up a new vista by his scrutiny of Prance's evidence and conduct. This man was a Roman Catholic silversmith, and an important witness at the trial that followed Godfrey's death. While his evidence seemed to be directed against certain Catholics, it diverted suspicion from Le Fevre, the Queen's Jesuit confessor, and several other Jesuits. In December, 1688, when Father John Warner, late provincial of the Jesuits in England, was attempting to escape from Gravesend, his boat was stopped in the harbor, and it was found to contain one other passenger, Miles Prance. A good understanding had apparently existed between him and the Jesuits during the ten years that followed Godfrey's murder, and his testimony must be construed with this fact in mind. Mr. Pollock's treatment of circumstantial evidence is highly plausible, and his theory of Godfrey's death deserves careful consideration.

On the political side, the chief motive of this book is furnished by Charles II.'s contest with the Whigs, ending in their severe discomfiture at the Oxford Parliament of 1681. To those who derive their knowledge of Charles's reign from Gramont and historical novels, the statement that the Merry Monarch was a determined politician may come as a surprise. Mr. Pollock finds him both determined and capable, a worthy foe of Shaftesbury, and the ablest member of his line. Not that he strove for the highest national aims. His purpose was simply to enhance the power of the crown, whether by the Treaty of Dover or by the tactics of Danby. The Popish Plot served to place him at a great disadvantage, for he desired the succession of James rather than that of Monmouth, and the Whigs had ground to hope that through the Plot they might force his hand. In the end the King prevailed over his foes by patience, and gained a personal triumph which Mr. Pollock calls unique. The decisive moment was reached in March, 1681, when Charles dared to dissolve Parliament after the first reading of the Exclusion Bill. No revolution followed, and the Whigs were driven into the Rye House Plot. We quote the passage in which Mr. Pollock indicates most clearly his conception of Charles as a politician:

"While to the world he seemed a genial debauchee, whose varied talents would have fitted him equally to be a chemist, shipwright, jockey, or dancing master, this horseman, angler, walker, musician, whose energy tired while his company delighted the most brilliant of English courts, more admirable than Crichton had he not been more indolent, he labored in an inner life at a great endeavor, and, chiefly by letting himself be misunderstood, achieved it. He restored the crown to its ancient place in the State whence his father and his grandfather had let it fall. He gave Parliament just enough rope to hang itself."

The volume closes with a study of the trials for treason which sprang from the Popish Plot. Before coming to the trials themselves, Mr. Pollock discusses at length the criminal procedure then in vogue and the rôle of the judges in political trials. The miscarriage of justice was such as might be expected under the circumstances; the bench being a branch of the Administration and chiefly concerned to defend the cause of the Crown, the witnesses being mostly perjurers, and public opinion being excited to the last degree by venomous rumors. The Popish Plot is an episode in national psychology no less than in national politics, and, though an extremely unpleasant subject, it fully deserves the attention which Mr. Pollock has devoted to it in this learned and well-ordered study.

TRENT'S HISTORY OF AMERICAN LITERATURE.

A History of American Literature, 1607-1865. By William P. Trent, M.A., LL.D., Pro-

fessor of English Literature in Columbia University. D. Appleton & Co. 1903.

Professor Trent's volume is in general so well conceived and executed that, as one of Mr. Gosse's "Short Histories of the Literatures of the World," it will not be shamed by its companion volumes, unless some of these attain to a degree of excellence far in excess of that reached heretofore. In his preface he is lavish with his modesty, saying that his book would have dwindled to an essay if he had "treated so callow a literature on the scale adopted by the writers of the volumes dealing with the mature and extensive literature of France and England." A fuller treatment than theirs has enabled him to pay more attention than their scheme would permit to the fairly important as distinguished from comparatively eminent writers produced by our democratic conditions; it has also enabled him to deal with certain pioneer authors "as though they were reputable and fairly interesting men," not as though they were unpresentable progenitors, always to be kept in the background. But Professor Trent's modesty extends to the more modern periods of our literature. We are too near to these for the historian and critic to deal justly with them, and consequently Professor Trent disclaims all pretence of having written a history of our literature from 1830 to 1865. What he has written is an impressionist appreciation. So much modesty is commendable, but we cannot but believe that he has builded better than he thinks. It is perhaps the defect of his participation in a history of universal literature that he seems to be habitually in fear that he may claim too much for any American writer. It is as if he sought to ingratiate himself by "singing small." One can easily imagine how much more doughtily Col. Higginson would stand to his American guns.

The earlier chapters take us through such immeasurable sand that a certain dryness would be only what we should expect; but actually we have less of this to complain of than of a too resolute vivacity, extracting sunshine from cucumbers of the most forbidding character. We tire a little of so much whistling when we know that it is done to keep the author's and our own courage up, and we would have him abandon himself to a dulness more in keeping with the books and authors he describes. A more serious defect than this, which leans so obviously to virtue's side, is that which becomes conspicuous only when we arrive, in the later chapters, at the chief American writers—the conscientious endeavor to determine whether this, that, and the other one was a great author. Matthew Arnold never less approved himself as a wise critic than in such mechanical measurements; and where Arnold failed, Professor Trent is hardly likely to succeed. Emerson counted five writers of the highest rank. Many of us would stop at three, and to "size up" a writer becomes increasingly difficult as we come down the line.

The first two parts of Professor Trent's book (186 pages) cover almost precisely the period of the late Prof. Moses Coit Tyler's four royal octavos. It would have been quite impossible for Professor Trent to carry his researches farther than Professor Tyler, so that from 1607 to 1788 the merit of his work is mainly that of faithful condensation. Moreover, Professor Tyler's emphasis was generally so just that to differ from him in this respect would be to go astray. Michael Wigglesworth is for Professor Trent, as for every literary critic of the New England theocracy, the typical Puritan poet, nor does he deny himself the inevitable quotation from "The Day of Doom." It is Professor Trent's disadvantage as compared with Professor Tyler, that he has much less room for quotation, which is the greater pity, because he has less skill than some others in plucking out the heart of a writer's mystery. He circles about an author like a swallow round a chimney, but without the bird's conclusiveness. "Annalists of the Seventeenth Century" is a chapter that reaches to its climax in a warm word for Bradford's Journal, and that on the New England divines of the same period in a generous tribute to Cotton Mather; his biographer, Mr. Barrett Wendell, faring equally well. "Later Colonial Verse" (1701-1764), "so dry that you might call it wet," would make the "Later Colonial Prose" of the same years shine by comparison, even if it did not have the master names of Benjamin Franklin and Jonathan Edwards to conjure with. Prof. Trent makes much of these oases, but not more than they deserve. For logical acumen he mates Edwards with John C. Calhoun, and might have found them complementing each other, one as the apostle of "man's inhumanity to man," the other as the apostle of God's similar disposition. Here again we have the inevitable quotation, Edwards's description of young Sarah Pierrepont, which certainly does read like a stray leaf from Dante's 'Vita Nuova'; but the longer passage, which he quotes to show that Edwards had in him the makings of a great prose writer, does not at all bear him out in that particular.

Coming to the "Revolutionary Period" (1765-1768), John Dickinson's 'Letters' are evaluated as the work of "the most important writer on political topics," but as less effective in hastening independence than the work of Samuel Adams. Is there not, however, a provincial note in the hint of Adams's "coarseness" as "a fact which partly accounts for his comparative failure to impress himself upon the popular imagination"? Still, so long as we are not invited to consider the whole course of Adams's revolutionary career as a profound mistake, we have little reason to complain. And so far is Professor Trent from this construction that he is even more generous than Professor Tyler in his appreciation of Thomas Paine. "He had grave faults, but one is almost tempted to say that the man who at this late day emphasizes them has greater"—a possible reminiscence of Henley's saying that he would rather have had Burns's faults than have written about them in the manner of Stevenson. A habit of infelicitous comparison has for one example the comparison of Paine's inferiority to Burke to Kingsley's inferiority to Newman. But where generally praise of Paine's political service to America has been offset by condemnation of his religious heresies, Professor Trent has the courage to say that much of Paine's Biblical criticism has not been prevented by Orthodox assaults upon 'The Age of Reason' "from seeming fairly conservative to-day, at least in point of substance."

Among the "Poets and Miscellaneous Writers of the Revolutionary Period" Freneau easily forges to the head; but a neglected point of view is taken where, over against Scott and Campbell's borrowing each a line from Freneau, we are reminded that his own borrowings were more royal. Of Timothy Dwight's multifarious writings Professor Trent would save one hymn and the 'Travels,' so much less than they might have been if Dwight could have subordinated to reality his predilection for "elegant English." Joel Barlow is considered with more than ordinary sympathy, both for his affecting story and for certain real merits, more conspicuous in his "Hasty Pudding" than in his "Columbiad." The word "notorious" has become so "soiled by all ignoble use" as to make it doubtful whether Professor Trent should have written of Barlow's friend and monodist as "the notorious Helen Maria Williams." John Woolman is described in terms that will satisfy all but the fanatical admirers of that noble journalist.

As the literary product becomes more various, Professor Trent's difficulties in achieving a satisfactory classification increase upon his hands, but his success commends his ingenuity. For the "Formative Period" (1789-1829) he is no longer reminiscent of Professor Tyler as in the two preceding parts, but is not less informing than when following the Tyler trail. From "Transitional Writers" he passes to "Writers of Fiction," under which head Irving and Cooper are treated with generous elaboration. Irving, "the first successful American man of letters," is eagerly defended from the assault of hypercritical depreciation, and the treatment of Cooper cannot be better praised than by a recognition of its substantial agreement with Professor Lounsbury's capital biography. The acceleration of interest promised by this chapter is hardly maintained by the next following, wherein the point of departure is Kettell's 'Specimens of American Poetry,' in three volumes, published in 1829, the term *ad quem* of the verse-writers of the period under consideration. Among Kettell's one hundred and twenty-five poets Professor Trent discovers only one of real importance; for, though the collection had some of Longfellow's and Whittier's early verse, there was little of the former's and nothing of the latter's to herald their long since established fame. We are once more reminded that the introductory and concluding parts of "Thanatopsis," as it now stands, were additions of much later date than the body of the poem; but the idea that they bettered it, is one from which the more judicious will appeal. The account of "Unitarianism and Transcendentalism" has as much prominence as in Mr. Wendell's 'Literary History,' but the manner of it has no taint of Mr. Wendell's patronizing airs. Emerson is highly exalted, not without qualification, while the praise of Thoreau as a writer, rather than as an observer or thinker, marks a tendency widely apparent, and Professor Trent's cordial abandonment of himself thereto. "The Romancers" (1830-1850) are preëminently Hawthorne and Poe. Hawthorne is invited to the highest seat, but with some demur at the narrowness of his vision, and with such admiration for his moral nature and winning personality as Emerson's personal contact did not excite and many of us cannot feel. There is no

attempt to rehabilitate Poe's character—a hopeless task—but if his special cult is not satisfied with the estimate of his prose and verse it is only because to set him above Shakspere would not be enough. Much of Longfellow's significance ("The Poets," 1830-1850) is found in his revealing the Old World to the New. A more careful reading of Pickard's Life of Whittier would have reshaped some of the sentences about Whittier's "shrewd campaigning" in a harsher mould. It is a right judgment that "some of his best work" deals with "such an unpleasant topic as slavery"; and if we are not prepared to say that "Ichabod" is the only great one of his personal poems, we may without hesitation recognize it as the greatest of its class. The minimizing view of Holmes's poetry would have sorely afflicted that genial egotist, could he have anticipated it, but he would have been comforted by being crowned as "the typical representative of Unitarian Boston and the heretical descendant of Calvinist saints." Hardly less minimizing is the view of Lowell as prose-writer, critic, and poet, with the grand exception of the first 'Biglow Papers' as the obvious culmination of American satiric and humorous poetry. We read of our longing for a new Lowell to satirize our new follies, but the old Lowell answers tolerably well, so closely are the new follies patterned on the old.

A chapter, "Poets and Novelists" (1850-1865), has 'Uncle Tom's Cabin' for its top and crown, and Professor Trent's unhappy predilection for the literary parallel betrays him into bracketing Mrs. Stowe's novel with Aphra Behn's 'Oroonoko.' The humorists from 1830 to 1865 have a chapter to themselves which is convincing that humorists in the lump are miserably indigestible. The concluding chapter celebrates a line of "Historians, Critics, Publicists." George William Curtis would not regret to find his service as Independent and civil-service reformer set above his work as orator and essayist, but the admirers of Webster will certainly object to having his Reply to Hayne refused the honors of great literature. Is it so sure that an ice-cold historical criticism is a better test of literary quality than the heat of contemporary passion? In reserving Abraham Lincoln for the climax of his work, Professor Trent, not forgetting the Gettysburg address and the inaugurals, seems to have intimation that the measure of literary greatness is not so much excellence of form as height of soul.

Portraitures of Julius Cæsar. By Frank J. Scott. Longmans, Green & Co. 1903.

The collection of portraits of Julius Cæsar published in 1887 by the late John Ropes of Boston was richer in illustrations than any that had before been made, and his study of them must still be read by all who are interested in the personal appearance of the great Roman. But numerically it is now superseded by the work of Mr. Frank J. Scott, an architect of Toledo, who has been more successful than was even Bernouilli in getting together material.

The latter's list, in his well-known 'Ikonographie,' included sixty statues and busts, and was illustrated by eleven plates or cuts. In Mr. Scott's list there are added twelve ancient and fourteen Renaissance or later works, and he gives us twenty-nine full-page plates and forty-five cuts in the text, all illustrations of portraits of Cæsar, together with ten more plates and cuts of kindred subjects. During four years of travel in Europe the author visited all the great museums and many private galleries, studying, comparing, making sketches, or causing photographs or casts to be made of all the materials, ancient, mediæval, or Renaissance, which might throw light on the features and head of Julius Cæsar. His studio, with its collection of this material, must be a fascinating place, to judge by one of his plates which represents a shelf supporting sixteen plaster casts of the most important busts.

Aware that, excluding coins, we have not a single portrait which was certainly executed or certainly not executed in Cæsar's life-time; confused at first by the curious variations in those which professed to represent him; with intenser study, ideals of the man's real presence began to shape themselves out of the aggregate of the marbles preserved, until finally Mr. Scott was able to fix, with other iconographists, upon certain ancient busts and statues as having been executed probably in Cæsar's time, and upon others as probable studies of ancient works no longer in existence. Not that he blindly follows any iconographist, even the greatest. For instance, he differs from them in distrusting Cæsar's effigies on coins as fundamental for knowledge of his features. Rightly; for the coins, wretched as works of art, and all of them struck towards the end of Cæsar's life, can give us nothing but one or two salient characteristics of the man at that period, to be read into the more general conception of him which is to be got from busts and statues. Again, Mr. Scott differs from the many who hold that the colossal head in Naples is the most valuable single portrait of Cæsar now known. This palm he would award to the Vatican head in the Chiaramonti Museum, No. 107, considering it the finest representation of Cæsar the thinker, jurist, statesman, and gentleman, although it fails to give evidence of his military dash, his audacity, and his energy. These latter traits Mr. Scott thinks are best expressed in a bronze statuette hitherto unpublished and undescribed, which he had the good fortune to find in Madrid. Of the striking bust of an old man with his toga drawn over his head, which used to be called "Cæsar as Pontifex Maximus," and which he justly considers altogether too old for the real Cæsar, he has the interesting theory that the original was merely an idealization in clay, never intended by the sculptor for literal duplication in marble, but copied literally in later times as a speculation.

In connection with this and with several inferior busts resembling it, Mr. Scott ventures the theory that there was a death-mask of Cæsar which served as their prototype. This thought was suggested to him by the discovery in Turin of another unpublished head which, unfinished at the back, certainly seems to be the copy of a mask; but whether of Cæsar or of another is a difficult question to determine. That a death-mask was made, Mr. Scott need not have doubted had he recalled the Roman *imagines* and known of Appian's description of the funeral of Cæsar with the puppet which figured there. This reminds us to say that it would perhaps have been better if Mr. Scott had omitted much of his chapter entitled "A Brief of Cæsar's Life." The word brief is well chosen; the chapter is a piece of special pleading on his favorite's behalf, for, to Mr. Scott, Cæsar must be like Cæsar's wife—above suspicion. And in his protest against the Shaksperian representation of Cæsar's funeral, where Mr. Scott argues that the actual spectators in the Forum that day must have behaved with the stern taciturnity of Americans when they received the news of the assassination of Lincoln, he entirely overlooks the difference between Italians and Anglo-Saxons, and has apparently never read the account of Appian to which we have referred. It was necessary, of course, that he should tell us of his conception of Cæsar's character; but he might have done this in a few words, and devoted the space thus saved to translations of those descriptions of the man's personality which have come down to us from antiquity. Here, by the way, he would have found it a difficult job to produce many descriptions by writers of Cæsar's own day, although he several times alludes to such as existing. Still, later descriptions, modelled upon earlier, no doubt, would have been welcome.

But the book is a good book, and will be full of interest to sculptors and to the general reader. The point of view is confessedly not that of the classical scholar, yet the work will be (and perhaps for that very reason) useful to scholars in spite of some slips like "Sueton" and "Plineus," and some curious usages of English, such as "histrionic" (for historical) and "portraited." That the heroic statue in the court of the Conservatori came from Cæsar's forum is a somewhat doubtful tradition, not a "belief," and the statue was executed towards the end of the first century or at the beginning of the second rather than "near to Cæsar's life-time." Finally, we may note that it is curious that one so familiar as Mr. Scott must be with the Vatican collections should not remember that the "Roman in a toga, sacrificing," a cast of which he saw in the Crystal Palace and proceeded to enter in his list as a possible Cæsar, is a prominent object in the famous Sala della Biga, where he must have seen it many times, though naturally then never thinking of adding it to his collection.

Rossetti Papers, 1862 to 1870: A Compilation by William Michael Rossetti. New York: Charles Scribner's Sons. 1903.

This last instalment of Mr. William M. Rossetti's family papers, containing as it does many letters of the most celebrated people in art and literature of the time, cannot fail to have a general interest, much as it will be regretted that its compiler has not limited himself to giving only what would have furthered the chief object he had in view—*i. e.*, to throw more light on the career of his brother, Dante Gabriel Rossetti. Although many books have been published about D. G. Rossetti, it is generally acknowledged, by all who knew him, that as yet there is none that gives any adequate idea of his genial personality or of the influence he exercised over the men who

came under the spell of his genius. To the future biographer of Rossetti, the letters here included will be of value, showing in many instances his appreciation of the humorous, the kindliness of his nature in attempting to secure purchasers for his friends' pictures, and his rare generosity in acknowledging the qualities he liked in the work of others. Several letters from Ruskin to D. G. and to W. M. Rossetti throw some light on the interruption of friendly relations between the artist and his former patron and critic.

Among the noteworthy correspondents whose letters are given are Carlyle, Robert Browning, Walt Whitman, Professor Norton, "Baron" Kirkup, W. J. Stillman, James Smetham, W. Allingham, Madox Brown, W. B. Scott, etc. Then we have several disputatious letters on business matters relating to the non-execution of commissions or the delay in their execution, about which it is impossible for the reader to judge, as the answers to the artist are withheld. Many notes to Madox Brown, the friend with whom D. G. Rossetti was constantly in touch, are too scrappy to deserve reprinting; but Mr. William Rossetti's method of reproducing everything he can lay hands on is too well known from former volumes to call for comment here, nor would his readers expect of him any concession to the virtue of discretion. It is, therefore, rather astonishing to find in his preface that he has clipped at all. "The passages omitted are very generally such as would be of little or no interest to the reader, although occasionally it happens that something which might be of interest is excluded on other grounds."

On the score of good taste we should think he might have withheld the nonsense verses, among other trivialities, as unfit for publication. Amusing as they may have been as impromptus, they are too personal and ephemeral in their fun to be intelligible to outsiders.

The interpolation of W. M. Rossetti's diary, which runs through the book, might well have been spared also, occupying as it does so much of the text with fragmentary jottings as to his own vacation journeys, dinings out, visits, opinions on pictures seen, accounts of spiritual séances at which nothing happens that is noteworthy—entries, in fact, which only serve to recall a date, and which could be of no permanent use to any one but himself. The references to Christina Rossetti are few, and consist chiefly of letters from her, referring to the publication of her poems, or her brothers' criticisms and suggestions about them, the change of a word, etc.—matters with which the public has no concern.

With all respect to the present craving for the human document, in giving the papers left by people of note to the public some discrimination should be used, as much in its own interest as in theirs, as to what is significant and characteristic, and what is utterly unimportant.

Sacred Sites of the Gospels. By W. Sanday. Oxford: Clarendon Press; New York: H. Frowde.

Dr. Sanday's 'Sacred Sites' consists of fifty-five process reproductions of photographs, seven maps and plans, and 126 pages of letterpress. The photographs are not original, the maps are for convenience, the plans—apart from one of Jerusalem, also for convenience—are an elaborate reconstruction of the Temple of Herod by Mr. Paul Waterhouse, the architect, in collaboration with Dr. Sanday, and the letterpress is in an easy lecturing style, marked by Dr. Sanday's common sense and insight, but not entering deeply into any of the problems involved. The origin of the book, in fact, lies in three lectures delivered by the author after a visit of a few weeks to Palestine. These are given as delivered, with a fourth chapter added on the recent literature of the subject.

As Dr. Sanday himself recognizes, the *raison d'être* of this contribution is to be sought in his training as a textual critic. Here the old antagonism of the archæologist and the philologist appears again, but in a mild form, and with prospect of fruitful results. Thus, the student of text-recensions feels compelled to read Gerasenes in Luke and Mark, while the topographer feels equally compelled towards Gergesenes. Again, it stirs, and not unnaturally, the textualist's laughter when the topographer, dealing with the pool of Bethesda, says naïvely that he does not intend to follow the best MSS. because he thinks that the inferior ones suit the local indications better. Finally, the writer of 'Macmillan's Guide'—happy neither in texts nor in localities—is the especial *bête noire* to Dr. Sanday's steady scholarliness. The Oxford professor evidently took a pleasure in rapping, always in calmly moderated language, the knuckles of that very cock-sure and overflowing compiler. And at all these points it is belief in texts and solicitude for their integrity that are the valid moments.

In Jerusalem itself Dr. Sanday upholds the traditional sites of Golgotha, the Holy Sepulchre, and the Upper Room of Luke's Gospel and Acts. Of course, he does not think that these sites can be exactly fixed, only that they must have lain more or less in their present localities. As for the tomb, for example, he says very pointedly that

"there is an appreciable probability that it would be remembered and handed down, even though it was buried [by the platform of the Temple of Venus]. When I say 'remembered,' I mean remembered in the genral sense that the successive generations of Christians would know roughly and approximately within what area the Lord's body had lain. We can understand that if that were so, when the Temple of Venus was taken down, and the earth that formed its platform removed, if the workmen came upon a tomb that at all answered to the description in the Gospel, the discovery would seem very convincing. And if, in an old disused rock-hewn reservoir near, there were found beams such as might conceivably have been crosses, that would seem to be striking confirmation. Under the circumstances, we must not expect that the examination would be very closely critical. But I think we may say with some confidence that the enthusiasm that was evidently felt and shown on the occasion was not without tangible grounds" (p. 77).

But the site in Jerusalem as to which he feels most confidence, still in this broad way, is that of the Upper Room. The evidence for the traditional Cenaculum is marshalled with great force and with a keen appreciation for the precise value of tradition—where it is valid, and where it fails. This part of his book is worthy of careful study; in it the effects of Dr. Sanday's training are very visible.

The same method is applied to the problem of the sites of Capernaum, but there it fails. Towards Khan Minyeh he inclines, but in the last instance—in the preface—has to confess uncertainty. The evidence is really insufficient, and it may be doubted whether it will ever be possible precisely to assign a great city like Capernaum to one or other of two sites so close, each to each, as are Khan Minyeh and Tell Hum.

As a whole this book, it must be confessed, is disappointing. Yet there are fresh and pointed sections in it, and even simple opinions and *obiter dicta* from a scholar of Dr. Sanday's rank and type are to be welcomed.

Another View of Industrialism. By William Mitchell Bowack. E. P. Dutton & Co. 1903.

To the question with which this author begins his book—Is there room for another work on Economics?—we were, after a cursory glance, disposed to give a negative answer. More thorough examination convinces us that this would have been a mistake. As Mr. Bowack says, the very number of books relating to industry suggests "an atmosphere of dissatisfaction which exists unsatisfied by all the formal treatises." Moreover, the standard writings are not of a kind to satisfy this dissatisfied atmosphere. "Their science is lifeless, soulless. It does not pulsate with that glowing purpose, that intensity of energy, that pervades economic man. The motivization of industry is not adequately realized." Beyond question, a truly soulful book, pulsating with glowing purpose, will meet a want long felt by readers of economic works in which "truths are presented in disproportion," and "trivialities and subtleties" abound.

Moreover, the author employs a new and original dialectic. "Adam Smith, Ricardo, Malthus, John Stuart Mill, were ever marshalling their arguments against the dangerous fallacies and hostile interests of their age. These giants have all been slain. The time is now such that the simple presentation of the truth carries conviction. Nothing is more noticeable in the public mind of the time than this." We must confess that this view of the public mind had not impressed us. It is obvious that the marshalling of arguments addressed to this mind has ceased to be common, but we attributed this to the public's dislike of intellectual exertion. It is pleasant to learn that logic can be thrown to the dogs, and that we may now, with Mr. Bowack, "rely upon the effect of the simple presentation of the truth without argument for the public sanction of our opinions."

The enormous convenience of this *novum organum* is abundantly illustrated in these pages. Thus, the author observes, "We require all the unpopulated places of the earth filled up with teeming millions." Nothing could be easier. It is only necessary to say that the rate at which population has increased will be quadrupled in this century. Thus the earth will, a hundred years from now, have eight thousand millions of inhabitants instead of sixteen hundred. And this is as it should be, for man is in various ways superior to other animals. Not the least of his advantages is

that, "instead of requiring four pedal supports, two suffice, and the other two are used for holding and making things."

The problem of maintaining this great population seems formidable; but Mr. Bowack is prepared to grapple with it. He has been unable to find "a satisfactory table or formula of dietary scientifically made, yet of practical value. The tables drawn upon chemical and physiological lines are valueless, because they say certain foods are of no nutritive value, while we know the great mass of humanity have lived and thriven upon them from the beginning of time." What laboring men require is "a form of common food that might be regarded as the recognized basis of subsistence. It should be a form of food prepared, containing all the elements necessary to perfect nutrition in perfect proportions, palatable and attractive. It must be cheap, lasting, and convenient. . . . This common food we would put up in regular packages of certified weight, and place all over the kingdom at a recognized price." The nearest approach to this standard ration known to Mr. Bowack is the German military sausage; but he cannot have read the advertisements of the American breakfast foods. Had he done so he would undoubtedly have recognized the cause of the economic efficiency of this country.

The number of truths here presented to the public mind is too great for us to consider. We should be glad, did space permit, to comment on the "three timeous relations," and the proposition that "an article or operation is never complete until it is completed"; which the author admits to sound rather self-evident, but justifies on the ground that "it is always the self-evident that is never perceived, or at least acted upon." One of the most fascinating suggestions is that for reducing to order "the manifold, and indeed the heterosity of the material and mechanical side of industry." To the captious objection that the proposed classification would be purposeless and useless, the author replies severely that we cannot tell until it is done whether it will be useful or not.

We must cease to quote; but we have made it plain that Mr. Bowack has written a book that is adapted to the requirements of a large class of readers. There are some irregularities of style, but the complacency of the author is inspiring; and even the solemn way in which he says an undisputed thing is not without its charm.

A Few of SCRIBNER'S New Books

To be published late this month

AUTOBIOGRAPHY OF SEVENTY YEARS

By Senator GEORGE F. HOAR

Two volumes, large 8vo, with portrait. ***$7.50 net (postage additional)***

NOT ONLY for its political importance, but for the unusual personal, social and literary interest of the reminiscences it brings together, Senator Hoar's autobiography will be the most notable contribution of the year to memoir-literature. It would be impossible to find another man in the country who has known more of the important men and measures of his time than Mr. Hoar; and the charm and piquancy of his style, with its range, from the eloquent discussion of his political principles to the humor of his anecdotes, are as remarkable as his experiences. The book is refreshingly frank and full of character and individuality—a record of opinions as well as events.

BY HENRY VAN DYKE

An elaborate new edition of

LITTLE RIVERS

This classic of the woods and streams is now produced uniform with "The Ruling Passion" and "The Blue Flower."

Color drawings by Du Mond. $1.50

By RICHARD HARDING DAVIS

An exquisite edition of

THE BAR SINISTER

This inimitable dog story, standing alone in its class, is here given a beautiful and adequate presentation.

Color drawings by Ashe. $1.50

VACATION DAYS IN GREECE

By RUFUS B RICHARDSON. Formerly Director of the American Archæological School at Athens. Fully illustrated. 8vo, $2.00 *net*. (Postage 20 cents.)

Professor Rufus B. Richardson, during a residence of eleven years in Greece as head of the American Archæological School in Athens, has had an unexcelled opportunity to visit many parts of Greece less frequently visited by the tourist, but most picturesque and interesting. He describes his excursions into these regions in a series of sketches of great informal charm, told from the picturesque rather than from the archæological and scholarly point of view, although the two are so judiciously combined that the book will be indispensable both to the student and to the general traveler in Greece. The sketches are attractively illustrated by unfamiliar and beautiful photographs.

THE STORY OF THE REVOLUTION

By HENRY CABOT LODGE. A new edition in one volume, with all the illustrations, 178 in number, of the original two-volume edition. 8vo, $3.00.

"Writing of this sort," said the New York *Tribune* of the two-volume edition of this standard work, "needs good illustration, and Senator Lodge is to be congratulated on just about the most brilliant pictorial accomplishment with which any such scheme as his has been blessed of late years." The success of the six-dollar edition here referred to was remarkable for so expensive a work, and it is felt that this one-volume edition, containing, as it does, every feature of the original at half the price, ought to reach a very large circulation.

THE NEW SCRIBNER FICTION

Thomas Nelson Page **GORDON KEITH** is now in its 100th Thousand.

John Fox **THE LITTLE SHEPHERD OF KINGDOM COME.** 50th Thousand.

F. Hopkinson Smith **COLONEL CARTER'S CHRISTMAS.** To appear on the 10th.

THE GIBSON BOOK FOR 1903

Will be published on the 17th. It will contain eighty drawings. Price will be $4.20 *net*.

Important Announcement

Pearson's Latin Prose Composition $1.00

By **Henry Carr Pearson,** A.B. (Harvard), Horace Mann School, Teachers College, New York.

This book combines a thorough and systematic study of the essentials of Latin Syntax with abundant practice in translating English into Latin; and affords constant practice in writing Latin at sight. The volume is complete in itself, and meets the most exacting college entrance requirements. Part I. is a summary of the fundamental principles of Latin grammar and syntax, and contains clear, concise explanations of many points that are troublesome to the ordinary pupil. Part II. contains short, disconnected English sentences, and some continuous narrative. Part III. presents material for translation into Latin, and also carefully graded exercises for general review. A valuable feature of the book is the Review Lessons, introduced at intervals. The work is founded upon long classroom experience, and shows the hand of the practiced teacher.

NEW AND FORTHCOMING BOOKS

FOR EARLY PUBLICATION

Hannah Logan's Courtship;

A True Narrative

The wooing of the daughter of James Logan, Colonial Governor of Pennsylvania, as related in the diary of her lover, John Smith, Esquire, 1746-1748, edited by Albert Cook Myers. 12mo, cloth, $2.00 *net.*

One of the earliest diaries dealing with Colonial Pennsylvania that has come to light. Valuable for the light it throws on historical questions and social conditions, in addition to the exquisite little romance which it embalms.

George Fox: An Autobiography.

The Life of the Founder of Quakerism as told in passages from his journal. Edited with Notes and Introduction by Rufus M. Jones, M.A.

George Fox's life was exciting, even dramatic, but his recital of it is made unreadable by the theological matter which drowns out the narrative. The *story* is preserved complete in these passages, and Mr. Jones's comments and Introduction constitute a masterly treatment of the psychological side.

Two volumes, 12mo, illustrated, $4.00 *net.*

Penn's "Greene Country Towne"

By Rev. S. F. Hotchkin. 12mo, cloth, illustrated, $1.00 *net.*

Pen and pencil sketches of early Philadelphia and its prominent characters, dwelling on the personal and characteristic aspects of history.

JUST PUBLISHED

The Independence of the South American Republics

A STUDY IN RECOGNITION AND FOREIGN POLICY

By Frederic L. Paxson. 12mo, cloth, $2.00.

Mr. Paxson has done one signal service in bringing out the fact that, even more completely than has been surmised, John Quincy Adams was the real head of the Monroe Administration, and was the real power behind the throne as regards the Monroe Doctrine. Furthermore, the author shows that the Monroe Doctrine itself was in process of formation for many years before it was enunciated in 1823. Finally, the present study throws new light upon the rivalry between John Quincy Adams and Henry Clay. Thus we have a work which will attract the immediate attention of every student of American history, and the attention will be well repaid.—*The Outlook*, August 29, 1903.

This little book, which reviews comprehensively and brilliantly, but somewhat briefly, the inception and culmination of the revolts of the Spanish colonies in the Southern continent, is especially timely to-day, when the final extinction of Spanish colonial rule is so fresh in the minds of the people of the world. Not only is this phase of this discussion of interest and value, but so also is that which considers the question of American foreign policy, as applied to the recognition of Spain's revolted colonies. To obtain his material for this discussion the author has searched the archives of the British Foreign Office, and of the American Department of State, as well as the papers of the Adams family of Massachusetts, to which last-named archives access has been granted by Mr. Charles Francis Adams. It was during the incumbency of John Quincy Adams of the office of Secretary of State that the greater portion of these delicate questions were settled.—*Boston Transcript*, September 2, 1903.

NOW READY

The PHILOSOPHY of AUGUSTE COMTE

By L. LEVY-BRUHL, of the University of Paris. Authorized translation, with an Introduction by FREDERIC HARRISON. 8vo, net, $3.50.

A plain, independent account of what Comte really taught, written by one possessed of the fullest qualifications for such a task. No work of recent date will enable students to understand so clearly the solution given by the French philosopher to the perplexing moral, social, and religious problems of our time.

THE BEGINNINGS OF CHRISTIANITY

By Paul Wernle of the University of Basel. Two volumes. Each net $2.50.

Part I., The Rise of the Religion.

"A brilliant production. Will do good service to the interests of truth if it may lead to a fresh investigation of the history and significance of these records of evangelical facts."—Critical Review.

THE VIRGIN BIRTH OF CHRIST

A CHRISTOLOGICAL STUDY
By PAUL LOBSTEIN of the University of Strassburg.
12mo, $1.25 net.

This contribution by the well-known Strassburg Professor—critical yet perfectly reverend in treatment—should be welcomed by all.

MAN AND THE DIVINE ORDER

Essays in the Philosophy of Religion and in Constructive Idealism. By HORATIO W. DRESSER, author of "The Power of Silence," "The Perfect Whole," etc.
12mo. (By mail, $1.75). net. $1.60.

A study of various conceptions of the religious life and the divine order. It will appeal to a wide class of readers, since its aim is to unite in a single system the profoundest interests of religion, philosophy, and practical life. The concluding chapter contains an outline of the system of thought underlying Mr. Dresser's entire series of volumes.

POETRY AND BELLES-LETTRES

EL DORADO: A Tragedy. By RIDGELY TORRENCE. 12mo. $1.25 *net*

THE LITERARY GUILLOTINE. Being a Report of the Proceedings of the Literary Emergency Court Presided over by Mark Twain. 16mo, boards.....$1.00 *net*

SELECTED POEMS OF JOHN DAVIDSON. Contains the author's selection of his most important poems, including "A Ballad in Blank Verse," "The Ballad of the Nun." 16mo, cloth.....$1.25 *net*
Leather.....$1.50 *net*

FOR ENGLAND. By WILLIAM WATSON.....16mo. $1.00 *net*

ART

A BOOK OF COUNTRY HOUSES. Comprising 19 examples illustrated on sixty-two plates, accompanied by the plans of each. By ERNEST NEWTON. 4to.....$7.50 *net*

ARMORIAL FAMILIES. A Dictionary of Gentlemen of Coat-armour. By ARTHUR CHARLES FOX-DIVIES. Profusely illustrated. Large 4to.....$50.00 *net*

THE STUDIO ART ALBUM. A collection of 100 of the finest plates from several years of the International Studio. Cloth bound volume. Folio.....$5.00 *net*

THE STUDIO ART PORTFOLIO. A selection of 15 of the choicest color and photogravure plates from the international Studio. Mounted on card mats, ready for framing. In portfolio, 12x16 inches.....$5.00 *net*

Write a postal to John Lane, 67 Fifth Avenue, New York, and he will send on request post free, Complete Illustrated Fall List of Books.

LONGMANS, GREEN, & CO.'S NEW BOOKS

The Silesian Horseherd

"Das Pferdeburla"

Questions of the Day answered by F. MAX MÜLLER. Translated by OSCAR A. FECHTER, Mayor of North Yakima, Washington. With a Preface by J. ESTLIN CARPENTER. Crown 8vo. $1.20 *net*. By mail, $1.30.

*** This is a translation of a work which was published some years back in Germany, but which is now for the first time translated into English. It consists of a controversy on religion carried on between Professor Max Müller and an unknown correspondent in America.

Economic Notes on Insular Free Trade

By the Right Hon. ARTHUR JAMES BALFOUR

8vo. Paper Cover. 30 Cents net

Fermentation Organisms

A Laboratory Handbook

By ALB. KLÖCKER, Assistant in the Carlsberg Laboratory, Copenhagen. Translated from the German by G. E. ALLAN, B.Sc., Lecturer in the University of Birmingham, and J. H. MILLAR, F.I.C., formerly Lecturer in the British School of Malting and Brewing, and Revised by the Author. With 146 Illustrations in the Text. 8vo. $4.20 *net*. By mail, $4.42.

The Making of Our Middle Schools

An Account of the Development of Secondary Education in the United States. By ELMER ELLSWORTH BROWN, Ph.D., Professor of the Theory and Practice of Education in the University of California. With Bibliographies and Index. Crown 8vo. 561 pages. $3 00

An Introductory Study of Ethics

By WARNER FITE, Ph.D., Instructor in Experimental Psychology in the University of Chicago. Crown 8vo, pp. xii-383. $1.60.

CONTENTS: Introduction: I. The Scope and Methods of Ethics—II. The Ethical Problem—PART I. *Hedonism:* III. Empirical Hedonism, The Ethics of Happiness—IV. Scientific Hedonism: The Ethics of Self-Preservation—V. Hedonistic Social Theory—VI. Hedonism as a System of Philosophy—VII. Hedonism and Common Sense—VIII Hedonistic Social Theory and Common Sense.—PART II. *Idealism:* IX Intuitionism: The Ethics of Conscience—X. Rationalism: The Ethics of Principle—XI. Self Realization: The Ethics of Purpose—XII. Idealistic Social Theory—XIII Idealism as a System of Philosophy—XIV. Idealism and Common Sense—XV. Idealistic Social Theory and Common Sense.—PART III. *Hedonism and Idealism: The Moral Situation.*—XVI. The Situation from a Metaphysical Standpoint—XVII. The Situation from an Evolutionary Standpoint.—XVIII. The Practical Moral Attitude—XIX. Concrete Illustration of the Moral Attitude—INDEX.

The Theory of Optics

By PAUL DRUDE, Professor of Physics at the University of Giessen. Translated by C. Riborg Mann and Robert A. Millikan, Assistant Professors of Physics at the University of Chicago. With 110 Diagrams. 8vo. Pp. xxvii-546, $4.00.

LONGMANS, GREEN, & CO., 93 Fifth Avenue, New York

The Nation.

NEW YORK, THURSDAY, OCTOBER 1, 1903.

The Week.

The Colombian canal situation looks more hopeful in the light of the latest rumors from Bogota. It is the old story of the news coming a full week behind the event, and in very vague form; but it seems probable that the Colombian Congress has not committed the blunder of letting the Hay-Herran treaty lapse under the time limit without provision for further negotiations. It is reported that Congress, while rejecting the old treaty, has given President Marroquin full power to renew negotiations and conclude a treaty. This opens the possibility that the new agreement will follow the Hay-Herran treaty very closely in substance, or even be identical with it. To be sure, the situation is complicated by an impending election in Colombia, but the reference of the canal dispute to the Executive greatly simplifies matters. Pending more explicit news, the general situation warrants every hope that a way will be found out of the tangle. Our Government wants that canal, and Colombia is even more deeply committed to the enterprise. Where two parties are both desirous of closing a bargain, they are likely to find a way.

The recent advance in the price of silver has brought the bullion value of the new Philippine peso within three cents of the American half dollar (gold). There is some trepidation at Washington lest it should advance still further and carry the peso out of circulation altogether. This will happen whenever its bullion value exceeds its legal tender value. How to explain this advance in silver is a puzzle. We would not affirm that our Commission on Exchange, which has just returned from Europe, has overdone its work, but we really think that it is time to call a halt. If Professor Jenks goes to China and gets into conference with the mandarins behind closed doors, anything may happen, and presently the Filipinos may be left with nothing better than American gold for the payment of wages and the transaction of their daily business.

By a singular combination of circumstances, the money markets of New York and London have for a fortnight been converging their attention on nothing but the fixing of "new low-record" prices for certain typical securites on the Stock Exchange. In London, British consols have for a couple of centuries been accepted as an index to the condition of investment capital. In New York, since the great promotion craze of 1901, securities of the Steel Corporation have been accepted as an equally important index; because, of all the thousands of millions of new industrial securities placed on the American market during and since that time, those of the Steel undertaking were most widely distributed among investors and for a time most highly regarded. Shortly before the Transvaal war, British consols sold at 114; at the opening of 1903 their price was 93. On Monday they were quoted for less than 88, the lowest price in thirty-seven years. In 1901, preferred stock of the Steel Corporation, paying 7 per cent. dividends, sold at 101⅞, and the common, paying 4, brought 55. Last week these two stocks sold respectively at 60¼ and 16. What has added to the interest in these foreign and home developments is the fact that, although the prices are so extraordinarily low, no eager inquiry from investors follows. Consols are selling 5 to 6 points below the price at which $160,000,000 were sold by the British Government last year; the Steel shares, 20 to 30 points below the price at which the bankers placed them originally on the market; yet, at these figures, the heaviest selling orders are ascribed to interests which had to do with placing these two securities.

There are numerous broad conclusions to be drawn from such a situation; but the most obvious is, that the "syndicate plan," as conceived in the theories of 1901, has broken down completely. Much has been made of the fact that a security of so high grade as British consols should have been sacrificed like the Steel shares, and for similar causes. But the grade of the security does not at all affect the matter, except so far as it may modify the violence of the declines. It has escaped the notice of many people that the $600,000,000 new consols issued in the three past years were for the most part placed with banking syndicates, who took the risk of selling to the public at a profit later. The chance invited turned out against the syndicate; their judgment of the price at which investors would be able and willing to take up the consols holdings was erroneous, and, in the end, strain on the money markets where the syndicate had to borrow capital to hold the unsold bonds, grew so severe that the holdings were turned at any price into cash rather than face a possibly still greater loss. In Wall Street the situation has been parallel.

It is suggested without a smile that Senator Hanna be appointed umpire in the dispute between the President and the union employees of the Government Printing-Office. Senator Hanna, so the Executive Board of the Knights of Labor declares, is the friend of Labor and of the President, and accordingly the proper arbiter when the two have fallen out. We fancy that Senator Hanna, should it come to this arbitration, will efface himself, for it would be awkward to say to his friends, the Knights of Labor: "Fellow-workmen, you are in the impossible position of asking that the supreme head of the nation submit his appointments and dismissals to private organizations. You desire to make of every union which has members in Government employ a kind of Senate. You ask that Foreman Miller be dismissed because his subordinates in the Government Printing-Office have not confirmed his original appointment or reinstatement. Fellow-laborers, your plea is bosh. There is no 'dispute' between you and the President. The fighting is all on your side, and you can stop it when you will —the sooner the better. In these matters the President does not argue, but decrees; he needs no umpire except with Congress, which may impeach him. This, fellow-unionists, is my decision, and remember that Mark Hanna is your very good friend." We presume that Senator Hanna would hardly care to speak as much truth as this even among friends, and we do not anticipate that the President will urge his campaign manager to accept so painful a refereeship.

Referring to the strike in the Cripple Creek district, which was called some weeks ago by the Western Federation of Miners, the *Colorado State Journal* calls attention to the watchwords of that union—"Faith, Hope, and Charity"—and then states that the Cripple Creek miners had absolutely no grievance. "It is a sympathetic strike pure and simple," says the *Journal*, "for the miners have no direct dispute with their employers, who are paying them satisfactory wages and working them satisfactory hours." In its attempt to live up to its published motto of faith, hope, and charity the Western Federation has succeeded in bringing the mining industry to a standstill at Cripple Creek, at Idaho Springs, at Durango, and at Telluride; it has "paralyzed" the business of the small merchants at the camps; and it has set the friends of the miners to inquiring into the quality of that "charity" that throws some thousands of satisfied miners out of work at the beginning of winter. The strike at Leadville in 1896, with the general demoralization that followed—the shutting down of paying properties for a long period, and the total abandonment of others not so well developed—is too fresh in the Western mind to permit a calm

submission to the Federation's orders, despite its beautiful motto. The promptness with which the State ordered its militia to the scene in large numbers to protect property and prevent lawlessness is a sign of this, as it is a credit to Colorado's executive.

Samuel J. Parks again becomes the leading figure in the progress of organized labor by the action taken last week at Kansas City. The International Society of Structural Iron Workers, holding its annual meeting at that place, voted to sustain Parks in his contest with Mr. Buchanan, the President of the international organization, and with Mr. Neidig, the President of the local body. In other words, the organization endorsed a convicted blackmailer, who is temporarily out of State's prison and who is still to be tried under four indictments. It has deposed the officials who have sought to shield themselves and other honest men from contamination with the criminal acts of Parks, and to save the good name of organized labor from the disgrace attaching to his blackmailing operations. We can recall nothing quite so brazen and unbearable in the annals of organized labor. The worst enemies of the "union shop" could not ask for a better issue on which to continue the fight to a decisive battle in the long war waging in the building trades.

A notable contrast to the doings of organized labor at Kansas City is found in the action taken by the British Trade Unions Congress, lately in session at Leicester, England. At this meeting the Taff Vale decision came up for consideration. This decision was rendered about one year ago in a case where the workmen on a railway in Wales had violated an arbitration agreement which they had made with their employers. The latter brought suit against the union and recovered judgment. The union was not a "registered society," or, as we should say, an incorporated company. Nevertheless, the court authorized the sheriff to seize the union funds to pay the judgment. The decision created a great stir in England and the United States, and the principle seems now to be established in both countries that, for any violation of contract or infraction of law resulting in damage to property, the society committing the offence is pecuniarily responsible, whether incorporated or not. The method adopted by the Congress at Leicester to avoid such mishaps hereafter was to ask Parliament to pass a law declaring that the funds of trade unions should not be liable to seizure for any purpose except as authorized by the rules of the union itself. A resolution of this purport was passed, but not without strong opposition. Mr. J. Ward, representing the navvies or common laborers, said that Parliament would never pass such a law, and ought not to. It would, he said, be class legislation—a thing that wage workers ought not to seek, but rather to avoid. They could only claim their rights on condition of recognizing the duties they owed to the community. Mr. R. Bell, a member of Parliament, failed to see how he and other representatives of labor in the House of Commons could meet their fellow-members if they asked to be placed in a different position from all other persons under the civil law. The Taff Vale workmen had violated their own rules. Was it reasonable, he asked, that they should seek to avoid responsibility for their own deliberate act?

Gen. John C. Black, the new commander of the Grand Army, announced in Chicago on Sunday that it will be the policy of the organization to fight from now on for a pension for every veteran of the civil war more than sixty-two years old who saw sixty days of actual service—"and for their widows after them." Rich or poor, well or sick, moral or immoral, honest or dishonest, all who bore arms for sixty days, whether in the fortifications or in the field, are to step up to the Treasury and have a service pension paid to them. This is the logical outcome of the indiscriminate pension jobbery which has been going on for years. Cash payments for patriotic service in cases where the soldier is not actually in need have fairly demoralized the veterans. Altruistic devotion to one's country is to be turned into so much cash! Moreover, it is not asked as a favor, but is demanded as a right. For the benefit of the Spanish war "veterans" and the survivors of all our future hostilities is this standard set up for our patriotic young men to repair to. Gen. Black says that there was a service pension for the soldiers of 1812 and for the fighters in our inglorious Mexican war. Therefore, the saviours of the Union must also have it, no matter what the cost or the need, no matter what the ensuing demoralization, no matter what happens! And then, of course, the Spanish-war and Philippine veterans will have the right to demand the same. The proposition is indefensible and must be disregarded, whether in or out of Congress.

Undigested securities are not a circumstance to undigested political principles. Gov. Cummins of Iowa is exhibiting a peculiarly pitiable case of the latter. Sure of his interior hollow construction, he swallowed his own brave words about tariff reform. That was bad enough, and might well of itself have brought on appendicular colic; but the Governor also attempted to bolt whole the raw inanities and self-contradictions of his victorious opponents in the Iowa State Convention. Naturally, after that, his first campaign speech sounds very much like the cries of one in mortal pain. Gov. Cummins threatens woe to any wicked man or party that dares to say a word against the sacred principle of protection, but he also predicts that any Administration which does not do something to make trade conditions easier "will go down into history under the fierce condemnation of all the people." What will the "stand-patters" care for such vague fulminations? They may say that they do not know what Gov. Cummins means, and allege that no more does he himself, which is quite likely; but in any case they will know that they need not bother themselves about him. When the time comes, he will eat his words again with gusto. One thing, however, may be safely said about such a wholesale swallower. He ought not to attempt public speaking.

Gov. Yates of Illinois is bitter about the treatment he receives at the hands of the newspapers of Chicago, and is appealing to the country editors to "vindicate" him. He describes the Chicago papers as the "Trust press." It seems not to affect his judgment at all that most of the journals involved were friendly to him before the scandals of the Kankakee Asylum were revealed, and before he broke his promise not to regard Park Board appointments as political spoils. The appeal to the country newspapers as the organs of unfettered speech is amusing. They depend on the favor of the Republican machine for their State and county printing, in many cases their principal means of existence. In reality, Gov. Yates is either deceiving himself or trying to deceive the public. He is being attacked by the press of Chicago because it is to a large degree independent, and he has been an out-and-out partisan, as well as an unscrupulous Governor. His resentment against the newspapers is not unlike that of Quay, whose State Convention in Pennsylvania devoted its platform almost solely to denunciation of the newspapers. One was led to suppose that all the ills complained of in that State were due to the flagrant injustice of the press. Men of this type are sensitive; that is, they hate to be found out.

Gov. Pennypacker of Pennsylvania recently made a speech at Wilkes-Barre in which he once more attempted to defend the Salus libel law, his approval of which brought down upon him a perfect storm of ridicule. He says nothing now about heads of offenders dropping into baskets, or the drawing and quartering of critics and malcontents. Indeed, he speaks in a strangely apologetic tone. He says that the new statute is not really a libel law at all; that it leaves the whole matter of libel precisely where it was before; and that it only imposes

the obligation of reasonable care in publication. This is all quite true, except that it has not in fact imposed any obligation which editors have felt bound to respect. But the Governor cannot pretend that he had any such view of the law when he urged its passage and gave it executive approval. He still must face his amazing memorandum filed with the signed bill. He thought he had secured an anti-cartoon bill which would protect Quay and himself and the rest. He found that they were all more mercilessly lampooned than ever before. Except to incite derision, the new libel law is almost a dead-letter. The Governor cannot revive it even to excuse it.

On September 22 there was submitted to the voters of New Jersey one of the most important measures which could possibly come before them. It was a series of Constitutional amendments radically reorganizing the judicial system of that State. The subject was one which had engaged the attention of the Legislature, and in it the bar of the State took the deepest interest. Addresses were issued and newspaper articles printed by the hundred for the purpose of arousing the electors to the vital nature of the issue. Yet, on the actual polling, it appeared that only about one-fifteenth of the voters of New Jersey cared enough about a project so nearly affecting their interests to take the trouble to cast a ballot for or against it. The amendments were defeated on this scandalously light vote, and the disappointed lawyers—not the bar as a body—are blaming the authors of the plan for maladroit presentation of it. This melancholy experience of New Jersey makes the scheme of having dozens of different laws referred every year to popular vote, as proposed by advocates of the referendum, seem truly chimerical.

Results of the test in Boston last week of the new primary law are, on the whole, gratifying to the advocates of the direct primary. The law worked smoothly, checked the practice of voting the members of one party in the primary of the other, and brought out an unusually large number of voters. This last is to the friends of direct nominations the most important point. Their argument has been that the voters would gladly embrace an opportunity to register their will, and not that of the caucus or of the boss at the primary, and they can cite the Boston result as evidence. More than 56 per cent. of the total vote of the city in the last election for President was polled, and the percentage would undoubtedly have been much larger, but for the absence of contests for the nominations among the Republicans. In the Democratic primaries, where there were several candidates, 75 per cent. of the vote cast for Bryan in 1900 was polled. How much better the nominations thus made are than the choice of the boss under the old method remains to be seen.

The Atlanta *Journal* is one Southern newspaper which does not believe that colored criminals are as numerous as the rabid anti-negro agitators would have the public think. With the exception of those who commit the crime of rape, it is certain that the negro wrongdoers are not capable of doing as much harm to society as are the white criminals. The depraved negro errs through impulse and the passion of the moment; the "constructive deviltry of the brainier white criminal" is not his. The *Journal* also feels doubtful whether the percentage of negro criminals in relation to the negro population is much greater than that of whites to the white population. These views the *Journal* expressed apropos of the attack on Booker Washington and Tuskegee in the Alabama Legislature. So far as we have observed, the violent antagonism of some of the Montgomery speakers has found little or no echo in the public prints. The intelligent men of the South are everywhere beginning to realize that it is impossible for their section of the country to exist in peace if the great mass of negroes are to live in a hopeless state of ignorance and degradation. If it is true that some graduates of Tuskegee have become offenders before the law, the same could also be said of Harvard and Yale. But the latter fact would certainly lead no one to argue seriously that because of a few black sheep the higher education creates criminals and should therefore be done away with.

The recent bye-election for a member of Parliament for Rochester, in place of Lord Cranborne, is the first success that Mr. Chamberlain has scored for his fiscal policy. It is a curious fact in connection with the election contest that Mr. Tuff, the Unionist candidate, when interrogated, declared that he did not know what Mr. Chamberlain's proposals were. "But," he added, "I am opposed to any tax that will increase the cost of living in any way whatever." The secret of Mr. Tuff's election lies in the fact that, while roundly repudiating any import duty on food or raw materials, he advocated a duty on cement. Rochester is a cement manufacturing town, and latterly there has been a considerable importation of cement from the Continent of Europe. One Rochester firm lost an order for 87,000 tons because an equally good article was offered by a foreigner at a lower price. In view of this fact, the correspondent of a Liberal paper, writing from Rochester a few days before the voting took place, said, "On cement the election may be lost or won." Mr. Tuff was asked how he reconciled his demand for free food and raw materials with his desire for a duty on cement. "What!" he exclaimed, "do you call cement a raw material? Go and look for yourself. Count the barges that bring the chalk and the clay. Go and look at the kilns where the grinding, the mixing, and the burning take place. Talk with the engineers who have charge of the works, and ask how much their machines have cost. Raw material, indeed! If cement is not a finished product, where will you find one?"

Civilized Russia has just witnessed the spectacle of Government troops escorting a mob which systematically sacked Jewish shops and maltreated their possessors. The rioting at Gomel was less bloody than that at Kishenev; in some ways it is more disgraceful to Russia. The Gomel riots originated, not in ungovernable religious fanaticism, but in some petty squabble between Jews and Christian traders. The Government was not, as before, in the position of failing to quell a riot; it, on the contrary, sanctioned the disorders and protected the mob in law-breaking. Such action will bring upon Russia the moral condemnation of the world. It also goes far to explain the indifference of the Empire to the ruthless massacre of its coreligionists in the Balkans. Russia does what she will with her own heretics, and by a kind of cynical logic lets the Turk have an equal license in dealing with his heretics.

A certain light is thrown upon the approaching "evacuation" of the southern Mantchurian provinces by two recent official acts. Russia has extended beyond the Amur River the jurisdiction of Admiral Alexieff, the new Viceroy of the East, and has applied to Korea for protection of timber-cutting concessions beyond the Yalu. That is, the Empire is apparently making a crown colony out of the northern Mantchurian province, which was to have been given back to China, and is claiming a favored position in western Korea. It is frequently said, and with some reason, that the world would be the gainer if Russia should occupy and govern all of Mantchuria. This country, since the principle of free ports has been admitted, has no reason to look askance at such an advance. But the Japanese have a very just cause to dread the activity of Russia on the Korean boundary. Korea belongs, geographically and commercially, to Japan's sphere of influence, as Mantchuria does to Russia's; Japan needs the peninsula as a market and as a possible field for emigration. The various attempts of Russia to get a foothold in Korea in the guise of trading stations evince a total disregard of Japanese sensibilities and contempt of Japanese resources.

SHALL WE DISMEMBER THE COAST SURVEY?

The proposition to turn the hydrographic work of the Coast Survey over to the Navy Department has been so long urged and so often rejected that its revival at the present moment seems singularly inopportune. Twice at least within the last twenty years it has been exhaustively considered and adversely reported on by committees of Congress when all the circumstances were much more in its favor than they are at present. Prominent Treasury officials under the first Administration of President Cleveland were known to be so hostile to the management of the Survey that an investigation not only unfriendly, but very far from judicial, in its character, was undertaken with the approval of the President. The report set forth that abuses had crept into the management, some of them of long standing. The resignation of the superintendent was forced, and it only remained for Congress to take the necessary action to transfer the Survey. At the following session a committee of Congress, having Senator Allison at its head, made a thorough investigation of the whole subject. The result of this inquiry was to leave things as they were.

The effort to effect the transfer was renewed with great vigor in 1893. A majority of the Naval Committee was believed to favor the change, several of its members being warm advocates of the measure. But, after a careful hearing of all that was to be said on both sides, the Committee reached a conclusion adverse to the transfer. What has happened since to lead to a change? Nothing whatever. On the contrary, the establishment of the Department of Commerce with the Coast Survey as one of its bureaus removes the last reason for considering the subject. No work is more appropriate to the Department of Commerce than that of providing facilities for navigating our coasts. Charts and soundings are of the first importance not only to our coasting ships and our entire mercantile marine, but to all ships from abroad which enter our ports. Of course, a naval ship has as much need as a merchantman for these means of navigation. There is nothing required on a chart for naval use different from that required for the ordinary purposes of commerce. Accordingly, the Coast Survey was very naturally included among the bureaus to be transferred to the new Department.

Extraordinary though the proposition to reverse this action may now appear, the reasons against it are so strong and so near the surface that they hardly need to be cited if the question is to be decided on its merits. Looking at the matter from a purely abstract point of view, the question is whether such a work as that of making charts of our coast can be most efficiently and economically undertaken by the navy or by a civilian organization like the present one. Let us carefully weigh all that is said in favor of the proposed transfer. Hydrographic surveying is part of the business of a naval officer. He learns as much about it while at the Naval Academy as the absorbing character of his other studies will permit. The question whether, during the limited periods which he can possibly devote to such work, he can acquire as much skill as a civilian wholly engaged upon it, is a question which the reader can decide for himself. But the mere fact that naval officers can do the work, does not prove that it should be placed under the Navy Department rather than under that of Commerce. The arguments on the question whether naval or civilian methods are the more economical have, on the whole, been favorable to the civilians. But even here one important item has been too little considered, and that is the cost of the naval officer himself. The mere salary of the latter is but a part of what it costs the Government to educate and train him. In estimating his cost, we must include not only what is expended in his training and his off-duty pay, but his retired pay also. To reach a correct conclusion on this point, we shall probably have to double the pay of every officer of the navy from the time when he gets his first commission up to the date of his retirement. Of course, we must include in the estimate the millions being expended at the Naval Academy for the improvement of its facilities. To expend such sums in training officers to perform duty that civilians are now carrying on at far less cost, would be a most unjustifiable expenditure of the public money.

The slight reason for the employment of naval officers on civil duty which formerly existed has entirely disappeared with the lapse of time. For several years after the civil war we had more officers than were necessary for the management of our ships and the administration of shore stations. Under these circumstances there was no objection to their employment on such outside service as might be appropriate. But all this has now been changed. The cry in every department of the naval service is for more officers. We hear daily stories of the Department's inability to man its ships properly. Why should the service be deprived of its trained officers if this is the case?

The practice of foreign nations has been cited in favor of the proposed action. It is true that the hydrographic surveys of the leading countries of Europe are carried on to a large extent by their respective naval departments. But this statement needs to be supplemented by two others. Both the administration and the personnel of foreign surveys are to a greater or less extent distinct from those which relate to naval duty properly so-called. In France the surveys are all conducted by a special corps of "hydrographic engineers," and not by line officers at all. In England, by custom, the hydrographer of the Admiralty is permanently withdrawn from military duty. He can, of course, be restored to it if such a course is desirable, but practically this is seldom if ever done.

These features of foreign hydrographic surveys have always been successfully antagonized by our naval authorities, and we cannot suppose that they have changed their minds on the subject. The transfer of the Coast Survey to the Navy Department, whatever may be the intentions of those who favor it, practically means the administration of the Survey and the performance of its most difficult work by officers of the navy, each temporarily withdrawn from naval service proper for this special duty, which he is expected to abandon for life about the time when he has obtained a respectable measure of skill in its performance. A civilian organization under the Secretary of the Navy, however plausible it may be made to appear, is an impossibility in the present state of naval opinion.

The law organizing the Department of Commerce gave the President authority to transfer to it bureaus from other departments of the Government, that of the Navy included. There is good reason to believe that this provision was expected to lead to the inclusion of the Naval Observatory, and perhaps of the Hydrographic Office also, within the new Department. The transfer of the former is loudly called for by all the facts of its history and present position; and if any unification of the Government hydrographic surveys is to be carried out, it should be done by transferring the Hydrographic Office also, for it has no necessary relation to the Navy Department whatsoever, and properly belongs to the Department of Commerce.

THE PHILIPPINE OPIUM TRAFFIC.

The inquiry in regard to the status of the opium bill now before the Philippine Commission is symptomatic of a widespread ignorance. Although the bill is in some respects one of the most important measures which the Commission has yet had to consider, it has been very little understood or talked of in this country outside of certain influential church circles. The fact throws an interesting light upon the hollowness of the Imperialistic theory that we should improve all our home political methods and institutions by taking lessons from our colonial governments. In practice, the great bulk of the public is in as total ignorance of what our Philippine Commissioners are doing as they are in regard to affairs in Borneo.

The bill itself, as was explained by Governor Taft in his speech of July 15, was drawn by Commissioner Smith, who made use of the results of an investigation previously carried on by Commissioner Moses. This inquiry showed that under Spanish rule all Filipinos were forbidden to smoke or use opium. The dealers were permitted to sell the drug only to Chinamen. The privilege of vending the drug to them was sold to the highest bidder in each province, while one "farmer" in Manila controlled the entire importation into the archipelago. On the arrival of the Americans these laws were suspended, and there were no restrictions upon the sale and use of the drug, save an import duty and some weak attempts of municipalities to suppress opium dives. In 1899 the opium imports comprised 120,066 pounds, valued at $328,713. In 1901 three times as much came in—no less than 369,037 pounds. In 1902 there was a great falling off, but in the first four months of this year 90,466 pounds were imported. Under the changed conditions the Civil Commission noted a sudden and alarming spread of the drug's use among the Filipinos, and particularly among the native youth. The Commission thereupon felt itself compelled to take some action looking toward the regulation of the opium traffic. The bill which Commissioner Smith drew has as its sole object—we quote Gov. Taft again—the restriction of the use of opium by the Filipinos. The Chinese are apparently either deemed to be beyond rescue or to have a prescriptive right to the drug.

In the first section of the bill the sale of opium to any American, Moro, or Filipino is absolutely prohibited. Only a Chinaman over twenty-one years of age can become a purchaser. In its second section the bill shows that Commissioner Smith followed the policy of the Spaniards in most respects. Here the exclusive right to import opium, or to sell it, or to give it away is lodged, for three years, in the hands of the "opium concessionary," the "highest and best bidder" for the privilege. In subsequent sections of the bill he is required to give a large bond and is hedged about by many restrictions, drawn with a view to preventing any violation or evasion of the main purpose of the law. He is entitled to appoint agents and sell opium in all towns where there are aggregations of Chinese, but he must in no way encourage "dens," for these are positively forbidden. One violation of his agreement is sufficient to cause the concessionary to forfeit his rights, as would two or three violations by his agents. Finally, the bill provides that the sums paid for the concession shall be used only for educational purposes.

As to the possibility of enforcing the law, there was a sharp division of opinion. Gov. Taft expressed himself as being hopeful that it would accomplish its object, but confessed that his belief was founded on the Spanish experience. The opposition, which was very strong in Manila, maintained that illicit sales could not be prevented, and that the net result would be the forcing of the drug upon the Chinamen, since the concessionary would naturally be anxious to spread the sale of it by every possible means in order to increase his profits. A petition against the bill, signed by 7,000 Chinese, was given to Gov. Taft, who discredited it somewhat by showing that the names included those of a dead Emperor, a stuffed monkey, and a good many others who have gone to the happy hunting-grounds. Still, it represented an earnest protest against what some honest Chinamen consider "a wholesale poisoning of their community." The petition itself declared that the monopoly "will increase the use of opium," "will debauch our countrymen," and "will encourage our young men to start the use of opium by surrounding it with an air of respectability."

The opposition to the bill comprised various elements. Besides the protesting Chinese, there was a group of men headed by an able Methodist clergyman, the Rev. Homer C. Stuntz, who represents a bona-fide moral antagonism to the Philippine Government's lending its official sanction to such a traffic. It is on all fours with the sentiment which forced Congress to repeal the law establishing canteens in army barracks, and is entitled to very great respect. As much cannot be said of the hostility of the Manila newspapers, whose advocacy of any cause is a serious blow to it. The adventurers who are opposed to Gov. Taft at all times and under all conditions could not, of course, let pass this opportunity to attack the man who stands for the Philippines for the Filipinos. These incongruous forces, however, were strong enough, with some aid from church sources in this country, to induce the Commission to lay the bill on the table. Gov. Taft himself admitted the existence of defects, and the measure was so open to misconstruction that its temporary abandonment was heartily welcomed by the Government and the Insular Bureau at Washington. At the same time a commission of three persons, the Chief Health Officer in the Philippines, Bishop Brent of the Episcopal Church, one of the opponents of the bill, and Dr. Albert, a Filipino physician, who is President of the Federal party, has been appointed to tour the Orient and study the opium problem from Calcutta to Canton. Until it makes a report, the main question at issue will not be revived; but the antagonism on moral grounds to a licensed opium traffic is likely steadily to increase as the problem is more clearly understood.

COTTON-GROWING AND THE COTTON INDUSTRY.

The price of cotton during the past year has been perhaps the most important factor in the industry of the civilized world, even surpassing that of steel. It is extremely important at all times, but special attention has been drawn to it in the past twelvemonth by reason of the high price that the staple has reached, causing a partial suspension of the spinning industry, both in England and in the United States. The range of price has been from 8.90 to 13.50 cents per pound. The price on call a week ago was 11.15, but for October delivery it was 9.60. The latter figure is much above the average of the past ten years. A difference of one cent per pound in the price of cotton makes a difference of $17,500,000 directly to the cotton spinners of Great Britain. To many of her operatives in the cotton industry it makes all the difference between full and partial employment—between comfort and misery.

The United States supplies 60 per cent. of the cotton used by mankind. Our last crop (1902-3) is reckoned at 10,758,326 bales of 450 pounds each. That of 1901-2 was a trifle less, and that of 1900-1 was considerably less. We have to go back five years to find a larger one. That of 1898-99 was a little more than 12,000,000 bales. In general terms, it may be said that our annual production of cotton has increased by three million bales in the past ten years, but that it has not kept pace with the demand. The proof of this fact is furnished by the rising price. In 1894 the price ranged between 5½ and 8½ cents. It did not reach 10 cents until 1900. Some part of the advance of the past season was due to the cornering of the market, but cornering is rendered possible only by the relations of demand and supply. Corners are costly enterprises, and are of brief duration in any case.

It is the settled opinion of the cotton spinners of Great Britain that demand has outrun supply. This belief finds expression in the renewed activity of the British Cotton-Growing Association, which has decided to establish permanent headquarters in Manchester and keep an open office for the transaction of business. At the present time, as we learn from the Manchester *Guardian*, the efforts of the society are directed to the west coast of Africa as a source of supply. At Lagos, on the Bight of Benin, the cultivation of the staple has been begun with some promise of success, but only three or four thousand bales are expected to come from that place this year. More encouragement has been found at Sierra Leone because the plant is indigenous; but there, it is said, everything depends upon cheap transportation, which is still wanting. If steamships will come and take the cotton and carry it to market free of charge, it

will be possible to compete with American cotton, but not otherwise. "Without some definite guarantee as to freights," says the writer in the *Guardian*, "there is absolutely no inducement or protection for private speculation in the cultivation of cotton in West Africa." Southern Nigeria, which adjoins Lagos, is another field to which the attention of the Association has been directed, but the conditions there are certainly no better than at either of the other West African stations. Longing eyes have been cast upon India, also, but the *Guardian* tells us that the Government has turned a deaf ear to the appeals of the Association, Lord George Hamilton having declined to grant them an interview on the subject. This seems rather surprising. It must betoken either a great pressure of other business on the India Office, or a belief that it is not the function of the Government to advise the cultivators of Indian lands what crops they can raise to the best advantage. Egypt can produce more cotton than she is now bringing into the world's market, but the amount is limited to the strip of land that may be reached by the waters of the Nile—the small delta below Cairo and a narrow ribbon above it.

The *Guardian's* article we take to be a summing up of the latest information within the Association's reach on the subject of new supplies of cotton. It concludes thus:

> "Although the reports from the Association are necessarily indeterminate, they appear to give on the whole good reason for hope. Those uninformed enthusiasts who look for a colonial crop equal in size to the American within a few years may be disappointed with the signs of progress. It must be understood, however, that the object of the Association is not to substitute so much as to supplement; and if—to name quite arbitrary figures—they could five years hence produce an additional crop from all sources that would add a million or even half a million bales to the world's provision, they would have done well. But such a result as this could hardly represent a stationary state of things, and if we get so far the possibilities of the future are immense."

It is evident that there exists in the world no conjunction of soil, climate, transportation, labor, capital, and intelligence for the production of cotton comparable to those of the Southern United States. To all intents and purposes we have a monopoly of this indispensable article, and nothing can take it from us but our own supineness and folly. It is not at all likely that we shall lose it. The capacity of the Southern States for cotton growing is enormously greater than the largest crop that ever has been gathered. Whether the growth will keep pace with the demand in years to come is not so certain. That the rise in price will stimulate the planters to increase the cotton area and lead to larger expenditure for fertilizers may, however, be reasonably expected.

But another fact must be quite as carefully kept in mind. The pressure on cotton consumers, and on the cotton manufacturing trade, would be severe enough if the price were left to regulate itself under natural laws. Prices of cotton goods have not risen in proportion to the rise of the raw material. At some figure, the margin of manufacturing profit disappears and becomes a loss. If consumers of cotton goods will not pay an advanced price for their goods, the spinner cannot pay it for his cotton; and a resumption of this year's early efforts at a corner would, if long protracted, bring about such shrinkage in demand as would eventually prove disastrous to the cotton producer himself. This is the real danger involved in the theory, very prevalent in cotton-growing regions, that the spinning trade must take the cotton crop, and the whole of it, at any price whatsoever. This is a mistake, as the shut-down of July and August proves; but of course nothing but experiment can tell at what point consumption will be checked.

A YEAR OF THE CHILDREN'S COURT.

The Court for Juvenile Offenders which was established by the revised city charter in 1901 has now completed its first year, having begun work on September 2, 1902. Despite the forebodings of District Attorney Jerome, who opposed its establishment, it has proved to be of constantly growing value, if only because the prisoners brought before it are kept from contact with hardened criminals. The whole atmosphere of the little building at the corner of Third Avenue and Eleventh Street is vastly different from that of the old courts, every effort being made to keep the courtroom bright and cheerful. So evident, indeed, have been the benefits of separate trials for minors, that a similar institution, authorized by the Legislature last winter, was opened in Brooklyn some three weeks ago. To it has been appointed Mr. Robert J. Wilkin, who was for many years superintendent of the Brooklyn Society for the Prevention of Cruelty to Children. As in the Manhattan institution, everything which suggests the prison is kept in the background as much as possible. The detention rooms, for instance, in no way resemble cells.

In the first twelve months of the new Manhattan court's existence, 7,447 children were arraigned, of whom 4,368 were convicted. Of these, only 1,527 were committed on criminal charges or because of improper guardianship. The rest were placed on parole or had their sentences suspended. The offenders may be classed as follows: Mischievous children, disorderly children, those of distinctly criminal tendencies, and those who are misbehaving because neglected by unworthy parents. In the first class belong those who break windows, build street bonfires, and otherwise become nuisances Before releasing them the judges take pains to explain to them the nature of their wrongdoing. To the disorderly children belong those who run away from home because of their impatience of restraint, or who are on the road to crime.

Among these the judges (of whom there are five, from the Special Sessions Court, sitting in succession), find it necessary to discriminate carefully. Strange as it may seem, there are many parents of scanty means, desirous of having their children educated free of cost, who are perfectly willing to prefer charges of waywardness against their own children. By this means they can shirk the responsibility of caring for them, and at the same time have them taught a trade. So flagrant was this evil that the judges induced the last Legislature to pass a law giving them the power to compel parents, under threat of imprisonment, to pay a sum not exceeding two dollars a week for the support of each child placed in a city institution. While this law has been in effect only since September first, there is every indication that it will check this tendency to make the city stepmother to hosts of children who properly belong at home. The judges have also brought about the passage of legislation making purchases by junkmen from children a misdemeanor. This law was necessitated by the discovery that many children were being taught by the junkmen to steal from vacant houses, the subway works, etc., pipes, tools, and other articles, which were eagerly purchased for a few cents. It is safe to say that the public owes both of these laws to the establishment of the separate children's court, in which the whole conditions of juvenile crime can be studied as they never could be when the children were only a few of a large number of offenders passing in review.

The most difficult problem, of course, concerns the children who have just got started on the criminal path. Here a great deal depends on the probation officer; and that official reports that 15 per cent. of the 639 children released on probation between September 1, 1902, and July 1, 1903, had to be committed to institutions because they violated the provisions of their parole. Of those so committed, the majority were under twelve, which goes to prove that for children under that age the probation system is of questionable value. It is also interesting to note that of these 639 probationary offenders only 23 were girls. Of the boys 285 came into court because of larceny, and 125 for disorderly conduct. In most cases the parole lasts two or three months, only six having been committed for a year or longer. Where a child is reparoled more than three times, it is generally found to be necessary to send him to a reformatory; but the judges seek wherever possible to

avoid commitments. Children on parole are required to report to the probation officer once a week, and to the court at stated intervals. Each time the delinquent reports, his or her record in full is placed before the judge. In the Brooklyn court, where Judge Wilkin sits permanently, there are three probation officers, one for Catholic children, one for Protestants, and one for those of the Hebrew faith. The Manhattan magistrates believe in changing the judges, because they find the work too great a strain on the sympathies of one man, who would, they believe, soon become too tender-hearted or too callous. This has not been the case in Chicago, where Judge Tuthill still presides most satisfactorily over what is believed to have been the first separate children's court in this country. Judge Tuthill has, however, fewer offenders to deal with than the Manhattan court, and has more probation officers.

It is the principle of prevention as well as punishment which distinguishes these courts, and which marks them as part of the great movement everywhere going on to modernize the treatment of offenders. What the judges must ever consider is that it rests with them largely whether the child is to become an enemy of society or a valuable citizen. Hence the need for great wisdom, patience, and sympathy, particularly as the court must often protect a child from wicked parents or debased guardians. The Manhattan judges are not alone in their opinion that the older the courts the more light they will throw upon the whole question of juveniles and the law. They have already, for instance, discovered many shortcomings in our compulsory-education legislation.

BRITISH AND AMERICAN SCIENCE.

A fortnight ago, in speaking of Lockyer's appeal to his countrymen for the support of British science, we showed how to apply the old saw that the way to get the best performance from a human being is to encourage him. To-day we will try applying the same maxim in speaking of the future of American science. We wanted to allow the Anglophobists (who never allow the sacred fire to die on their hearth) ample time to dispute our proposition if they could —the proposition, we mean, that for three hundred years not a single conception has taken sovereign preëminence in science that has not been largely—in most cases, even without contest —of British parentage. But our proposition remains undisputed. Its substantial truth seems to be tacitly acknowledged.

Whatever could be said to blunt its point has, no doubt, been indicated in a letter in another column from a rarely accomplished and ingenious scholar, signing himself "H. T." Whether this subtle writer is serious, or whether he is only making believe that he opposes us, our readers can guess as well as we, if they note that he does not explicitly deny our proposition, and that he throws in our way two or three very pertinent suggestions in support of it. Certainly, two more striking examples of what are *not* conceptions of sovereign preëminence in science than those he furnishes would be sought in vain—the theory of numbers and the theory of functions. A famous mathematician, being asked why he should be so in love with the theory of numbers, replied that he loved it because it was a pure virgin that never had been, and that never could be, prostituted to any practical application whatsoever. Not only no *practical* application, but (so far as one can look into the future) no *scientific* application, either, is likely ever to be made of one or other of those two theories, outside of pure mathematics itself. In short, they are as narrowly technical as anything can be. They are Leibnitzian monads whose activity, intensely interesting in itself, is imperviously secluded from the business of life and from the main business of science.

Only compare this isolation with the loud resonance awaked in every harp and organ of science by those discoveries which truly have been sovereignly preëminent through science—the inductive philosophy; the corpuscular philosophy with the atomic theory and its progeny; universal attraction; the differential calculus (certainly discovered by Newton, not certainly also by Leibnitz after enjoying Newton's conversation); the theories of elasticity (Boyle and Young), of heat as *vis viva* of molecules (Bacon and others), of electricity (Gilbert, Faraday, etc.), of light as transverse vibrations (Young) and transverse vibrations of an electromagnetical kind (Maxwell); natural selection (Darwin and Wallace); universal evolution (Spencer). We forgot to mention one of the greatest discoveries of all, made by an humble clergyman of the Church of England, Gay—the discovery that the association of ideas is the autocrat (or, at least, the first of two consuls) that governs all the activities of the human mind, so far as they are subject to any mental law. For the theory of numbers and the theory of functions it can be said that they far surpass chess both in beauty and in their broadly intellectual character; but to call them ideas of sovereign preeminence in science would be to fall into one of those extravagant statements to which mathematicians are only too prone, as when Henry John Stephen Smith—one of the protagonists of the theory of numbers, for all his being an Englishman—spoke of a decline in a people's mathematical activity as if it differed from all other historical developments in having but a single possible cause.

We have to thank "H. T." for another suggestion contained in his remark that, of the pure mathematicians of England's last half-century, the two most prominent were the Hebrew Sylvester and the half (or quarter?) Russian, Cayley. To be sure, there is a simpler and more conclusive proof that the singular relation which Great Britain has sustained to science has not been due solely to Teutonic blood, namely, the density of the entirely uncultivated German (if this species be not quite extinct). The days are very, very distant when it will be possible to disentangle the causes of national character; but as to the matter in hand, there is one cause that strikes any good American observer of intellectual English society. Montesquieu, who possessed an intimate knowledge of so many countries (he was, by the way, a Foreign Member of the Royal Society), put on the title-page of his immortal book this motto:

"Prolem sine matre creatam"

(offspring produced without a mother). A close friend asked him in what sense this had any particular application to the 'Esprit des Lois.' He replied, after some reluctance: "A truly great work must owe its birth not only to a man of genius as its father, but also to a society of intellectual freedom as its mother." Probably in no country is thought of almost all kinds so completely untrammelled as in England. The chief external hindrance, everywhere, to supremely original scientific speculation lies in a certain spirit to which, for want of a better word, we may give the name of *pedantry* (one could hardly call it *obscurantism*). We mean that spirit which caused Poggendorff to refuse for his journal the now far-famed paper of Mayer about the thermodynamics of gases; that spirit which for a whole generation silenced, through the German universities, every contribution to philosophy that was not Hegelian, and which to-day as completely silences there everything that *is* Hegelian.

And this brings us round to the brief word we proposed to say to the young scientists and philosophers of America. Good and sufficient reasons have in the past acted to conceal the scientific genius of the American people in money-getting and in settling the order of things in this country. But now that those reasons are losing their force, and that you are turning to pure science, above all trust to your own wings. Beware of excessive subservience to the opinions that happen to be in vogue in the German universities. Imitate the Germans in those things that deserve imitation. Emulate them, for example, in that which has contributed not a little to German scientific leadership, their national self-confidence; in their persistency as well. Those two qualities have made that people the world's leader in all *Fach-Forschung* (if we may be al-

lowed to coin the word)—a preëminence all the prouder that it is founded on two moral virtues. You have infinitely more reason to believe in your own scientific powers than they had, one brief century ago. In the nature of things, you will soon outgrow your school-boy deference to your master's *dicta*, and, trusting to your own genius, will surely develop a new and more philosophical type of scientific man.

GAY PARIS IN LIQUIDATION.

With the suspension of the opera balls the legend of Paris as a centre of gilded dissipation should vanish. These public masked balls were in a sense the very symbol of Paris the Casino of Europe. They were first organized as a kind of public echo to the private gallantries of the court of Louis XV.—the most frivolous of an age in which refined dissipation was reduced to a code. Under the First Empire, Bonaparte's adventurers supported this peculiar institution with an imperial lavishness which was exceeded only by the parvenus of the flush times of Napoleon the Little. Since Sedan they have been the dreary form of an outworn gayety. Instead of the courtiers, the dragoons, and the gilded youth of earlier times, one saw a curious mixture of Parisian counter-jumpers depressed by the "louis" taken at entrance, of British and American fathers of families marvelling that it was all so little shocking, of South Americans noisily throwing their money about, with a sprinkling of French college lads and American students saddened that the reality of an opera ball fell so far short of the legend. As for the women, the change was even more marked. From the heroines of the Third-Empire *chronique scandaleuse*, and all of theatrical Paris, the dance had descended to paid nobodies, among whom the outraged British matron and her brood moved, masks tightly clutched, while the German *Hausfrau* and the American wife "doing Paris" bore her uneasy company. A performance solemn and inept even in its improprieties has been discontinued because it no longer pays.

For many years the legend of a Parisian world *où l'on s'amuse* has been kept alive only by the surplus money and deficient brains of foreigners. Long ago the Parisians withdrew their support from the dancing gardens and the more notorious cafés. The result was that any glamour which dissipation might have gained from Parisian taste and wit was absent, and travellers paid their good money, with much sacrifice of self-respect also, for tasting a life that the true Parisians heartily scorned. Naturally those who came to see the Anglo-American or the Russian Paris, and detected the cheat, declined longer to be humbugged.

Meanwhile the restaurants, the Maisons Dorées and the Cafés Riches, which were frequented by the old-school *boulevardiers*, and turned away all but the notorious, the wealthy, and the extravagant, have one by one closed their doors. Every year Paris loses something of its old preëminence as a city of pleasure, and the time has come when the primrose path for the spendthrift has as many ramifications as there are great cities and human follies. Balzac used to insist on a certain freemasonry, in the sensual life, which had its capital on the Seine. To-day he would feel differently. The recklessness and the genius for debauch of the hero of 'Peau de Chagrin' are no longer Parisian characteristics. Parisian dissipation has taken on the dull and uniform tone of the random life elsewhere. The irrational squandering of one's gold and one's self may as well be practised in New York, St. Petersburg, or any one of a score of great cities.

If a certain school of metropolitan economists be right, the discontinuation of the opera balls should be marked by a shrinkage of the national credit. Many times the theory that money can circulate normally only when much of it is spent profligately has been seriously maintained. As if to give the lie to the theory that she is rich only on condition of remaining the bawd of Europe, Paris adds a new beauty as fast as she drops an old infamy. Year by year that unparalleled prospect along the Seine becomes richer and nobler, without the loss of any of the precious monuments of old time. Every year, too, Paris becomes a more delightful residence for those who value the things of art or of the mind. As she loses her title of the Casino of Europe, she strengthens that of the new Athens.

Nor do we believe that, with the passing of the legend embodied in the opera balls and in a dozen other institutions of organized profligacy, Paris loses any real gayety. The *verve Parisienne* was never prominent among these syndicated pleasures, nor was it offered at a price to the moneyed rabble of immigrant amateurs of "la vie en rouge." The gayety of Paris is at every family dinner table, in the studios and small shops —everywhere that two or three Parisians meet. And that unique sprightliness of the mind which is the just pride of all Frenchmen, is still to be found in Paris, from the quais where clothes are washed to the salons where academicians are still agreeable to pretty women. That is the real "gay Paris." It will live on as long as Frenchmen are Frenchmen, although it be unknown to the cosmopolitan herd whose growing parsimony or prudence is forcing the other "gay Paris" into liquidation.

ENTERTAINMENT FOR MAN AND BEAST.

Every one of the half-dozen popular magazines contains at least one story of which the hero is beast, bird, or fish. Mr. John Burroughs's protest in the *Atlantic* in behalf of his dumb friends, has passed unheeded. A whole school of writers keeps step with the 'Jungle Book' man or struggles along the trail of the 'Sand Hill Stag.' A literary tendency is clearly manifest, and we see no reason why it should stop at the terrestrial fauna. The flora is as yet unexploited, and since we have had the tragedy of the brook trout and the pathos of the pachydermata, why not also the miseries of the edible mushrooms, the loves of the lotuses, and the tragedy of a dead beet? Erasmus Darwin and his botanical epic are pretty well forgotten, and the way lies open for a literary adventurer to publish as many short stories as there are leaves in Vallombrosa. Nor need the process stop at the organic creation. Two scientists of our acquaintance only ceased from writing a comedy of the chemical elements because they found (as had the British matron before them in Darwin's 'Loves of the Plants') that the matrimonial complications necessitated by the allegory passed all bounds of morality and availability.

The chemical comedietta was intended for children, and it seems that pretty much all animal stories are planned for the very childlike. For the animal heroes and heroines are strangely unlike any animals that the average reader knows, and amazingly like those characters of the dime novel and Sunday School book which the adult reader usually scorns. We have tested it high and tested it low. Occasionally a Mr. Jack London strikes the note of veracity, as Mr. Kipling knew how to invest jungle life with poetry, or Mr. Joel Chandler Harris to fill the B'rer Rabbit stories with shrewd wisdom and exuberant humor. But this is the exception. What may be called the beast tale of periodical literature possesses neither veracity, poetry, wisdom, nor humor. The question, Why do people read these stories? only raises the more impenetrable mystery, Why do people read most of the magazines at all? The answer is possibly that people do not read the magazines, but look at the illustrations; and that the popularity of the new school is simply a tribute to the pencils of Mr. Thompson-Seton, Mr. Heming, Mr. Bull, and others.

But if there is doubt about the demand for sentimentalized quadrupeds, there is no doubt as to the supply. We feel, indeed, that the production is too copious and uniform to be the result of individual enterprise, and we suspect in the whole matter the machinations of a syndicate which was first called Seton-Thompson and then, for purposes

of reorganization and evasion of the law of copyright, was renamed Thompson-Seton. Upon this hypothesis the recent remarkable flotation of animal stories falls under familiar commercial processes. Imagine a resourceful and unscrupulous syndicate which has gained possession of all the undigested securities of the fiction market. Obviously, the whole supply of rejected articles might have been got at a base price. What would the substance of such stories be? Of course, the humdrum pathos and conventional melodrama that lie within the observation and mental range of the writers. Such an accumulation would appear wholly worthless from all points of view. But here is where the genius of our supposititious syndicate comes in. You can always unload a bad stock-market security by changing its name and denomination.

It would be superfluous, and in the present market conditions manifestly unkind, to recall the instances of stocks which have brought better prices every time a consolidation reduced their actual security. Upon this pregnant idea what we may call the Animal Story Trust based its fortunes. One may imagine the process of conversion prior to marketing. A dreary story of the death of an old woman in a country village is to be sold. For old woman read Sheesquaugh the Cougar, for village read "bleak, crumbling precipices iridescent with such colors as are only seen under the desert sun," votes the board of directors, and the editors tumble over each other to buy. Again, we imagine the syndicate's blue pencil cancelling the title, "Algernon's Heart Sorrows," and rewriting it, "Plunges of Pete the Cayuse," with the note, "Printer, substitute Pete for Algernon." And the publishers who broke Algernon's creator's heart, compete for "Pete" at the top of the market.

Now, it is far easier to expose this method of unloading undigested copy than it is to stop it. We may pity the editors and publishers, we may warn them of the impending depression when the underwriters shall be confronted with unmanageable blocks of manuscripts, and Cuvier shall have been exhausted from cover to cover; but we cannot restrict their right to buy at their own risk. Refusing to read Algernon travestied as Pete is only a partial measure. In fact, no effective protest is possible unless the animals should organize a protective association, and appeal to the humanity of the syndicate. One may imagine a sensible "cayuse" complaining as follows: "What right had you to impute to me disgusting human sentimentalisms? What warrant had you to deprive me of my inborn horse sense and put upon me scarcely human idiocies? If you cannot respect yourselves, gentlemen, at least respect the feelings of a horse of good manners, sound nerves and sane habits." That such would be the sentiment of the beasts reassembled in Æsopian council there can be no doubt. And, failing their voice, we make the plea of our worthy but silent friends our own.

Correspondence.

DEFECTS OF THE CENSUS.

To the Editor of The Nation:

Sir: Permit me to corroborate your statement that the census statistics regarding capital employed in manufactures are untrustworthy. In a communication published in the *Wool and Cotton Reporter*, June, 1900, I quoted Special Schedule, No. 15, addressed to manufacturers of hosiery and knit goods, as follows:

"Inquiry No. 4, Capital invested? The answer must show the total amount of capital, both owned and borrowed."

Commenting on this, I could not but point out that the entire statistical value of the answers as to the amount of capital invested in the industry was destroyed by including borrowed money as capital. The relations of capital to product, and both to profit, are obviously not to be arrived at from the census tables based on data furnished in pursuance of the above inquiry.

Inquiry No. 9 must lead to results that are equally misleading, though not to so great an extent as the prior one. It requires the manufacturer

"to give the value or price charged at the factory. . . . for all products . . . whether sold or unsold."

Compliance with this requires that the manufacturer assume a profit as earned on his unsold product and credit himself therewith. Census returns are supposed to be accurate representations of existing facts, not a counting of unhatched chickens. Whose was the expert skill that devised these questions the present Director of the Census ought to be able to tell, as he was "chief statistician of the division of manufactures." Max Lowenthal.

Rochester, N. Y., September 25, 1903.

DIRECTOR RICCI.

To the Editor of The Nation:

Sir: In a notice of the Neapolitan journal *La Critica*, included in the "Notes" of the number of the *Nation* for June 18, Signor Corrado Ricci is spoken of as "the well-known Director of the Royal Gallery at Parma." Signor Ricci has been long enough Director of the Gallery of Brera (if one may, in imitation of the universal Milanese use, drop the article before Brera) to rearrange completely its contents and make it possible for the student to study with the greatest ease the chronological development of Lombard Art. As there is perhaps no other gallery in Europe where sequence and relations in art can be so easily understood, it might be well if some competent writer among your correspondents should furnish the *Nation* with an account of what Signor Ricci has accomplished here. His success has been such that it is said (I know not with what authority) that he is to be transferred to Florence to do a similar work there.

Very truly yours, S. K.

Alassio, September 11, 1103.

THE DECLINE OF MATHEMATICS IN ENGLAND.

To the Editor of The Nation:

Sir: The statement made by you in the last issue of the *Nation*, page 229, may be easily answered by quoting such important branches of mathematics as theory of numbers and modern theory of functions, which are almost entirely due to benighted Continentals. Some time ago, when the English had three eminent mathematicians left yet—a Hebrew, a half-Russian and an Irishman—they used to say that they had generals, but no soldiers, in mathematics. Now the generals are dead and no soldier has risen to the rank of general. What a well-minded Englishman thinks of the present state of mathematics in England may be inferred from Professor Greenhill's review of the German translation of Professor Perry's book, published in *Nature* about a year ago. Without the slightest intention of composing a "Sovvenire di una gran nazione" to the English people, I cannot help quoting the momentous words of Henry John Stephen Smith: "A decline in the mathematical productivity of a nation amounts to a retreat on the whole line."

Yours very respectfully, H. T.

September 17, 1903.

[Our comment will be found on another page.—Ed. Nation.]

Notes.

Charles E. Goodspeed, Boston, in connection with D. B. Updike, proposes a new and elegant edition ("The Merrymount") of Jane Austen's works in sixteen volumes, 16mo. By subdivision of each novel into several volumes a large and very readable type can be used. The enterprise depends upon preliminary subscription. Mr. Goodspeed has nearly ready 'A New Year's Address to the Patrons of the *Essex Gazette*, 1828,' with a hitherto unpublished letter, by John G. Whittier. Only sixty copies will be printed.

A new edition of Fielding's works in eleven octavo volumes, with Arthur Murphy's essay on his life and genius, edited by Dr. James P. Rame of Edinburgh, will have Messrs. Scribner for the American publishers.

Harper & Bros. are about to bring out 'The Dutch Founding of New York,' by Thomas A. Janvier, beautifully illustrated; 'Hawthorne and his Circle,' by Julian Hawthorne, also illustrated; 'Portraits from the Sixties,' by Justin McCarthy; 'The Standard of Pronunciation in English,' by Prof. T. R. Lounsbury; 'The Diversions of a Book-Lover,' by Adrian H. Joline; and Lewis Carroll's 'The Hunting of the Snark,' with Peter Newell's illustrations.

Fox, Duffield & Co., New York, announce 'The Compromises of Life,' lectures and addresses by Col. Henry Watterson; 'The Shepherd's Pipe,' a collection of sixteenth and seventeenth-century verse, by Fitzroy Carrington, with old portrait illustrations;

'Rhymes of Real Children,' by Betty Sage; and 'The First Loves of Perilla,' by John Corbin.

The "English Men of Letters" series of Macmillan Co. will be extended by Canon Ainger's Life of Crabbe, and Dr. Henry Van Dyke's Life of Lowell. From the same house will issue 'Irish Life in Irish Fiction,' by Horatio Sheafe Krans.

'The Principles of the Founders,' Boston's last Fourth of July oration, by Edwin D. Mead, is to be issued by the American Unitarian Association in that city.

Ainsworth & Co., Chicago, have in press 'The Thirty Years' War on Silver,' by Judge A. L. Fitzgerald of the Supreme Court of Nevada.

Forthcoming from the University of Chicago Press are 'A History of Matrimonial Institutions,' in three volumes, by George E. Howard; 'Animal Education,' by John B. Watson; 'Lectures on Commerce and Administration,' by J. Laurence Laughlin and others; 'The Philosophy of the History of a Small Nation' (Bohemia), by Thomas G. Masaryk of the University of Prague; 'Russian Civilization: Its Past and Present,' by Paul Milyukoff; and 'The Code of Hammurabi,' in two volumes, by Robert Francis Harper and William Rainey Harper.

The Clarendon Press (H. Frowde) has in preparation the third series of Dr. Edward Moore's 'Studies in Dante'; the fifth volume of the Oxford History of Music, 'The Romantic Period,' by Edward Dannreuther; 'Selected Drawings from Old Masters in the University Galleries and in the Library at Christ Church, Oxford,' chosen and described by Sidney Colvin; 'An Examination of the Shelley MSS. in the Bodleian Library,' by C. D. Locock; 'The Songs of Robert Burns,' printed for the first time with the melodies for which they were written, edited by James C. Dick; and 'Elizabethan Critical Essays' (1570-1603), edited by Gregory Smith, M.A., in two volumes.

Among the reprints on our table are two more volumes in J. F. Taylor & Co.'s "Library Edition" of the Novels, Poems, and Memories of Charles Kingsley, namely, 'Two Years Ago'; 'Christmas Books and Hard Times' in the "Biographical Edition" of Dickens (London: Chapman & Hall; Philadelphia: Lippincott), with a great variety of standard illustrations by Doyle, Leech, Fred Walker, Maclise, Landseer, etc. (the chief typographical attraction of this unpretentious output); Pierre Loti's 'Madame Chrysanthème' in Laura Ensor's translation, with half-tone illustrations by Rossi and Myrbach to which less than justice has been done in the printing (London: Routledge; New York: Dutton); Elbert Hubbard's 'Little Journeys to the Homes of Famous Musicians' and likewise of 'English Authors' (Putnams), reinforced with numerous unhackneyed full-page portraits; and Charles Augustus Stoddard's 'Cruising Among the Caribbees,' revised and enlarged since 1895—but we can hardly praise the new matter about Martinique and Porto Rico (Scribners).

'The Children's Book,' edited by the late Horace E. Scudder (Boston: Houghton, Mifflin & Co.), strikes the eye at once as old-fashioned. In the first place, all the illustrations in the text are woodcuts, in divers styles and after many designers, from Cruikshank to Darley and Lafarge. There was, therefore, no need to employ shiny paper for half-tone prints, and this, too, points to what for our youngsters is a prehistoric age. In fact, this cleverly compiled quarto volume dates back to 1881. Perhaps its appearance, in contrast with smart "process" manufacture, has kept it from holding its own in the nursery. A few inserted plates of photographic origin we judge to be the publishers' latter-day concession to a changed (not a better) taste. Be this as it may, there is no reason why this collection should ever fall into the background. It ranges from Homer's fables to Æsop; from Aladdin to Cinderella; from Gulliver to Baron Munchausen; from Goldsmith to Hans Christian Andersen. There is, further, much good poetry—Jane Taylor, Scott, Wordsworth, Macaulay, Robert Browning, Longfellow; "Robin Hood" and "Sir Patrick Spens" among the ballads. In short, this is a rich and handy thesaurus for reading aloud or to the childish self.

In 'Masterpieces of Latin Literature' (Boston: Houghton, Mifflin & Co.) Prof. G. J. Laing of the University of Chicago has collected translations by various hands of typical selections from seventeen poets and prose writers, from Terence to Apuleius. A brief biographical sketch is prefixed to each author, and to the whole an heroic attempt to give in nine pages an outline of the general tendencies of Latin literature. The selections are well made, the translations are as good as any that were available, and from the book those who are so unhappy as not to know Latin may obtain a fair idea of the contents if not of the form of the originals.

Jules Cambon's 'Essays and Addresses' (D. Appleton & Co.) relate mainly to France and the United States. The essays are two in number, one on Pierre Loti, and the other on "Diplomacy and the Development of International Law." There are eight addresses, delivered at New York, Boston, and other American cities; of these the public had at the time of their delivery more or less full reports in the daily newspapers. They are interesting as a graceful contribution to international comity. M. Cambon, having shown his ability as a diplomat here, at a trying time, was peculiarly fitted for the task of explaining France to America He particularly insists on one point which we are too often inclined to forget—that the "scrofulous French novel," with which Paris has teemed for the last fifty years, is representative of the country only to those whose tastes it suits. It is not what made France "la grande nation," nor what makes French literature and history of perennial interest. What really does this is well described by M. Cambon in these pages.

Poets and poetasters desirous of the immortality of preservation, at least, would do well to consider the aim of the curator of the Harris Collection of American Poetry in the library of Brown University. He seeks, as we learn from the *Library Journal* for September, "to obtain by purchase or gift the entire yearly output of American poetry." But the fund at his disposal is very limited.

The *National Geographic Magazine* for September contains an account of the mineral resources of the United States, by Mr. C. Kirchhoff, in which is condensed a large number of interesting facts and statistics. After detailing briefly the achievements of the past thirty years, this writer calls attention to the fact that they have been accompanied by some serious abuses. Chief among those is that, "in the rush to get rich, we have deliberately followed the principle that it pays to waste." To check the enormous waste, he sugests that there be some Government control over the mining industry; and also that titles to mining property on the public domain should contain some provision for their surrender as the penalty for long-continued idleness. Among the remaining contents are the journal of a Spanish expedition into Texas in 1675, translated from an old manuscript, and a short account of the gardening done by the International Polar Expedition at Point Barrow, Alaska, in 1882. "Twenty-seven days after seeding, and nineteen days after germination, harvesting began."

The researches of Mr. R. T. Günther into the earth-movements in the Bay of Naples, the results of which are given in the *Geographical Journal* for September, have brought to light many facts interesting to the geologist, archæologist, and historian. Among other things, they have made clear what has been a matter of doubt, that the phenomenon has not been local, but has affected large areas of adjacent Italy. They have further shown that the upward movements of the land in recent geologic times have been much in excess of the downward. The evidence is strong that the land must have stood at least 17 feet higher in Roman times, and then have sunk to something like 18 or 20 feet below its present level, and afterwards, probably in the earlier part of the sixteenth century, have come up. The well-known artist and traveller, J. G. Millais, contributes a short account of some explorations in central Newfoundland, and Professor Élisée Reclus, in a paper on geographical education, emphasizes the importance of the use of globes in teaching. He even goes so far as to say that "in all well-conducted schools . . . children ought to be entirely forbidden the use of maps." This number contains, besides, an account of Sir John Murray's bathymetrical survey of the freshwater lochs of Scotland, illustrated by photographs and maps.

The German archæological expedition to Babylon, which was at first disappointing in the small number of inscriptions discovered, has now struck "pay dirt," and has in recent months unearthed a mass of cuneiform tablets. Most of these are of a date belonging to the Persian and Greek periods. Dr. Weissbach, who has been examining the finds, reports descriptions of the sacrificial worship of the Babylonians, together with a full cosmogony. Even more fortunate have been the diggings in the ancient city of Fara, where tablets have been discovered that probably date back to the fourth millennium B. C.

On the initiative of Professor Wolfstieg, a regular institution for the education of women librarians has been opened in Berlin. The course of study has been officially approved by the Prussian Cultus Ministry. It is called the Bibliothekarinnen-Schule, and is to constitute the beginning of a Frauenhochschule für den Bibliothekdienst, the whole really under the control of the Comenius-Gesellschaft, which has recently undertaken the reorganization of the whole library system in Berlin, and has incidentally established the new school.

The entering class numbers eleven women. Full accounts of this innovation are to be found in the reports of the Society (Vol. XI., p. 33), from the pen of Professor Wolfstieg.

Carl Frederick Bricka, keeper of the Public Records of Denmark and editor of the Danish Biographical Dictionary, died in Copenhagen on August 24. He was born in Copenhagen July 10, 1845. After eleven years' service in the Royal Library, he entered the department of records under the famous historian, A. D. Jörgenson, whom he succeeded on the latter's death in 1897. After preparations extending over many years, Bricka began in 1887 the publication of the Biographical Dictionary, the sixteenth volume of which has already appeared. The assignment of material for the remaining volumes had been made by the editor before his death, so that the original plan of his *magnum opus* will be followed, although the master's hand will be sorely missed in carrying out the details.

—New Yorkers will learn with considerable interest, from the October *Scribner's*, just what becomes of the miscellaneous refuse turned over every day to the Street-Cleaning Department, ranging from the crumbs of the dinner-table to cast-off clothing, stoves, bedsteads, etc. Formerly it was dumped miscellaneously into the bay, to pollute the water and air, or wash up in offensive heaps upon the beach. It is now carefully assorted, and the great bulk of it made to yield some return to the city, direct or indirect, against the cost of its removal. The coal ashes are rapidly making new land of the shoals about Riker's Island, worth $10,000 per acre at a fair estimate, while the ashes from incinerated vegetable matter, rich in plant food, are going to feed the famishing trees and shrubs of Central Park. Keen-eyed dealers are paying the city more than $100,000 yearly for the privilege of picking over the solid rubbish for articles of value, and the vegetable and animal matter collected from garbage receptacles yields large quantities of merchantable oil and fertilizing materials. All this may not strictly belong to belles-lettres, but it makes excellent reading-matter for New Yorkers just at present. Brooks Adams presents a narrative of his grandmother, Mrs. John Quincy Adams, describing her journey from St. Petersburg to Paris, whither she went to join her husband shortly after the signing of the treaty of 1814. The paper is preceded by a reproduction of a miniature of Mrs. Adams now in the possession of Mrs. Henry Parker Quincy of Boston. Walter A. Wyckoff writes of certain phases of trades unionism, the burden of his thought being that the movement is the inevitable result of changed conditions, and is, on the whole, highly beneficial to all concerned, notwithstanding various palpably wrong positions into which the unions have been led. His argument that the effect of unionism is to increase the efficiency of the individual workman, by driving the employer to seek for the best labor available at the uniform rate of wages, is somewhat hard to follow. Will H. Low, in the "Field of Art," gives several pages of counsel to the American art student in Paris. He advises the student to seek the Government schools rather than the ateliers established by private enterprise, and especially to avoid those in which American students congregate in such numbers as to give predominance to ideals and methods brought from home. Learn the language, go to the root of things, and yield not to the temptation of the publisher who would draw you into the remunerative but artistically fatal work of present-day popular illustration.

—The October *Century* makes a special appeal to the sportsman. André Castaigne describes a hunting expedition of President Faure, in company with the Grand Duke Alexis and a few others, in the thickets of Rambouillet. Five hundred and thirty rabbits, a hundred and nineteen pheasants, ninety-one hares, three roebucks, and two squirrel, the sum of this day's shooting, will suggest to many readers a day in a slaughter-house rather than a day of legitimate sport. J. M. Gleeson describes the game parks of Powerscourt and Drummond Castle. Sterling Heilig writes of the Duchesse d'Uzès, who rents from the French republic more than ninety square miles of the Rambouillet forest, in addition to her own extensive hunting-grounds. With more than eleven hundred stags to her account, she may well be called "the first huntress of France," but the instinct of true sportsmanship revolts at such numbers. It is just this unrestrained desire to be killing that gives to another contributor, Dwight W. Huntington, material for a gloomy sketch of the rapid diminution, in many cases practical extinction, of the game birds and animals of the United States. L. O. Howard contributes a short but extremely interesting sketch of the investigations which have established the culpability of the mosquito as the chief, if not the only, agent in the distribution of yellow fever. Anna Bowman Dodd writes in glowing terms of the "New Woman in Turkey."

—Captain Sumph himself, whom Pendennis met at his first literary dinner at Bungay's, never told more inconsequent anecdotes than are to be found in the memoirs of another captain, one George Elers (London: Heinemann; New York: Appletons). Again like Sumph, Elers was "related in some indistinct way to the peerage," and the MS. of his Memoirs has reposed for years in the library of Lord Monson, who now gives it to a world that needed it not. The writer went out to India as an ensign in the Twelfth Foot in 1796, and stayed there eight or nine years (dates are hardly ever given), during which time he seems to have been under fire once. To have "a good billiard table, a good regimental library, and excellent shooting and hunting," was apparently his professional ideal, and he speaks of a week of racing and chicken hazard as the happiest he ever passed in India. During three months he was entertained, when invalided, by Col. Wellesley at Seringapatam, but this hospitality he ill repays by frequent innuendo of a personal and trivial kind. It is obvious that in later years he made himself a bore to the Duke by presuming on this early acquaintance to ask for favors which his services had not merited. After his return from India he spent some years at home stations, but finally left the army in 1812 to please, as he fondly hoped, a mother-in-law *in posse*. The old lady very promptly and wisely refused her blessing to a son-in-law who *in esse* had not even a captain's pay; and for the rest of his life he lived as best he could, paying visits, and finally ending as the pensioner of a female cousin. The memoir is, in fact, the common tale of an earthen pot trying to swim with the brass kettle, and getting sadly knocked about. In an appendix, however, there are some rather interesting letters from Maria Edgeworth, another cousin of this harmless and unnecessary man.

—The *Nation* of December 13, 1900, noticed the appointment by Gen. Porter, United States Ambassador to France, of a committee, consisting of Henri Méron, consul of France at Chicago; E. P. McLean, Vice-Consul-General of the United States at Paris; Col. Chaillé-Long, and Major H. A. Huntington, to compose a list of the French officers, soldiers, and sailors who took part in the War of American Independence. This committee, to which M. Lacour-Gayet, professor at the École Supérieure de la Marine, was added in January, 1901, has completed its work, and the result appears in a huge quarto volume entitled: 'Les Combattants Français de la Guerre Américaine, 1778-1783: Listes établies d'après les documents authentiques déposées aux Archives Nationales et aux Archives du Ministère de la Guerre, publiées par les soins du Ministère des Affaires Étrangères' (Paris: Ancienne Maison Quantin, pp. xii., 327). Besides the names, it contains portraits of Washington, Lafayette, Rochambeau, Vergennes, D'Estaing, De Grasse, and De Guichen; the vote of thanks passed by the General Society of the S. A. R. to all concerned in the publication, with individual mention; and an introduction by M. Méron, giving due credit to his collaborators. The edition is of eight hundred copies, of which four hundred have been presented to the United States Government. The remainder will be divided by the Ministries of Public Instruction, War, and Marine, at whose joint expense the work was printed, and will be distributed by them among the great public libraries of France. These lists, which may be advantageously consulted by all students of our Revolutionary period, have a special value for readers of that extremely interesting work: 'Marins et Soldats Français en Amérique pendant la Guerre de l'Indépendance des États-Unis' (Paris: Perrin & Cie., 1903), by the Vicomte de Noailles, a great-grandson of the illustrious soldier of that name who concluded the capitulation of Yorktown.

—It is not only with the Indian East, as was set forth recently in these columns by Professor Lanman, that Western students have now come into touch, nor is it only at the feet of native Sanskritists that they can now sit. In spite of the fear of an uncrossable gulf of prejudice and fanaticism, the world of Muslim theology is also opening its doors to the West, and the Ulama of the Azhar in Cairo have shown themselves willing to receive in the circles which sit round them inquirers from among the unbelievers, and have thus claimed for their school a place in the broad freedom of academic comity. The greatness of this revolution and its far-reaching effects, for both Islam and Christianity, are clear; for Islam, perhaps, more immediately deep and essential. For the West—though such a world of contemporary thought and emotion certainly cannot for long lie open without results of

stimulus and suggestion—the first fruits of the change must be more objective and simply scientific. Islam will come to be understood by us more perfectly when it can be studied not alone in its books from the past, but as its present teachers interpret and hold it. This is the great interest in Dr. A. de Vlieger's 'Kitab al Qadr: Matériaux pour servir à l'étude de la doctrine de la prédestination dans la théologie musulmane' (Leyden). The "matériaux" here presented, partly in the original text and throughout in translation, are indeed of very considerable value, being drawn largely from MS. sources, but of greater value is Dr. de Vlieger's statement of the theological positions of the present day, and of the interpretations which Muslims now give to their doctrines.

—The only pity is that he did not definitely put himself to school with them and work resolutely through their course of studies. Scholastic theology is a thing by itself and can not be caught in a moment by any intuition. So, that he has not grasped fundamentally the Muslim system is plain on page 6, where a passage is given in text and translation, but with the point completely missed and some technicalities wrongly rendered. A similar weakness is shown in handling the distinction between *qadā* and *qadar*, the two words for predestination in Arabic. On another side, his Muslim teachers seem to have had too great an influence. Professedly in this account we are placed on the present-day platform of Muslim orthodoxy; no reckoning is made with different schools nor with heretical divergencies. Such a plan is excellent; a book so constructed would give us a much needed point of departure. But Dr. de Vlieger has mixed in material of a different kind, drawn from European sources, and has done so without a word that it is not modern orthodoxy. Thus, apart from a distinction between the position of Mohammed himself and the Mohammedan Church, there is no suggestion here of any process of change or development, for good or for evil. The statements of the straitest theologians, of mystics of varying orthodoxy, and of absolute philosophers like Averroes, are thrown together without an attempt to indicate a difference or to trace a genetic relationship. It would, for example, be interesting to know with what degrees of horror the Cairo theologians view Averroes, the Neoplatonic Aristotelian, and Abd ar-Razzaq, the Neoplatonic sufi—that is, if they have even heard of them—and what proportion of them regard al-Ghazzali as a Father of the Church. But, for all this, Dr. de Vlieger's work is a refreshing witness to the renewed intercourse of East and West.

RECIPROCITY.

Reciprocity. By J. Laurence Laughlin, Ph.D., Professor of Political Economy in the University of Chicago, and H. Parker Willis, Ph.D., Professor of Economics and Political Science in Washington and Lee University. The Baker & Taylor Co. Pp. 583.

The authors of this work have given us a detailed history of the moments in our later tariff history in which the idea of reciprocity has played a rôle. The volume is therefore a much needed and most welcome addition to the all too scanty tariff literature which can make any pretence to scientific insight and accuracy. Its appearance is most timely, also, at this juncture, when widespread interest in an important phase of reciprocity has been aroused by Mr. Chamberlain's assault upon free trade in Great Britain under the guise of preferential duties.

The origin of reciprocity is traced in the introductory chapter to the mutual concessions made by various nations in respect of their navigation laws, when it became recognized about a century ago that these laws were defeating the very ends for which they had been enacted. The formation of the German Zollverein and the rising tide in Europe making for unfettered commerce extended the scope of reciprocal concessions to the tariff duties imposed upon the goods of international trade. Commercial treaties incorporating "the most-favored-nation" clause were the principal means of contracting the area of high-tariff depression. The description of modern reciprocity systems, particularly those of Germany and France, affords, when taken in conjunction with a subsequent chapter on "Reciprocity and the Sugar Situation," a good insight into the current tariff policies of the leading European States. It is to be regretted that the authors could not devote more space to tracing the modern reaction against commercial freedom. They ascribe the tendency most briefly to the increased need for revenue for war and armament following upon the Franco-Prussian war.

The series of chapters which elucidate our various reciprocity treaties with Canada, with Hawaii, with South American countries, and abortively with Cuba, are well done, and the generalizations one may readily draw are eminently sobering. On the whole the history of these experiments teaches that the general interests of consumers as a body—so well subserved, for example, by Canadian reciprocity—have been generally subordinated either to the private interests of small groups of producers, or to vague national animosities or ambitions.

Not the least merit in the work is its exposure of the change in the reciprocity idea in our tariff since 1890. The species of reciprocity which Mr. Blaine at the last moment foisted on the McKinley bill was in reality a threat of tariff retaliation upon countries exporting tropical products to the United States unless those countries should abate their tariffs on our exports of foodstuffs and manufactured goods. But, despite the retaliatory aspect of the McKinley tariff, it stood four square to perfectly orthodox protectionism. At that time the only kind of reciprocity sanctioned by uncompromising protectionists, and believed to be free from any taint of revenue reform or free trade, had to conform to three tests. First, it could contemplate free admission only of products not coming into competition with products of this country; second, it must imply a contemporaneous willingness in the foreign country to take the surplus of our farms and factories; and, third, it must involve an approximately equal volume of trade with the foreign country in the two kinds of products exchanged. Upon the passage of the Wilson bill, the reciprocal engagements with other countries practically became of no effect. As the Wilson bill was originally reported, raw sugar was to continue to be admitted free, as under the McKinley act; but the manipulation of the sugar schedules in the Senate imposed a duty on raw sugar, and thus practically annihilated the basis of reciprocity agreements founded upon the free admission of sugar. The Dingley tariff did not revert to the free-sugar provision of the McKinley act, but put both raw sugar and hides on the dutiable list. This practically destroyed the basis for such reciprocity as had existed under the McKinley act, although formal homage is still done to the shade of that idea in our present tariff law. The Dingley bill, however, provided, at least formally, two other kinds of reciprocity. A few selected articles, of relatively small importance and so chosen as hardly to compete with any domestic product, are entered at certain reduced rates of duty whenever and so long as the President is satisfied that equivalent reciprocal concessions have been extended to us by the nations exporting the articles above mentioned. This is a slight departure from the earlier type of reciprocity. But the Dingley bill also sanctioned the negotiation of reciprocity treaties providing for a five-year abatement of tariff duties equal to 20 per cent. of the regular tariff rates. The treaties so negotiated are subject to Congressional approval before going into effect. This was theoretically a direct breach with reciprocity of the strictly orthodox type; but the fate of the treaties negotiated by Mr. Kasson seems to substantiate the contention of this work that this last kind of reciprocity is purely of the buncombe order. The earlier type harmonized strictly with the protective creed, and went immediately into effect. The Dingley measure professes to give a broader scope to reciprocal engagements, but subjects such engagements to an indefinite delay. One promised little and did something; the other seems to promise much and does but little.

The Protean character of reciprocity is well analyzed in this volume. The estimate to be placed upon reciprocity as a fiscal policy must vary accordingly. For, first of all, reciprocity may mean a fair offer of mutual tariff concessions to all the world. This, in the diplomacy of trade, is the Retort Courteous. Or, reciprocity may take the shape of an offer of mutual tariff concessions to be reached by special bargains with each separate nation. This is the Quip Modest. Or, again, reciprocity may be so narrowed in its scope as to apply only to such imports as do not compete with home products. This response to an invitation to freer commerce is called "tropical reciprocity" or the Reply Churlish. Or, once again, reciprocity may be concluded with but a single country in a spirit of selfish exclusiveness so as to deprive all the world beside of a valued privilege. Thus, when for years Hawaii alone could lay down her sugar in this country duty free, the other sugar growers of the world, despite their solicitations, experienced from us what they must have taken for the Reproof Valiant. When, finally, reciprocity turns into a frown, and becomes a covert threat of tariff retaliation unless the foreigner makes certain specified concessions, we reach the Countercheck Quarrelsome of the McKinley tariff, from which the Lie Circumstantial of excluded commerce, and the recoil of the Lie Direct in the shape of heavy tariff burdens on

the home consumer, are not far distant. To such a type of reciprocity as that first outlined, the free trader can but be a friend; to such as that last described the fair protectionist may well be a foe.

Owing to treaty obligations, reciprocity at its best means generally a hampering of the fiscal machinery and a weakened control over revenue. It constantly involves the danger of setting duties abnormally high in order to seem to make considerable abatements when reciprocity is once concluded with other nations. It often means a loss in revenue, as in the case of Hawaiian sugar prior to 1894, without any gain whatever to the consumer in the matter of price. Moreover, it is but seldom that a great industrial nation like the United States can, by reciprocal arrangements, ensconce itself in a coign of vantage analogous to that occupied by the Hawaiian sugar grower. His exceptional profit was due to the fact that he could produce only a fraction of the supply, and could market it under conditions giving him an exceptional profit. The most usual gains derivable from reciprocity are attenuated copies of those obtainable with fewer delays and difficulties from tariff reform.

The unfavorable criticisms to be passed on the book before us are two in number. It assumes a tone of non-judicial censoriousness whenever the motives of Congress are mentioned; and it affords too scanty evidence of perhaps its most important generalization, to wit, the effectiveness of threatened reprisals as a means of securing tariff concessions. A perusal of the volume will substantiate the former criticism abundantly, and makes an unfavorable contrast to the severe impartiality of Taussig's tariff history. On page 426 it is stated that "the result of duties levied by a free-trade country in the way already described [*i. e.*, by threatened reprisals to provoke counter-concessions] almost uniformly leads to the enforcement of similar duties in return, and a tariff war results." It is not at all impossible that this may be the case. But, if so, it is transcendently important that every available scrap of evidence be cited in proof, for evidently this point is the crux of the whole contention between free trade and fair trade. This assemblage of evidence is neglected, and the proposition consequently carries only the force of an *ipse dixit*.

The book is written in a uniform, matter-of-fact style which does not readily allow one to guess at the respective shares of the two authors. The appendixes are full and valuable, and include in one hundred and forty pages a complete bibliography, the text of important reciprocity treaties, recent revenue acts, as well as pertinent commercial statistics. A misleading error on page 472 gives 1891 instead of 1894 as the date when certain reciprocity treaties were terminated. It is to be regretted that the charts of variations in exports and imports, etc., are not more clear. The diagrams are well devised to impair the eyesight.

BOOKS ON MUSIC AND MUSICIANS.

Hugo Wolf. Von Michael Haberlandt. Leipzig: Lauterbach & Kuhn.

Schumann. By Annie W. Patterson. London: J. M. Dent & Co.; New York: E. P. Dutton & Co. 1903.

Forty Songs by Johannes Brahms. Edited by James Huneker. Oliver Ditson Co.

Technique of Musical Expression. By Albert Gérard-Thiers. New York: Theodore Rebla Publishing Co.

Hugo Wolf wrote about two hundred songs, none of which have as yet become widely known in this country. Nor is this strange, even if his biographer be right in maintaining that he was the greatest of modern lyric composers and second only to Schubert, for his works did not begin to be made public in Austria and Germany until about ten years ago, and a decade is only a minute in the life of such exalted works as these are claimed to be. Is not Robert Franz only just beginning to be appreciated at his full value, sixty years after his first volume of songs was printed? So Wolf's day may come, even if he is not, as Herr Haberlandt implies, superior to Schumann, Liszt, Franz, Jensen, Grieg, MacDowell, and all the others who have followed in Schubert's footsteps. That he was a composer of unusual originality is certain, and it is the æsthetic duty of our concert singers to make their audiences familiar with his best songs without further delay. It must be admitted that he was himself largely responsible for the tardy appreciation of his art, for, like Franz, he was so unwise and unmodern as to object to his personality being made a topic for journalistic paragraphers. "When I shall have ceased to compose," he once said, "no one need bother about me any more." It is well that his friend paid no attention to this semi-mandate; his short story of Hugo Wolf's sad life will help to call to his works the attention they deserve. It was Haberlandt who first suggested the formation of the Hugo Wolf Societies which were founded in Berlin and Vienna in 1896-97. To these Wolf did not object, as they were to be concerned not with himself, but with his works; and it is to these that we owe the publication of three volumes of collected articles on his songs and his opera "Der Corregidor," which is to be produced in Vienna the coming winter, after having been successfully performed at Graz and in several German cities.

Like three other eminent composers—Donizetti, Schumann, and Smetana—Hugo Wolf passed the last years of his life in a lunatic asylum, to which, one cannot help thinking after reading his biography, his own folly brought him. Haberlandt notes with satisfaction that his hero did not share the belief that long, unkempt hair and slouchy, spotted apparel are necessary concomitants of genius; it would have been well if he could have added that Wolf had also emancipated himself from the idea that men of genius need pay no attention to the laws of health. That he often took insufficient food was his misfortune rather than his fault; there was no sale for his works, and for some years he had to eke out a livelihood by writing criticisms for one of the minor Viennese newspapers; but for his neglect of sleep and other necessaries of health there was no excuse. While he was absorbed in a task, he allowed himself no time for rest or meals, and it was the strain on his vitality caused by his frenzied work on a new opera ("Manuel Venegas"), in midsummer, without a pause, that led to his breakdown. He had invited his friends to meet him and hear him play what he had written of this score, and what happened at this hearing was so gruesome that our author draws a veil over it.

Wolf's abnormal emotionalism made him the easier victim of overwork. "I have not the courage," he once wrote to a friend, "to compose an opera, because I am afraid of the many ideas necessary. Ideas, dear friend, are terrible. I feel it. My cheeks glow from excitement like molten iron, and this condition of inspiration is to me an enchanting torture, not a pure joy." When in such a state he would slam the door in the face of his best friend who happened to call inopportunely; but a few hours later, when the song was finished, he would run over to the same friend and, with tears in his eyes, play and hum it to him. He seemed to look on a new song as a child does on a present it has just received, and expressed his delight over it with sublime naïveté. In the letter cited he says: "I have just finished a new song—a song for the gods, I assure you—divine and wonderful! *Bei Gott!* It will soon be all over with me—I am growing more clever from day to day. Where will this end? It makes me shudder to think." On February 24, 1888, he writes: "Another new song! My dear, when you hear that, the devil will take you for joy." On the next day: "I am furiously busy. To-day two new songs came to me, one of which is so strangely gruesome that it frightens me. Such a thing has never been. God have mercy on those who hear it." A month later: "'Erstes Liebeslied eines Mädchens' is by far the best thing I have done so far. Compared with it, all that went before is child's play." The next day: "I take back what I said yesterday about 'Erstes Liebeslied eines Mädchens,' for what I have written to-day—'Fussreise'—is a million times better still. When you have heard this song, you can have but one more wish—to die." It should, perhaps, be borne in mind that this enthusiasm over his songs was not pure egotism. Much of it, no doubt, was caused by his almost frantic love of the poems he set to music. From his boyhood he was a greedy devourer of poetry. A volume of poems was always in his pocket, and he never lost an opportunity to read his favorites to his family and his friends. It is of such material that great song writers are made. Let us give him a trial.

It is a strange thing that up to date there is not in the English language a satisfactory biography of either Beethoven or Schumann. Beethoven will receive his dues when Thayer's life of him is printed in the original English version, which has been vainly expected for some years. Pending that event, the reader who knows English only must turn to Grove's masterful article on Beethoven in his 'Dictionary of Music and Musicians.' It is in that work also that by far the best treatise in our language on Schumann is to be found. No doubt the reason why no exhaustive monograph on Schumann has yet appeared (in any language) is that the most valuable source of information has been hitherto withheld from publicity. This source is the diary of his wife, in forty-seven quarto volumes. Their main contents have been incorporated in the first volume of Litzmann's 'Clara Schumann,'

which, however, extends only to 1840, the year of her marriage to the great composer. Until his second volume, covering the sixteen years of her married life, is issued, no one can undertake the definitive life of Robert Schumann.

Annie Patterson, who attaches to her name the "Mus. Doc. B.A." of the Royal University of Ireland, has not made use of Litzmann's first volume, which would have enabled her to add some vivid touches to her account of Schumann's early life, especially the period of courtship. She has, however, made free use of those of his letters which were printed in two volumes a few years ago, and she duly emphasizes the fact that Schumann was almost as interesting from a literary as from a musical point of view. Her book will doubtless be read with interest, and may be commended as a first introduction to the subject; but it is far from being a model of what a short monograph should be. That there are no new facts or points of view in it is not surprising, for Schumann has been dead nearly half a century; but much better use might have been made of the available biographic material, while of critical discrimination there is little. Of the painful but undeniable fact pointed out by Hans von Bülow, that Schumann began as a genius and ended as a talent, her readers are left in blissful ignorance; she even indicates 1849 as the year when his creative powers reached their zenith! She also makes one smile by her repeated eager efforts to prove that Mendelssohn was not biassed against Schumann's music, followed by long paragraphs trying to explain this very bias. As for Schumann himself, he, unfortunately, was not biassed against Mendelssohn. His efforts to imitate that smooth but shallow composer formally, led to what Bülow aptly called his "partial artistic suicide"—a theme on which Weingartner has discoursed eloquently in his treatise 'Die Symphonie nach Beethoven.'

Schumann's last critical act was to point out Brahms as the musical Messiah (versus Wagner). In the treatise just referred to Weingartner dwells on the great assistance thus given to the launching of Brahms, and how Brahms, by taking Schumann seriously, injured himself as a composer. It would also seem as if he had, by way of showing his gratitude, chosen the empty songs of Schumann's talent-period as models for his own. However, there are undoubtedly some inspired *Lieder* among the 196 he wrote, and undoubtedly also the best forty of them have been incorporated by Mr. Huneker in his Brahms volume cited above. It has a lucid four-page preface, in which the life of Brahms is briefly told and his merits are duly emphasized. Such a volume has long been a desideratum, for the Brahms songs are at present popular, one might almost say fashionable. The publishers have given it all the advantages bestowed on previous issues of "The Musicians' Library"—good paper and binding, clear type, and excellent translations.

Mr. Gérard-Thiers holds that it is in the power of every talented student to become a true artist. He believes that temperament is not such a mysterious and inexplicable thing as it is commonly supposed to be, but that it has its laws—its technique—which can be taught; and in his treatise of 108 pages (mostly taken up with musical illustrations) he endeavors to show what the technique of expression is. He claims that the theory advanced is original with him, but we have not been able to find anything not previously brought forward by Christiani, Riemann, Lussy, Schulz, Kullak, and other writers on this subject—indeed, we are not sure but that a student of music might learn nearly as much by perusing the two columns Riemann devotes to the word *Ausdruck* in his 'Musik-Lexicon' (fifth edition) as by reading this volume, which may still be cordially welcomed. It is always a pleasure to note a teacher who pays attention to something besides the mechanical aspect of his art. The arrangement of the matter seems confused, but the individual points are well made, sometimes graphically, and no student can read this book without benefit. The examples are usually well chosen; but why continue to ascribe "Adieu" (Ex. 29) to Schubert, when Nottebohm proved long ago that it was written by Weyrauch? And why spell Gluck's name Glück? Why not Wägner or Schümänn? On page 28 Mozart's "Dove sono" is printed "Dore sono," both in the heading and in the text.

Submarine Navigation, Past and Present. By Alan H. Burgoyne, F.R.G.S. London: Grant Richards; New York: E. P. Dutton & Co. 2 vols., pp. xiv., 341; xii, 363. 1903.

That man will eventually achieve the conquest of the waters under the earth, and that he will be able to go and come and stay therein, practically at will, cannot be doubted if the pertinacity of past ages and the undiminishing enthusiasm of the present century may be appealed to as proof that the more difficult a problem, the more certain and complete the ultimate solution. This, or a kindred reflection, arises in the mind as we open the handsome volumes of Mr. Burgoyne's 'Submarine Navigation,' in which clear print, marginal headings, copious illustrations, and a fair index combine to attract the reader and to hold his attention. No matter what be his prepossessions as to the subject of the work, he will be grateful, at least, for the first volume, in which the history of the attempts to live and move beneath the surface of the seas is given chronologically, at length, and with commendable wealth of bibliography. It forms in itself so excellent a treatise that it may well be called invaluable. From the psychological standpoint this record is of exceptional interest, presenting as it does a bewildering variety of invention, the trial of many ideas, all ingenious and some fantastic, the gradual winnowing out of the impracticable, the survival of the simple and rational, and a general advance towards the desired goal.

And what is that goal? Undoubtedly, the destruction of an enemy's vessel is the chief and undisguised end sought after by the Bushnells, Fultons, Nordenfeldts, and Hollands of all times, and yet it is not beyond the range of possibility that the submarine vessel may prove a potent factor in the world's industrial progress, and, like gunpowder and nitroglycerine, find a wider field of usefulness in the arts of peace than in the operations of war. As explosives have wrought wonders for mankind in mining, tunnelling, and quarrying, so may boats like Lake's *Argonaut* open up unexplored regions of the ocean's floor, which are vast even within the limits of water shallow enough to permit the diver and the diving craft to work along the bottom. Under the heads of Submarine Wrecking; Recovering Gold from River and Sea-Coast Bottoms; Coral, Pearl, or Sponge Fisheries; Laying Submarine Foundations; Scientific and Pleasure Boats, Part IV. deals with this peaceful phase of submarine navigation in an extremely interesting manner.

Nearly one-half of the second volume is devoted to the Holland boat, the most successful and promising type thus far developed. This chapter, by the way, contains much unnecessary and irrelevant matter which a wise editing would have omitted to advantage. The sections of Part VI. (Theory of the Submarine Boat) which deal with Submersion, Stability, Form, Direction, Habitability, Motive Power, etc., are those to which the student will naturally turn. Some of them are admirable, and all are too short. They touch upon the very crux of the whole matter, and they deserve greater attention at the hands of so well equipped a writer as Mr. Burgoyne. He has given to them all only as many pages as to the subject of Armament and Explosives. In Part VII. Mr. Burgoyne discusses the military value of the submarine in the cheery vein of the optimist, basing his arguments upon the assumption that the submarine will do the very things which inventors have for generations been endeavoring in vain to make it do, and forgetting that he had already written, "No doubt some efficient means of seeing when submerged will be evolved, but it must be confessed that it is this matter that retards the progress of submarine navigation more than anything else."

Nevertheless, the submarine is a fearsome thing, almost justifying Chief Constructor Cuniberti's belief that she need carry no torpedoes, as her appearance alone would suffice "to make an enemy turn tail and fly!" The book ends with a symposium of expressions, favorable and unfavorable, by distinguished writers on military subjects, and by naval officers, chiefly British, which proves the author's sincerity of purpose and greatly increases the value of a very welcome addition to the literature of the naval profession.

James Madison. By Gaillard Hunt. Doubleday, Page & Co. 1903.

Mr. Hunt has accomplished a difficult task remarkably well. Madison left voluminous records of his many public services, but carefully destroyed those covering the most interesting phase of his career, when he was becoming a strong partisan—a step that led to the Presidency, but narrowed and warped his judgment of men and public questions. The member of the Continental Congress and the Constitutional Convention was a very different man from the member of the House of Representatives, the unquestioning follower of Jefferson, and the weak President. His true position was that of a recorder of events; as such, he is the best source extant of Virginia policy during his long and varied career. His minutes of the debates in the Constitutional Convention will always rank as his best work. In action he was timid, and too much under the influence of others and of his own doubts to succeed. The measures most closely connected with his name are those affecting religious freedom in Vir-

ginia, and the Virginia Resolutions of 1798. The one destroyed a prop necessary to the existence of the Virginia aristocracy, and thus contributed to destroy the influence of the State in national affairs; the other was an interesting though somewhat futile declaration of Constitutional interpretation that equally served the purposes of the nullifiers of 1828 and of their opponents. Wide as was Madison's reading on Government, his ideas were often half formed, his arguments too refined, and his suggestions wanting in practicality. His partisanship under the fostering care of Jefferson separated him from those who would have been his natural colleagues, and weakened his undoubted powers for public usefulness. Perhaps he felt this himself, and so destroyed the records of his breach with the Federalists. As Secretary of State he was bound by Jefferson's theory of peace at any cost, and as President he inherited the results of the downfall of that theory, and experienced such failures in actual war as should have ruined his reputation as an administrator.

In most of these aspects of Madison's career Mr. Hunt is not a blind admirer; he admits the errors of judgment and the inability to judge of men, which brought together so weak a Cabinet and permitted so much discord among its members. With a tendency to overestimate Madison's initiative in legislation, Mr. Hunt does not blink or justify his resort to scurrilous journalists or political tactics but little defensible. Overlooking Madison's essay on Neutral Rights, Mr. Hunt gives an interesting extract from a fragment by Madison showing that slavery is incompatible with democracy. Mr. Hunt has also dwelt on the subject of patronage and its abuse under Jefferson, and on nullification in South Carolina, topics well deserving the space given to them. He has studied with care original sources of material, and a high degree of accuracy is maintained throughout the book. *Corbett* for *Cobbett* is the worst of the few errors. It is the best life we have of Madison, and a decided improvement on former biographies.

Italy and the Italians. By Edward Hutton. E. P. Dutton & Co.

This is a volume such as one gladly sees, well printed on good paper, with clear illustrations, all from familiar Alinari photographs. The author loves his Italy and is not devoid of intelligence, so that his pages may be read with pleasure, though one would be slow to call the work successful. There are chapters on United Italy, Il Papa-Re, The House of Savoy, The Socialists and Literature (which for Mr. Hutton means chiefly the writings of Gabriele d'Annunzio); also upon the cities of Italy, upon half-a-dozen topics chosen rather capriciously out of the innumerable phases of Italian life, and an appendix with an itinerary for the hurried tourist, and slight notes on education, the political system, the army and navy. There are a good many clever things said by the way, and there are pages of delicious nonsense, relieved by occasional flashes of real eloquence, or even by passages of common sense. Mr. Hutton's practice, however, is better than his preaching: he "loves a priest, he loves a cowl," and therefore loathes the Sardinian Government in Rome; and yet, by various signs, we divine that this is only in some Pickwickian sense. Then, too, it is after having, through the entire volume, poured scorn and reviling on the tourist, that he shows himself capable of doing good to them he hates and despitefully uses, by furnishing an itinerary—Italy in eleven weeks—for the besotted herd.

In illustration of his manner—his worser, we own—here is a page taken at random. The author is writing of Venice:

"Through her streets rush the penny steamers, like horrible bacilli in the veins of one dying of a dreadful fever. They care nothing for her beauty, and are perhaps unconscious that they are destroying her, being occupied with their own thoughts, their own little life. Within her palaces, innumerable and splendid, the canvases that reflect her ancient beauty and magnificence decay, too, and fade under the glances of the vulgar and foolish tourist. For how long has she asked in vain who will defend Beauty, Beauty distressed now as never before, despised and rejected by the vulgar and barbarous century that has been captured by lust of gold and sensuality and ugliness? I at least have no words to express my contempt, my hatred, and my despair of a world that has destroyed so fair a thing. I hate how bitterly, how ineffectually, these bestial multitudes that, without understanding or knowledge, are trampling Beauty down beneath their million hoofs. Ah, how shall I tell, without an emotion that in a despicable, vile world of mechanics will seem ridiculous, all my loathing, all my horror! O Demos, King of kings, Lord of lords, the only Ruler of princes, thou who hast in thy turn conquered, thou also in thy turn shalt die, despicably die at last, and men shall laugh together and be glad," etc., etc.

We strongly suspect Mr. Hutton of not being yet thirty years old; we trust that the case is not worse than that.

The Flower Beautiful. By Clarence Moores Weed. Boston: Houghton, Mifflin & Co. 1903.

The aim of Mr. Weed's rather pretentious book is to advocate a more general and discriminating use of flowers in the decoration of the house, and especially of the schoolroom, where flowers, even better than pictures, would serve to educate the eye to beauty of form and harmony of color. Several of the articles included have already been published in the *House Beautiful* and in *Art Education*. Our author inveighs against the old-fashioned way of making compact masses of flowers of every kind into the nosegay or bouquet, but in the prevailing enthusiasm for gardening which pervades all classes, flowers receive a great deal of attention and preserve their identity far more than when they were relegated to the choice of the gardener, so that, when gathered, each bloom is appreciated according to its importance.

Mr. Weed acknowledges his indebtedness to Japanese methods in much that he teaches—for instance, simplicity of background for flowers arranged in vases, the form of vases for long-stemmed flowers and branches, the keeping each kind of flower by itself, or grouping at most two different flowers or two colors together, and showing as much as possible the growth of flowers and leaves. He very justly advises the use of flowers and branches from our own woods, fields, and gardens for decoration, rather than buying exotics and forced flowers out of season from shops. In this, also, he conforms to Japanese customs: we are told that in Japan it would be regarded as equally out of place to use summer flowers in winter for decoration as to wear winter clothes in summer.

There are plentiful illustrations of Mr. Weed's floral arrangements, with suggestions as to combinations of color in flowers and vases, and advices as to the different kinds of pottery, Oriental and indigenous, fittest for use. We doubt whether the book will be of any great help, for all matters of decoration depend on individual taste and feeling. It contains much which is obvious, and all that is of use could have been said in one chapter if Mr. Weed had not chosen to repeat himself so frequently and had preferred a less precious manner of expression.

BOOKS OF THE WEEK.

Ainger, A. Crabbe. (English Men of Letters.) Macmillan. 75c.
American Jewish Year Book. 5664. Biographical Sketches of Rabbis and Cantors. Philadelphia: The Jewish Publication Society of America.
Aristotle on Education. Translated by John Burnet. Cambridge (England): The University Press; New York: The Macmillan Co. 60c.

For Immediate Publication

The Laws of Imitation, by the eminent French sociologist Gabriel Tarde, translated by Mrs. Elsie Clewes Parsons, with an introduction by the eminent American sociologist Prof. Franklin H. Giddings, of Columbia. (xxx+404 pp., 8vo, $3.00 net; by mail $3.20.)

Ferns, a manual for the Northeastern States, by C. E. Waters (Ph.D., Johns Hopkins). The 200 illustrations, largely from photographs, are remarkably fine. The book is popular, though scientifically accurate. (362 pp., square 8vo, $2.75 net; by mail $3.09.)

The Regency of Marie de Medicis, 1610-1616. An account of six very interesting years in French history by Arthur Power Lord, with five fine portraits from rare originals. (xi+180 pp., 12mo, $1.75 net; by mail $1.85.)

The Thoughtless Thoughts of Carisabel. Many of these thirty genial satires by Isa Carrington Cabell first appeared in the Baltimore *Sun*, and were widely copied. They cover such matters of universal interest as The New Man, The New Child, Servants, One's Relatives, Should Women Propose, Original Sin, etc. (12mo. $1.25 net; by mail $1.37).

Merry Hearts, by Anne Story Allen, author of that effective story "By the Favor of the Gods," in a recent "Harper's." Shakespeare's "A merry heart goes all the day, your sad tires in a mile-a" suggested the title of this story of two bachelor girls who wrested happiness from unpropitious circumstances. (Uniform with Van Zile's "A Duke and His Double." With frontispiece by Eliot Keen. 220 pp. 16mo. 75 cents.)

NEW AND ENLARGED EDITIONS OF TWO POPULAR BOOKS

The Ways of Yale in the Consulship of Plancus. (8th printing.) By Prof. Henry A. Beers. This new edition contains two stories and several poems not included in the earlier ones. Bound in blue and gold with gilt tops. (x+328 pp. Small 16mo, $1.00 net; by mail $1.06.)

Lavignac's Music and Musicians. (4th printing.) Mr. Krehbiel's new chapter covers Richard Strauss, Humperdinck, Dvorak, Charpentier, Sullivan, Elgar, etc. (518 pp. 12mo. $1.75 net; by mail $1.91.)

Henry Holt & Company, 29 W. 23rd St., New York.

CLARENDON PRESS

The Mediaeval Stage. By E. K. Chambers. 8vo, 2 vols., buckram, $8.50.

Studies in Napoleonic Statesmanship—Germany. By Herbert A. L. Fisher, M.A. 8vo, cloth, $4.15.

Sacred Sites of the Gospels. With Illustrations, Maps and Plans, by W. Sanday, D.D., LL.D., Litt.D., with the assistance of Paul Waterhouse, M.A., F.R.I.B.A. 8vo, cloth, $4.50.

Mathematical Crystallography. and the Theory of Groups of Movements. By Harold Hilton, M.A. 8vo, cloth, $4.75.

The Educational Systems of Great Britain and Ireland. By Graham Balfour, M.A. Second Edition. 8vo, cloth, $2.50.

Aeschylus. Persae. With Introduction and Notes by A. Sidgwick, M.A. Extra fcap. 8vo, cloth, 75 cents.

Aeschylus. Septem Contra Thebas. With introduction and Notes by A. Sidgwick, M.A. Extra fcap. 8vo, cloth, 75 cents.

Recent and Forthcoming Publications

THE WORKS AND LETTERS OF
Charles and Mary Lamb

Edited by E. V. Lucas. 7 volumes, 8vo. Very Fully Illustrated. Each, net, $2.25.

NOW READY:

Vol. I. **Miscellaneous Prose.** Vol. V. **Poems and Plays.**

IN PREPARATION:

Vol. II. **Essays of Elia and Last Essays of Elia.** Vol. IV. **Dramatic Specimens.**
Vol. III. **Books for Children.** Vols. VI. and VII. **The Letters.**

To be followed by

CHARLES LAMB AND HIS FRIENDS. 2 vols.

"We congratulate Mr. Lucas on this crown to his enduring work, and equally congratulate all lovers of Lamb on the possession of the seven volumes, which promise to form, if not the ideal edition of Lamb, at least the best which is likely to be produced for very many years—it may well be forever."—*The Spectator.*

"What seems likely to be henceforth the standard edition of the 'Works of Charles and Mary Lamb' is at last in sight. Mr. Lucas has spared no pains to make himself perfect for the task. He has also the true critical and editorial spirit."—*The London Morning Post.*

LITTLE FRENCH MASTERPIECES

Edited by Alexander Jessup. Translations by George Burnham Ives. With portraits in photogravure. Issued in a small and attractive form, cloth, flexible; and also in limp leather.
6 volumes. 16mo. Cloth, each, $1.00. Limp leather, each, $1.25.

I.—PROSPER MÉRIMÉE
II.—GUSTAVE FLAUBERT
III.—THÉOPHILE GAUTIER
IV.—ALPHONSE DAUDET
V.—GUY DE MAUPASSANT
VI.—HONORÉ DE BALZAC

By Katharine M. Abbott

OLD PATHS AND LEGENDS OF NEW ENGLAND

Saunterings over Historic Roads, with Glimpses of Picturesque Fields and Old Homesteads, in Massachusetts, Rhode Island, and New Hampshire.
8vo. With 186 illustrations and a Route Map. $3.50 net.

By Julian Klaczko

ROME AND THE RENAISSANCE:

THE PONTIFICATE OF JULIUS II.

Translated by John Dennie, author of "Rome of To-day and Yesday," etc.
8vo. With 52 full-page illustrations. Net, $3.50. (Postage, 25 cts.)

By Prof. Heinrich Wolfflin

THE ART OF THE ITALIAN RENAISSANCE

A Handbook for the Use of Students, Travellers, and Readers.
8vo. With over 100 illustrations. Net, $2.25.

By Elizabeth W. Champney

ROMANCE OF THE BOURBON CHÂTEAUX

8vo. With colored frontispiece, 7 photogravures, and 40 half-tone illustrations. Net, $3.00. (By mail, $3.25.)

By Elie Metchnikoff

THE NATURE OF MAN

Studies in Optimistic Philosophy. 8vo.

By Gabriel Hanotaux

CONTEMPORARY FRANCE

Charles Tarver, M.A. Four volumes. Each complete in itself and sold separately. With portraits. Each, net, $3.75.
Vol I.—France in 1870-1873. The Franco-Prussian War and the Close of the Second Empire. Vol. II.—1874-1878. *Ready shortly.*

By Leslie Stephen

AN AGNOSTIC'S APOLOGY

AND OTHER ESSAYS

New Edition. 8vo, net, $2.50.

By James Albert Woodburn

I. THE AMERICAN REPUBLIC AND ITS GOVERNMENT

II. POLITICAL PARTIES AND PARTY PROBLEMS IN THE UNITED STATES

Two volumes. 8vo. Each complete in itself and indexed. Sold separately. Each, net, $2.00. (Postage 20 cts.)

"A sounder or more useful commentary has never before seen the light. Even Mr. Bryce's 'American Commonwealth' must be deemed less fruitful—not a single page should be overlooked."—*N. Y. Sun.*

The Story of a Book

In Three Chapters

*Chapter 2. How the Book Is Made

ALL young people should have a dictionary at their elbow; and while you are about it, get the best—get Webster." So said a school journal many years ago, and the G. & C. Merriam Company took the phrase as their motto. "Get the Best"—this for the public. "Make the Best"—this for themselves.

Successful business rests on two principles: make a good article, and let the world know it. In their work the Merriams have emphasized quality even more than publicity. Starting sixty years ago with the great fabric Noah Webster had reared, they spent years in refashioning it for popular needs before publishing, and the Webster's International Dictionary of to-day is the result of a long series of revisions. Spending freely for advertising, they have in the last quarter century spent a much larger sum for improvements, in re-editing and recasting. Some leading member of the firm has always had the editorial work as his specialty, and between publishers and editors there has been thorough harmony and co-operation.

The constant aim has been to make the best possible one-volume dictionary, for the use of the man on the street, the cultivated reader, the teacher, and pupil, the scholar and expert, the mechanic, the foreign student, the whole reading public. The basal principle has been to employ the amplest stores of scholarship so as to best serve the average consulter. The qualities kept in view have been Accuracy, Clearness, Fullness, Convenience, Attractiveness. Any single word in the vocabulary will illustrate these principles. First, the word is easily found—a strict alphabetical order being followed, with ingenious resources of arrangement and type to facilitate the search. Next, note that the word's mere presence in the vocabulary shows that it has a certain standing. There has been no attempt to pile up numbers; neither dead words nor gutter-scrapings have been favored; something of merit and of permanence is implied in each word. Then comes the pronunciation—a respelling which is quickly caught by the ordinary eye and ear; and a use of the phonetic marks which every public school child has learned. Substantially these same marks, beginning with Webster's Speller, and extending into the nation's school books, have been unifying the pronunciation of the whole people for a century.

Next comes the etymology—the parentage of the word in earlier tongues. Into this has gone a world of toil. When Dr. Johnson was questioned as to the source of his etymologies, he answered easily, "Why, sir, here is a shelf with Junius and Skinner and others; and there is a Welch gentleman who will help me with the Welch." But Webster, though at the outset well equipped according to the standard of the time, stopped in his work for years to acquire twenty foreign vocabularies. The next generation saw a great advance in linguistic science, and the fruits of this were harvested by a distinguished German scholar, Dr. Mahn, for the 1864 edition. The later gains in etymology have been inwrought in the International and its Supplement by the eminent Prof. Edward S. Sheldon, of Harvard. As a result, each word's treatment opens with its clear and exact lineage, on which the scholar's eye pauses with fascination.

Then come the definitions in their historical order. Accuracy and lucidity of definition, Webster's special distinction, have been the first aim and constant care of his successors in the work. The searcher for a special meaning finds it easily and to his satisfaction; and, beyond his original quest, his attention is apt to be caught by the curious way in which one meaning has grown out of another, by some bit of interesting fact, by a felicitous quotation or striking picture, and so his eye wanders over the page from one attraction to another. The old story of the man who found the dictionary interesting reading but with a frequent change of subject, had a solid basis. There are few more entertaining volumes for a leisure hour than Webster's International.

The book has been naturally broadened by the addition to its vocabulary of various Tables. One goes to the dictionary for all sorts of words; why not then for proper names, which require not definition, but information? So here in one Appendix are the world's distinguished people of all times, some 10,000; name and its pronunciation, nationality, characteristic, birth and death dates. Here is the Gazetteer with more than 25,000 geographical titles, each line a miracle of condensed information. And here is a Dictionary of Fictitious Persons and Places in Literature, which one should hardly consult when his moments are precious, so strongly do its pages fascinate and detain. These, and various other Tables—foreign proverbs, abbreviations, etc.—too many to be here set down. Taken as a whole, Webster's International is, in the words of President Eliot of Harvard, "a wonderfully compact storehouse of accurate information."

This whole mass of information—vocabulary and appendixes — is constantly brought up to the latest date by an unintermitted process of revision. The results appear partly in occasional Supplements, more rarely in general revisions, and constantly in minute corrections made without announcement. Thus to the vocabulary of the International of 1890 there was added ten years later a Supplement of 25,000 new words and meanings. On the mere number no stress is laid; nothing is easier than to pitchfork words together by the thousand and ten thousand;—technical, obsolete, disreputable, and useless. The real need, the real task, comes in the sifting, the choosing from the huge welter of written and spoken language those words which have an individuality and in some way a real use. The International had made a satisfactory record of the English language until 1890; the addition of 25,000 words, phrases, etc., was a fair representation of the actual growth of the language for a decade in this swift rushing and prolific age. The contributors to this Supplement, besides the office staff, were such specialists as President Remsen of Johns Hopkins University, Justice Brewer of the United States Supreme Court, General Greely of the United States Army, Prof. Chittenden, director of the Sheffield Scientific School, Mr. Dudley Buck, and a score of other eminent experts. At this time the plates of the entire work were newly cast.

Of other improvements, a good instance is the very recent and thorough revision of the Biographical Dictionary and the Gazetteer. These have been worked over line by line and word by word, with reference to spelling and pronunciation, as well as other information. In geography the publications of official boards have been consulted; in hundreds of cases not thus to be settled recourse has been had to Mr. Henry Gannett, chairman of the U. S. Board on Geographic Names; uncounted letters have been written to local authorities. The biographies have not only been amended to include the fresh death dates, but old dates have been corrected, sometimes fifteen centuries back, and many minor points retouched. This revision, the work of able scholars, was, like the Supplement of New Words, supervised by Dr. W. T. Harris, U. S. Commissioner of Education.

As occasions arise, new words and meanings are frequently inserted in the body of the work by costly plate corrections. When *Ohm* and *Volt* were redefined by International Congress and U. S. statute, the new measurements went into the body of the vocabulary; when the *Roentgen ray* was discovered, it was given due place and description; when *Appendicitis* began to plague humanity under its own name, it was duly entered; and so in hundreds of cases.

In its mechanical features, the International, like its predecessors, is a serviceable, durable, and beautiful book. Made at the Riverside Press, by H. O. Houghton & Co., its binding, paper, and typography, all are fully up to the standard set long ago by its manufacturers and publishers.

On the commercial side of their business the G. & G. Merriam Company have found no occasion to resort to premiums, "combines," "great reductions," and the various devices by which wares are foisted on indifferent or reluctant buyers. They have steadily offered good value for a reasonable price, and have found always an ample market. They have made a Subscription Edition of the International, with a Historical Supplement, corresponding in merit and attractiveness to the main work. The regular edition is sold through the bookstores, and it is a great satisfaction to the publishers that their relations with "the trade"—as the bookselling fraternity is for some occult reason entitled—have always been marked by confidence and cordiality.

For some years past, the market has been flooded with large "Webster's Dictionaries" other than the International, generally at a low price and often with extravagant claims as to authenticity and value. All these books have the same basis, the Webster's of 1847, on which the copyright has expired, and which was completely superseded by the "Unabridged" of 1864, and that in turn by the editions of 1879, 1890, and 1900. This now ancient volume of 1847, reprinted by cheap

*Chapter I. of "The Story of a Book" was published in last week's issue.

processes which have faithfully reproduced all the obsolete scholarship, all the discredited etymologies, all the statements falsified by modern discovery, every accidental misprint, every blurred line and broken letter in the original; padded out with supplementary matter, in one or two instances of some real value, in most cases crude and of little worth, and in no case of first-class scholarship; made generally with poor paper, print and binding; sold sometimes under fairly honest descriptions, but frequently under false pretenses of being the authentic, modern, and best Webster,—these books have no standing with scholars, and for the general public they have no recommendation in comparison with the International, except their cheapness.

"The best" is never the cheapest. More exactly, using "cheap" as meaning "low-priced," the best is never the cheapest; while using cheap to signify good value relative to price, the best is generally the cheapest. Webster's International is an expensive book, compared with dictionaries of a lower grade; it is not expensive, compared with other works resembling it in the mental and material toil and cost involved in the construction. "The best" is stamped on every stage of its production; on the original genius and life-long labor of Noah Webster, the succession of eminent scholars who have perfected it; the care which keeps it always abreast of modern knowledge; and the mechanical processes which make a volume unsurpassed in usability, durability, and beauty.

The series of authorized Abridgments, headed by the admirable Webster's Collegiate Dictionary, and ended by the "Pocket," meet the various wants of different classes. But the English-speaking public has been educated by Webster and his successors beyond any other people to the common use of the large one-volume dictionary—a work of some 2400 pages, with 5000 illustrations; a complete interpreter of the English language; a treasury of general information. Not for the scholar and the expert only, but for the merchant, the mechanic, the housewife, the professional man, the average man and woman, "the best" is none too good.

But what impartial and competent authority shall decide among various claimants to superiority which is the best? Next week shall be cited on that question the pronouncements of three tribunals, widely diverse in character, and all of the highest standing.

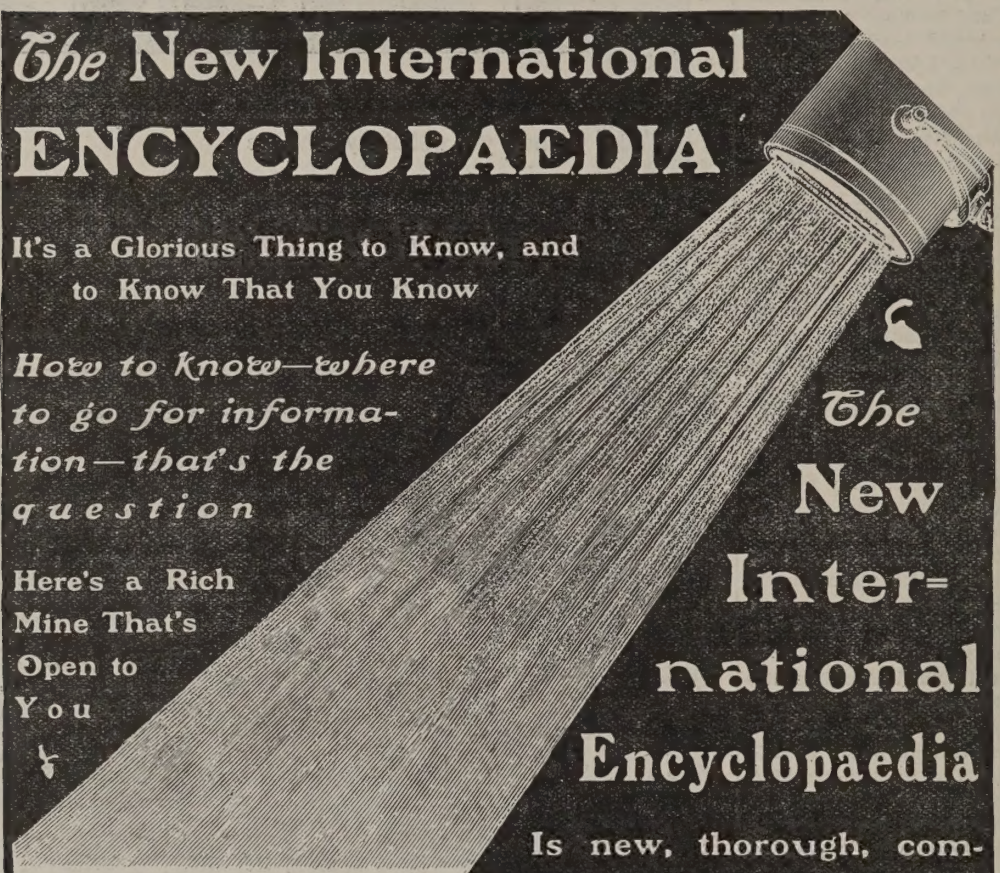
The New International ENCYCLOPAEDIA

It's a Glorious Thing to Know, and to Know That You Know

How to Know—where to go for information—that's the question

Here's a Rich Mine That's Open to You



The New International Encyclopaedia

Is new, thorough, comprehensive—superior to all other works of similar nature. That's a very positive statement, but the facts justify it

Under the searchlight opposite, incontrovertible evidence is shown

The NEW INTERNATIONAL ENCYCLOPAEDIA

Includes 65,000 titles—over 100,000 subjects. 30,000 more than are covered by any other encyclopaedia.

In other words, The New International Encyclopaedia answers fully fifty per cent. more questions than any other encyclopaedia.

It contains 100 full page colored plates—over 7,000 other excellent illustrations. Comprises 17 large volumes—over 16,000 pages.

It's wholly new—brought down to to-day by the country's ablest specialists and editors.

It has the endorsement of America's leading thinkers, teachers and scholars. And that's what the searchlight shows.

NEW HARPER PUBLICATIONS

1 The Maids of Paradise

The latest romance by Robert W. Chambers, author of "*Cardigan*," etc. The maids of Paradise, an idyllic French village, live in the stirring days of the Franco-Prussian War. Fighting is rife through many of the pages, but the dominant note is love and this is the happiest romance that the author has done. Illustrated, ornamented red cloth, $1.50.

2 Letters Home

By William Dean Howells, author of "*Questionable Shapes*," etc. An exceedingly interesting story told in letters written home by various people in New York. They not only describe New York life from a novel view-point, but unfold to the reader a fascinating story of the American metropolis. Uniform with Mr. Howells' other works. $1.50.

3 Hawthorne and His Circle

An entertaining volume about America's greatest writer of romance, written by his son, Julian Hawthorne. The author's standpoint is personal throughout; he talks of his father in a charming way. Little details of Hawthorne's life are accounted which have not been available to any other biographer. Illustrated with sketches by Mrs Nathaniel Hawthorne, portraits, etc. Crown 8vo, ornamented cloth, uncut edges, gilt top, $2.25 *net* (postage extra).

4 A History of the German Struggle for Liberty

Vol. III. By Poultney Bigelow. This, the third volume of Mr. Bigelow's absorbing recital of the German fight for nationality, tells of what took place between the years of 1815 and 1845. A spirited account, told with calm judgment, but fervor and enthusiasm. Uniform with Vols. I. and II. Illustrated. Gilt tops, etc., $2.25 *net* (postage extra).

5 Portraits from the Sixties

By Justin McCarthy, author of "*A History of Our Own Times*," etc. An entertaining and valuable book of reminiscences. Dickens, Thackeray, Carlyle, Tennyson, Cardinal Newman and a long list of people of note are pictured as Mr. McCarthy himself saw and knew them in daily life. Uniform with Mr. McCarthy's "*Reminiscences*." Crown 8vo, uncut edges, gilt top, $2.00 *net* (postage extra.)

6 A Keystone of Empire

By the author of "*The Martyrdom of an Empress*." This is the story of the life of Emperor Francis Joseph of Austria, told by the biographer of his consort, the late Empress Elizabeth, in "*The Martyrdom of an Empress*." It constitutes a companion volume to the latter, completing it, in fact, and presents the doyen of the Old World monarchs in a singularly fascinating light. Illustrated from private portraits and drawings. Crown 8vo, $2.25 *net* (postage extra).

7 The Dutch Founding of New York

A delightful history by Thomas A Janvier, author of "*In Old New York*," "*The Christmas Kalends of Provence*," etc. It tells of the early days of the Dutch settlements in America—their domestic and commercial life. Copiously illustrated with old photographs, rare prints, maps, plans etc., never before published. Leather back, gilt top, etc., $2.50 *net* (postage extra).

8 America in Literature

By George E. Woodberry, Prof. of Literature at Columbia University. A critical account of the most important periods of American letters, with a trenchant summing up of the work of Emerson, Lowell, Whittier, Hawthorne and the other great names in American letters. Illustrated. Boards. Cloth back, $1.50 *net* (postage extra).

The Heart of Hyacinth 9

A new book by Onoto Watanna, author of "*A Japanese Nightingale*," etc. An exquisite love story of Japan, told with tender sentiment and dainty comedy. Beautifully bound, uniform with "*A Japanese Nightingale*," lavender cloth with gold and colored decorations; pictures in color, and marginal drawings in tint, by Japanese artists on every page. Deckel edges and gilt top. In box, $2.00 *net* (postage extra).

Monna Vanna 10

One of the finest plays by Maurice Maeterlinck, the "Belgian Shakespeare." Translated by Alexis Arénée Du Pont Coleman. The scenes are laid at Pisa, Italy, in the end of the fifteenth century. The chief episode is that of a woman's heroism in offering to sacrifice herself to save Pisa. Art binding, uncut edges, gilt top, $1.20 *net* (postage extra).

The Hunting of the Snark 11

By Lewis Carroll. Illustrated Newell Edition. This volume contains all of Mr. Carroll's poems, including those which appeared in "*Alice in Wonderland*" and "*Through the Looking-Glass*." Uniform with those two volumes. There are 40 illustrations by Peter Newell and decorative borders in tint on every page. Bound in ivory vellum with gold ornamentation. 8vo, deckel edges, gilt top, with over-cover of green and gold. In a box, $3.00 *net* (postage extra).

The Book of Months 12

By E. F. Benson, author of "*Dodo*," "*The Relentless City*." This is the story of the adventures and experiences of a London man about town, each more or less appropriate to the month designated. Full of witty observations and worldly wisdom. Beautifully illustrated with many marginal drawings in color. 8vo, ornamented cloth in green and gold, gilt top, uncut edges, $2.50 *net* (postage extra).

The Suppressed Poems of Tennyson 13

An interesting and valuable volume of the poems of Lord Tennyson not published in his other volumes. There are an Introduction and many annotations of importance to bibliographers. Ornamented cloth, uncut edges, gilt top, $1.25.

The Diversions of a Book-Lover 14

By Adrian H. Joline, author of "*Meditations of an Autograph Collector*," etc. Mr. Joline talks in a kindly and instructive way of books, authors, book collectors, their friends and their foes; he tells of fine bindings and old and curious editions, and enlivens his tale with many anecdotes and stories. Uniform with "*The Meditations of an Autograph Collector*." 8vo, leather back, uncut edges, gilt top, $3.00 *net* (postage extra).

The Making of a Journalist 15

By Julian Ralph, author of "*Our Great West*," etc. This is Julian Ralph's account of his own life as an active journalist, and the recital of his remarkable career is brimming with interest. Illustrated, cloth, uncut edges, gilt top, $1.25 *net* (postage extra).

The Standard of Pronunciation in English 16

By T. R. Lounsbury, LL.D,, L.H.D,, author of "*Studies in Chaucer*," and Professor of English at Yale University. In this volume for the first time is given the history of the pronouncing dictionary. Prof. Lounsbury gives arguments and many examples which show that there never has been nor can be an undisputed standard of pronunciation for our language. Cloth, gilt top, uncut edges, $1.50 *net* (postage extra).

"While the world waits for Morley's Life of Gladstone"

TO BE PUBLISHED **OCTOBER 9,** WITH PORTRAITS

Mr. JOHN MORLEY'S *life of*

William Ewart Gladstone

Three Illustrated Volumes, Cloth, octavo, $10.50 ***net.***

"Whoever follows the annals of England during the memorable years from 1843 to 1894 will meet Gladstone's name on almost every page, will feel how great must have been the force of an intellect that could so interpenetrate the story of its time, and will seek to know something of the dauntless figure that rose always conspicuous above the struggling throng . . . When he departed the light seemed to have died out of the sky." JAMES BRYCE.

Mr. MORLEY'S is undoubtedly the most thorough and important life of Mr. GLADSTONE that will be written. The author is Mr. GLADSTONE'S literary executor and has in his possession all his subject's private papers and documents. He has likewise had at his disposal all desirable public documents, through his recent connection with the English Government, and no other man was so intimately associated with Mr. GLADSTONE in politics and public affairs throughout the whole of his active life.

To a considerable extent the three volumes form a history of England throughout the majority of the great Victorian era; indeed, the sharpest of all the many difficulties of his task, the author says, has been to draw the line between history and biography—between the fortunes of the community and the exploits, thoughts and purposes of the individual who has so marked a share in them.

"Gladstone was a man of such a mould and fibre, and of such a transcendent career, that no one has since arisen to take the place which he unquestionably held at his death—that of 'the world's greatest citizen.'"—New York Evening Post.

Newly Revised
Monsanto & Languellier's Practical Course in Spanish
$1.25
Revised by FREEMAN M. JOSSELYN, Jr., Assistant Professor of Romance Languages in Boston University.

For many years this has been one of the most successful Spanish grammars before the public. It aims to make the basic principles of Spanish grammar familiar to the student by constant practice and repetition in Spanish, and to this end the Spanish examples are made as numerous as possible. The advance in linguistics, and the new rules of accentuation promulgated by the Spanish Academy, have made a revision of the book necessary. The original form of the work has been retained so far as possible, but such grammatical statements as needed change have been recast. The Spanish text is presented in accordance with the latest rules for orthography and accent.

The Story of a Book

In Three Chapters

*Chapter 3. A Triple Verdict

"Get the best"—this to the public; "make the best"—this to themselves, has been the motto of the publishers of Webster's International Dictionary. Their aim has been to make the best popular dictionary in the English language, in respect to accuracy, clearness, fulness, convenience, and usefulness to all classes of consulters. Comparison is not here made with the many-volumed and encyclopedic works, but with those whose size and form adapt them to quick and easy use, the one-volume books which aim to serve all classes from the erudite scholar to the school-child.

Without a word of disparaging comment on other works which claim to rival Webster, let us seek the verdict of some tribunal so high in character and intelligence, so numerous in membership, and so impartial in constitution, as to give a sanction like that of a court of last resort. Three such tribunals will be cited as to the merits of Webster's International Dictionary in comparison with all works of similar aim.

To what authority upon doubtful questions do the American people habitually pay the highest deference? Unquestionably, to the National and State Supreme Courts. They are not only accepted as final arbiters on the vast and vital matters within their immediate sphere, but in great emergencies, like a disputed presidency or a wide-spread labor disturbance, the national impulse turns to these courts as the strongholds of broad intelligence and the highest fairness. Weighty then are their opinions on a subject so peculiarly within their range as text-books of definitions. Language, the medium through which all statutes and precedents are expressed, is the very subject matter with which courts are continually dealing. It is of the first consequence to them to have some standard of appeal as to the meanings and usages of words, which is not only of the first order of intrinsic merit, but is so widely recognized as to command popular approval. Hear then the opinions, first of individuals and then virtually of the entire body of the highest judiciary of the country.

In the United States Supreme Court, Chief Justice Fuller says of the International: "I regard it as of the utmost value in accuracy of definition, and have found it in all respects complete and thorough." Justice Gray: "I always considered Webster's Dictionary as the best in the language in the matter of definitions." Justice Brewer: "From my childhood up, Webster's Dictionary has been my authority. The last, the International Dictionary, is the perfection of dictionaries." Justice Brown, after a life-long experience, has found it "invaluable as a book of easy reference," and believes "it will succeed for many years in maintaining its position as the leading dictionary of the language." Justice Shiras is no less emphatic. Justice Harlan says: "It should be in the library of every American judge, lawyer, preacher, journalist, statesman, and student"; and while it is desirable to have more than one dictionary always at hand, "if only one can be afforded, preference should be given to Webster's International Dictionary." Justice McKenna has "always used the Webster" and finds its old reputation as to completeness and accuracy sustained by the International. Justice White in "daily use" finds the book "of the greatest utility;" and Justice Peckham, praising especially the Supplement of 1900, regards the whole work as constituting "a perfect exposition of the English language as existing at this time."

Turning now to the highest courts of all the States, we find an almost unanimous consensus to the same effect. Thus Chief Justice Knowlton of the Massachusetts Supreme Court says: "For all who want but one dictionary of the English language for general use in any department of study, or in literary or professional work, I regard Webster's International as decidedly the best." And so on through the State Courts, the entire body of judges generally speaking as one. In many instances the statement is explicit that the International is preferred before all others. The most guarded expression is that of the Justices of the New York Court of Appeals, and they speak of the International as "in no respect falling behind its numerous rivals, however remarkable for their extent and accuracy." The opinions of the entire bench of other State Supreme Courts may be briefly sampled. Pennsylvania: "No other single volume is so valuable or so satisfactory." New Hampshire: "The best one-book dictionary of the English language." Arkansas, California, Oregon, and Wisconsin say the same. Kentucky calls it "the most comprehensive and accurate dictionary in existence." Nevada says: "In our library we have many other dictionaries, but all of them put together are not consulted as much as Webster." New Jersey: "For every day use, no English lexicon is at all comparable with Webster's International." Equally emphatic are Delaware, Idaho, Kansas, Michigan, Minnesota, Mississippi, Rhode Island, Tennessee, Vermont, Virginia, and Washington. All these are explicit in affirming the International as *the best* for general use; and this is since the publication of all its would-be rivals. The Florida Justices define its peculiar service to the bench: "Frequently the proper interpretation of an instrument or a statute, before us for review, hinges upon the accurate definition of a word: in all such cases we turn with confidence to Webster's International." Others dwell upon the fund of general information; thus the North Dakota Justices: "No other single book extant contains such stores of rich, varied, and exact knowledge." The Ohio Supreme Court: "The new (1900) edition of Webster's International seems to have reached the acme of perfection in book-making, editorially and mechanically." In brief, the entire body of Judges in the National and State Supreme Courts, with the exception of hardly a dozen individuals (and these recommended no other), have borne testimony to the preëminent merit of the International.

To the question, "What popular dictionary is accepted as of the highest authority and value by the people of the United States,"—could there be any more weighty answer than this almost unanimous testimony of the Supreme Court Judges of the Nation and all the States?

Another tribunal may be cited, which in a different field carries not less authority, and which speaks with one voice. The public school systems of the forty-five States are practically a unit in favor of the International. Every one of their State Superintendents recommends it in the highest terms. In every State Normal school it is the accepted standard. Wherever State funds have been appropriated for the purchase of a large dictionary for the schools, Webster's has been the book. The school books of the country, wherever they are of such character as to require a standard in spelling, pronunciation, and definition, follow the International with hardly an exception.

The highest judiciary and the entire public school system—better indexes of American opinion can hardly be named. It remains to question that broad constituency which the name "International" suggests,—the English-speaking peoples beyond America. It has been said that the judgment of foreigners carries a weight like that of posterity,—owing to its freedom from local or temporary bias. Taking first Great Britain: the popular test shows a sale of the International far beyond that of any other one-volume dictionary, English or American. The official test is given by the fact that the only Governmental departments of Great Britain using any standard of language—the Postal and Telegraphic, both managed entirely by the Government—follow the International. The scholar's test may be best indicated, to take from many tributes the most authoritative and impressive, by the unsolicited words of Dr. Murray, editor of the unfinished many-volumed Oxford Dictionary, and probably the highest individual authority on lexicography in the English-speaking world: "In this its latest form, and with its large Supplement and numerous Appendices, Webster's International Dictionary is a wonderful volume, which well maintains its grounds against all rivals, on its own lines." And again: "The last edition of Webster, the International, is perhaps the best of one-volume dictionaries."

In Canada, the International far outsells all rivals. In Australia it has the field to itself, and with special reason; for this great commonwealth has been explored with the utmost thoroughness as to its wealth of new words and usages, by representatives of Webster on the ground, coöperating with the best local scholarship, and reaping a harvest which the home office has winnowed and inwrought with the main work. In the new American Colonies, in South Africa, in India, in China, in Japan, throughout Continental Europe, and wherever flies the Stars and Stripes or the Union Jack, the International goes as a chief symbol and agent of that language which leads the world's civilization.

"The story of a book"—it has been shown as a story of supreme concentration; Noah Webster devoting a lifetime of genius, learning, and character to one book; the G. & C. Merriam Company giving their whole energy for sixty years to perfecting and spreading the work. It has been a story of the close alliance of Scholarship and Business; the scholar's thirst for perfection wedded to the business man's sense of practical needs. It is a story of growth, the patriot scholar's lonely dream of an "American Dictionary of the English Language," maturing to an "International Dictionary," the accepted authority of a world-encompassing race.

The blue-backed Webster's speller, of which the public have consumed some seventy-five million copies, concluded with a few pungent fables, "The Milkmaid," "The Old Man's Apple Tree and the Rude Boy," etc., and to each fable was appended a moral. To the present Story the Moral may be given in words a little amplified from an old quotation: "All young persons, and all older ones no less, should have a dictionary at their elbow; and while you are about it, get the best—get Webster's International."

*Chapters I. and II. of "The Story of a Book" were published in the issues of September 24 and October 1 respectively.

THE MACMILLAN COMPANY'S NEW BOOKS

For a description of the long-expected, eagerly awaited "Life of Gladstone" *in three 8vo volumes, by JOHN MORLEY, see the front page*

The Best of the Season's Fiction Thus Far:

Mr. QUILLER-COUCH'S *new novel* **Hetty Wesley**

in which this well-known author combines with all the fire and dash of his "The Roll-Call of the Reef" the insight of his "The Ship of Stars," etc. The book tells with almost startling realism the true story of the unhappy brilliant sister of John and Charles Wesley. *Cloth, $1.50*

Miss CAROLINE BROWN'S *novel* **On the We-a Trail**

is a strong story of love and war in the days when the famous Indian war trail was an important factor in the struggle for control of the forts on the Wabash in the days when the present State of Indiana was still "the great wilderness." *Cloth, $1.50*

Mr. CUTCLIFFE HYNE'S *latest novel* **McTodd**

has for its central figure the old Scotch Engineer who so ably aided in Captain Kettle's many adventures. Such critics as Professor HARRY THURSTON PECK find in him a "mellowness" that makes them like this even "better than any of the author's other books, with which every novel reader is familiar." *Cloth, $1.50*

Mr. RICHARD L. MAKIN'S *new novel* **The Beaten Path**

is a dramatic story of industrial life, as it touches such people as all of us know, yet is never commonplace. It shows everyday human life vivified and made full of meaning. *Cloth, $1.50*

Miss BEULAH M. DIX'S *new novel*

Blount of Breckenhow

by the author of "Christopher Ferringham," tells the story of a brave man's love for a novel woman, such as it is good to see in any place or time. Here it is taken from the family papers of the English Rowlestones of the Seventeenth century. *Cloth, $1.50*

Mr. NIMMO CHRISTIE'S

The Black Chanter

is a series of tales of the Highland Scotch, taking their title from that of Lachlan the piper's revenge, when in place of the stirring, arm-strengthening "Blades of Glenkilvie" he played the wailing "Death Tune." *Cloth, $1.50*

PUBLISHED THIS WEEK

Dr. CURRY'S

The Vocal and Literary Interpretation of the Bible

With an introduction by Dr. FRANCIS G. PEABODY, of the Harvard Divinity School, is of the greatest value to all who have to do with Bible classes.
Cloth $1.50 (postage 13c.).

Mrs. MACHEN'S

The Bible in Browning

with particular reference to "The Ring and the Book," is a discussion at some length of the poet's many-sided indebtedness to the King James' version of the sacred book, both as regard the form and the matter of his thought. *Cloth. Just ready.*

Rev. JAMES DE QUINCEY DONEHOO'S *new work on*

The Apocryphal and Legendary Life of Christ

Being the whole body of the Apocryphal Gospels and other extra canonical literature which pretends to tell of the life and words of Jesus Christ (including much matter which has not before appeared in English) in continuous narrative form, with notes, scriptural references, prolegomena, and indices. *Cloth, 8vo, $2.50 net* (postage 16c.).

Published by **THE MACMILLAN COMPANY** 66 Fifth Avenue New York

The Nation.

NEW YORK, THURSDAY, OCTOBER 8, 1903.

The Week.

President Roosevelt's declaration that Government shops must be "open" is such a staggering blow in the face of the "unionists" that they naturally try to break the force of the shock. Mr. Gompers kindly explains that the President prefers the union shop in private enterprises. With Mr. Roosevelt's personal preferences nobody can quarrel. He has laid down in the clearest terms the only sound principle on which public work can be conducted—absolute disregard of the claims of labor unions, religious societies, or any other such organizations. This principle the American Federation of Labor, of which Mr. Gompers is the head, has bitterly opposed. Encouraged by President Roosevelt's example, governors and mayors may now pluck up heart and assert themselves against unionist encroachments upon the rights of free men; for the test for public employment, whether in the construction of a State canal or the building of a city school, should be nothing but personal capacity. Moreover, whatever Mr. Gompers may say, Mr. Roosevelt is bound by the logic of his own argument to execute, so far as falls within his duty, our laws to protect the open shop. If in 1909 he starts a factory at Oyster Bay and chooses to hire only union labor, nobody should lay a straw across his path, but if his next-door neighbor wants the open shop, that neighbor must enjoy equal liberty. To this proposition Mr. Roosevelt cannot but give hearty assent. As a lover of fair play, he cannot approve the argument by which Mr. Gompers, in the October issue of the *American Federationist*, defends boycotting and intimidation.

The President's flat repudiation of Addicks, in the appointment of a successor to his tool, District Attorney Byrne, is most welcome. He has now selected the man who was so strongly urged upon him a year ago by the bar and judiciary of Delaware, but whom he then, in a rash moment, put aside in favor of an abject truckler to the great Delaware corruptionist. Mr. Roosevelt has learned something since then. He has discovered, what he should have foreseen, that the country considers Addicks the very type and crown of political debauchery, and could only look with astonished indignation upon the association of Theodore Roosevelt with that tainted purchaser of votes. That the President has now seen the error of his ways and has resolutely turned his back upon the man at whom the decent citizens of this country draw the line, is matter for general rejoicing. It will hearten the antagonists of political scoundrelism everywhere, and will, in particular, nerve the honest remnant in Delaware to keep up the fight upon the smirched man who would smirch the State. Addicks's overthrow at the White House followed an impudent visit to the President, in the course of which he was, according to the press dispatches, told some exceedingly plain and wholesome truths. Mr. Roosevelt, indeed, informed the gasman that his call was in "extremely bad taste." After what has happened, we doubt if it is repeated. Now that the President has been stung into exercising his Constitutional prerogative to name appointees to Federal offices, we hope he will not let the function lapse. In other States than Delaware the conditions cry aloud for its application.

Mr. Bryan's belated letter to the *Evening Post* of Friday on negro disfranchisement adds neither wisdom nor courage to the discussion of a momentous issue. All that it proves is, that another Democratic leader is willing to keep the Declaration of Independence purely for export to the Philippines. Mr. Bryan speaks gingerly of "Constitutional guarantees," but has not a word to say of the duty of Congress to resist and correct their open violation. He may possibly learn more boldness from the Massachusetts Democrats, who on Thursday declared in their platform against all attempts to repeal the Fourteenth and Fifteenth Amendments. They perceive clearly the monstrous inconsistency of standing up for the rights of the Filipinos while viewing with mild expressions of disapproval the political wrongs of the negro at home, or deferring the whole matter to the arbitrament of time. They are evidently willing to have a difference of opinion about this question within the party ranks, for their action comes on the heels of Senator Carmack's announcement of his determination to begin the battle for the repeal of the Fifteenth Amendment. Their action is an admonition to the Democratic party of the South. It serves notice that in Massachusetts the old ideal of equality in citizenship still holds. It could not be otherwise; the Democrats who wear Grand Army buttons there are too numerous to permit the party to sit by silently and see the greatest achievements of the civil war nullified.

The Massachusetts Republicans have wheeled into line and are marching with the noble army of stand-patters. The tariff, they assert, may need revision some time, but not now. When the dim and far-away day shall at last dawn, the changes must be made by "the friend and defender of protection." This plank is evidently modelled on the familiar advice regarding marriage—a young man not yet, an old man not at all. For the last twenty years the Republicans have been saying "Not yet!" and soon the plea must be that the hour of grace has passed; for the truth is that it is always either too early or too late to mend the tariff. The country is not facing a new problem; it is as old as the history of government.

The Tammany platform partakes visibly of the weakness which marks the beginning of its Mayoralty campaign. If the Hall has never been accused of a literary atmosphere, it has none the less generally seen to it that its resolutions were forcible, of an aggressive tone, and as plausible as its record permitted. Not for years, we believe, have the delegates been called upon to cheer for so lame a document. It was well read by Senator O'Sullivan, but even his art failed to obtain any applause for it when he took his seat. It is a mélange of hopeless contradictions, a promise thrown in here, a denunciation there. It assures the reader that the Low Administration obtained office through "false pretences and dishonest representations." But if these representations, which evidently refer to the police collusion with vice, were untrue and dishonest, why does the Hall find it necessary to pledge itself "to the suppression of criminal protection by the police force, to the absolute uprooting of the evils which exist in the Police Department"? Such a pandering to decency is not to be found in Tammany's platform of 1901. Then it was willing to enter the campaign with a studied silence upon what was the leading topic of the hour, while its orators denied the existence of any abuses. Two years of starvation have had their effect; Tammany sick is willing to take a leaf out of the reform book which it so viciously denounces.

Most of the platform's mendacities are so easily answered as to increase the wonder that Mr. Murphy turned his back upon all the clever men in Tammany. Magistrate Hogan's experience does not bear out the statement that complaints against the police receive "but superficial investigation." He would have been glad, indeed, to escape the ordeal of backing up his allegations before a Deputy Commissioner, and so would other citizens who have made sweeping charges, and then

tried to withdraw or shirk responsibility for them. The falsehood that 80,000 children are in vain clamoring for admittance to our schools was refuted before it was uttered, and reads amusingly beside the excuses for the unfinished schools and scanty sittings in the Tammany platform of 1901. But for the strike, the Hall would have been deprived of the slight truth there is in its present declaration, and of this Tammany is quite aware. Similarly the platform forgot to mention, in attacking Dr. Woodbury for his alleged extravagance in cleaning the streets, that the money he received has come to him largely through the votes of Democratic Aldermen, with whom the Commissioner has been a prime favorite. As for the rest, there is abuse and faultfinding without end, but the specifications of the wrongdoings asserted are left to the reader's imagination. Mr. Crain had prepared two columns of them for the Convention's delectation, but even he thought it best to leave this part of his speech unspoken. All in all, there was little in Thursday's Convention to suggest the powerful organization which once executed without a murmur the dictates of a Croker.

We can barely hint at the moral density which Comptroller Grout displays. Having tricked the Fusion Conference into nominating him, he now asserts an indefeasible right to a nomination which he obtained under false pretences. His first threat that, if "pressed too hard," he would not run for office at all but return to the practice of his profession, he now seems to have modified. In its present form it reads that he will run for office by means of practising his profession. Did ever a candidate start out to elect himself with such an array of writs and court orders? Mr. Grout proposes to enjoin and mandamus everybody in sight. If the thing goes on, every voter will be haled to court and required to show cause why he should not mark his ballot for Mr. Grout. The prospect is indefinitely extensive. After he is beaten at the polls, the Comptroller can apply for a writ of *quo warranto* to serve upon his successor. He may even try to distrain the man from office. And is there not also a remedy in replevin? We may be sure that Mr. Grout will leave untried no legal resource to compel the unhappy citizens of New York to vote for a man they despise. Well, this may be magnificent practice of the profession, but it is incredibly stupid politics. If nothing else makes Mr. Grout pause in his career of folly, Murphy will soon order him to leave off his nonsense. The Tammany leader will not wish to see developed such a mania for beating Grout that thousands of Tammany ballots will be invalidated by ruthless scratching of the candidate for the Comptrollership—just as votes were lost to the Wigwam in 1901 by the widespread eagerness to scratch Van Wyck.

No one longer pretends to believe that a currency reform measure will be enacted at the forthcoming special session of Congress. Indeed, the Washington oracles now say that no serious move in this direction will be made even at the regular session. It looks, indeed, as if the whole matter would be allowed to drop, partly on account of the attitude of Speaker-to-be Cannon, and partly through the usual fear of doing anything at all on the eve of "Presidential year." It is even stated that if the President alludes to currency reform at all in his annual message it will be in a most perfunctory manner. A great change has taken place since two months ago, when the country was given to understand not only that a currency measure had been practically agreed upon, but that its passage at the extra session would be easily effected — in other words, we might consider the thing as good as done. Two questions arise: First, was there ever any genuine expectation on the part of those who were so confidently predicting the passage of a currency reform measure, or was all their talk merely part of a propaganda, or for effect upon Wall Street; and, second, is it at all to be wished that such a measure should be rushed through the extra session, or be discussed in the manner that is always apt to characterize Congress when a Presidential election is impending?

A good deal of encouragement as regards the general financial situation may be extracted from the annual report of the Treasurer of the United States for the fiscal year ended June 30, 1903. The developments in Wall Street since September, 1902, and particularly since the early summer of 1903, have unmistakably depressed the spirits of those actively participating in the material affairs of the nation. The overcapitalization of industry, the over-extension of credit, the senseless inflation of stock-market quotations, and the extraordinary rise in commodity prices which characterized the last few years, failed for a long time to excite widespread concern; but recently these phenomena have begun to take hold upon the fears of the community. Is the country in danger of entering another period similar to that witnessed between 1893 and 1897? The affirmative view is not generally expressed in print, yet it must be said that the events of the last few days have concentrated the public mind very directly upon that possibility. But the Treasurer's report is calculated to allay such a fear. As a mere matter of detail, he states that the increase of the money in circulation during the year was $121,740,532, of which $59,776,462 was in gold and gold certificates, and $54,520,193 in national bank notes. The share of money for each person increased 89 cents, and the proportion of gold to the whole rose to 42 per cent., the highest ratio ever recorded.

Now, this showing differentiates the present financial situation very sharply from that which existed about 1893. When a leading financier said a year or two ago that there could never be another great financial panic in the United States, he was talking wildly; but it is perhaps safe to assert that a feature which in the past has contributed powerfully to the intensity and prolongation of financial revulsions, has been permanently removed. The peculiar gravity of the 1893 crash, for instance, resided in the fact that the over-extension of individual credit was complicated with an even more fundamental vice—namely, the impairment of public credit. It was because the currency system of the nation was thoroughly unsound that such a period as 1893 to 1897 was possible. The Sherman law of 1890 had the effect that was foreseen by every trained mind. Gresham's law operated with rapidity, gold was hoarded, the Government's receipts of the metal fell practically to the vanishing-point. In his present report, the Treasurer states that "of the receipts from customs at the port of New York, constituting 67 per cent. of the whole, 88 per cent. was in gold"—a complete reversal of the situation which existed prior to the 1893 disturbance. The great difficulty experienced by the Government in keeping intact its $100,000,000 gold reserve against the greenbacks is a matter of history. To-day the public credit is at its maximum.

High livers and modest lovers of *Delicatessen* will regard the new activities of the Department of Agriculture with something between gratification and dismay. Recent confiscations of adulterated food and drink from abroad have included Frankfurter sausages, on account of suspicious preservatives; Sauterne, for an excess of sulphur; Rhine wines, for salicylic acid; olive oil, for admixture of cheaper oils; jellies and jams, for coal-tar coloring and flavoring extracts. All this is calculated to abridge the pleasures of life by casting a doubt on all manner of good things, from Château bottlings to the translucent conserves of Bar-le-Duc. There is a complication, too, in the fact that the new food inspection may be condemning right American products—the golden cottonseed oil of the South and the generous white wines of the Pacific Coast. Weak-kneed hankerers after the European fleshpots will possibly aver that it was a case where ignorance is bliss. Salicylic acid, if unperceived, does not mar the bouquet of

a "Schloss" vintage, nor cotton-oil impair a mayonnaise—except for epicures. But the Department of Agriculture will properly turn a deaf ear to the pleading of these "bad Americans," and will continue its useful work of keeping unwholesome food products out and making the rest conform to their labels.

The convention of fish and game commissioners which has been in session at Boston to consider means for the protection of the lobster has agreed on three recommendations, and these will doubtless soon come up for discussion in the legislatures of all the Northern Coast States. The commissioners favor the restriction of lobster-catching to fishermen having permits from the State, the general adoption of the Maine law, which prohibits the sale of lobster meat except in the shell, and the enactment of uniform laws as to the length of lobsters which may be kept. The resolution on this last point would have carried more weight if the commissioners had been able to agree as to what is the proper length. There was much discussion on the plan for compulsory construction of a special lobster pot which would catch only those between eight and eleven inches long. It is putting a severe strain on poor human nature to expect the fisherman deliberately to throw away good edible lobsters which he already has in hand. If the new pot will do the sorting for him in the depths of the sea, morality as well as ichthyology will be the gainer. It is a still more direct way out of the difficulty to adopt the Canadian plan of a close season—another suggestion considered by the convention. All this discussion will doubtless do good, but it hardly touches one of the most important points—the attitude of the officers charged with enforcing the laws. The rural game warden who may be lenient with his friends is nevertheless inflexible in his attitude toward the stranger. But this sort of enforcement will not do at all in the lobster fisheries. The "dude sportsman" does not catch lobsters. All the lobstermen are apt to be friends and neighbors of the wardens.

Mr. Balfour's reorganized Cabinet is condemned as soon as composed. He retains the unpopular Lord Lansdowne in the Foreign Office, transfers the incompetent Mr. Brodrick from the War to the India Office, replacing him by young Mr. Arnold-Forster; gives to the experimental Mr. Austen Chamberlain the Chancellorship of the Exchequer, and finally tries young Mr. Alfred Lyttelton, an M.P. of seven years' standing, in the Colonial Office—a portfolio which Lord Cromer and Lord Milner had declined to take. It is certainly the youngest Ministry that has ever ruled England, and possibly the weakest. The imperturbable *Times* recalls that Disraeli once said that England must be saved by her young men. The anxious Tory *Standard* takes no such cheerful view, but asks how Mr. Balfour can possibly face Parliament with so impossible a Government. Mr. Balfour, indeed, has only one reason for not resigning himself—to give a little time for the Chamberlain protectionist leaven to work before the general elections. We have possibly a case of decease deferred, pending litigation, in favor of the residuary legatee.

It needed only the Duke of Devonshire's resignation to give the farce of the reorganized Ministry a tragic tinge. This veteran Liberal-Unionist has supported Mr. Balfour beyond the point of political consistency, and almost of self-respect, in the hope that the Premier would finally renounce Mr. Chamberlain and his works. Now, nettled at certain flippant expressions in the Sheffield speech, the Duke resigns, and Mr. Balfour, in accepting the resignation, is betrayed into unhappy and uncharacteristic expressions of personal resentment. As to the insinuation that the Duke has been at pains to pick a quarrel, the Unionist leader in the Lords has brought that upon himself by not going out with Mr. Ritchie. The wonder is, in short, not that the Duke of Devonshire has repudiated Mr. Balfour, but that he did not do so long ago. As it is, the Prime Minister loses the most imposing figure in his Cabinet, and the most influential of his indispensable allies, the Liberal-Unionists. From now on, it is only a question of deciding when to publish the death notice of the Government; for dead it is, to all political intents and purposes. Mr. Balfour has virtually passed from the stage, and the actors in the new drama are Mr. Chamberlain preaching protection, and the Liberals and Free-Trade Unionists opposing him.

For solemn nonsense the renewed Austro-Russian demands upon the Porte have rarely been equalled. Last February these two Powers jointly required Turkey to appoint an independent Inspector-General over the vilayets of Kossovo, Monastir, and Salonika; to reorganize the gendarmerie under European officers, and with suitable representation of native Christians; finally, to reform the worst abuses of the Ottoman system of tax-gathering. Within a day these demands were "accepted" by Turkey—in the sense that, as the two Powers now sapiently express it, "the representatives of the Sublime Porte interested with their application [the reforms] have been generally wanting in the necessary zeal, and have not been imbued with the idea which inspired these measures." In less diplomatic language, the new Inspector-General has not been the agent of the Powers, but the promoter of massacre; the "foreign specialists" who were to discipline the gendarmerie—a handful of Swedish officers virtually prisoners and in danger of their lives—were recently discovered by the English correspondents at Monastir; instead of tax reform there has been wholesale burning and pillage. And now Austria and Russia, expressing mild disapproval of the past, merely suggest that the Sultan should do better in the future. What the Macedonians think of this plea in their behalf may easily be imagined.

Very inconsiderately, the Japanese are to send troops to Korea just before the Russian evacuation of Mantchuria, which is set for to-day. Obviously, this significant step is taken as a check to the Russian demands for privileges on the Korean side of the Yalu. It is a sharp reminder that Japan means to assert and maintain her preponderancy in the peninsula. We can but note also that this almost aggressive action falls at a time when Japan and Russia are in negotiation about all frontier matters. Clearly, the Japanese are unwilling to commit themselves unreservedly to any "truce of the Bear." No immediate result is likely to follow the landing of the Japanese regiments, but the event is pretty certain to constitute an "obstacle" to the approaching evacuation of Mantchuria. Providentially, other obstacles are ready at need; the Chinese court has refused to accede to the supplementary conditions of withdrawal. Thus it seems unlikely that October 8 will make any excessive demand upon the transportation facilities of the Trans-Siberian and Port Arthur railways.

Within a few days of his resumption of the Hungarian Prime Ministry, Count Hedervary has been again outvoted in Parliament, and resigns. Details are lacking, but it seems likely that his overthrow is due to the extreme irritation produced among the Magyar Nationalists by the Emperor's recent army order. Finding that Francis Joseph was unalterably opposed to admitting the Hungarian language or extending Magyar influence in the army of the Dual Empire, the Nationalists had no choice but to continue the campaign of obstruction against the Emperor's man, Count Hedervary, who had already been much discredited by the detection of bribery among his followers. Count Hedervary was transferred from the Governorship of Croatia to Budapest in the character of a "strong man." His strength has been ignominiously deficient before the impossible situation which confronted him. Speculation as to the future of Hungary would be preposterous; but, since the Emperor has given up his rôle of conciliator between Magyars and Germans, it has become vastly more difficult to settle the racial deadlock in any parliamentary or constitutional way.

A MAN'S A MAN FOR A' THAT.

President Roosevelt's vigorous reaffirmation of the principle that this Government cannot discriminate among its employees on account of creed, color, birthplace, occupation, or social condition, comes like a gust of fresh air into the sultry and fetid atmosphere of our labor troubles. This clear-cut statement is, in view of all the circumstances, one of the most important of President Roosevelt's utterances. There has never been a moment when plain speaking on the labor-union question was more needed. There is no man whose voice will carry so far as the President's.

Our walking delegates have reached the summit of insolence. For some years the country has floated on the high tide of prosperity. For capitalists the movement culminated about two years ago in an orgy of promoting and stock-watering. The country saw speculators make millions—on paper—overnight; and everybody rushed for his share of the pickings. The workmen demanded higher wages, and generally received them. When their demands were not granted they struck, generally with success. The great anthracite coal strike of last year was the most significant event of the labor campaign, for the miners won many of their contentions, and won them largely through the intervention of the President. Flushed with this victory, and confident that they had the sympathy of President Roosevelt and others in authority, the labor unions have been proceeding as if wages could be raised 10 per cent. every three months till the end of time. But the tide of prosperity is indubitably ebbing. Wall Street is aware of the turn, for it has seen the paper profits, the magical wealth, of two years ago wiped out, as it was created, in a few hours. Shrewd financiers frankly admit that this country must face a period of falling prices. With falling prices a lowering of the general rate of wages is as certain as the flow of water down hill. Here and there local causes may for a while obstruct the current, but in the course of time wages will obey the law of gravitation and reach their level.

Of this fact our labor leaders seem not yet aware. They imagine—as Wall Street imagined two years ago—that the upward trend can continue forever; they have clean forgotten the lessons of the past; they talk in the language of high finance about "breaking all precedents," about "a new era" in the industrial and economic world. Their error is natural; they are no wiser than our new school of stock-jobbers was a few months since; but their mistake is no less fatal because it is due to ignorance rather than malice. The results are no less appalling. New York has suffered from countless strikes, and in particular from unionism run wild in the building trades. Agitators have preached with such fervor the gospel that the union can do no wrong that Sam Parks, convicted blackmailer, holds his leadership by a majority vote, and boasts of raising a fund of half a million to wage industrial war in New York. The conditions here are matched in other trades in Chicago, Pittsburgh, and every large centre. The walking delegate is infallible and omnipotent.

The worst feature of the situation is the assumption of the divine right of labor unions. To be a member is to be above the unwritten code of society, the Constitution, and the fundamental principles of justice. A manufacturer who dares to open his shop on equal terms to all honest and skilled workmen must expect to have his buildings destroyed, himself and his family assaulted, and his business boycotted into bankruptcy. The man who accepts a place in an open shop knows that his wife and children may be stoned, his house blown up with dynamite, and his own throat cut. Outrages have gone so far that in Chicago last week a national association of employers was formed to protect the interests of independent workmen. The union have played upon the cowardice of politicians to secure State aid for their schemes of exclusion. Sometimes by law and sometimes by threats at the ballot-box, they have practically barred non-union laborers from public employment in most parts of the country. They saw no reason why a Government Printing-Office foreman who obeyed the law of the land rather than the regulations of the labor unions should not be summarily dismissed. They knew the President to be a friend of labor, and they supposed that with a national election in sight a sufficient show of force would awe him into acquiesence.

But they left out of their reckoning Theodore Roosevelt's love of fair play, his instinctive desire to give every man a square deal. As a result, they have drawn from him the most stinging rebuke that organized labor has ever received from a President of the United States. His deliverance is admirable in manner and in matter—incisive, absolutely unequivocal, and sound to the core. He gave the delegation of laborers a full hearing, which was all they could ask; his decision is:

> "In the employment and dismissal of men in the Government service, I can no more recognize the fact that a man does or does not belong to a union, as being for or against him, than I can recognize the fact that he is a Protestant or Catholic, a Jew or a Gentile, as being for or against him."

The question of Miller's personal fitness is entirely apart, and is to be settled by itself. So far as the impudent request of the union is concerned, the President rests on the impregnable doctrine of the Declaration of Independence — civic equality.

The President has done the country a great service; for to this position, sooner or later, we must all return. We must perceive and admit that before the law the capitalist, the unionist, and the non-union man are exactly the same. The fall in wages, which has already begun, doubtless marks the beginning of a long and hard struggle. The cut in the price of pig iron means lower wages in that industry, and so on through the whole list. The workman must accept the inevitable there just as the capitalist has had to stomach the drop in stocks. His failure to grasp the economic law will hurt him quite as much as it will hurt his employer. And his failure to grasp the principle which the President enunciates will be equally disastrous. In New York the unions may by a sort of political terrorism succeed in keeping non-union men from building the schools and constructing other public works, but when the unions have secured general acceptance of their theory they will have overturned that foundation stone of human equality, regardless of rank or power, which has made America the Land of Promise for all toilers.

CALLING EVIL GOOD.

It is just a week since the alarmed Tammany leaders called upon Independent Democrats not to commit themselves to the Fusion nominees until they had seen the Tammany platform and ticket. This was in line with the talk so persistently kept up about a mysterious regeneration of the corrupt old organization. Well, we have now seen the promised revelation of Tammany purity and wisdom, and the more closely we look at it the most clearly do we perceive that it is a transparent humbug. Indeed, the common complaint among even those wavering Democrats who might have supported a first-class Tammany nomination on a taking platform is that the management of Tammany never looked more unscrupulous and at the same time more fatuous than at present.

It may, in fact, be truthfully said that Tammany shows signs of being *in extremis*. We do not mean alone its evident apprehension lest, being but "scantily fed with the offal of plunder," it may be "driven out of sight and left to perish obscurely, like rats, in holes and corners." What we refer to mainly is the progressive degradation of Tammany. Both intellectually and morally, it never stood on a lower level than today. Even in the years when its rottenness seemed most in evidence it had men who could speak—like Cockran and Col. Fellows. At present its chief spokesman is one whose only eloquence is insult, and whose habits are so notorious that Boss McLaughlin was not hitting below the belt when he referred to this orator as having been cautiously taken out of "a sanitarium" to address Thursday's Convention. As for skill or

plausibility in constructing an appeal to the people, they seem to have departed from Tammany along with its last shreds of respectability. Only consider how reputable men have been driven away from its contamination. Time was when leading members of the bar and business men of standing had place and prominence in Tammany counsels. To-day there are none such—at least, not openly. The association is too damning.

From such a body as Tammany is to-day, out of which the better elements have been driven in sheer repulsion and disgust, how could we expect anything different from what we have got? We see in that organization, desperately striving as it is to cover its nakedness with a few rags of Democratic "regularity," almost the exact realization of Burke's description of the way in which "the more active and stirring part" of a city's semi-criminal class schemes to get government into its hands, and to make plunder of the municipal resources, distributed so as to build up a gang of obedient followers. From such men nothing good can come. Standing face to face with the leading plotters of Tammany Hall to-day, known as they are in all their low cunning and consuming hunger for spoil, it becomes the citizenship of New York to adopt as its watchword that other famous and piercing utterance of Burke: "There is no safety for honest men but by believing all possible evil of evil men."

Now we say that all the attempts to disguise Tammany's real nature and wicked purposes are simply an example of calling evil good. The woe which the Scriptures invoke upon those who do this hangs over the head of every paid apologist, or interested defender, of Tammany Hall in this municipal contest. Mischief is threatened to the city, in the security and decency of life, as well as in property and good name; and the first duty is to clear our minds of the notion that we may look upon a civic enemy with tolerance, with amusement even, worst of all with indifference. The questions at issue are rather moral than political; and the power of moral discrimination is the one most important for voters to exercise in this contest.

For honest men, calling themselves Democrats, to be caught by the specious plea that the coming election is only a struggle between parties, is too pitiful. Facts and figures abundantly show that the State and national Democracy has a fairer prospect when Tammany is prostrate; but, even if it were not so, how could men go home and look their wives and children in the face if ready to thrust this great city back into the Tammany slough for the sake merely of party advantage? To send licensed vice stalking again through the streets—that is to rehabilitate the Democratic party! To neglect and oppress the poor; to allow public plunderers to flaunt their stolen wealth in the eyes of the public; to permit filth and needless squalor; to make the lot of children and women bitter; to cause outraged virtue to hide itself for safety, and to make it appear that the pander, the gambler, and the criminal have come to their own again—that is the way to elect a Democratic President!

BALFOUR AND CHAMBERLAIN.

Mr. Balfour's Sheffield speech is not in the least likely to straighten out the problem of British fiscal change. It possesses all the dialectic and linguistic skill for which the Premier has long been noted; but it is paradoxical; it contradicts Mr. Chamberlain; it signally fails to outline any working scheme of preferential trade; its allusions to the United States are not happy; it is historically weak and philosophically and economically crude. In short, it is a purely *doctrinaire* production, and not a good one at that. The Premier apparently finds himself in somewhat the same situation that certain eminent Democratic leaders occupied in 1896, when Mr. Bryan foisted his sixteen-to-one heresy on the party. He may be given credit for more sincerity than they possessed; but his present course has every appearance of an uncongenial effort to find arguments for a policy which has been unexpectedly thrust upon him. Mr. Balfour to-day continues to avow himself a free-trader, and the presumption is that until very recently that term meant to him what it has always meant to the average mind. Mr. Chamberlain has now forced him to hold it with reservations; but when his statements regarding these are read carefully, it will be perceived that he has taken refuge very largely in paradox.

His contradiction of Mr. Chamberlain is explicit. In his recent contribution to the *Daily Telegraph*, the late Colonial Secretary said: "It is intended to give preference to the colonies whose chief exports are articles of food. It will, therefore, be necessary to put a duty on food." Mr. Balfour, however, says that "though he believed that the evils of the taxation of food had been exaggerated beyond what reason and logic justified, still he thought that public opinion was not yet ripe for the taxation of food. Therefore, as an adviser of a great party, he was bound to tell them plainly that it was outside the limits of practical politics." This is categorical, though Mr. Balfour puts his objection to the impost on the specific ground of political inexpediency. He says nothing regarding the economic aspect of the proposal, differing radically in this respect from Mr. Chamberlain, who adopts a high economic tone, and boldly declares that the producer pays the tax.

Mr. Chamberlain's fixed plan of minimizing the revolutionary character of his fiscal programme is continued in his latest outgiving. The pamphlet, "Mr. Chamberlain's Proposals," by C. A. Vince, explains that there is to be no increase in food taxes; on the contrary, a rearrangement which will result in an actual decrease. The $65,000,000 now raised by duties on tea, cocoa, sugar, and other foods will in the future be raised from foreign meat and grain. The consumer is to gain as much on tea, sugar, and possibly tobacco, as he pays on bread. The plan reminds one a little of Marie Antoinette's cake alternative for the Parisian bread rioters. Mr. Chamberlain, proposing a two-shilling tax on foreign wheat, virtually says to the English workingman: "If you don't like the dear loaf, why, drink tea and cocoa, eat sugar, and smoke tobacco." We doubt if this clever shuffle of the cards will fool the British voter. Then there is a budgetary aspect to Mr. Chamberlain's reduced programme. Mr. Balfour has said that it is all the same if revenue greatly exceeds expenditure, British financiers for two generations to the contrary notwithstanding; but the new Chancellor of the Exchequer, Mr. Austen Chamberlain, must needs have some concern in seeing that revenue shall meet expenditure. Were young Mr. Chamberlain likely to direct the treasury for a long period, he would certainly look with anxiety at the paternal contempt of the steadiest and most firmly established customs taxes. What a two-shilling grain tax, waived in favor of the colonies, will bring in, is matter of sheerest conjecture; but Mr. Joseph Chamberlain crosses bridges only as he comes to them, and the immediate perilous pass is to get a majority of votes for the protectionist policy. To this end his campaign is very astutely shaped.

It is highly interesting to note the number and the nature of the special interests which he invites to enlist under his banner. In the United States, we know, there is no difficulty in pointing out the different industries whose representatives write our tariff schedules whenever a new tariff act is framed. In Great Britain, on the contrary, industries have so long been accustomed to standing on their own feet, and have so long eschewed seeking their profits through the operations of the revenue laws, that Mr. Chamberlain's protective nucleus had to be formed largely from a grouping of nationalities and social classes, instead of manufacturers. Irish Nationalists, for example, are to receive in return for their support of protection a Roman Catholic university at Dublin, built and supported at the cost of the British taxpayer. The opposition which this establishment is expected to create in Ulster necessitates a further sop to the Orangemen, whose colleges in Belfast and Londonderry are

to receive from the state additional endowments. The laboring classes are to be brought into the protective fold by receiving titular recognition in the Cabinet. A Ministry of Labor is to figure hereafter beside the Foreign Office and Board of Trade. The Minister of Labor will be charged with ascertaining the conditions under which British imports are produced. Finally, Mr. Chamberlain has gone out of his way to take the side of the keepers of public-houses, in their contention that they have a sort of vested interest in their liquor licenses. The publicans are now expected, of course, to become deeply concerned about the Empire, and to vote as one man for Chamberlain and protection.

Whatever the success of Mr. Chamberlain's little tariff job, it is not unfair to predict that future generations will rise up and exclaim at the Promethean audacity of the man in trying to create out of whole cloth an empire the like of which history has never seen. Cobden never posed as a philosophic historian, but he had grasped a truth which Mr. Chamberlain has yet to learn, when he said to his countrymen: "Empires have arisen unbidden by us; others have departed despite our utmost efforts to preserve them. All have undergone a change so complete that, were the writers who only a century ago lauded the then existing state of the balance of Europe to reappear, they would be startled to find in the present relations of the Continent no vestige of that perfect adjustment which had been purchased at the price of so much blood."

QUESTIONING COLLEGE STUDENTS.

College students are probably the most interrogated class in the community—not excluding the dwellers in the slums. Grave men question them on every topic. What is the state of their spelling? How do they write their mother tongue? What books do they read? What courses have benefited them? Have athletics marred their scholarship? These are some of the more pertinent inquiries that must make American student life seem one long census-taking. "Gaudeamus igitur," one must presume, is sung only in the intervals of severe introspection. And the more practical questions are not the whole of it. Dialect experts wish to know if our students say pail or bucket, and doubtless they are occasionally polled on antivivisection and the Macedonian atrocities. The docile college students who answer any and all inquiries must end in a deplorable state of neurasthenia.

For it must be doubted if their tender minds grasp the desirability of standing up and being counted. It probably gives them imperfect satisfaction to have President Thwing, in the *North American Review*, prove for the twentieth time that their business prospects are excellent. Most of them are experimenting in college life generally; many are body and soul in sports; a silent minority is studying—to all of them business prospects are as remote as the gold at the rainbow's end. Even Mr. A. Lawrence Lowell, when he writes in the *Atlantic Monthly* that "high-stand" men have the best chance of distinction in after life, that baseball players and oarsmen are simply like their average college mates in scholarship, while football players are distinctly inferior on this count—tells nothing that most college men have not learned by painful experience. It was generally understood that the vigor of football training in most cases suspends all intellectual processes so long as it lasts; and the football players, who have concededly only a twentieth chance to get into 'Who's Who,' doubtless comfort each other with the reflection that their fame is already won and that graduation at worst is honorable retirement. In any case, we are certain that the market for college statistics is not in the college.

The accuracy of some college statistics is somewhat open to doubt. For such useful studies as Mr. Lowell's, ordinary printed sources suffice; but frequently the college student is taken at a disadvantage in his examination papers, and on direct questioning he is usually evasive or facetious. Only four out of fifty sophomores would tell whether they said pail or bucket, and a fifth wrote that, being well brought up, he said receptacle. The ironical spirit is evident in the year-books which successive class secretaries compile. What would the New Zealander say of the present state of academic taste in America, should he base his monograph on favorite books, pursuits, types of beauty, etc., as set down by our last year's seniors? A college in which there was only a pitiful handful of Democrats periodically paraded in force for Mr. Bryan at the height of the free silver agitation. "It helped out," the leaders of the undergraduate Republican machine used to explain. In view of a certain amiable jocularity of the undergraduate, all serious answers to the numerous *questionnaires* must come from a very small class. Sometimes we have suspected that there is just one student in every college who has established a prescriptive right to speak for the community. It is he who examines his own case in the night watches and decides whether fine arts or philosophy more advanced him toward intellectual mastery, whether coeducation is advisable or not, whether the curriculum should be of two, three, or four years' duration. Clearly, it is this responsive undergraduate who, once arrived at eminence, reports individually for all his committee and is the "prominent citizen" of his generation of interviewers.

Yet of all the questioning and answering it must be said that it gives an innocent pleasure to the interrogator and does no possible harm to the college student. In this respect it recalls the much discussed science of "child study" and the more infantile forms of experimental psychology. You cannot easily make a prig of the average undergraduate. And whatever peril may exist on that score is assumed vicariously by the limited class of responders to whom we have alluded. Finally, these rather inconclusive inquiries as to the intellectual status of our students have this to be said of them—they are read with almost pathetic interest. Not in colleges, of course, but by the host of mothers and fathers who have a boy in training for college life. Naturally, these anxious parents read, as they would the latest historical novel, descriptions of college luxury and statistics from the football-stricken field. So long as editors feel this quite legitimate demand, we shall have the college boy served up in all the literary and arithmetical styles. These articles will serve their useful purpose, and the tribe of subfreshmen will undoubtedly continue to increase. Whether a census of students, by students, and for students would not bring out vastly different results it is needless to inquire. We have not yet come to a point where college life is taken solemnly enough to make such a census possible.

TEACHERS AND CHOLERA IN THE PHILIPPINES.—I.

TANJAY, March 6, 1903.

An outbreak of cholera is at best and in any country a serious matter, as Hamburg learned not many years ago. It is a much more serious matter in any Eastern country, and especially so in the Philippines at this time. We have realized to the full the truth of the old saying that war, pestilence, and famine come together. In the course of the war it was inevitable that entire villages should be wiped out, vast tracts of land laid waste, and thousands of people driven from their homes. Close upon the suffering thus caused came the rinderpest, by which probably 90 per cent. of the carabaos and cattle were destroyed. The seriousness of such a loss can hardly be overestimated or even appreciated. With the loss of the carabaos, it became practically impossible to manage the great sugar haciendas and, even worse, to plant rice or corn. Then the pest atacked the hogs and even the chickens. In most of the provinces the horses have been carried off by surra and other epidemics. Families formerly rich have been reduced to poverty, and the suffering among the poor (who number 95 per cent. of the inhabitants of the islands) has been intense. In many parts of the islands there has been for a long time, and still is, actual famine. Then came the cholera, which is now disappearing; but the famine still continues. The Insular Government has done and is doing all in its power to relieve the distress, and

has accomplished much, but its task is an enormous one.

This time, also, as in the tremendous outbreak of 1882, the cholera has raged throughout the entire East. I have seen it reported that more than 500,000 have died in China; 100,000 have died in the Philippines. In Borneo it has been even worse. Japan, the Straits Settlements, India, and even Egypt have been attacked, and the end is not yet. Just where the cholera first broke out, we don't know. It is notoriously endemic in India and China, and it was from Hong Kong that the port of Manila was infected. Vessels from Hong Kong had long been quarantined in Manila, but somehow a cargo of infected fruit and vegetables got into the city, with the inevitable result. This was in March, 1902. Through the untiring efforts of the Board of Health of Manila, headed by Col. Maus of the United States army, the disease was long confined to Manila alone. At last, however, as had been foreseen from the outset, it began to spread, and, to the best of my knowledge, not an island has escaped.

Early in May Dr. Atkinson sent out circulars to all the American teachers, requesting their aid in combating the plague. The request met with a hearty response, and a very large number of the teachers have acted as health officers in their respective towns, maintaining coast guards, cleaning the towns, and trying in general in every way to impress upon the people the imperative need of putting and keeping their houses and themselves in good sanitary condition. The task was no light one. The first drawback was our own ignorance and inexperience. But the main obstacles were the abject poverty, the unconquerable disinclination to work of any sort, the absolute ignorance, the apathy, and fatalism of the people themselves. In many instances to this list may be added the general incompetency of the average Filipino official, or his unwillingness to further the efforts of an American civilian, or his hostility to any enterprise from which he cannot hope to gain all the glory, as well as something of a more material and tangible nature.

If I remember aright, Cebu was the first of the southern islands to be attacked, and as soon as we of Oriental Negros heard that the cholera was so near us we redoubled our precautions. A coast guard was organized along the entire coast, to prevent the landing of any boats from Cebu. This was kept up night and day for two months, or until cholera broke out in Negros. It was a rather difficult thing to manage, for one can place absolutely no dependence upon a Filipino in such a position. But what with frequent inspection at all hours of the night, the service was made fairly efficient. While we don't know just how much good was done by having this guard, we do know that a great many boats from Cebu were turned back, and we also know that our province was the last to be attacked.

While we were thus guarding the coast, the sanitary work in the towns was pushed as fast as possible. In order that you may understand what this work was, I will describe the location and condition of the town where I am stationed. I am free to confess that it is the worst town, from a sanitary standpoint, that I have seen in the islands. I am not describing its present condition, but simply the state it was in before the present Board of Health commenced their labors. Situated amid vast swamps, intersected by arms of the sea by which large parts of the town are daily flooded, a mile and a half from the coast, with every available foot of land planted with cocoanut trees or covered by thickets of *nipa* and bamboo, which cut off completely the ocean breezes, a worse location for a town could hardly be imagined. A thickly swarming population of Filipinos and Filipino hogs completes the picture.

Hogs form a conspicuous element in any Filipino town. Very few people have fences about their premises, and no one ever thinks of fencing in his hogs. They are ubiquitous. Most towns have no system of sewerage or street cleaning, and the hogs serve the same purpose as the turkey-buzzards in Cuba. They are universal scavengers. I said a minute ago that the hogs are ubiquitous. This is literally true. In the houses, under them, in the streets—everywhere one meets the gaunt, shaggy, long-maned nuisances. (They look much more like the wild boars of the mountains than like domestic hogs.) Naturally our attention was early directed to them.

The ordinary native hut and the kitchens of nearly all houses are floored with narrow strips of bamboo, fastened down with withes, a very convenient method of making a floor, for the cracks are nearly as wide as the boards. Through the floor is poured all the water used for cleaning purposes in the kitchen. Soon a mud puddle is formed, and here the pigs delight to congregate. In the course of time a steaming, reeking mass of muddy filth is formed, in which the pigs can delve and wallow to their hearts' content. After finishing this performance they roam through the town, consuming a little garbage, but scattering infinitely more, and disseminating odors scarcely pleasant.

Stringent measures were adopted. First, we ordered all pigs to be kept in confinement. Those who could should make suitable pens at a distance from their houses. Those who could not, should fasten their filthy pets by a rope around one foot, and, failing this, go out of the pig business. Some people evaded the regulations for a time by keeping their pigs in the kitchen, and the discovery of one such instance led to a careful inspection of every kitchen in the town. Those people soon learned better. After disposing of the pigs, the wallows under the houses were cleaned and filled with fresh earth and sand, and the entire space beneath the houses raised, by the same means, above the level of the surrounding ground, in order that no surface water might gather there.

It was all very well to banish pigs from kitchens, from under houses, to make regulations, and fine offenders; but still the pig question was not solved. Finally, the Presidente said: "I will make a proclamation to the effect that all pigs found in the streets or under houses, three days from now, shall be killed." That same night the crier, accompanied by the town band, marched through the streets, and the order had good results. But still the people did not respond so fully as we wished, and, finally, driven to desperation, we took with us a policeman armed with a rifle. Arrived at a house where the pig was enjoying his old privileges, I asked the owner if the pig belonged to him. "No." "Do you know whose it is?" "No." "Very well." "Benito [to the policeman], shoot that pig." The order was at once obeyed, and with tears and lamentations the householder confessed that the pig was his. At once pandemonium reigned in the hitherto quiet *barrio*. There was almost as much noise as in the *gallera* on Sunday. The people who had been tagging after us, at once scattered. On all sides we heard shouts, calls, oaths, shrieks, and commands, intermingled with the squeaks and squeals and grunts and groans of hapless hogs chased and grabbed and held down by the women, while the children fastened ropes about them, and tied them to stumps and trees. Then ensued a scene of varied and remarkable activity. Our orders to sweep up and burn the rubbish lying in such generous profusion all over the ground in all directions, hitherto received with the usual apathy, were carried out promptly, and to the letter. On all sides the piles of rubbish grew as if by magic, and the smoke made it impossible to remain. "Now the microbes are burning," remarked my companion, a Filipino doctor and President of the Municipal Board of Health. Perhaps they were. The pig question was solved.

This, however, was the least of our troubles. We had disposed of the pigs, but must find a substitute, and difficult it was to do so. What we finally decided upon was the following—and be it borne in mind here that measures which would be justly laughed at in the States, seem to these people very elaborate and exacting; that a very simple and perhaps inadequate means may prove much better than an apparently more adequate one, merely because it can be more thoroughly enforced; and, finally, that almost daily inspections were made to see that the people were fulfilling and complying with the instructions and regulations we laid down for them. Wherever necessary, we made the householder dig a good deep pit in a convenient place, and into it throw all waste and garbage from the house. It was kept as wholesome as possible by a liberal use of clean earth and sand. Simple as was this measure, we had the greatest difficulty in enforcing it.

The knottiest problem we had was, in many ways, the public market. Nearly every town has one, and all are constructed on the same plan. They are long, low sheds of bamboo, and are roofed with *nipa*. Usually they have no walls, but are surrounded by the houses and booths of the venders. They are almost always dirty and ill-smelling. The two things which are most in evidence are fish and *tuba*. Everybody drinks tuba—the fermented sap of the cocoa-nut palm—and enormous quantities are sold. It has a rather unpleasant odor. As for the fish—I won't go into details, but the Filipino will buy and eat anything that looks like a fish, or any part of one, and eat it despite *age*, condition, and odor. Large quantities of fruit, cooked rice, etc., are also sold, and the Oriental substitute for chewing tobacco, betel-nut. Bread, cakes, lard, and sometimes meat complete the list of foodstuffs. The markets are always swarming with flies, and dogs and pigs wander about at their own sweet will. I wanted this market burned, but was overruled, and all we could do was to drain and clean it. Most of the furniture (fish

crates, etc.) was burned. All sales of food, betel-nut, and tuba were prohibited. We could do nothing more, and our few orders were constantly transgressed.

A great outcry was made when the sale of food and drinks was prohibited. How could they live without fish? They couldn't; that was plain enough. The poor Filipino eats only fish and corn, and a few bananas. But he could buy the fish direct from the fisherman. There was no reason why it should be carried to the market and handled by dozens of hands which hadn't seen water for weeks, before it was finally sold. But the rice—what could the outsiders do if they couldn't buy cooked rice in the market? The outsiders must look out for that. If the *monteses* wanted to come to town to see the cockfight, they could bring their food with them, or go without. It's safe to say that they did neither; but the tuba—one old man said, "No hay tuba, no hay saguin [bananas], bueno muerto." And that is the way all looked at the matter. Nevertheless, although no tuba was sold in the market, it was sold at private houses all over the town, and no amount of vigilance could prevent it.

It was amusing to see what efforts the people made to get *buyo* (betel-nut). Much of the betel-nut comes from the island of Cebu, separated from Negros by a narrow channel. Since, owing to the coast guard, Cebu boats could not touch the Negros shore, fishermen would go out from both coasts to the middle of the channel, and, while apparently engaged in fishing, the Cebuans would sell their betel-nut to the men from Negros.

So much for the market. I come now to a question which has undoubtedly suggested itself to you ere this, namely, drainage. The town is so low that it can be only imperfectly drained, and the work was so difficult that the people hated to undertake it. No wonder, either, when one considers the tools with which they have to work. They break the earth with a bolo or sharpened stick, and dig it out with a cocoanut shell. We made the owner of every house dig a good ditch all around it, connecting with the main gutters. By means of culverts, the drains and gutters were connected with a few main canals emptying into the rivers below the town—by no means an ideal method, since almost all the water used in the town is taken directly from the river. But we had no other way of meeting the difficulty, and had to content ourselves with putting a guard on the river and making all the people get their water at a point far above the town. The fact that the tide enters the river twice a day, causing the water to rise three feet right in the town, lessened the danger of the water supply getting infected.

By these measures three important purposes were served. First, the general sanitary condition of the town has been greatly improved. (I may note here that although this town is generally full of fever, there has been very little during the past year.) Secondly, the danger of eating infected food was greatly decreased. Thirdly, the swarms of flies within the pueblo were greatly diminished. The importance of this last point cannot be overestimated, as flies are almost the principal agent in disseminating the cholera germs.

THE SECOND EMPIRE AND THE ROMAN QUESTION.

PARIS, September 24, 1903.

The 'Pages in the History of the Second Empire (1854-1866),' from the papers of M. Thouvenel, Minister of Foreign Affairs, edited by his nephew, M. L. Thouvenel, former Secretary of Legation, deserves to be read, and will remain a valuable document for a time which is in one sense near us, but which already appears very distant, so great are the changes which have been accomplished during the last thirty years. A preface has been written for it by M. Albert Vandal, the historian, who has published such interesting chapters on the Directory period, the 18th Brumaire, and the period which witnessed the transformation of the Consulate into the Empire. The order of things created by the treaties of 1815 had already suffered some changes, as, by the creation of the kingdom of Belgium:

"At the beginning of the Second Empire," writes M. Vandal, "there was still a Europe and what may be called a European spirit. The great political and military operation which ended in the taking of Sebastopol was the last classic war conceived after the old formula, and inspired by the ideas of conservation and equilibrium in which the statesmen of the old school thought they found the best guarantee of stability for the Powers and of peace for the nations."

The Czar Nicholas I. had for a long time had a proud preponderating influence in Europe. He pretended to exercise a protectorate over all the orthodox Christians in Turkey. His pretensions gave the new French Empire an occasion for playing a part in Europe, which had recognized it, after the 2d of December, only with frigid reluctance. England, always hostile to Russia, saw her opportunity and formed an alliance with Napoleon III. In the negotiations which preceded the war of the Crimea M. Drouyn de Lhuys, our Minister of Foreign Affairs, had the collaboration of M. Thouvenel, who was what is called the political director of the Foreign Office. M. Thouvenel held the Ministry *ad interim* during the time which Drouyn de Lhuys spent in Vienna. He was afterwards appointed Ambassador to Constantinople, where he had to deal with a very difficult colleague, Lord Stratford de Redcliffe. In 1860, M. Thouvenel was appointed Minister of Foreign Affairs, and he held this portfolio for three years, in a period which is full of interest.

I find, among the inedited documents published by Thouvenel, a curious letter written by the Count (afterwards Duke) de Persigny, French Ambassador in London, to Napoleon III., after the visit made by the Emperor to Queen Victoria.

"Sire, if I could have had any doubts as to the sincerity of the English alliance, they would be thoroughly dissipated. All I hear every day fortifies in my mind the conviction that, since your visit to England, you have become as indispensable to this country as to ours. There are organisms in the human structure without which existence cannot be understood. It is the only comparison which, in my view, suggests this sort of identification of England with our person. It seems as if, without your Majesty, there could be for this country neither prosperity nor security nor any future."

Flattery could no further go, and, as M. Thouvenel says, "When the Duke de la Feuillade, as represented to us by the legend in front of the equestrian statue of Louis XIV. which adorns the Place des Victoires, spoke to the *Grand Roi*, it was probably in analogous terms."

The Crimean war and the Congress of Paris which followed it made Napoleon III. for a time the arbiter of Europe. He was naturally induced to use his influence and to give a new direction to the affairs of Europe. The condition of Italy called all the more for his attention as he had been from childhood a great friend of that country, and found in Cavour, during the negotiations which preceded and which followed the Crimean war, a very able advocate of Italy. M. Thouvenel's chapters on the Italian question are the most important in his work. In October, 1861, the Treaty of Villafranca, confirmed by the peace of Zurich, was only two years old, and seemed already superannuated. That peace had been concluded hastily, after the victory of Solferino. It had given Lombardy to Piedmont, but had left Venetia to Austria. The revolution had continued the work of the war. The King of Naples, Francis II., had retired from Gaeta to Rome. Garibaldi had given Victor Emanuel the kingdom of the two Sicilies. Cavour was dead. Pope Pio Nono remained in Rome under the protection of the French army. The Roman question had become a vexed question, and Napoleon III. was still trying to reconcile the Papacy with the new kingdom of Italy.

Before the death of Count Cavour, a plan for settling this difficult question between France and Italy had been prepared; but the untimely death of the great Piedmontese statesman left the convention without a final signature. We find the text of it in M. Thouvenel's book, and it deserves to be known, as it was the joint work of Napoleon and Cavour. By its terms a treaty was to be concluded directly between France and Italy, without the intervention of the court of Rome. France, after having secured the Pope against foreign intervention, was to withdraw its troops from Rome in a fixed period, which it was opportune to make as short as possible. Italy engaged herself not to attack Rome, and even to hinder by force an attack which might be made from outside against the territory of the Pope. Italy would make no complaint if a Papal army was created, even if it was formed of Catholic foreigners, providing this army should not exceed ten thousand men.

An important change took place when the Marquis de Lavalette was appointed French Ambassador to Rome. He was notoriously anxious to procure as rapid a settlement as possible of the Roman question. Ricasoli, who was Prime Minister of Italy, proposed an arrangement which was the application of Cavour's famous formula, "Libera chiesa in libero Stato"; but the resistance of Pio Nono could not be conquered. Thouvenel wrote to Benedetti on the 26th of November, 1861:

"The Emperor has spoken to me of a combination analogous to that proposed by M. de Cavour, with this difference, however: Italy would recognize the temporal power in its present limits, and the Pope would in his turn recognize the King of Italy. Turin consenting, the Holy See would be informed of it, and a month or two would be left Pio Nono in which to reflect; thereupon, whatever his decision might be, we should leave Rome."

Thouvenel, who was at heart a partisan of Italian unity, adds in his letter, "When

such an idea has taken on a body, it does not die." He gave a diplomatic form to the ideas of the Emperor, and sent his projected treaty to Benedetti. On the 4th of December, 1861, Monsignor Lavigerie (who became afterwards so famous by his work in Algeria), sent from Rome a confidential report to M. Thouvenel. We read in this inedited document:

"The city of Rome and what remains of the Pontifical States enjoy at present profound peace. This calm is probably owing to an army of occupation of twenty thousand men; but the great majority of the population has not the aspect of fear or of subjection. In reality, it is certain that this majority is devoted to the Pope, or attached by interest to the present régime, or at least indifferent. It is not doubtful to me, however, that if the French army left Rome, even if Piedmont was forced to abstain and not to cross the frontiers, the party of action, though numerically the weakest, would upset in twenty-four hours the temporal power of the Holy See."

Monsignor Lavigerie added, what events have confirmed, that, whatever happened, "the French Government ought to be convinced that it will obtain from the Pope no renunciation of a single village which he has lost. The Pope considers this attitude a duty in honor and in conscience, and he will not give in, whatever it may cost him. An arrangement on this point, with a voluntary cession to Piedmont either of the Marches, or Umbria, or the Romagna, is therefore absolutely impossible. The consent of Pio Nono will never be obtained. He will accept materially accomplished facts, but he will not renounce his right."

It seemed to Monsignor Lavigerie difficult to establish the capital of Italy in Rome; but his objections have been controverted by the facts, at least partly.

"Rome," he said, "is an unhealthy, a very unhealthy city, during the summer. It is, besides, badly constructed, and, with the exception of the Corso and the piazza of St. Peter's, it resembles our saddest country towns. I do not speak, of course, of its monuments and churches. Those, with the convents annexed to them, are one difficulty more. There are 300 of them, near each other, in all the quarters. The Italian Government, if it established itself in Rome, would be obliged of necessity to expropriate and demolish them, to give the city air, light, and house-room."

Those predictions have not been fully realized, but a new Rome has been built, with streets and boulevards; some of the famous old villas have been destroyed; but ancient Rome has been respected in all its important features.

The religious question was far superior in importance to the material difficulties of the transfer of the capital to Rome. M. Thouvenel, though very sympathetic towards Italy, incessantly preached moderation to the Italians: "The interior organization, the constitution of the army, the renewal of relations with Prussia and Russia—this is what I would work at before thinking of Venetia and Rome." All the efforts and combinations to obtain a *modus vivendi* between the Pope and the King of Italy remained vain. On the 20th of May, 1862, the Emperor Napoleon addressed to M. Thouvenel a letter on the Roman question, which was published in the official *Moniteur*. He declared himself opposed to the eventual choice of Rome as the capital of the Kingdom of Italy, and expressed his desire to maintain the Pope in possession of the part of his States which the presence of the French flag was protecting. In June, 1862, M. Thouvenel set before Cardinal Antonelli a plan which contained four points: (1) The territorial *status quo*, with European guarantee for the Papal States reduced to the limits of 1862; (2) the transfer of the political debt to the Kingdom of Italy; (3) a civil list assured to the Pope, France engaging herself to contribute annually to it a sum of five millions; (4) political and municipal reforms accepted by the Pope." The enunciation of these four points allows us to measure the space which has been covered in forty years. The Papacy is not likely to find itself confronted by the conditions offered in 1862. They were, however, distinctly refused, and one of the consequences of the refusal was the official recognition of the new Kingdom of Italy by Russia.

A few days later Garibaldi landed in Sicily. Soon afterwards, he was in Calabria. The Piedmontese general Cialdini was sent by the King of Italy against him. "Garibaldi, at Aspromonte, near Reggio, received in his foot an Italian bullet, discharged from the Italian gun of one of the Italian soldiers of the Italian Colonel Pallavicini." This celebrated bullet did not kill Garibaldi, who was, however, dangerously wounded, but, speeding as far as Paris, it mortally wounded M. Thouvenel. His diplomatic structure had fallen to the ground; a rapid succession of events had altered completely the situation in Italy. A ministerial crisis became imminent in France. M. Thouvenel had always tried to negotiate with Italy as well as with the Pope on the basis of the evacuation of Rome by the French troops, after a given time; he had not succeeded; the occupation of Rome by the French troops continued, the Emperor judging that the solution of the Roman problem was not ripe, and M. Thouvenel left the Foreign Office to M. Drouyn de Lhuys. The history of his ministry will be found interesting to all who watched the rise of the new Italian kingdom. As for the Roman question, which was Thouvenel's chief preoccupation, we may say that it has not yet received its definitive solution.

Correspondence.

THE TYPO'S OATH.

To the Editor of The Nation:

Sir: Being a member of the Typographical Union, I have read with peculiar interest the editorial article entitled "The Typo's Oath," which appeared in your journal of the issue of September 17. A clergyman of the Roman Catholic Church, by quoting certain words which purport to be an extract from the typo's "oath," would make it appear that the International Typographical Union is a disloyal and a sacrilegious organization. If the exact terms of the typo's so-called "oath," which really is merely a solemn affirmation, were printed beside the terrible oath which is actually exacted of the postulants of some other orders of men—the Jesuit Society, for example—the "solemn league and covenant" of the printers would appear harmless and unobjectionable, and entirely consistent with the allegiance which the initiate owes and acknowledges to his country and its institutions. You quote Mr. Jerome F. Healy, Secretary of "Big 6," as saying that he knows nothing in the obligations of members of the union which would interfere with their duty to their churches. Neither do I. Presumably Mr. Healy is a Roman Catholic, and presumably he interprets certain quoted words—alleged to be part of the typo's "oath"—in the same way that I, a Protestant do, namely, that no organization (and by the word "organization" the printers mean any ecclesiastical, religious, or social organization, or any fraternal order or society, or any political party, club, or organization) shall be permitted to interfere with the trade regulations or the free exercise of the legitimate functions of the International Typographical Union.

The solemn affirmation which the printer admittedly makes on joining the union only constitutes the union supreme in strictly typographical matters. That is to say, any allegiance which the initiate may now or hereafter owe to any other organization, social, political, or religious, must not be permitted to interfere in any manner with his fidelity to the union in those matters which pertain solely to wages, hours of labor, prevention of unjust discrimination, and the like. In other words, the union is to be supreme in all matters which rightfully belong to it as the regulator of the conditions under which its members are to work. No church, no hierarchy, no secret order, no political party, no organization, secret or otherwise, has the right to undertake to regulate those matters which are the concern of printers alone.

The word "organization," as it appears in an alleged extract from the printer's "oath" or affirmation, cannot embrace organized government, or duly constituted civil authority, or Legislatures, or courts, or State or national Constitutions. Suffice it to say that the framers of the Typographical Union "oath" did not contemplate that the fealty which its members bear to the union was to be superior, in strictly civil matters, to the allegiance which they owe to the United States Constitution and Government. For is it not written in history that there are no more loyal or patriotic citizens than the printers?

Adalbert Beach.

San Francisco, September 25, 1903.

[We have little respect for trade-union interpretation of any language, seeing what degrees of perfidy, lawlessness, persecution, and cruelty unionism is capable of in pursuit of professedly humanitarian ends. It insists upon being let alone to play its own game in its organized capacity, while hounding to poverty and death those who prefer to wear the freeman's badge. It acts, not only as "the regulator of the conditions under which its members are to work," but of those under which non-members may starve, employers may drop out of business, and every citizen fail to command the commonest and most essential service. Is it "the concern of printers alone" that they resort, as freely as any other strikers, to all the known arts of coercion and intimidation? If the militia should have to be called in to suppress them, would Mr. Beach favor expulsion from the union, and from employ-

ment, of patriotic printers wearing the uniform against the mob? Would he take the pledge to a union specifically proscribing enlistment in the militia? We should also like to ask him how any of the organizations he enumerates is likely to array itself against his "trade regulations in the free exercise of the legitimate functions" of his union; above all, "any political party"?—Ed. Nation.]

THE WANDERING JEW.

To the Editor of The Nation:

Sir: In your Paris correspondent's interesting review of Gaston Paris's Essays (September 24) a reference is made to the Arabic legend of the Wandering Jew, "Samiri." Mr. Henry Iliowizi not long since published a volume of Eastern legends under the title of 'The Weird Orient,' in which he gives the full story to which you refer, as "The Doom of Al-Zameri." Can you tell me whether this legend is to be found elsewhere? In Mr. Iliowizi's footnote he cites two references to Al-Zameri in the 20th book of the Koran. Are there any further references that you know of? I presume these references indicate that the legend was current in Mohammed's time.

Very sincerely yours,

Chas. T. Brooks.

1214 North 18th St., Philadelphia, September 28, 1903.

[The legend of as-Sāmirī, the maker of the Golden Calf, is probably Muhammadan, not Jewish. Its earliest appearance is in the Qur'an (xx., 87 ff.), but what was Muhammad's source, or sources, is uncertain. The native commentators suggest that Samiri means Samaritan, a view which is alluring and quite possible, as Muhammad seems to have been capable of any chronological confusion; that the doom of as-Samiri shall be to say to all who meet him, "Touch me not," confirms this. The English translations of the Qur'an by Sale, Rodwell, and Palmer, with their notes, may be consulted for details. So far, however, there is no point of contact with the Wandering Jew. That is afforded by later Muhammadan legend, which makes this as-Samiri, in punishment of his crime, wander eternally through the world, crying as above. For this later legend, reference can be made to Weil's 'Biblische Legenden der Muselmänner' (pp. 169 ff.), and to the 'Jewish Encyclopædia' (iii., 509 f.).—Ed. Nation.]

THE GREEK THEATRE AT BERKELEY.

To the Editor of The Nation:

Sir: The new Greek theatre at the University of California, the gift of the Hon. William R. Hearst, was dedicated September 24 with a performance, in Greek, of extended scenes from the "Birds" of Aristophanes. The building, which is probably the only one of the kind in the world, stands on a hillside crowned with beautiful trees, and seats 7,000 spectators. The orchestra is circular, backed by a stage seven feet high for modern representation. The materials of the building are concrete and Portland cement, but it is not improbable that the whole may be sheathed with marble in the near future. The lines are simple and beautiful, and the whole structure is a not unworthy modern adaptation of the magnificent theatre at Epidaurus, which was, in a general way, its model. Its acoustic perfection is the marvel of every one who tests it.

In the performance of the "Birds," the actors entered by the *πάροδοι*, and stood with the chorus in the orchestra. The stage was hidden from view by a screen of trees and branches, in the centre of which stood a huge nest containing three gigantic eggs of plaster of Paris. In the earlier rehearsals the actors appeared upon the stage, but it was soon found that the action demanded so much mingling of actors and chorus that a change must be made, and so the views of Dörpfeld received an interesting practical confirmation. The music of Professor Paine was sung by a second chorus, concealed from view upon the stage. The performance was witnessed by an enthusiastic crowd which filled every seat in the great *cavea*, and added one more to the lengthening list of successful American revivals of Greek dramas.

Edward B. Clapp.

Berkeley, September 26, 1903.

Notes.

'Rome and the Renaissance: The Pontificate of Julius II.,' translated by John Dennie from the French of Julian Klaczko, fully illustrated, and 'The Art of the Italian Renaissance,' a handbook, by Prof. Heinrich Wölfflin, containing more than 100 illustrations, are announced by G. P. Putnam's Sons.

E. P. Dutton & Co. have nearly ready a new edition of 'The Autobiography of Leigh Hunt,' with an introduction by Thornton Hunt, and new editing by Robert Ingpen, in two volumes.

Thomas Y. Crowell & Co. will publish in the spring a Life of Dean Farrar, by his son, Dr. R. A. Farrar.

The Scott-Thaw Co. of this city are about to issue 'Zionism and Anti-Semitism,' by Dr. Max Nordau and Dr. Gustav Gottheil; a limited edition, all on vellum, of Holbein's 'Dance of Death,' with an introductory note by Austin Dobson, and reproductions of the cuts in the Lyons princeps edition of 1538; and, following Landor's 'Pericles and Aspasia,' in the folio "Library of Noble Authors," Sir Thomas More's 'Utopia,' with Holbein's portrait and the original maps and illustrations.

The sixth and last volume of Lord Berners's Froissart (being volume xxxii. of the "Tudor Translations" edited by W. E. Henley and published by David Nutt, London) has appeared. In noticing previous volumes we have expressed the opinion that this is, and must remain, the one English version of that wonderful picture of a wonderful time. We may add that this edition is provided with an excellent index, compiled by R. W. Chambers.

Among the Scribners' importations we note the old favorite "Mermaid Series" of British dramatists in a new and much condensed form. Apparently the typography is unchanged, but the pages have been cropped close to the text, with the result of producing a tall volume in Elzevir form. The paper is thin and not wholly opaque. In this fashion the old volume of Marlowe's best plays, containing the two "Tamburlaines," "Faustus," "The Jew of Malta," and "Edward II.," is brought into a booklet of convenient size for the pocket. Text, introduction, illustrative features, are unchanged from the octavo issue, which is still preferable for the shelf, while the miniature rejuvenation has distinct advantages for the class-room or the walking trip. Besides the Marlowe we have received Ben Jonson (three volumes), Otway, Congreve, and Steele.

'The Autocrat of the Breakfast Table' has made its way into Macmillan's pretty "Golden Treasury" series, and what gives this edition a special charm is the prefixed study of Dr. Holmes by Leslie Stephen, familiar already as a chapter in his 'Studies of a Biographer,' being a review, in effect, of Morse's Life of Holmes. The personal note in this Introduction and the happy contrast of Holmes and Lamb are memorable features; but it is all full of insight and delicacy and Sir Leslie's extraordinary suggestiveness.

A few of our readers may remember that in the late sixties Mr. George Washington Moon fell foul of the English of Dean Alford, the self-constituted defender of the Queen's English. Encouraged by his successes with a rather slovenly writer, Mr. Moon presently picked flaws in Mr. George P. Marsh's use of the mother tongue, and later of Lindley Murray's. Then this luminary (incongruously radiating a more than solar heat) set, apparently well satisfied with itself. Now that the revolution of time has brought back the King's English, Mr. Moon emerges from obscurity, with ardor unabated, tricks his beams, and emits, with a portrait of himself, 'The Bishop's English,' "a series of criticisms on the Rt. Rev. Bishop Thornton's laudation of the Revised Version of the Scriptures, and also on the English of the Revisers" (London: Sonnenschein; New York: Dutton). Mr. Moon is in his eightieth year, though he does not look it; but that he is still quite capable of affording amusement is witnessed by his proposed designation of the Revisers' work as "the Revisers' ungrammatical, immoral, and blasphemous version." For particulars we refer our readers to the little book itself.

James T. Keen's 'Manual for Notaries Public, Justices of the Peace, and their Employers in Massachusetts' (Boston: Little, Brown & Co.) is an invaluable little handbook. It is expressly confined to Massachusetts, but we should think it would be of use anywhere. To the Massachusetts notary or justice it is a necessity, for his powers and duties have been materially changed by recent legislation, while the law of commercial paper has been made to a great degree statutory. The noting and extending of marine protests is fully treated by Mr. Keen, and the book abounds in forms. The whole machinery and practice of the notarial law (relating to commercial paper), usually taken for granted and therefore not understood, is fully explained. A book of this sort in the hands of a good teacher of law supplements *ad hoc* the treatises on the substantive law of bills and notes.

'Japan in the Beginning of the Twentieth

Century' is the title of a well-printed volume in English of over 800 pages, with a map showing in colors the geological formations of the empire. It is issued by Baron Hirata, Minister of State for Agriculture and Commerce, and has been prepared under the supervision of Mr. Yamawaki, with revision, we imagine, by Mr. Henry Satoh, for the English is excellent. In eight parts, the author treats of geography, population, administrative system, and land as an institution, under which last head, with other interesting information, we learn that the hereditary estate of a peer cannot be sold, transferred, mortgaged, or hypothecated. The primary industries, agriculture, fisheries, mining and metallurgy, and forestry, and the various kinds of manufacturing industries are well described in detail. Foreign trade, finances, the army and navy, communications, transportation, and education are all concisely treated, and the statistics are fresh, abundant, and clearly arranged. The historic matter incorporated makes the text readable. Though there are redundancies and the work shows some signs of haste, we have here what is probably the most satisfactory single volume treating of Japan's resources and possibilities in the year 1903. The proof-reading is unusually good. The financial information, so full, accurate, and thorough, makes this book worthy of serious study by economists.

The general description of the Library of Harvard University, prepared by Alfred C. Potter, of the staff, and published as No. 55 of the "Bibliographical Contributions," sets an example that every library might well follow. As that of a great university, the scope of Harvard's collection is wider, and yet more specialized in certain lines, than that of a general library could be, and is more frequently tested than happens in the case of a circulating or reference library. Under very liberal patronage, and under the direction of men who were scholars as well as specialists, the wealth of what has been amassed is extraordinary. The Riant, Child, Fitzedward Hall, the slavery and law collections may be noted, but constitute only a small part of the "features." Among the manuscripts are those of Sparks, chiefly transcripts, of Arthur Lee, Charles Sumner, and James Russell Lowell—certainly of sufficient moment to attract attention. Mr. Potter has skilfully prepared lists of gifts and bequests of books from 1638, of book funds, beginning with the first Hollis legacy of 1781, and of the official publications. The issue is a suggestive record of our leading university library, whose very eminence cries shame on its inadequate building.

The development of industrial education in Germany during the last quarter of a century has been remarkable. It appears from the Consular Reports for September that while in 1882 there were only 22 industrial schools in Saxony, there are now 287. In Hesse "there is not a single village, no matter how small, in the whole country, which has not an industrial school of some kind," generally with workshops for actual practice. In Baden "fully 20,000 apprentices are learning how to make clocks, and cotton, woollen, and silk goods." The Prussian State railways have schools in all the large cities "for the purpose of teaching apprentices every subject which has anything to do with the building or repairing of railway cars, etc. . . . Each apprentice in these schools receives a remuneration of 20 cents a day, which is put out at interest until the end of his three years, when he comes into possession of both principal and interest." In all Germany pupils of both sexes are taught forty-four different trades and industries.

Publications of the Lick Observatory, volume 6, is devoted to meridian-circle observations made from August, 1896, to March, 1901, by R. H. Tucker. They include the declinations of the Bethlehem latitude stars, additional standard close-circumpolar stars, zodiacal stars for heliometer measures of the major planets, the southern stars of the catalogue of Piazzi, the reference stars for the photographs of Eros, and miscellaneous observations, including those of Eros, Nova Persei, comets, and comparison stars. In all, there are included about 11,700 full observations, and 2,700 observations in one coördinate only, for the determination of 4,500 stars.

The geographical literature for the year 1902, including separate works, society publications, and official documents, is chronicled in the September issue of the *Annales de Géographie*. The list is divided among sixty-eight subjects, and contains more than a thousand titles in thirteen different languages, with numerous cross-references. Valuable explanatory and critical notes, by the editor, M. Louis Raveneau, and his fifty-three able assistants, accompany nearly every title. We note, as last year, that a fuller analysis is given to our Government publications than to those of any other country. Of the Monthly Summary of Commerce and Finance it is said: "Ce recueil officiel américain est devenu des plus précieux pour toutes les questions d'ordre économique et colonial." The index of authors contains more than two thousand names.

In *Petermann's Mitteilungen*, number six, evidence is given to show that the glacier of Jakobshavn, the southernmost of the great Greenland glaciers, has receded seven and a half miles since 1851, two miles within the last ten years. The first of a series of articles on the industries of the South Pacific islanders treats of their various modes of cultivating the soil. A material addition to the knowledge of the seismic conditions of Asia Minor is to be found in a long list, with notes, of earthquakes observed since 1894 at seven stations in the peninsula. An interesting account of Diamantino, a town in western Brazil, given in number seven, shows that South America, not Africa, should now be called the "dark continent." Diamantino is the last outpost of civilization on the verge of a vast unknown region inhabited by hostile tribes. The town, formerly noted for its diamond mines, was destroyed in a revolution in 1901, and its future is uncertain. Other subjects discussed are the wanderings of the eastern Eskimo, and the Atlas Mountains of Morocco.

One of the revelations furnished by the latest *Heft*, No. 150, of the 'Statistik des Deutschen Reiches,' the official digest of the last national census of Germany, is the remarkable fact that within that empire are found representatives of no fewer than 222 religious confessions and professions, surpassing in number the sects and sectlets of America, which has not yet reached the 200-line, but seems to be making rapid strides in that direction. Germany reports 49 kinds of Protestant Christians, more or less closely connected with the State churches, and 107 "other Christian" confessions. Among the non-Christian creeds are found Mohammedans, Buddhists, Brahmans, fire-worshippers, sun-worshippers, etc. The list has special rubrics for atheists and materialists, and, rather singularly, closes with "confessors of no religion." These data show clearly that the union of state and church does not prevent the development of the most extensive religious dissent.

The Transactions (*Mitteilungen*) of the German Asiatic Society of Japan, volume ix., part ii., contain a paper, by Hans Sporry, of considerable value to artists and architects as well as to the general student, on the universal use, in old Japan, of bamboo as an article both of cultivation and of sale, as well as for material in art and architecture, and for manifold appliances. The author reviews both the native and foreign literature on the subject. Dr. Hefele contributes a long paper full of detailed information on his travels in Saghalin, East Siberia, Mantchuria, China, and Korea. There is also a good German translation of the wonder-working grace of the goddess Kwannon, who, by the way, anciently was a male, but changed sex when introduced into Japan and is worshipped under divers local names. It is well to recall that this society published last year a *Festschrift*, in celebration of its twenty-fifth anniversary, containing its history and a catalogue of its publications, most of them rich in science, and altogether a most creditable showing.

The *Korea Review* for June, 1903, follows up the Asiatic Society's paper on Choe Chiwun, Korea's greatest man of letters, with further commentary and illustration on the historical and literary side. A scholar from Nippon writes of the Japanese occupation of Seoul, in May, 1592, showing that "the invader was not a barbarous destroyer. Shops were reopened and trade went on much as usual." The usual brief articles on local customs, archæology and folklore, the news calendar, and an instalment of Professor Hulbert's Korean History, complete the table of contents.

—It is no flattering picture that Professor Woodberry paints, in the October *Harper's*, of the South in American letters. Jefferson, "the one great dreamer ever born in this land," might have been the fountain-head of a literature, but turned his talents in other directions. But the age of procreative energy in Virginia passed away even before Jefferson died. The higher life withered in the air of social tyranny, slavery catching and binding the master in the same chains with the slave. The great theme of slavery itself could generate literature in a Whittier or a Mrs. Stowe, but not in the soil sterilized by the actual presence of oppression. Poe is admitted as the one exception, "the one genius of the highest American rank who belongs to the South"; for Professor Woodberry holds that he was as essentially a product of the South as Whittier of New England, in spite of all arguments to the contrary. Justin McCarthy writes entertainingly of the literary men whom he met in London in the early sixties, when he went to the metropolis to pursue a life of journalism and liter-

ature. Kinglake struck him as "one of the most brilliant writers of his time or of any time," though an ineffective and labored speaker in the House of Commons. Newman seemed to have a faculty of eloquence entirely apart from mere rhetoric, winning his way by force of sincere and lofty thought, embodied in appropriate phrase, but wholly unaided by the arts and gifts which usually serve the great orator or preacher. Ruskin's chief service was to sound the battle-call to controversy and set people to thinking. Richard Burton, McCarthy knew as a man of irrepressible energy, impatient of differing opinion, the inevitable dictator of any assembly in which he was present, an indomitable dogmatist, but refined and ennobled in temper and manners, as the years passed by, through the sweet and gentle influence of a devoted wife who consciously applied herself to bringing out all that was best in him. On the basis of stratified remains of at least five or six successive culture periods, Max Uhle, of the University of California, argues for a Peruvian civilization of no less than three thousand years' duration. Mary Applewhite Bacon presents a reassuring account of the efforts made to furnish industrial education to the children of the poor white families which have been drawn to the mill towns of the new South. The "Easy Chair" editor renews his warfare against present-day popular fiction, while the "real editor" announces the beginning in the next issue of a new serial which "will furnish a fresh justification of the historical novel"—a crooked pin for the Easy Chair, as it were.

—Congressman McCall, in the October *Atlantic*, makes some telling points against the encroachments of the Senate, but he is somewhat inconclusive in charging the equal representation of the States with a large share of the evil. His citation of the attitude of Senators from small silver-producing States in the struggle to repeal the Sherman law does not prove much, since the House, elected on the basis of population, has repeatedly shown more favor than the Senate towards dangerous financial legislation, as in the case of the Warner Free Coinage bill, which passed the House easily, but was killed by the Senate. Mr. McCall's only hope for a better balance of power between the two branches lies in arousing the House to a more virile assertion of its Constitutional prerogatives. He drops incidentally a few remarks which show that he is as far as ever from being convinced of the wisdom of imperialism or the infallibility of the tariff. Booker Washington writes of the Fruits of Industrial Training, incidentally saying a word to reassure those who, like Prof. Burghardt Du Bois, have feared that his policy involved the entire sacrifice of any aspirations for higher intellectual development among the negroes. Henry Van Dyke pleads for the adoption of a few new technical terms for the science of English verse. It was Poe, we believe,

> "Who talked like a book of iambs and pentameters
> In a way to make people of common sense damn metres."

but we doubt whether the substitution of *stress* for accent, *bar* for foot, *seven-stress* for heptameter, etc., would be any less provocative of profanity. The natural sciences have already pretty effectually walled out the layman by a rampart of new terminology; let literature ponder well before taking the same course. Professor Van Dyke makes a brief but forcible plea for the study of English poetry as an effective means of culture. A. Lawrence Lowell pushes the study of college rank and distinction in after life into a new field, showing that those who succeed in getting a place on the Harvard teams have much less than the average chance for future distinction. The inevitable explanation is that football and baseball have been so highly developed on the technical side that very few students can hope to become expert players and give proper attention to their mental development at the same time.

—Volume v. of 'The Philippine Islands, 1493-1803 [1898]' covers but two years, 1582 and 1583, those just succeeding the arrival at Manila of the first Bishop of the Philippines, Friar Domingo de Salazar. The latter is sometimes called "the Las Casas of the Philippines" for his attacks on the Spanish system of enslaving the natives under the "encomiendas" and excessive tributes. We have, in his letters to the King in this volume, some eloquent protests against oppression of the natives, throwing many sidelights upon the condition of affairs in the second decade of Spanish occupation. Gov. Peñalosa indirectly takes issue with the Bishop in his communications covering this period, but his defence is hardly convincing. We are given, however, in this volume itself, glimpses of the temper and personal jealousies of the men involved in this rising "friar controversy of the Philippines" which should have cautioned the editors of the present work against so sweeping a statement as this in the preface to volume v.: "The Spanish conquerors are ruthlessly oppressing the Indians, caring but little for the opposition made by the friars; but Salazar exerts as far as possible his ecclesiastical authority, and, besides, vigorously urges the King to shield those unfortunate victims of Spanish rapacity. Various humane laws are accordingly enacted for the protection of the natives; but, of course, this interference by the Bishop occasions a bitter hostility between the ecclesiastical and the secular powers—perhaps never to be quieted." If the editors of this work wish to live up to their declarations of impartiality as between the factions whose strife has characterized all Philippine history, they must not be led into such unscholarly and by no means impartial statements as the foregoing. The hostility between ecclesiastical and secular powers in the Philippines did not begin solely, nor primarily, in the manner stated. The most we can say is that the early missionaries, in general, took a humanitarian view of the needs of the situation, whereas the greed that had drawn most of the first conquerors there led them to seek to exploit the natives when the natural riches they had foolishly hoped to find were not to be picked up off the ground as gold nuggets. But neither set of men had an entire monopoly of humanity nor of rapacity, as documents for this early period which have not yet appeared in the work in question will show.

—Besides the above-mentioned correspondence, volume v. contains further evidence as to the jealousies and dissensions between the civil authorities themselves, an interesting "report on the offices salable in the Philippines," and the instructions to the Commissary of the Inquisition in the Philippines (this officer was a dependent of the Inquisition in Mexico, to whom persons apprehended were to be sent for trial). But the main document of this volume is the 'Relation of the Philippine Islands,' by Miguel de Loarca, written from Panay about 1582. Indeed, this is altogether the most valuable document yet produced in the series. De Loarca was a soldier, undoubtedly an officer of Spanish troops, who had served in the islands from the arrival of the Legaspi expedition and had seen all parts known to the Spaniards up to 1582. Without an undue amount of missionary prejudice as to the natives' religious and other customs, and with a much keener appreciation than friars and civil rulers had shown of the facts about these new peoples that would be of importance to tell, his relation carries a presumption of veracity in the evidence it bears of a keen observation; and, while by no means such a scientific treatise as modern scholarship would demand, it is one of the most important of our early sources of information about the Filipinos. It occupies 154 pages in this volume, the old Spanish text and the translation being published page by page. In connection with this document, more than ever, appears a defect in the editing, viz., in the lack of sufficient or sufficiently good annotations. One might also ask that some uniformity of spelling and rendition of technical and other frequent terminology be enforced—a rule all the more necessary where various persons are engaged in the work of translation.

—The Club of Odd Volumes of Boston has reproduced Morton's 'New-England's Memoriall,' with an introduction by Arthur Lord. So far as the mechanical execution is concerned, there is only praise to be given. The value of Morton's work has diminished greatly since the issue of Bradford's Journal, but there is enough of the curious and "poetic" in his colorless annals to give him a place in any library of American history. The introduction contains some slovenly work, which could easily have been avoided. For example, the writer quotes Lowndes's mention of a London edition of 1669, a copy of which he said had been sold in 1824 in the Nassau sale; but Mr. Lord says "it is not probable that an edition was ever printed in London." The Nassau catalogue gives no place of publication, but only the date 1669. Lowndes's note must have been based upon a personal examination, or was a mistake. A reference to Clavel would have shown that an edition was printed in London for R. Chiswel and about 1669; but no copy, unless that of the doubtful Nassau collection, is known. Mr. Lord also describes a MS. copy of the laws of Plymouth Colony, once in the possession of Dr. Ames, but is unable to trace its whereabouts. It lies in the Boston Public Library, having been purchased of Dr. Ames's family some years since. In spite of such defects, this reprint is to be welcomed. An index is much needed.

—The Collections of the New York Historical Society for 1895 comprise the fourth volume of W. S. Pelletreau's 'Abstract of Wills in the Surrogate's Office, 1744-1753.' As a source of genealogy and real-estate history the record is invaluable, and the accuracy and historical notes of the editor have added to its general utility. To the economic side much interest attaches. The growth of the city in population, the preponderance of English names, and the mul-

tiplication of foreign names other than Dutch, point to a social change, while the evident increase in the amount of personal property and in property covered by the wills indicates the growing commercial importance and material prosperity of the town. The confusion of currencies noted in the earlier records has disappeared, but the same bewildering range of bequests exists—from thousands of acres, plate and gold, to a piece of eight, a warming-pan, a bit of flax yearly or a negro. Rights of commonage still exist, but are infrequently mentioned; nor are implements of trade often specifically bequeathed, though a large number of the wills is of persons following some industry. Negroes are frequently named, and sometimes they are given their freedom—less frequently, their freedom and a sum of money. An "Indian boy" stands as the survival of a practice that disappeared long before negro slavery. Books and "libraries" are to be met with, but the "great Bible" and "great Holland gun" were a family possession. As a curiosity may be quoted the subjects needed to qualify a man to be a Doctor: "good arithmetic, navigation and surveying, and Lattin"; but the testator intimates that his son may be either a doctor or a merchant.

MURRAY'S BYRON.

The Works of Lord Byron. A New, Revised, and Enlarged Edition. Poetry: Volume VI. Edited by Ernest Hartley Coleridge. London: John Murray; New York: Scribners.

The new edition of Byron is nearly finished. Volume vi. was intended to be the last of the Poetical Works, but it now appears that a seventh volume will be necessary, and this will contain epigrams and occasional poems, an extensive bibliography, and the index. To the bibliography, which we believe has been entrusted to really competent hands, one may look for the correction and adjustment of much that has been left at loose ends in the work itself.

The present volume, of more than 600 pages, is entirely occupied with 'Don Juan.' There is the usual gleaning of hitherto unprinted Byronic marginalia—much of it trivial, but all of it interesting—and, in addition, there is a considerable amount of "new material." This new material consists of seven satirical and heavily annotated stanzas on Lord Brougham, originally meant to follow stanza 189 of the first canto, and of fourteen stanzas of a seventeenth canto, printed from a manuscript formerly in the possession of Hobhouse. This is the fragment which Trelawny found at Missolonghi. It consists mostly of characteristic reflections, and contains one interesting addition to the numerous passages in which Byron characterizes himself:

"Temperate I am—yet never had a temper;
Modest I am—yet with some slight assurance;
Changeable, too—yet somehow *Idem semper;*
Patient—but not enamoured of endurance;
Cheerful—but sometimes rather apt to whimper;
Mild—but at times a sort of *Hercules furens;*
So that I almost think that the same skin—
For one without—has two or three within."

Mr. Coleridge's *apparatus criticus* is not easy to understand. In fact, he seems constitutionally unable to express himself with precision on such matters as bibliography and the sources and history of his texts. In the volume before us this chronic disability becomes particularly troublesome. The editor informs us, at the outset, that "the text of this edition of 'Don Juan' has been collated with original MSS. in the possession of the Lady Dorchester and Mr. John Murray." At this point one might expect a list of the manuscripts or at least some further statement about them; or, if not here, then perhaps in the Introduction. *Somewhere,* certainly, it was the editor's duty to give definite and collective information as to the extant manuscript materials and his manner of utilizing them. But nothing of the kind will be found in the volume. The reader must go to the several cantos and study the footnotes—he must infer, divine, and even guess outright—if he wishes to get at the facts which a little more care or skill on the editor's part would have set before him in a dozen lines.

Nor is this all. Grant that Mr. Coleridge was not bound to make his volume easy to use in the way suggested. He might at least have refrained from putting obstacles in the reader's way. He has, it appears, collated the Murray and Dorchester MSS. The results of his industry will be found in a considerable number of variant readings, duly registered at the foot of the page, where variant readings should be. So far, so good. Unhappily, however, there is dire confusion in the labelling of these variants. Thus, in canto i., almost all of them are marked "MS." simply, but sometimes "MS. M." (*i. e.,* Murray MS.) is used. There is apparently no distinction. On page 72, for example, two variants are followed by "MS. M." and three by "MS." In this particular instance one finds ample room for perplexity, since, in a note on stanzas 190-198, Mr. Coleridge speaks of a "second or revised copy" of these stanzas, and also of "the first draft," in terms which indicate that both are extant. Yet it appears that all the variants on page 72 are from the first draft, and that the difference in their designation is mere oversight or whim. It is not, however, until we reach canto iii. that the imbroglio becomes complete. In this canto some variants are marked "MS.," one "MS. M.," and some "MS. D." The first two designations appear to be synonymous; the third means, no doubt, "the Lady Dorchester's MS." There is, however, not a word of the relations of "MS. M." and "MS. D." Perhaps the editor expects us to extract the facts, by some alchemical process, from a note on page 143, which note, however, characteristically involves a fresh problem in divination. When we come to canto vi., we are informed that "two MSS. (A, B.) are extant, A in Byron's handwriting, B a transcript by Mrs. Shelley." "The variants," adds the editor, "are marked respectively *MS. A., MS. B.*" Throughout this canto there is no difficulty, if we except the slip by which "MS." pure and simple is once used, apparently for "MS. A." (p. 273). But canto vii. affords a fresh embarrassment. The variants are almost all marked "MS.," but on page 310 we hear again of "MS. A." and "MS. B." Now, one would have supposed that these two MSS. were copies of canto vi. only; yet here it appears that they have something to do with canto vii. Are we to infer that Mrs. Shelley's transcript included both cantos? And, in that case, did her copy of canto vii. correspond almost exactly with MS. A., so that "MS." in the textual notes now means "MSS."? Who is to say?

We have not exhausted the problems suggested by Mr. Coleridge's *apparatus criticus,* but we have probably said enough to convince the reader that this volume cannot stand as a final edition of 'Don Juan.' Much may be done to make up for such incoherence by careful attention to the manuscripts in the bibliography promised for volume vii., and it is with this in view that we have pointed out the defects of Mr. Coleridge's method. The details may appear insignificant; but no one can deny that, if such things are to be recorded at all, they should be set forth accurately and in an intelligible way. It seems odd that the editor has not acquired greater technical skill by the mere process of operating on the five volumes that precede 'Don Juan.'

The commentary is managed better than the *apparatus criticus.* It is based, as was fitting, on that in the edition of 1833, but is both fuller and more exact. Considerable pains have been taken to supply references and to verify quotations, and a great many of the notes are quite new. On the whole, the annotation is satisfactory. Yet it is not free from the freakishness and lack of care which mar the critical apparatus. A few miscellaneous examples will make this clear.

Byron himself attached to "Thine 'incomparable oil,' Macassar" what seemed (and seems) a sufficient comment: " 'Description des *vertus incomparables* de l'Huile de Macassar.' See the advertisement." To this Mr. Coleridge appends the following Orphic saying: " 'An Historical, Philosophical, and Practical Essay on the Human Hair' was published by Alexander Rowland, jun., in 1816. It was inscribed, 'To her Royal Highness the Princess Charlotte of Wales and Cobourg.' " "What of it?" is the only reflection that suggests itself. Mr. Coleridge should have given us more information, or less. If there is any connection between Byron's line and Mr. Rowland's treatise on the Hair, he should have pointed it out. If—as is apparently the case—there is no connection whatever, he should have denied himself the pleasure of citation.

We may next give an instance of pure blunder—due to unskilful adaptation of a note in the edition of 1833. "With the exception of La Fayette," writes Mr. Coleridge, "who outlived Byron by ten years, and Lord St. Vincent, all 'the famous persons' mentioned in stanzas ii.-iv. had passed away long before the First Canto of 'Don Juan' was written" (p. 14). We say nothing of the euphemistic phrase "passed away," which may be meant for a grim joke, coming as it does immediately after a list that includes four who were guillotined, one who poisoned himself, and one who was assassinated. Our concern is with the fact, not the phraseology. The First Canto of 'Don Juan' was written in 1818. Among the "famous persons" were "Buonaparté," who died in 1821, and "Dumourier," who, as Mr. Coleridge informs us on the preceding page, died in 1823.

In note 1, page 87, we have quotation marks with no indication of the source of the words quoted. The matter happens to be of no consequence. A less excusable oversight of the same kind leaves Byron's reply to Hazlitt's criticism (p. 12) quite adrift. According to the editor of 1833, the note in question is "on Lord Byron's MS.," and is signed and dated "B. Venice, 1819."

We have no means of knowing whether this is correct. At all events, the note must have come from *somewhere*, and, wherever it came from, it can hardly have contained, as it does in Mr. Coleridge's version, a reference to the 1870 edition of Hazlitt's 'English Poets.'

"One makes new noses," says Byron (i. 129). Mr. Coleridge's comment is almost incredibly comic: "The reference is to the metallic tractors of Benjamin Charles Perkins, which were advertised as a 'cure for all disorders, red noses,' etc." Quite as absurd, though not so laughable, is the retention (from the edition of 1833) of a stanza from Moore (p. 43) which has nothing to do with the passage it is supposed to illustrate. A similar bit of obtuseness is the citation of "Love's Labor's Lost," on p. 87, Inapposite quoting is a weakness of Mr. Coleridge's editorial method.

By "Cæsar's earliest acts" (p. 174) Byron of course refers to the *jeunesse orageuse* of the great dictator. Here is Mr. Coleridge's note, which hardly needs to be characterized, either as to its appositeness or as to its historical justice: "One of Cæsar's 'earliest acts' was to crucify some jovial pirates who had kidnapped him, and with whom he pretended to be on pleasant if not friendly terms." Two notes on Milton are also not very creditable to the editor. In one (p. 146) there is a misleading account of Milton's domestic affairs, and the other (p. 174) refers to Johnson's 'Life of Milton' in apparent acceptance of the story that the poet was "whipped at college." Perhaps it is similar deference to the Doctor's authority that leads to the silent adoption of his conjecture, "May of life," which nobody now believes in (p. 184).

A diverting remark is to be found on page 188, where it is solemnly suggested that "an opium dream of too much youth and reading" may be a reference to Coleridge's "Kubla Khan." At times we find ourselves wondering whether Mr. Coleridge reads Byron with his eyes shut. To his otherwise satisfactory note on Feinagle and his system of mnemonics (p. 16) the editor appends the following anecdote: "When Rogers was asked if he attended the lectures, he replied, 'No; I wished rather to learn the Art of Forgetting,' " with a reference to Rogers's 'Table-Talk.' Mr. Coleridge has forgotten the occurrence of the same anecdote in Cicero's "De Finibus," which rather puts Rogers out of court.

Here we must stop, not because the list of Mr. Coleridge's lapses is completed, but because there is no particular reason for going on. We have said enough to show that he is not a very careful editor, and that the book is in some respects disappointing. Still, he has done a good deal for the elucidation of 'Don Juan,' and the volume, with all its faults, is indispensable.

RECENT FICTION.

The MS. in a Red Box. John Lane. The Bodley Head.

A Doctor of Philosophy. By Cyrus Townsend Brady. Charles Scribner's Sons.

The Duke and his Double. By Edward S. Van Zile. Henry Holt & Co.

Cheerful Americans. By Charles Battell Loomis. Henry Holt & Co.

The Career Triumphant. By H. B. Boone. Appleton & Co.

An Irish Cousin. By E. Œ. Somerville and Martin Ross. New and revised edition. Longmans, Green & Co. 1903.

The Call of the Wild. By Jack London. Macmillan.

The most interesting persons to be found in 'The MS. in a Red Box' are not the fictitious group whose adventures form the subject of the anonymous tale, but the real people spoken of in the red-letter advertisement called "The Publisher's Note." First of all there is the "publisher's reader," who, having read the MS., "reported on it with enthusiasm." His impulsive action denotes a spirit not easily depressed by a dreary occupation, nor open to the seduction of the personal security that lies in guarded statement. Then there are the seven persons not without distinction in letters who, simultaneously inspired, suggested for the nameless novel "the same title on the same day." The subtle quality of their inspiration needs no comment. A glance at the startling cover is as instructive as a long homily on the artistic faith of the collaborators in its composition, Mr. Ford and the Hon. Mrs. Anstruther, to whom "is due the witty suggestion of adding the Della Robbia plaque from the Florentine Foundling Hospital." Finally, we have the publisher disturbing public confidence in the generosity, honesty, and good faith of all publishers by so much protesting of his own impeccability. He appears to have taken extraordinary pains to protect the interests of his phantom author, and, besides that, announces with excellent intention yet rather wildly as to arrangement of parts of speech: "Should there be any dispute arise, he, for his part, will be quite willing to leave the decision with the President of the Society of Authors" and other persons of repute.

No remark about a novel is more common (and none that we remember is often more pertinent) than, "Why on earth was this thing ever published?" Except by those who (much to their loss) omit to read the Publisher's Note, 'The MS. in a Red Box' will never be the subject of this querulous inquiry. It was not published because the author had a pull, or because it was hoped, indeed believed, that publication would pay; but because the official reader was enthusiastic about its merit, and the publisher "fully endorsed the opinion of his literary adviser." The disinterested judgment of authority is always valuable, at least as matter for reflection, and modesty quails at the thought of pronouncing it in error. To hesitate in such a situation is indeed to be lost; there is nothing for it but to dissent boldly, and declare that 'The MS. in a Red Box' is a poorish book of a poor sort, and to congratulate the author on his happy refuge in anonymity.

The time chosen is the reign of Charles I., the scene the Isle of Axholme, and the reason for the tale (a confused, badly connected narrative of rustic brawls and the narrator's personal prowess) one of the King's arbitrary acts, the granting a Dutchman authority "to drain the meres, embank and stop the rivers of the isle, and transform the country at his pleasure, regardless of the rights of the Isle Commoners, covenanted in the Deed of the Earl of Mowbray." The situation, though not historically of great importance, is good enough for a romance of adventure, but the author makes little use of it except as a background, and for the introduction of a Dutch girl whom his hero, Mr. Frank Vavasour, may fall in love with, for whose sake he may face innumerable perils, perform prodigious deeds of valor, and escape (always escape) with no more permanent damage than a broken nose and a branded breast. The presence of the Dutch in the isle and the hostility of the natives are really not essential to the tale. Lord Sheffield could have desired an English girl as malignantly as he did a Dutch one, and it is conceivable that the Isle Commoners and gypsies could have been dramatically worked up to murder, abduction, and arson without the presence of foreigners as an excuse. Character is of course drawn on the simple lines affected by writers of historical romance. No convention is slighted. The villains, of whom there are three, are ruthless; the hero has as many lives as a cat; the maiden is lovely, pure, and wise; the gypsy girl is always giving unheeded warnings; and the servitors, male and female, are fertile in resource and of unquestioned fidelity. The expression is pretty uniformly modern, with occasional experimental archaisms, and there are several descriptive passages written with taste and sincere appreciation of nature. These passages perhaps arrested the publisher's reader's attention and roused his reported enthusiasm.

In 'A Doctor of Philosophy,' Mr. Brady presents dramatically the unhappy lot, in American society, of a man or woman known to possess even one-sixteenth of negro blood. The opening chapters do not prepare one for a serious motive and tragic ending, and, in proportion to the whole, the descriptions of the foolish provincialism of Philadelphia society and of occurrences at the school where Alice Chalden got the degree of Doctor of Philosophy, are unduly long and trivial. As the story proceeds, the author warms to his work, and, from the moment when Alice Chalden hears the rumor of a mystery surrounding her birth, he writes rapidly and surely, holding the reader's sympathetic emotion. The test question, whether a white man, a man of good birth and social position, would or should marry a woman with the black taint, however suitable and desirable otherwise, is left unanswered. Alice Chalden by her own act deprives her lover of choice, and deprives the reader of a definite contribution from Mr. Brady to the discussion of the question that he raises. It is entirely probable that the despairing little Doctor of Philosophy would thus solve the situation for herself, and if Mr. Brady has rather shirked an issue, he has not committed the blunder of seizing an artificial and improbable way out of his difficulty. His style is sometimes pompous and circumlocutory, and he does not escape the snare of the mixed metaphor. Wishing to intimate that something would happen at the moment of Aunt Nancy's death, he writes: "That would be the moment when, not of choice but of necessity, she would be compelled to exchange the comforts of her present home for a narrower and more lasting abode." In reference to Philip Chalden's responsibility for the complications that must ultimately destroy him, he remarks: "There was brewing for him a petard which in the end was to hoist the engineer."

The passion of some Americans for spending their money on any sort of a duke is

always an available phenomenon for the jest and scoff of other Americans and foreigners. It is difficult to treat the theme in fiction with any freshness, and the only novelty in 'The Duke and his Double' is that Mr. Flint of Chicago, not Mrs. Flint, is eager to go to the expense of a duke in order to introduce his daughters into the highest social circles. The situation which involves Mr. Flint's substitution of his butler for his defaulting duke is good stuff for farce, but the author's spirits do not rise to the rattling point. He discards the chance for a good jest and takes to stale romance. Desirous, perhaps, of giving Mr. Flint the worth of his money, he establishes the butler as a real, rightful duke, a duke informed with sentiments of glaring respectability, a tedious, grandiloquent duke—a duke, in fine, quite as good as a commoner, and therefore a perfectly uninteresting representative in fiction of a corrupt aristocracy.

It is not because Mr. Loomis's preface holds the words "a reviewer (Heaven bless him!)," but on cold grounds of reason, that the present reviewer thanks him for devoting a volume to cheerfulness. The mere name and the very cover are full of hope for them that sit in the darkness of the prevailing story-book. This small volume is a safe one to lend to a grumbler, an invalid, a hypochondriac, or an old lady; more than safe for the normal man. Automobilists and ocean travellers are especially held up to scrutiny, but all manner of oddities and quiddities have their chance. Of slang Mr. Loomis is a connoisseur, but slang serves and not masters him. He touches on a variety of life's little pleasantries, ranging from adventures of travel to ways and means of making presents to poor clergymen, and from fantastic incident to monologue portraits. The book should fulfil a useful mission on rainy days, and on kerosene-steeped evenings in those spots of earth where men and women do congregate.

'The Career Triumphant' is the story of a woman who gave up the stage for the domestic life, and never ceased to regret it. After ten years of matrimony, her husband, with an admirable air of self-sacrifice, suggested that the "career" should be allowed to triumph, and we leave the heroine playing to an enthusiastic audience "in one of the smallest and newest of the New York theatres." Irrelevant detail is the characteristic note of Mr. Boone's style. His scene is laid in the Virginia of to-day. The very name of this State has an echo of romance, and Mr. Boone has done his best to produce romantic situations that would match the setting of a Southern plantation. In this he succeeds, but his personages are obstinately commonplace, and regularly refuse to show the emotions suitable to their circumstances. They all live on horseback, and are without visible means of support; their tailors' bills are left unpaid in London. All this is, of course, very Virginian. The author's aim was to show that a dramatic genius will never consent to be mute and inglorious; but that ten years, not more, may be safely conceded to the demands of family life.

Few novelists can resist the temptation to exhume an early effort and embark it on the current of a recent success. The enterprise fails regularly, but the example never deters. The authors of 'Some Experiences of an Irish R. M.' have made their own the short story dealing with certain aspects of country life in the west of Ireland. Their success with two volumes of amusing and well-written sketches has prompted them to issue a new edition of an earlier achievement in the more ambitious line of the long novel. 'An Irish Cousin' fell flat five years ago, and is not to be rehabilitated. Instead of lively pictures of what does actually happen among the horse-dealing, drinking, improvident inhabitants of County Cork or County Galway, we are presented with a sensational story of a lost will, a murdered heir, and all the accompanying incidents familiar to English fiction of half a century ago. But the touches of description of Irish untidiness, Irish weather, Irish gloom, and Irish wit which have made their short stories popular, redeem the improbabilities of the plot. The book can be read, and would pass muster in the mighty array of modern fiction if one were not driven to contrast it with the more recent work of its authors.

'The Call of the Wild' tells of a dog that retrogrades to savagery and becomes the leader of a wolf-pack. The dog, Buck by name, a powerful animal crossbred from a St. Bernard and a shepherd dog, is stolen from a luxurious home and shipped to the Klondyke to work in the traces with Eskimo sledge-dogs. Here begins his struggle for existence against cold, hunger, and toil, the hostility of beasts, and the brutality of men—a struggle that develops in him the instinct of self-preservation, and makes him, like his wild ancestors, crafty, patient, keen of senses, strong of sinew, and ferocious in fight. The story of the struggle is painful, but later Buck gains a master whom he loves, and enters on a happy wandering life with him in search of gold. The cruel environment that roused in him qualties of the wild beast no longer surrounds him, but powerful though subtle influences still compel him. He is at the height of physical perfection, and every fibre is awake to the mysterious call of the forest life about him. In idle weeks at camp he runs alone for days through the wilderness, learning to lurk in cover and kill his meat, to read the signs of the woods, and to know the joys of wild freedom. The tragic death of his master at last breaks the one tie that has always drawn him back to civilization. Then he completes the course of his retrogression, and enters into fellowship with the wolves.

The part of the story that narrates Buck's life in the traces is especially graphic. The dogs and the drivers are sharply drawn, and the incidents of the trail are told with force. If the ferocity of the "husky dogs" is exaggerated, one may remember that there is no introduction asserting the story to be "strictly true," and that, logically, Buck needed a fierce school in which to unlearn his gentler habits. The background of Arctic scenery is merely suggested; the author subordinates persons and scenes in order to tell his dog story with simple directness. He is least effective in the fanciful pages where Buck remembers the youth of his race and thrills to the call of the wilderness. The possibility of a dog's retrogression is an interesting question. Given such an exceptional individual as Buck, and such surrounding conditions, one must hesitate wholly to deny it. Apropos of Buck's excursion with the timber wolf, the present reviewer may say that he has known of somewhat similar intercourse between a dog and coyotes.

My Own Story. With Recollections of Noted Persons. By John Townshend Trowbridge. Illustrated. Boston: Houghton, Mifflin & Co. 1903.

It could only be the poverty of Mr. Trowbridge's material that would prevent his 'Own Story' from being an interesting one, seeing that he has been a story-teller from his youth up, was almost to the manner born, and was long since a master in the art. But his material is equal to his skill. Without much exaggeration it might be said that it is the same material that he has used to good purpose all the way along, since his first notable success with 'Father Brighthopes' in 1853 (not in 1843 as it is written in the footnote to page 196). For, without exactly reproducing in his stories heretofore the persons he has known and the events which he has experienced, he has mingled recollection with invention in a judicious manner. In one respect his avowed fiction has probably reflected his actual experience more vividly than this autobiography. "While aiming always," Mr. Trowbridge says, "at entire fidelity in the main and minor points of my record, I have kept out of it as much as possible the errors and heartaches of which my life has doubtless been no freer than yours who peruse these pages, if as free." Certainly for one included in the *genus irritabile vatum*, his life appears in these pages as a singularly happy one. It is interesting as having been to a remarkable degree a life of literary occupations. A few weeks' engraving of pencils was the sole aberration from the business of writing, once he had definitely resolved to live by his pen; this in May, 1847, when he was not quite twenty years old.

With "A Backwoods Boyhood" for its subject, Mr. Trowbridge's first chapter could not fail in his hands to be attractive. The "backwoods" were those of western New York, and we are vividly reminded of the recent taming of that wilderness. There is good self-portraiture here as subsequently, a frank self-esteem tempered by a cheerful consciousness of having been not too bright or good to be endurable; two boys in him, "one truly gentle, the other a dormant, but too easily roused cave-dweller." The parents also are well drawn, and Grandmother Willey, with sincere depreciation. At a very early age he was dreamy, idealistic, consciously beset with mysteries, trying to think other people's thoughts. His first tardy impulse to "book-learning" was derived from the foreign phrases translated "in the back part of the spelling-book," and he at once set about studying the French language. It is significant that he took kindly to "Othello," "Lear," and "Hamlet," while he could not abide "Love's Labor's Lost," nor the rhymed endings of Shakspere's blank-verse speeches. Perhaps he was older than he remembers when he made these nice discriminations. On the other side of the account is his preference for the 'Essay on Man' to Pope's translation of Homer. This, for a boy, was an unpardonable sin.

The interest slackens in the second chapter, "Starting out in the World," but rallies in the third, which is the most delight-

ful in the book. It relates Mr. Trowbridge's "First Experiences as a Writer." These had New York for their scene. They were not quite the first, seeing that he had competed successfully, when but seventeen, for a prize given for the best "Carrier's Address" for the *Niagara Courier*. The prize offered was Griswold's 'Poets of America,' but the boy compromised with the editor for a dollar and a half. In New York he had other disappointments, as when the *Knickerbocker* editor accepted his essay and then crushed his swelling heart with the announcement that "it was not their custom to pay for the contributions of new writers." Nevertheless, the wonder is that the boy, with little education and less training, did so well and forged ahead so fast. True, there was a blond and portly *deus ex machinâ* in the person of Mordecai Manuel Noah, who put him in the way of selling some of his juvenilia; and other friends turned up. But clearly this was because he showed himself friendly, being of "a free and open disposition." The moral of this chapter, and of the entire book for that matter, is that if the literary fellows do not get along tolerably well, the trouble is not so much with their stars as with themselves.

Mr. Trowbridge has recollections of gifted characters in New York and Boston, fifty years since, whom the Bohemians in either city had sealed unto themselves. Indeed, at one time, Mr. Trowbridge was not without ambition to be a prince among people of this sort; but finding his hospitality abused and his inclination to private imbibition growing more insistent than seemed good, he resolved upon a better course. Of evil communications he had enough to serve as "seeds and weak beginnings" of his literary inventions, while they left him essentially unharmed. They are very pleasant to remember from the safe vantage of a serene and dignified old age. So are his relations of various degrees of intimacy with many kindly wags, some of them famous once, and not all quite forgotten. Among these were B. P. Shillaber, whose creation of "Mrs. Partington" was his most distinguished feat, Artemus Ward, and Col. C. G. Halpine, "who sometimes made his stammer tributary to his wit" as when, upon Mrs. Stowe's going abroad in 1853, on a supposed mission to collect funds for the anti-slavery cause, he nicknamed her, first among his friends and afterwards in print, "Harriet Beseecher Be-Stowe."

Young Trowbridge's relations with Mrs. Stowe and other anti-slavery people were cordial, and he was proud to rank with them. His 'Neighbor Jackwood' was under suspicion as an anti-slavery novel, and a sonnet which he addressed to Theodore Parker, for whom he had warm admiration, was rejected by a leading Boston paper to which the author sent it in his innocency. The description of Parker's manner in preaching is excellent, though "grinding earnestness" does not convey the idea of Parker's reliance on the sheer weight of his matter for the impression he desired to make. The reminiscences of Phillips (of Phillips, Sampson & Co.), Underwood, Lowell, Holmes, and others in connection with the *Atlantic Monthly*, are among the best relating to that pithy and momentous enterprise, of which Mr. Trowbridge saw a great deal and was a *magna pars*. He speaks with modest satisfaction of some of his more successful ventures in prose and verse, "The Vagabonds," "Coupon Bonds," etc. His long line of boy stories excites in him no such grateful emotion as his poems, and, indeed, of such favors of the muse as his "Midsummer," or "At Sea," a man may well be glad. One notes approvingly the blush with which he writes of the audacious advertising of his 'Cudjo's Cave.' There is more than entertainment, there is sound instruction, in the chapter on "The South After the War." It is to be especially commended to those who think all the mistakes of reconstruction gratuitous so far as the North was responsible for them.

Mr. Trowbridge's "Recollections of Noted Persons" blend agreeably with the details of his 'Own Story.' He writes of Emerson with a warmth of enthusiasm that will bring back to a happy few their own delight in him when first his star hung in their morning sky. Those who weary of the greatness of Emerson's way will be much pleased with his punishment of Mr. Epes Sargent's jaunty disrespect. Mr. Alcott would have had Emerson write of him, and not merely of Plato, Pythagoras, and Jesus. Mr. Trowbridge writes of Alcott with amused depreciation. A very interesting story is that of Longfellow's objection to Emerson's reading Whittier's 'Ichabod' at the celebration of Whittier's seventieth birthday, not because he read it badly, but because it hit Webster so hard. Longfellow's defect of moral passion comes out in his objection and in his saying, "Of course, Emerson took only the literary view of it"; probably a complete misapprehension. The recollections of Whitman are more extended than those of any member of the Boston coterie. They are extremely cordial, but the victims of the true Whitmania will find them over-critical in some respects. Particularly good is the view of Whitman's relation to Emerson. Whitman's friends have sometimes thought it necessary to assert that Whitman wrote 'Leaves of Grass' before reading Emerson. Mr. Trowbridge quotes Whitman as making to him a statement of opposite character, and he is able to cite lines from the early 'Leaves' that distinctly reproduce Emerson's sentences. If Whitman denied to others what he affirmed to Mr. Trowbridge, it should be noted that his memory failed in his last years so much that we find him crediting 'Leaves of Grass' to the inspiration of the civil war.

The Life Work of George Frederick Watts, R.A. By Hugh Macmillan, D.D., LL.D. London: J. M. Dent & Co.; New York: E. P. Dutton & Co. 1903.

This volume on the great English artist does not pretend to be a complete history of his life, since, for obvious reasons, it is not during the lifetime of a great man that the events of his career can be dealt with in all sincerity; nor is it a critical survey of his work from an artistic point of view. It treats chiefly of the ethical aims of his art, the philosophy of his allegories, the explanation of his symbolism, which is not always very clear.

The "Temple Biographies," to which series the book belongs, aim at bringing together the lives of "God's born interpreters," as Mazzini names them, *i. e.*, men gifted with a knowledge of the spiritual significance of life and with the power to express it in a manner helpful to mankind. The editor, in his preface, remarks that it would have been an injustice to the art of England and to the past century to have excluded G. F. Watts from the ranks of these great teachers on the score of his being still at work. Dr. Hugh Macmillan, a life-long student and enthusiastic admirer of the artist's pictures, was entrusted with this biography; he died while correcting the proofs, which, according to a note inserted at the end, have been since revised with trifling alterations by Mr. and Mrs. Watts, but published substantially as the author left them. To an artist who, with all his great gifts, is also endowed with the quality of modesty, as is the case with Watts, judging from his manner of speaking of his own work as told here, the perusal of this volume must have been a severe ordeal, so persistently is the note of praise sounded from beginning to end. Praise, to be agreeable, must also be discriminating, and Dr. Macmillan constantly shows his inability to deal with the artistic qualities of the pictures he describes, while even in the province which chiefly interests him, the inner meaning and moral lesson, he does not seem to understand that the symbolism which requires elaborate literary explanations misses its mark.

Mr. Watts is chiefly known in this country by the exhibition, in 1885, at the New York Metropolitan Museum of Art, of fifty of his most representative works; among them were some of the portraits of celebrated men and women of the time, from the biographical series he means to leave to the English nation. His first laurels as a young painter were won in the field of portraiture, and it is as a portrait painter he is even now chiefly esteemed by his contemporaries, although his predilection has always led him to allegorical subjects, and in many of these he has shown himself very great, both in conception and in color and manner of execution, approaching in his best work nearer than any artist of our time to the great Venetian masters, Tintoretto and Titian. A replica of the allegory of "Love and Life," which Mr. Watts himself says "is perhaps his most direct message to the present generation," was presented by the artist after the Chicago exhibition to the American nation and gratefully received by an express act of Congress. It hangs in the reception room of the White House, and tells its own story excellently well, as do "Love and Death," "Time, Death, and Judgment," "The Rider of the White Horse," "Paolo and Francesca," "The Judgment of Paris," "Endymion," "The Court of Death," "Hope," and many others. It is interesting to note from Mr. Watts's own talks about his pictures to the author, how these subjects grew and developed into moral lessons which it has been the labor of his life to express, while Dr. Macmillan's own further expansion into a sermon on every subject that Watts has ever painted, becomes extremely wearisome, and brings to mind the old Italian saying, "From my friends defend me, oh God! From my enemies I can defend myself!"

The narrative of the artist's life, the influences of Greek sculpture and Italian painting over him, his travels in the East, and his relations with his contemporaries, reads as if all the facts had been obtained from the most trustworthy sources, as also

the account of Mr. Watts's efforts to encourage the development of art industries among his own people. The story of a life so nobly lived and of work so conscientiously thought out and executed cannot but be instructive and inspiring to all. It is only to be regretted that the author has not pruned his style of so much perfervid "gush," and has not known measure either in the length of his digressions or in the quality of his admiration.

The book is illustrated fairly well from Hollyer's photographs of the artist's works.

A Text-Book of North-Semitic Inscriptions, Moabite, Hebrew, Phœnician, Aramaic, Nabatæan, Palmyrene, Jewish. By the Rev. G. A. Cooke, M.A., late Fellow of Magdalen College, Oxford. Oxford: Clarendon Press; New York: H. Frowde. 1903. Pp. xxiv, 448; 14 plates.

A comparison is inevitable between this book and Lidzbarski's 'Handbuch der nordsemitischen Epigraphik.' They practically stand alone together, and they, to a great extent, parallel one another. Whether a translation of Lidzbarski with considerable additions would not have more adequately met the needs of the case, can be better considered after a description of the present work. It consists of 151 selected inscriptions and papyri, given throughout in the square Hebrew character, with a number of coins and gems. The inscriptions are Hebrew, Moabite, Phœnician with its later developments, Punic and neo-Punic, in Phœnicia proper, Cyprus, Egypt, Attica, Malta, Sardinia, North Africa, Gaul; Aramaic in what is commonly called Old Aramaic from North Syria, Assyria, Babylonia, Asia Minor, Egyptian Aramaic (largely papyri), Nabatæan, and Palmyrene Aramaic and Sinaitic; late Jewish. This groups under North Semitic all those dialects commonly classed as Canaanite and Aramaic; geographically its sweep runs into the Assyrian field, but, of course, takes no account of cuneiform, and into the territory of the north Arabic inscriptions, which also it leaves untouched—not quite so easy a matter. These inscriptions, then, are given in transliteration into the square Hebrew character, and are equipped with translations and commentary. The translations are more or less composite, built up from the author's study of the different editions and decipherments; novel interpretations and reconstructions are very properly eschewed, and a cautious attitude, dotted with probablys and possiblys—eminently characteristic of a pupil of Driver—is maintained. The commentary is similarly composite, is full of references, and will serve excellently as an introduction to further study.

The plates consist of two representative Phœnician inscriptions, one Punic, one neo-Punic; two Old Aramaic (Nerab), one Nabatæan, one Palmyrene; three of coins and gems and three of alphabets. This is all the provision made for epigraphy in the true sense, and marks the great weakness of the book. The user of it has really no opportunity to learn how Semitic inscriptions actually look, and to gain that familiarity with the archaic Semitic alphabet which is essential to any original work. After having worked through this book, he may stand as helpless before a Semitic inscription as though he had never even studied Hebrew. It is true that the expense of photographic reproductions is very great, and few are penmen of such skill as Lidzbarski has shown himself in his magnificent atlas of facsimiles. But there are fonts of archaic type in existence, and all the inscriptions here, except, perhaps, the later Nabatæan and Palmyrene, could be represented much more closely in archaic than in the square Hebrew. This was one possible course which Mr. Cooke might have followed. Another would have been to translate Lidzbarski, add translations and commentaries to the text, and refer the student to Lidzbarski's atlas. To it he will need to go in the end, and the sooner he deals with inscriptions as they stand engraved the better.

But, with this rather serious limitation, there can be no doubt of the value and scholarship of the present book. The introduction is hardly adequate, but the commentaries are generally excellent—the ignoring of the doubt that has been cast on the date of the Siloam inscription is exceptionally startling—and there are almost forty pages of indices. Another so full presentation of its subject does not exist in English, and one so simple and accessible does not exist in any other language. The learner may well begin with it; but let him also turn, as soon as may be, to the stones themselves or to adequate reproductions of them.

The Black Hawk War: Including a Review of Black Hawk's Life. Illustrated with upwards of three hundred rare and interesting portraits and views. By Frank E. Stevens. Chicago, 1205 Chamber of Commerce Building; Frank E. Stevens. 1903. Pp. 323.

The only background for the Black Hawk War that Mr. Stevens has prepared is the brief sketch of the early life of the Indian leader contained in the opening chapters. The author finds that Black Hawk was rather smaller than his reputation:

"The reputation which he has established in Indian annals comes not from any sacrifice he made for his people, for never in his life did he make one. Neither comes it from his struggles for an oppressed race, for he never conceived a solitary scheme for its amelioration. He had never a lofty aspiration for his nation. His every venture was made for personal aggrandizement or popularity. Tecumseh dreamed of a great confederation; not to become a leader. Cornstalk, Logan, Pontiac were ambitious for their people, but Black Hawk never" (p. 20).

The chief events of Black Hawk's life have been selected for comment, to show that his motives were usually unworthy (from the white man's point of view), and that he was utterly unjustified in precipitating the war which bears his name. Having sketched the life of Black Hawk in this way, the author proceeds to relate the history of the war in some detail. The book closes with a chapter on the last years of Black Hawk, and two chapters dealing with the part played in the war by Lincoln and Davis respectively.

Mr. Stevens tells us that he began collecting material for his book in 1871. Certainly he has got together a great amount of valuable material. He claims to have consulted or had transcribed all of the existing original documents, and to have gained much information from conversing with those who participated in the war, from whom also he has obtained letters, muster rolls, etc. Many of these documents are here printed in full; indeed, one-half of the space, at a rough guess, is taken up with quotations in full or in part from original sources. Another distinguishing feature of the work is the great number of illustrations, chiefly portraits of participants. The battlefields have been visited, and maps of them have been prepared; and the author has prepared a map of the whole region of the war. Mr. Stevens is to be commended for the carefulness with which he has collected his documents, and the result, as a collection of material, is interesting and valuable.

As history or biography, however, it is not satisfactory. First of all, one misses the strict impartiality of the true historian. This is especially noticeable in the early chapters. The author has given us not so much a clear biography of Black Hawk as a collection of facts enforcing his opinion that Black Hawk was a bad Indian, who had nothing to complain of in the treatment he received at the hands of the white men. There is constantly present the temper that judges rather than the temper that explains. When Black Hawk learned that the Americans were to take possession of St. Louis, he says that "this news made myself and band sad, because we had always heard bad accounts of the Americans from Indians who had lived near them." What more natural? Yet Mr. Stevens finds these words "ill-natured," "malignant," and "false" (p. 26). In the second place, the story Mr. Stevens has set himself to tell, and for which he was at such pains to collect material, is poorly told. He says that "no attempt has been made at making literature." We do not complain that the book is not "literature"; few histories are that in the strict sense of the term. But it is one thing to expect that an historical narrative shall be "literature," and quite another to expect that it shall be clear. Mr. Stevens's narrative as a whole is not clear. It is not so much in the use of words or the construction of sentences that he is at fault, though he does not find it impossible to write such a sentence as: "During the years 1803 and 1804 the British were in their ugliest humor toward the Americans, and no effort to aggravate, yea murder, the frontier was spared" (p. 32). The chief fault is in the utter lack of constructive ability exhibited throughout. What is important is not distinguished from what is unimportant by any sort of emphasis. There is no grouping of the whole subject into its natural divisions; there is no subordination of minor details to important events, there is no integration of the separate parts. In a word, there is not only no literary "art" here, there is not even ordinary historical carpentry. The reader never knows precisely where he is until the end is reached, and then he has no clear notion of Black Hawk or of the Black Hawk War. This is due partly to a lack of general historical insight, partly to the extensive quotations that have been introduced, but chiefly to the author's inability to tell a plain tale clearly and directly.

We have noted only a few positive errors. France ceded Louisiana to Spain in 1762, not in 1763 (p. 24). In 1783 France had no "colonial possessions to the West" (p. 25). Though dealing with original

sources, the author refutes a statement of Black Hawk's by quoting from "the only historical record at hand," which turns out to be Dawson's 'Life of Harrison' (p. 34). There is a fair index, but no bibliography, and no satisfactory citation of authorities.

The Cricket of Abel, Hirst, and Shrewsbury.—A Book of Golf. 2 vols. Edited by E. P. Benson and Eustace H. Miles. New York: E. P. Dutton & Co. 1903.

These are two of the volumes of another athletic library. One would have supposed that the subjects had been thoroughly exhausted; but, as the years go by, new features appear in both cricket and golf, new methods are adopted by successful players, and those who are less successful are eager for any literature that promises to be "up to date" and to make the new ideas available for their practice. The two volumes are constructed on quite different principles. That on Cricket is entirely written by Mr. Miles, and is elaborately illustrated by photographs of the three English professionals whose names appear in the title; whereas the Golf book is mainly written by J. Braid, J. A. T. Bramston, and H. G. Hutchinson, the first a professional, and the other two well-known amateurs, and the contribution of the editors is comparatively small. In both books much value is claimed for photographic representations of players in the act of making different strokes; but the really novel feature, and one that seems to merit the attention of beginners, if not of experts, is the suggestion of bedroom exercises calculated to develop the particular muscles required for these strokes. That such a system might lead to greater accuracy in golf seems highly probable, but that it would be equally valuable for cricket we are disposed to doubt. So great is Mr. Miles's faith in the idea that he is now engaged in a course of these daily exercises, and believes that in a couple of years he will be a fine cricket player, although heretofore he has not been successful on the cricket field. But then, Mr. Miles is nothing if not original. In all seriousness he proposes that cricket should be one of the subjects in which candidates are examined for civil-service appointments, on the ground that a knowledge of the game is "as good a qualification as to know well the names of many prophets, kings, battles, and other dull trivialities."

In the Golf book the beginner may be puzzled by finding that the gospels according to Braid, Bramston, and Hutchinson are not synoptical, in that the writers differ on some material points; and the conclusion must be that the reader should adopt the system best suited to his physical peculiarities. Mr. Hutchinson calls attention to the fact that good billiard players are generally good golfers, because success in both games depends on accuracy, and in both the player strikes a ball that is at rest. There is a sensible and timely chapter on the American rubber-cored ball, which has encountered much opposition in England, but which is driving out the gutty as completely as that ball drove out the old feather-filled ball. The opposition was largely based on the fact that the new ball was invented and patented in this country, but its superiority is so marked as to have overcome even British conservatism.

FERNS

A Manual for the Northeastern States. By C. E. WATERS, Ph D (Johns Hopkins). With over 200 illustrations from Original Drawings and Photographs. 362 pp. Square 8vo, $3.00 net; by mail $3.32.

A popular but thoroughly scientific book. *The Plant World* says: "It is likely to prove the leading popular work on ferns . . . It can be confidently asserted that no finer examples of fern photography have ever been produced."

Henry Holt & Co. 29 W. 23d St. New York.

Doubts About Darwinism

By a Semi-Darwinian. 8vo. $1.25.

"In Lord KELVIN'S Address to the British Association the following passage occurs: 'If a probable solution consistent with the ordinary course of nature can be found, we must not invoke an abnormal act of Creative Power.' The Author has endeavored to conform strictly to this principle. DARWIN'S theory of a natural selection has been accepted in every case as far as appeared adequate to accounting fairly for the phenomena; an additional cause has only been proposed where that theory appeared inadequate or inapplicable."—AUTHOR'S PREFACE.

LONGMANS, GREEN, & CO., N. Y.

John Bull in France;

or French as it is Spoken. By LEON DELBOS, M.A., Instructor in French to Royal Naval Cadets in H. M. S. "Britannia." Cloth, 50 cents.

This is a book of real conversations, that is of conversations such as may, and do actually, occur in everyday life, especially between travellers.

EL DORADO:

A Tragedy

By RIDGELY TORRENCE

12mo, $1.25 net

A Statement: The Drama gets closer to Life than Fiction. Read a play or two, instead of novels, and test the statement.

A Challenge: Everyone knows how England recently welcomed its new poet and dramatist, Stephen Phillips. Americans should show their culture by welcoming *their* new poet and dramatist,

RIDGELY TORRENCE.

EDMUND CLARENCE STEDMAN writes as follows of Mr. Torrence's new Tragedy, "EL DORADO":

"EL DORADO certainly justifies the hopes raised by the quality of Mr. Torrence's first book, 'The House of a Hundred Lights.' The poet's hand and voice have strengthened. The imaginative cast of his grave yet picturesque drama is sustained throughout, but its highest reach is to be found in various superb passages of the blank verse—a measure which so few are born to master. In this respect, the 'Prologue' of itself stamps the author as a poet who will do honor to America."

A New Volume in the Great Commander Series.
Edited by Gen. James Grant Wilson

Admiral Porter

By JAMES RUSSELL SOLEY

Formerly Assistant Secretary of the Navy.

In the annals of the United States Navy no single family has borne itself with greater distinction or deserved higher honor than that of the Porters. An adequate biography of the great Admiral has long been wanting, and Mr. Soley's book, upon which he has been long engaged, and into which he has brought much information generally unavailable, will be welcomed by all interested in the history of America.

Portrait. 12mo. Cloth. $1.50 net.

The Alphabet of Rhetoric

By ROSSITER JOHNSON

The Alphabet of Rhetoric is "intended as a familiar companion for all that care to speak and write correctly." It has an article on each of the figures of rhetoric, explaining its nature and use, with examples from famous authors. It also contains essays on Conversation, Humor, Poetry, Style, and kindred subjects, and a chapter on Elocution is added. The whole is arranged alphabetically, for easy reference.

12mo. Cloth, $1.25 net

Garden Mosaics

By ALFRED SIMSON

A book of reflections by one who loves flowers and trees, who has had opportunities to study them closely and diligently, and who gives hints as to their cultivation. There are interesting anecdotes throughout the book, which itself deals with a subject of perpetual interest. The moralizing and the gentle philosophy induced by the surroundings of a beautiful garden are always to be welcomed in literature.

Illustrated. Decorative Cover. 12mo. Cloth. $1.00 net

HENRY C. STURGES

With a Portrait on Vellum. To which is prefixed a Memoir of the Poet by Richard Henry Stoddard

100 copies on large paper. $2.50 net

Ready October 16.

The Life and Times of Thomas Jefferson

By THOMAS E. WATSON,

Author of "The Story of France," "Napoleon," etc.

Mr. Watson's book is undoubtedly one of the most notable of the present season. He has brought to his task a devotion to high principles which has found ample scope in depicting the character of Jefferson. His determination to write an unbiased account of the great Virginian, without sectional prejudice, renders his book of peculiar value. The story is told in a style of great simplicity, but is marked none the less by moments of dramatic fervor. Mr. Watson has realized the pictorial possibilities in the life of the third president, and used them with good effect. The volume forms the beginning of a series of books in which the history of the United States will be given.

Portraits and other illustrations. Cloth, 8vo, $2.50 net.

THE EDITORS-IN-CHIEF (Assisted by over 300 Eminent Editors and Contributors) OF

17 Volumes **The New International Encyclopædia** 16,000 Pages

Over five hundred public libraries in the East alone have *purchased* this incomparable work during the past year, thus taking advantage of the low introductory price. Isn't that the best possible evidence that the New International is a necessity?

The foremost scholars of the world are its editors and contributors. No pains, no expense were spared in making it as nearly perfect as was humanly possible.

The money spent in its preparation amounts to a large fortune.

It was begun years later and brought out for use ten years newer, with ten years more of human knowledge upon its pages than any other encyclopædia in print to-day. Knowing this, is it any wonder that unsold editions of older encyclopædias are offered as great bargains.

The work, now practically complete, is still offered at a special introductory price so low and on terms so easy that every book-loving family may possess it and not feel the outlay.

To those ordering now we will present a

Handsome Book-case FREE

to hold the complete set.

At least let us send you Prospectus and Specimen Pages.

E. P. DUTTON & COMPANY

SOME NEW BOOKS

The Drawings of the Florentine Painters

Classified, Criticised, and Studied as Documents in the History and Appreciation of Tuscan Art. By BERNHARD BERENSON. With a Copious Catalogue Raisonné and One Hundred and Eighty Facsimile Illustrations. Two Vols. Folio. $80.00 *net.*

This Edition is limited to three hundred and fifty-five copies in all (one hundred and five for America and two hundred and fifty for Great Britain) and the type has been distributed. Prospectus with specimen plate to be had on application.

"He has not left the subject where he found it. On the contrary he has carried it to a new point of scholarship beyond the confusion which has hitherto reigned in this sphere, and has provided an indispensable work for those who may engage in further research."—*N. Y. Tribune.*

TEMPLE AUTOBIOGRAPHIES.—I.

Benvenuto Cellini

Newly Translated by ANNE MACDONELL. With Introduction, Bibliography, and Notes. Illustrated, two vols, $2.50 net. (Postage 13 cts.)

"The translation is a sterling piece of work."—*Guardian.*

"Miss Macdonell has done her work with vigor, and with that quality of exuberance and plain, honest speaking, lacking which any translation of Cellini would be futile. It reads as if the man himself was talking."—*Academy.*

The Autobiography of Leigh Hunt

With Introduction by Thornton Hunt. Newly edited by R. INGPEN, and illustrated with photogravure portraits. Two vols., 8vo, vellum, $7.50 net. (Express 25 cents.)

It was Carlyle who said of these memoirs: "I call this an excellent good book, by far the best of the autobiographic kind I remember to have read in the English language; and, indeed, except it be Boswell's *Life of Johnson*, I do not know where we have such a picture drama of a human life as in these three volums."

THE TEMPLE EDITION OF

The Works of Charles Lamb

Edited by WILLIAM MACDONALD. With Essays, Biographical Introductions, and Notes.

This Edition includes among its distinctive features (1) Appropriate daintiness of setting; (2) Profuse illustration, comprising some 500 drawings by modern artists, reproductions from the original engravings, and portraits; (3) Methodical grouping, careful editing, and, by the inclusion of much copyright and hitherto unpublished matter, general completeness.

In 12 vols. long fcap, 8vo (4⅝ by 7¾), $16.00 *net* per set. Also 100 sets on large paper, $50.00 *net* per set.

NOW READY

The **ESSAYS OF ELIA.** With Essay: "On Editions Past and Present," by the EDITOR. Illustrated by C. E. Brock.

The **LAST ESSAYS OF ELIA.** With Biographical and Critical Memoir by the EDITOR. Illustrated by C. E. Brock.

Other Volumes shortly. *** *Detailed illustrated Prospectus sent post free.*

"This is a form in which the lovers of Charles Lamb will be glad to have his works. It seems to be in almost every way a fitting embodiment of his spirit. The little volumes are extremely charming; easy to hold, easy to read, and with a certain elegant distinction of page, typography and paper."—*N. Y. Times Saturday Review.*

A RE-ISSUE IN 12 VOLUMES OF

An English Garner

Professor ARBER'S Ingatherings from English History and Literature (the original impression of which is now out of print). The volumes are moderate-priced, well printed, handsomely bound in blue cloth, and average between 400 and 500 pages. $1.25 net, per volume (postage, 13 cts. a volume).

From letters received from prominent authorities we venture to quote the following:

Professor DOWDEN writes: "The original Arber was a rich haggis of miscellaneous feeding. When I opened it I never found out what I wanted, but always something better, which I didn't want. Now it becomes a well-arranged library and the gain is great."

SOCIAL ENGLAND ILLUSTRATED. A collection of 17th-century tracts. With an introduction by ANDREW LANG. xxxii+458.

TUDOR TRACTS. 1532-1588 With an Introduction by A. F. POLLARD, M.A., F.R Hist.S., xxxvi+520.

VOYAGES AND TRAVELS MAINLY DURING THE 16TH AND 17TH CENTURIES. With an Introduction by C. RAYMOND BEAZLEY, F.R.G.S. Vol. I., xxviii+332. Vol. II., xxiv+444. Index. 2 vols., $2.50 *net.*

ELIZABETHAN SONNETS. With an Introduction by SIDNEY LEE. 2 volumes. (*Shortly.*)

Professor SAINTSBURY writes: "The form is very satisfactory. The additions in the first volume are very interesting, and the introductions will supply with a classified arrangement just what was wanted to make the earlier issues not merely as they have always been—welcome collections to those who know, but instruments of intelligent edification to those who do not."

CRITICAL ESSAYS AND LITERARY FRAGMENTS. With an Introduction by J. CHURTON COLLINS. pp. xlix+344.

STUART TRACTS. 1603-1693. With an Introduction by C. H. FIRTH. xxxvi+514.

LATER STUART TRACTS. With an Introduction by GEORGE A. AITKEN. xxix+384.

FIFTEENTH-CENTURY PROSE AND VERSE. With an Introduction by ALFRED W. POLLARD. xxix+324.

LONGER ELIZABETHAN POEMS AND SHORTER ELIZABETHAN POEMS. With an Introduction by A. H. BULLEN. 2 volumes. (*Shortly.*)

Detailed prospectus of series mailed to any address.

A Practical and Interesting Book

Bolles's Money, Banking, and Finance

$1.25

By ALBERT S. BOLLES, Ph.D., LL.D.

Author of "Practical Banking," etc., and Lecturer in the University of Pennsylvania and Haverford College.

A brief, practical treatise on the Theory of Money, the Practice and Usages of Banking, and the Principles of Finance. The author describes the best banking practice of the day, and adds those legal principles which refer to the topics taken up. There are chapters on the Closing of Banks, Bank Finance, and Railway Finance. The information contained in this volume is of unquestionable value and interest to every person, and has not heretofore been presented in so compact, reliable, and readable a form. The book will appeal alike to those who intend to devote themselves to the business of banking, to those who are thus engaged, and to those who are studying the history and theories of banking.

A Book of Country Houses

Illustrated on Sixty-two Plates, Reproduced from Photographs and Drawings, accompanied by the plans of each.

By ERNEST NEWTON, Architect

THE plans form an important feature of the book. They are collected on separate plates, reproduced to a sufficiently large scale to be easy of reference, and in all cases include both ground and bedroom floors.

The illustrations are from photographs specially taken, and from studies in water-color and pen-and-ink carefully made from the detail drawings. The photographic plates and water-color drawings have been artistically reproduced by the collotype process. The views comprise forty plates, and the plans twenty-two.

Send in your order at once. Edition Limited.

AN EDUCATIONAL DIRECTORY

I.—The NATION stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading-rooms, and into thousands of families.

II.—The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III.—The School List in the NATION has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

IV.—The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

A new volume in the American Men of Letters Series, presenting a fresh study of Whittier's life and work.

HOUGHTON, MIFFLIN & COMPANY, Boston and New York

The Nation.

NEW YORK, THURSDAY, OCTOBER 15, 1903.

The Week.

Senator Proctor's Rutland speech reads like that of a miserable anti-Imperialist. His open dislike of expansion over non-contiguous territory; his shrunken ambition which would be contented with such a pent-up country as could be bounded by the two oceans, the Arctic Circle, and the Gulf of Mexico; his sentimental concession to the desire of all people to "govern themselves"—why, the weakling and the craven seem suddenly to have clasped hands in this leading Republican Senator. The President will have to threaten him with a repetition of the speech exhorting us not to be afraid of being great. Rather than hear that again, we presume that Mr. Proctor would consent to annexing the most distant isles of the sea—or would even flee to them. His utterance, however, is a sign that the sobering-off period is about due after our Imperialistic, as well as after our speculative, debauch.

Senator Allison, in his speech at Clinton, Iowa, on Saturday night, dispelled any doubt that may have lingered regarding the attitude of Congress this winter towards the currency question. He expressed the belief that no change would receive the sanction of a Republican Congress that would "so revolutionize our system as to deprive the Government itself of the substantial control that it now has and exercises over bank circulation, as well as over other forms of paper money." This means, of course, that no asset currency scheme will make headway in Congress prior to the next election. Senator Allison, however, is of the opinion that legislation will be enacted this winter to relieve the nation from the inconvenience arising from the accumulation of money in the Treasury. It is a question how far others will share this view. The matter of so changing the policy of the Treasury as to accomplish this very desirable end is one which will arouse a sharp conflict of opinion—possibly as sharp as would be created by an attempt to substitute an asset currency for our present banknote circulation. While a measure allowing the Treasury to deposit both its customs and its internal-revenue receipts in the banks on the same terms as individual depositors, would command the approval of economists and business men, it is probably useless to expect any action along this line in the immediate future. On the other hand, when it comes to the question of enacting a law permitting the Secretary of the Treasury to deposit his surplus funds on other collateral than United States bonds, there is the possibility of endless arguments and delays.

The tariff, of course, came in for a large share of Senator Allison's attention, the burden of his remarks being that though our tariff and currency laws are not without defects, these may best be cured by the Republican party. Probably nothing would please the country better than to have the party demonstrate that fact. Secretary Shaw also contributed to the tariff discussion of last week by his speech at Akron, Ohio. Mr. Shaw has a way of presenting surface facts that is quite impressive, as when, last Saturday, he said: "Our farms produce $4,000,000,000, our shops and factories produce more than all the shops and factories of any other two countries on the map by $3,000,000,000 per annum. The productive capacity, without duplications, amounts to $11,000,000,000, of which we export, in round numbers, $1,500,000,000, and import $1,000,000,000." This is, of course, magnificent, but it could be wished that the connection were shown a little more clearly between these figures and the tariff. Mr. Shaw's calm assumption of a cause and effect here is followed by this statement: "Suppose we open the doors and allow Europe to clothe us and furnish us our manufactured products, who will consume the products of our farms, and what shall we do with the products of our factories?" The only answer which this calls for is the further question, If Europe impoverishes us, what advantage will she gain in the long run? Mr. Shaw's weak point is his failure to clearly understand the reciprocal nature of trade.

The Treasury statement for August showed that upwards of $19,000,000 of national banknotes were included in the Government's cash holdings. The September statement showed $15,500,000. Under Secretary Gage the average amount of banknotes held in the Treasury was about one-third of this sum. The rise to the present figures can hardly be accounted for except on the hypothesis that the Secretary has stopped *or* curtailed the redemption of banknotes by the banks issuing them. The Treasury must redeem with its own funds all such notes sent in, but if it fails to call upon the banks for reimbursement, if it fails to enforce the law in that particular, it makes a loan of its own money to the banks, payable on call, and then it holds a sword of Damocles over their heads. If the Secretary has taken this course, he has not only put a new obstacle in the current of banknote redemption, already too sluggish, but he has brought a new danger into the banking system—that of holding command over the reserves of the banks. Mr. Shaw has been very much a law unto himself since he became Secretary, and there is some room for apprehension lest his arbitrary practices end in a misstep of some seriousness both to himself and his party.

The Rhode Island Republicans have appealed to the sort of patriotism that is the last refuge of a scoundrel. In their convention last week they roared as gently as any sucking dove in their remarks on bribery, but they were as fierce as a lion in denunciation of Gov. Garvin for his efforts to stop it:

> "The party declares against bribery and corruption, and, while it condemns such practices in either party, it finds no words of criticism too severe to apply to the Chief Executive who has preached and written throughout his executive career concerning the debauchment of Rhode Island voters, thereby impeaching his own party and defaming the fair name of the State which he has taken the oath of honor to defend."

The Republicans of Rhode Island are not alone in their folly. When Joseph W. Folk began his work in St. Louis there was a wild outcry, not against the highwaymen who had been robbing the city, but against the man who was choking them black in the face. When negro peonage was unearthed in Alabama. Gov. Jelks had soft words for the criminal authors of a new slavery, who had beaten a woman to death; but he could not find language too bitter for the Federal officials who were champions of the oppressed, and for the newspapers that printed the news and exposed his own cowardice. Here in New York, also, the men who have attacked Tammany and its organized vice are always accused of befouling their own nests. In Rhode Island the Republicans make no attempt to deny Gov. Garvin's charges; they dare not, for the facts are known to every intelligent voter. They content themselves with declaring that the man who tries to stamp out bribery is a greater villain than the briber.

The issue, then, is clearly joined. Gov. Garvin's views on proportional representation or on the referendum are beside the mark. In his speech to the Democratic convention he laid stress on the great question of Constitutional reform, and the platform itself demanded this as the first change—pregnant with all others. In order to reduce the contest to its simplest terms, the Republicans have commended as "the foremost defender of our national honor and our national prosperity" Senator Aldrich, the president of the street-railway

combination which has been the principal beneficiary of the system of corruption; and they have nominated for Governor Col. Samuel Pomroy Colt, its vice-president. With an amazing lack of humor, they crowned their work by attacking "the immense Trusts" that "destroy competition," in spite of the fact that Col. Colt is president of the Rubber Trust and vice-president of the Woollen Trust. The campaign, then, is a fair fight for decent politics; and the protagonists are the people on the one hand, and, on the other, the most unpopular and unscrupulous corporation in Rhode Island.

The completion of the New York Fusion ticket is the signal for an aggressive campaign. The men who have stepped into the breach left by the deserters, Grout and Fornes, are unexceptionable candidates. Mr. Hinrichs, named for Comptroller, has an admirable record in public office, proof that he is equal to the duties he is asked to assume. His character is an appeal to the united Fusion vote; for though a Democrat, he has always shown himself independent. His candidacy for Lieutenant-Governor upon the Gold Democratic ticket is evidence of his willingness to sacrifice partisan advantage to principle. Edward J. McGuire, who is nominated for President of the Board of Aldermen, is recognized as one of the ablest officials of the present Fusion Administration. As Assistant Corporation Counsel, he has conducted some of the most important litigation in which the city has been engaged; in particular, he has distinguished himself in legal work connected with the Dock Board corruption under Charles F. Murphy. Mr. McGuire, too, is a Democrat of the most independent type. He supported Palmer and Buckner in 1896; and he was one of the committee that resisted Croker's attempt to control the judiciary, while in 1898 he conducted an independent campaign for the reëlection of Judge Daly. Both men are eminently suitable leaders in a contest for non-partisan government of New York city.

Mayor Low, in his letter of acceptance, confines himself largely to a review of the many achievements of his Administration. The change from the condition of affairs under Mayor Van Wyck as portrayed by Bishop Potter, would in itself be worth any sacrifice in the way of expense and trouble to which the city may have been put. But the transformation has been so quietly brought about that only those directly interested, like Commissioner De Forest or Mr. Jacob A. Riis, are aware of the full extent of the change. Mr. Low's position is buttressed by the fact that in every single department there have been many important improvements, and that in not one has there been a serious scandal or a financial loss to the city because of dishonesty. The Tammany Hall platform could only make three vague allegations of wrong-doing. Best of all is the tone of Mayor Low's letter. He is naturally generous in his recognition of Mr. Grout's work and the achievements of his subordinates. In short, this is the review of a broad-minded and trained executive who places the welfare of the city above everything else—particularly the interests of State and national parties and politics. As Mr. Low has well put it, the contest is between a government by law and a government by favoritism and the pull. Every honest and unselfish man must demand the Mayor's reëlection and enforce his views at the polls.

Judge Grosscup of the United States Court took the ground on Saturday that the solution of the Trust problem lay in a national law of incorporation. He also believed that should a great party adopt this idea and pass such an act in Congress, the law, if properly drawn, would be sustained by the Supreme Court. His comment is interesting because it brushes aside the paraphernalia of suppression of Trusts *quâ* Trusts and goes straight to the desideratum of sound and uniform corporation law. There is little promise that the States will ever make their laws of incorporation uniform. It is certain that a form of incorporation which required reasonable publicity of accounting and that nominal capitalization should approximate actual capital, would solve many of the evils arising from the present blind combinations. This, we believe, dispassionate students of the problem have generally conceded. Judge Grosscut is original only in asserting that a national corporation law would be Constitutional. At first blush this seems impossible. The right to incorporate companies is not one expressly given to the nation by the Constitution; it is one that has been assumed and exercised by every State. To withdraw the power from the States would mean the reversing of a century of precedent, and yet it is possible that a discreet court might sustain a National Companies Act, under the power to regulate interstate commerce.

Such a court would recall that, first, the power of incorporation was never in dispute at the Constitutional Convention —it was hardly worth fighting for; second, that, in the right to impose a national bankruptcy law, the central Government wields quite as drastic a power, and one closely analogous to that now sought; third, that the exercise of the right of incorporation by the several States might be called, in Hamilton's words, "absolutely and totally contradictory and repugnant" to a proper exercise by the nation of the power to regulate interstate commerce—for practically all companies do an interstate business. Canada under this last principle has practically asserted the right of national control over corporations. The Canadian Constitution no more gives that power specifically than does ours. But conditions had changed between 1787 and 1867. The power had become valuable, and whereas eighty years later it had gone by default to the several States of the Union, in the Dominion it is being gradually assumed by the nation, against the protest of the provinces. This might serve, if not as a precedent, at least as an illustration, for a court considering a National Companies Act.

Some additional light was thrown upon the ethics of unionism at the regular Sunday meeting of the Central Federated Union. Speaking of the suspension of the Morse Shipbuilding Company, a walking delegate of the International Association of Machinists exulted in the fact as a victory for organized labor. The Morse Company had refused to pay union wages, the Morse Company was "out of business"; *sic semper.* Furthermore, Walking Delegate Warner, meeting newspaper criticism of the action of his union, declared: "If there is any disgrace attached to this matter, we are willing and anxious to assume it." With all allowances for bluster, there is more disgrace attaching to Mr. Warner's view than any union can afford to assume. The Morse works were not closed as the result of a strike. In such a victory, in a stand-up fight, unionism might take satisfaction—though here also the victory might be far too dearly bought. The Morse shipyard was closed because the union workmen loafed on their jobs and refused to do an honest day's work. That at least is the story, and such is Walking Delegate Warner's boast. He rejoices that his union has swindled its employers out of days' work until the business and the days' work had been destroyed together. He congratulates his constituents upon successful petty larceny of the time that belonged to their employers. It is a peculiarly despicable instance of the shifts to which the union oligarchy will stoop.

The cotton goods statistics in the August trade statement of the United States are of especial interest. They reveal a state of affairs that is rather striking in itself, and they cast a sidelight on the very interesting discussion which Mr. Chamberlain is now stirring up in Great Britain. The member from Birmingham said last week at Greenock that the cotton manufacturing industry of the United Kingdom was menaced by the continued adherence of the nation to

the free-trade policy. By an irony of fate, Board of Trade figures were issued the very same day showing a heavy increase in the exports of cotton manufactures for the first nine months of 1902. Presumably, the United States figured very largely in the late Colonial Secretary's mind when he delivered himself on the cotton goods situation; and it is interesting to note that our own August trade statement leaves him in the same plight as the Board of Trade figures. For, while the British exports for the nine months increased $6,250,000, the exports of cotton cloths from the United States during the first eight months fell off $3,844,910. Nor is this the whole story, for, far from menacing the Lancashire industry, this country had at last accounts imported $6,263,295 of cotton cloths from foreign countries this year, as compared with $4,956,354 in 1902, and in particular had received $4,845,270 from the United Kingdom, against $3,711,116 in 1902, and $2,795,257 in 1901. A fact of considerable importance in this connection is that the exports from Great Britain averaged a slightly higher price per yard this year than last, as regards both the month and the eight months. Notwithstanding the embarrassment to which he has been subjected by the high price of the raw material, the British cotton manufacturer appears to be gradually attaining a position in our market which gives the lie to Mr. Chamberlain's utterances on the stump.

But without any reference to Mr. Chamberlain, the recent figures regarding our exports and imports of cotton cloths are entitled to the most careful study. When it is stated that the exports for the first eight months of 1903 average something over five cents per yard, and that imports averaged in excess of sixteen cents, it is clear that it is in fine goods that foreign manufacturers are able to increase their hold upon the American market. In other words, on such lines of cotton manufactures as call for relatively high skill Europe continues to show considerable ability to compete with us. The exact cause of this state of affairs is a debatable point, but among careful students of the industry there is more or less feeling that we see here the enervating effect of the tariff. As every one knows, this country has taken an enormous stride in recent years in increasing its output of coarse goods, the part of the South in this movement being especially noteworthy. During the boom period it was not easy to tell whether capital was being diverted to this industry too fast or not. It seemed to be generally agreed, however, that a growing foreign market was indispensable, and it will be recalled by many that some concern was felt in cotton-manufacturing circles in the United States over the great decline in the exports to China which followed the Boxer troubles, but which was only temporary, 1902 witnessing a resumption of heavy purchases by the Empire. The present year, however, is experiencing another recession in cotton-goods exports, principally in those to China. For eight months the shipments to that country were only 164,589,829 yards, against 254,892,479 yards for the corresponding period of 1902. These figures not only explain in a measure why our cotton manufacturers were so ready to shut down their machinery in the face of the high price of the raw material this year, but they also show how vitally interested the industrial forces of this country have become in all that affects the well-being of China.

The new treaty with China, which awaits only the Senate's confirmation, abolishes the likin tax on goods in transit, raises correspondingly the Chinese customs duties, promises reasonable arrangements for mining concessions and the protection of trademarks and copyright, and allots two free ports in Mantchuria. In general, the treaty follows the line of the peace protocol drawn up in September, 1901, after the relief of the legations at Peking. For the United States the treaty means assured and favorable conditions of trade; for China it may be the beginning of much-needed fiscal reform. The likin tax which was levied at many points along the river and caravan routes, was an inordinately expensive one to collect, and liable to diminution by pilfering officials. It subjected all goods for the interior to a wholly indefinite charge. The transfer of the likin into customs taxes, which are easily and efficiently collected, should tend to give stability to the Imperial revenues. But for that very reason the abolition of the likin on foreign goods will be bitterly opposed by Chinese officialdom. In a sense a series of concessions by China, the treaty really puts the Empire in a more reasonable, hence in a stronger, position, and lessens the likelihood of foreign intervention in behalf of commerce. In this agreement Mr. Hay has shown himself, as at all times, the friend of China, although working primarily in the interest of the United States.

A week ago the Russians were to have evacuated the two southern provinces of Mantchuria. Yet, as was anticipated, the military government has found insuperable obstacles to evacuation according to treaty, in the failure of China to accept certain conditions—chiefly those which secured to Russia a modified right of military occupation in Chinese territory. Everybody knew that Mantchuria was as definitely marked out for Russia as the provinces north of the Amur. Probably no Power will venture to oppose this squatter sovereignty; so the practical question is, How will the civilized world adjust itself to the fact of Russian ownership? Except Japan, whose position remains to be defined, and China, which has nothing to say in the matter, the interest of America and of the European nations is simply that Russia shall continue in Mantchuria all commercial privileges and promises granted in that region by China. Meanwhile, Russia is hurrying troops towards the Korean border, Japan has practically her entire fleet in Chinese waters, and the Foreign Offices of the two Powers are negotiating for an adjustment of their relative claims in Asia. A diplomatic settlement can hardly be more than a postponement of hostilities. Japan has no reason to believe that Russia will keep a new treaty otherwise than she has kept the Mantchurian convention. Japan, although financially embarrassed, could fight on better terms now than later. Accordingly, the drift is distinctly towards a war in which Japan would face alone the overwhelming might of Russia. The Anglo-Japanese alliance can hardly come into play; it operates only when either party is engaged with two other Powers. Sympathy in abundance Japan will get from England and America, and arms and ammunition at the market rate. That is all.

Just how far President Roosevelt wished to go in exterminating the Spanish before the declaration of war, is a question which has now been brought to the front by the article of ex-Secretary Long in the current *Outlook*. In this paper Mr. Long confirms a story that was current gossip in and out of official life as far back as 1898. Mr. Roosevelt, he says, in conjunction with "some naval officers, was anxious to send a squadron across the ocean to sink the ships and torpedo-boat destroyers of the Spanish fleet while we were still at peace with Spain." This "ardor" of Mr. Roosevelt, Mr. Long says, sometimes went faster than was pleasing to the President or the Department. Naturally. Mr. Long now expresses his surprise that this seems to some like a criticism of his erstwhile subordinate. Does he not say that his relations with Mr. Roosevelt were always most friendly? Does he not affirm that Mr. Roosevelt worked indefatigably, and that he "gave his typewriters no rest"? After such a tribute, why should any one accuse Mr. Long of sarcasm and of venting his spite? Not we. In the interest of history we would merely point out that this is one of the episodes in the President's career which he has had to live down, just as it furnished one reason why many conservative and loyal Americans watched him assume the Presidency with no little anxiety.

WHO IS DESTROYING CONFIDENCE?

The bitter cry of Wall Street for some months past has been that "confidence" was being undermined by some wicked man, or men. Many Nathan-like voices have reproachfully said to President Roosevelt, "Thou art the man!" The moment, it has been asserted, that the Government brought the Northern Securities suit, capital took fright, the erstwhile simple-hearted and confiding investor received a "chill," the crops took to doing badly, and the great captains of industry—such as the builders of yachts and automobiles for stock brokers and promoters—began to set their houses in order. It was a beautiful theory—so clear, so closely knit in logic, so comforting after its melancholy fashion. We fear, however, that a rival explanation is likely to come into vogue after last week's revelation in the United States Shipbuilding suit, by means of which the screen was thrown down and the public was permitted to see promoting "as she is really promoted." Confidence would have to be a peculiarly hardy growth not to be shaken by the scandalous spectacle.

The testimony of Mr. Dresser disclosed a shocking state of affairs. It showed how character had been wrecked as well as values. Seldom can there have been uncovered a more vulgar conspiracy to pluck or shear the investing public—goose or lamb. The vendors of "salted" mines are entitled to hold up their heads, compared with the discovered tricksters. Their moral fraud was most unblushing. To be both purchaser and seller, to have a pool within a pool, and an agreement behind an agreement, and, at the same moment that a lying prospectus was issued to the public, to fleece the investor even before he invested—that is the kind of thing in which supposedly honest men were engaged. What the law will say about their transactions we must wait to see. It is certain that under such a Company's Act as England has, the whole proceeding would have been set aside by the courts, and the promoters compelled to disgorge their concealed profits.

On the moral aspect of the matter, however, every intelligent man is competent to pronounce judgment. His verdict will be that the methods practised were no more reputable than those of the common sharper. Nearly every element of indecent cheating appears to have been present, while the attempt to hoodwink and bleed the public could not have been more unblushing. But what we ask is, How is all this going to affect the small investor the country over? Is his confidence to be restored by the publication of such schemes to rob him? Is he likely to come trooping back to Wall Street and help lift a sagging market, when he sees snares laid to catch his feet? As destroyers of confidence, it appears to us certain that those who have most lamented its destruction outstrip all possible rivals.

Mr. Dresser's startling evidence has an instructive bearing on the vexed question of "Wall Street morality." We have had paraded before us the "vast transactions depending entirely upon good faith"; the scrupulous fulfilment of contracts; the word as good as a bond, and all that. It is all wonderful and admirable, no doubt, but it touches only the superficies of real morals. What lies beneath? Shall a man boast of living up to an agreement when, behind it, there is a secret and dishonorable understanding? The morality which is really required in Wall Street, and which the late revelations make to appear so lamentably wanting in at least certain financial circles, is of the kind which insists upon good faith and open and fair dealing through and through. It is not enough to meet your obligations at the bank, or to deliver stock as agreed; you must beware of underhanded plots and of striking hands in the dark to make a swollen and greedy personal profit out of the company in which you are urging the thrifty to put their small savings; you must give the humblest outside investor the same rights as yourself, the knowing insider, or else all your trumpeted morality is as a sounding brass or a tinkling cymbal.

There will be many to say that confidence ought to be destroyed, if it has been confidence in such unscrupulous promoting as we have now seen laid bare. Justified confidence in the country's stable prosperity is one thing; the other is not confidence, but a confidence game. We suspect that people in general will view with a good deal of cheerful resignation the slow sinking to the ground of the grossly inflated financial balloons. Upon really sound business the effect cannot be harmful. Nor can its moral influence be anything but wholesome. Men will say, with a good deal of justified complacency: "Well, it is a good thing to have this bubble burst. Wild dreams of making millions overnight will no longer demoralize our young men. The day of the steady worker in regular business will come again; and the professional man on a small income will not be so much tempted to envy the prosperity of the wicked. Confidence in legitimate enterprise and in honesty and high-mindedness is, after all, better than confidence in the conjurers and the conspirators of boomed and bursted combinations." That some of the men in the glow of promotion were as credulous as any member of the long-eared public that ever chased a financial rainbow, will be believed by those who read the extraordinary published correspondence relating to the underwriting of the Shipbuilding Company.

THE STEEL STOCK DIVIDEND.

The reduction by one-half of the dividend on the United States Steel Corporation's common stock is unquestionably one of those events which later years remember as landmarks in finance. Considered merely as an incident in the ups and downs of the steel and iron trades, announcement that decreased profits for a quarter necessitate smaller payments to the shareholder is neither unusual nor startling. Any one who examines the company's reported earnings for the past three months, will endorse the directors' action as wise and conservative. More than this, it is quite safe to say that few people with experience in the field of stock investments seriously believed, when the company was organized, that the $500,000,000 common stock could continue indefinitely to draw dividends. The judgment of investors who act upon such conclusions was expressed no less plainly in the market's refusal, at high level of the "boom," to pay more than $55 per share for this 4 per cent. security, than in the more recent fall of its price to below $13. What happened last week, then, was a foregone conclusion from the day of the billion-dollar merger, and need cause no astonishment to the investing world.

But there is another reason why the reduction is of the most far-reaching importance. No corporation in the world numbers so many individual investors on its books. The Steel Company's annual report, last March, showed 58,629 shareholders, of which number 26,830 held the common stock. This number had been increasing rapidly; during the twelve preceding months, 9,107 new names had been added to holdings of the common shares, and there is reason to believe that the increase since last March has been even greater. In this army of owners of the common stock there are undoubtedly many thousands who were not experienced in the nature of the Steel Corporation's problem, and who bought the stock because they believed that 4 per cent. dividends would be permanent.

Now it may be said that risks of this sort will always confront investors; that, if they buy a stock in ignorance of its possible vicissitudes, they have themselves to blame. This is quite true; but, in the Steel Corporation's case, the questions of real importance are, whether the company did right in beginning payment on the common stock, and whether the mere fact of such payment, at the start, did not mislead the uninformed investor. For ourselves, we have always held that payment of dividends on the common stock was a mistake, and events have amply confirmed that judgment. The company's earnings have, to be sure, shown a substantial surplus over dividends. During the calendar year 1902, for instance, net

receipts of $108,534,000 provided for $18,227,000 interest and sinking funds, for dividends of $35,720,000 on the preferred and of $20,332,000 on the common, and still left $34,253,000 surplus on the books. Working capital, exceeding $50,000,000, was also reported. On the face of things, the common dividend seemed to the average reader to be earned, and he could not see why shareholders should not get it. The answer has been made, however, in the company's own fiscal operations. Early in 1902, the need of $50,000,000 for use in raising certain properties to the standard confronted the company. Had it reserved for such purposes the cash paid out in dividends on the common stock, the outlay would have been easily arranged for. Instead, the company resorted to the money market, with unpleasant results now sufficiently well known to every one.

We do not suppose that any competent observer would to-day deny that payment of dividends on the common stock, under such circumstances, was a financial mistake. Not only is it true that needs such as those of 1902 are recurrent in every manufacturing industry, but there is always before great industries the chance of sudden fall in earnings, through labor troubles or declining trade. The way to prepare for these possibilities is, not to pay out at once in dividends the margin over visibly necessary reserves, but to husband resources at the start with the utmost care, and begin to pay dividends when the company's earning power, at other times than the climax of a "boom" in trade, has been fairly tried. To test the wisdom of such policy, one need only ask himself what would have been the company's situation now, in the trade and in the markets, had it never voted dividends on the common stock, but reserved the cash thus paid to use as need arose. Such a fall as has occurred in the preferred shares would scarcely have been conceivable.

We are aware of the arguments commonly advanced in Wall Street circles to justify dividends on the common stock. First, it was necessary to induce the subsidiary companies to agree to amalgamation, and in some of those companies, which were to be acquired through exchange of stock, the common shareholders were drawing dividends. Second, the placing of $500,000,000 common stock, or any substantial part of it, in the general public's hands, might have been impossible if it paid no dividend. We freely admit the force of both these arguments, as an appeal to the promoters' mind. But we must also draw attention to their total unsoundness as an economic plea, and to the highly dangerous conclusions in which an argument of the sort must end. If dividends, otherwise inadvisable, may rightly be paid to induce investors to give up their money, then the practices of the Fisks and Goulds, a generation since, have a powerful defence. Indeed, the Consolidated Lake Superior concern might quite as readily plead that it had to pay last year's 7 per cent. dividends, though on the verge of financial disaster, because on no other basis could the stock be "distributed." In the Lake Superior case, the policy meant bankruptcy; in the Steel Corporation's case it, of course, means nothing of the kind. But the dangerous principle is asserted, in the one instance as in the other.

PLASTERER AND ARTIST.

The general public is, we believe, aware that the managers of the St. Louis Exposition are giving more attention to the art features of the exhibition than has been the case in other world's fairs. For instance, $500,000 has been appropriated for a display of the work of American sculptors, and numerous artists have contributed, under the direction of Mr. Karl Bitter, the chief of the sculpture department. Many of these plaster statues and groups are of colossal proportions, and as they are completed they are transported to St. Louis in two or more pieces, according to their size. On arrival there they are moved to the grounds in readiness for setting up in the appointed places.

Naturally, this work of setting up requires very considerable skill if it is to be properly done. A number of the pieces are generally damaged while en route, and need remodelling, as do the joints where the sections meet. To place this task of rejoining and remodelling in the hands of unskilled persons is to run the risk of ruining the achievements of the sculptors. Some of the younger of them have for the first time been given an opportunity to show to the public their meritorious work. They have toiled over their contributions with the conviction that upon them to a large degree depends their immediate artistic future. In their eyes the filling up of an opening of two or three inches between the parts of their works can be properly done only by one thoroughly familiar with anatomical modelling. This common-sense opinion was shared by the director of sculpture, who designated the best sculptors of the St. Louis Modellers' and Sculptors' Union, No. 245, to do the work, thus recognizing the principle of union labor while seeking efficiency.

But this by no means satisfied the rampant spirit of unionism. The modellers of St. Louis were, of course, content, but there was another guild to be heard from—the Union (No. 3) of plain plasterers, who promptly demanded that the work be given to them, and coupled with their demand a threat to organize a general strike of all the Exposition workmen unless their wishes were acceded to. That these statues were modelled in plaster was the very plausible reason for their demand. Meanwhile the plain plasterers for a time abandoned their jobs on all the buildings. The negotiations were considerably protracted by reason of the fact that at the last meeting most of the labor delegates were drunk and the conference ended in a row. The Director of Public Works, Mr. Taylor, who has been in every way most friendly to the unions, when asked his opinion decided in favor of the sculptors. His decision was ignored as completely as was the Missouri State Board of Arbitration's similar finding. This official organization went over the matter very carefully, after giving a public hearing to the representatives of both sides; the Exposition authorities fighting the battle of the sculptors. The plasterers, taking the ground that they could remodel a broken hand, or face, or arm, as well as any "high-toned" sculptor, whether educated in St. Louis, New York, or Paris, flatly refused to abide by the decision of the State Board, precisely as the Typographical Union declined to be bound by the arbitrators in its dispute with the Spokane *Spokesman-Review*. As the public is now aware, the will of a union is the supreme law of the land, and no union need abide by an arbitration unless it is favored by the judges.

On August 10 last, in despair, the chief of sculpture addressed an earnest appeal to the General President of the "Operative Plasterers' International Association of the United States and Canada," Mr. J. B. Cavanaugh of Colorado Springs, Col. In this Mr. Bitter set forth the situation with the utmost courtesy and fairness, but gave it as his opinion that for the common plasterers to assume their fitness for this work would be much the same as for him to call himself an astronomer because he was able to look through a telescope. After waiting more than a month for a reply, the following letter was received by Mr. Bitter's superintendent in St. Louis. We reprint it in full as a sample of that courtesy and politeness which employers are everywhere now beginning to expect in their dealings with unions:

OPERATIVE PLASTERERS' INTERNATIONAL ASSOCIATION OF THE UNITED STATES AND CANADA, ST. LOUIS, MO.,
Sep't 11th, 1903.

Office of Secretary-Treasurer,
2712 Park Ave.

Mr. Carl Beil,
Sup't of Sculpture, Worlds Fair.

Dear Sir: The following decission was sent to this office by the General President of the O. P. I. A.

That plasterers shall do all pointing, and to notify locals. Locals referred to are No. 245 which is composed of modelers No. 242 composed of shop hands and No. 3 which is composed of plasterers. said notice bas been sent.

Trusting that the above decission will end controversy I remain.

Respectfully Your's
W. A. O'Keefe
Sec'y Treas.

Let no one think that this victory was not followed up. On September 24, the Modellers and Sculptors, No. 245, "got square" by "notifying" Mr. Bitter that

after October 15 there would be an increase in their wages of ten cents per hour and a minimum wage of eighty cents an hour. When a man is down, the proper thing to do is to hit him once more.

If we have recited the facts in this latest labor-union victory soberly and without embroidery, it is not because we fail to realize the importance of the stand taken in St. Louis. Our readers have all heard from labor leaders what organization has done for the workingmen. It has given them shorter hours and higher wages and greater consideration in the world's eyes. We have been told that skilled labor is steadily rising in the social scale. But now the credit side of the labor-union ledger has an entry which will, we are sure, make the bitterest critic hold his tongue for ever and ever. By one stroke of his pen, Mr. J. B. Cavanaugh of Colorado has emancipated a whole union, has lifted it out of the ranks of laboring men and placed it squarely alongside of our best and greatest artists. Bitter, MacMonnies, Adams, Ruckstuhl, even St. Gaudens himself, are now but brothers to the artists of the Plasterers' Union No. 3. More than that, the great mind in Colorado Springs has solved the question how to democratize art, which has puzzled many a less notable brain. All the visitors to St. Louis will see now the triumph of the plain plasterer in plastic art.

MR. CHAMBERLAIN'S BID.

Joseph Chamberlain never displayed his adroit and ready talent to better advantage than in his Glasgow speech on October 6. He knows how to wear in perfection the air of a misunderstood patriot. He is able gracefully to sink his unimportant personality in a cause vital to his country's well being; is studiously moderate where he was expected to be extreme; and applies his flexible mind to the intricacies of the difficult case he has to argue with an appearance of candor and of complete mastery very specious and fetching, and only just short of carrying conviction. His personal courage is undoubted, rising as it does to actual audacity. One must believe that a good part of the enthusiasm which he evoked from his Glasgow audience was but another form of the Englishman's admiration for a statesman who does not fear his fate, but puts his political fortunes to the touch, to win or lose all.

To devote a single word to the political aspect of Mr. Chamberlain's bid for popular support, it is clear that he protests his self-abnegation a trifle too much. For him to affirm his absolute loyalty to Mr. Balfour, and to assert that he will never compete with the Premier for the party leadership, is magnificent, but it is not politics. Everybody knows that Mr. Chamberlain simply must be the next Prime Minister if his policy is upheld by the electors. Mr. Balfour would be the first to perceive this. The King would no more think of sending for anybody but Chamberlain, if he were returned as the victorious chieftain after a great political battle, than did the Queen of turning to any man but Gladstone after he had beaten the Tories on Irish Disestablishment. To-day, Mr. Chamberlain stands as the statesman who has driven a wedge deep into the Conservative party. If in the future he succeeds in uniting that party and making it triumphant on his one issue, he will be the one man to become its titular leader. To hold any other view is to hug a delusion.

It is, however, the economic rather than the political side of Mr. Chamberlain's speech that most challenges comment. We pass by his array of figures proving to a Great Britain conscious of good health that she is really in a rapid decline. These statistics and the inferences from them have been sharply disputed by competent English authorities. Nor shall we stop over his alleged demonstration that the British workman stands to win two or three farthings more than he will lose by Mr. Chamberlain's food taxes. *De minimis* it is not for us across the Atlantic to debate. But there are certain gross fallacies into which Mr. Chamberlain has been betrayed that vitiate his whole argument.

He adopts completely the magic theory of protection. To him, it is a kind of supernatural device to make poor countries rich. Natural resources, acquired skill, a multiplying and enterprising population—all these go for nothing in making a nation wealthy, compared with a tariff tax on foreign imports. He adduces the expansion of German and American trade, and accounts for it wholly by the protective system. What nature has done, what political and social conditions have wrought, he entirely ignores. Germany and the United States have grown opulent by a trick of taxation which England has been too stupid to imitate. Why did Mr. Chamberlain not point to those protected countries, France, and Spain, and Austria? Apparently, only because his conjurer's protection has failed to produce the egg in those cases!

Sir Samuel Romilly's old complaint that Englishmen would not take the trouble really to grasp the argument of Adam Smith, will be revived if Mr. Chamberlain's notions are caught up. To imagine that an artificial system of taxation can create wealth is to maintain what logical analysis and practical experience both declare to be nonsense. It is the gifts of nature and the energy of man which, in the long run, determine national supremacy in manufactures and trade. If England is, as there seems good reason to believe, approaching a period of relative industrial decline, the cause for it is to be found in the increasing cost of her coal and raw materials, as compared with those of the United States. The fundamental situation was not caused, and cannot be altered, by any device of protective taxes. Laws can meddle and mar, but it is nature that has her way in the end.

Mr. Chamberlain's references to American tariffs are not happy. He calls our system "an abomination," but why? It is his own idea carried out to its legitimate but uncomfortable end. He says that some of our "best minds" think we ought to reduce our customs taxes; but those are also the minds which hold that they never should have been imposed, that they inevitably mean economic waste, class favoritism, and political corruption. Nor is Mr. Chamberlain more fortunate in alluding to the destruction of the Welsh tin-plate industry by the McKinley tariff. One of the interesting economic developments of the past two years has been the restoration of the prosperity of that very industry—without any protection. Mr. Chamberlain appears not to have heard of this, though the *Tribune* has "explained it away."

To give his scheme even a semblance of success, Mr. Chamberlain must induce the self-governing colonies to accept it. But here his argument is pitiably weak, and the facts are fearfully against him. At the very moment of saying that these colonies are thorough-paced protectionists (he does not say, but it is true, that they are as hot to exclude British goods as any others) he supposes that the plea of kinship and Imperial greatness will move them to abandon protective taxes as against England—in other words, abandon that mysterious formula for creating wealth which Mr. Chamberlain so lauds them for making their own! It is simply to be said that Canada, for example, or Australia, shows no sign whatever of giving up good monopoly profits for any sentimental considerations. Like Sancho Panza, they will take the actual foals of protection in preference to the dubious spoils of Mr. Chamberlain's next knightly adventure. The Canadians, we suspect, will be particularly offended by his intimation that they ought not to go on developing their "secondary industries," but should meekly and loyally take everything of that sort from England. On this rock of colonial self-interest alone, to say nothing of his economic and financial difficulties, Mr. Chamberlain's whole scheme might easily go to wreck.

NEW LIGHT ON GLADSTONE.

John Morley's long-awaited Life of Mr. Gladstone will disappoint no expectations that were not unreasonable. In its fulness of material, weight of judgment, and philosophic impartiality of

treatment, with grace and dignity of style, it is a work to be recurred to and meditated upon before a final verdict is ventured. Even a first reading, however, makes plain that it is an illuminating biography, adding much to our knowledge of a great man whose character, like his acts, has been the subject of fierce controversy. It was not, of course, to be anticipated that a great deal that is novel could come to light, in the case of a man whose long life was passed in the full glare of publicity. Mr. Morley's contribution consists mainly in piecing out old information with new evidence, and in marshalling events in their proper sequence and setting.

He gives us, for example, some interesting pages bearing upon Mr. Gladstone's attitude towards the United States. The unfortunate speech of 1862, asserting that Jefferson Davis and the South had made a "nation," he himself came to number among his serious errors. He admitted that it was not only founded upon inadequate knowledge, but was, in any case, an indiscreet utterance to come from a member of the Cabinet without the authorization of his chief. Not so well known is the part that Gladstone played in moderating the demands of Great Britain at the time of the *Trent* affair. In his note about the meeting of Ministers which decided on the peremptory dispatches to Lord Lyons at Washington, he wrote: "I thought and urged that we should hear what the Americans had to say before withdrawing Lyons, for I could not feel sure that we were at the bottom of the law of the case, or could judge here and now what form it would assume. But this view did not prevail." However, Mr. Gladstone was in high favor at Windsor in those days, and his diary has a suggestive entry concerning the next Cabinet meeting: "Nov. 30. Left Windsor at 11:25. Cabinet 3-5½. Lord Russell's draft softened and abridged." The inference is fair, Mr. Morley argues, that he had presented his plea for temperate action to the court, and that his representations had a good deal to do with the famous intervention of the Queen and the Prince Consort for the purpose of making the demand on the American Government less bellicose in tone.

Many other instances might be given of similar lighting up of critical episodes in Mr. Gladstone's career. Majuba Hill, Egypt, the belated attempt to save Gen. Gordon—the public records and private memoranda upon which Mr. Morley has drawn enable him to make those violently debated subjects more intelligible, even if not wholly to still the strife of tongues. One calumny he absolutely crushes. This is the assertion that Gladstone never thought of Home Rule for Ireland until he discovered that he needed the Irish vote. The written evidence now adduced should make men ashamed to repeat that old slander. As for the still more foolish invention which credited Mr. Morley himself with having converted Gladstone to Home Rule, he contemptuously dismisses it in a footnote as the merest "moonshine."

But the chief question which every reader of this remarkable biography will ask is, Does it help us better to understand the man himself? The extraordinary career which Gladstone ran is known. His gigantic intellectual power not even the bitterest of his enemies ever denied. His astonishing versatility, his personal ascendency, his immense industry, his amazing ability to sway by his eloquence a critical or hostile House of Commons as well as vast popular assemblages—about all this we do not need to be told. Where we wish to be better informed is as to the growth and training of his mind, the process of his political convictions, the balance of qualities in his character. Mr. Morley instructs us. He does it by no idolatrous deification of his old leader, but by letting us see him in habit as he was. Gladstone's perplexing dualism of both mind and soul his biographer does not undertake to conceal. He shows us "the ardent Italian in the custody of a Scotchman"; the mediæval schoolman who was at the same time a flaming tribune of democracy. Out of this two-fold nature arises most of the questionable matter relating to Gladstone. As Bagehot long ago pointed out, when you have, as you had in Gladstone, a hair-splitting scholastic who is also the leader of the party of change and progress, you are bound to get a statesman who will be accused of sophistry, insincerity, subterfuge, and vacillation. Mr. Morley frankly admits this, and shows us how the fine-spun distinctions which were of the essence of Mr. Gladstone's mind, exposed him to the gibes of the "plain people." Yet he remained the greatest leader of the plain people that ever arose in England. In the combination lies the mystery of his character. If there was in it the tortuous refining of words out of their natural meaning—"pure Gladstonese," it has been called—there was also in it a moral elevation and a kindling enthusiasm which made men yield to him though they could not understand him.

Gladstone's acknowledged mastery in finance Mr. Morley shows to have been wholly acquired. It has often been supposed that he was trained by his father, Sir John Gladstone, the Liverpool merchant of large affairs. But no, the son came to financial administration protesting that he knew nothing, about "packages." Trade and the Exchequer were not dreamed of in the then philosophy of Oxford. Gladstone's profound knowledge of the great industries and the ongoing of commerce, with his grasp of money and banking and taxation, he won by the intensity and vigor of his mental application. That was his lifelong power. Let any subject challenge and arouse him, and the swoop of his intellect upon it was like an eagle's, and tore facts and principles out of it for his masterful use. It was sheer concentration of mind, not actual experience, which made his budgets seem like the waving of a magician's wand, and which left the "practical" man who was to be put up to expose his ignorance, shrinking back, and saying, like the brewer member of Parliament who heard Gladstone expound the tax on malt: "It's no use; he knows my business better than I do myself!"

In his lifetime, Mr. Gladstone passed from party to party, and apparently from conviction to conviction. Wonderfully precocious though he was, he did not appear to find himself, politically, until fifty. But when he did finally break away from the narrowing prejudices of his early education, the one thing which gave impulse and unity to his public life was a passionate love of liberty for all men. With this went his shining advocacy of the doctrine that the principles of morals and religion must have sway in public affairs as imperiously as in private life. That made him the champion of oppressed peoples. That made him, like Falkland, the devoted lover of peace. One of Mr. Morley's interesting revelations is that Mr. Gladstone's final retirement from power in 1894 was due to a break with his colleagues over swollen naval estimates. He simply said, with dignity, that his record and the character of a Christian man which he had to sustain, would not permit him to sanction such an outlay. Nothing, in fact, in all his detailed biography, nothing in the mass of self-revealing letters and journals he left behind him, gives reason to bate a jot of the tribute which his political rival, Lord Salisbury, paid to him when he called him "a great Christian statesman."

TEACHERS AND CHOLERA IN THE PHILIPPINES.—II.

TANJAY, March 6, 1903.

There is still a little to be said regarding the water supply. In times of cholera, as of typhoid, it must be guarded most carefully. We filled all the wells we could find in the town, guarded the river night and day that it might not be polluted, and forced the people to get their supply only where we knew it was safe to do so. Besides this, we tried to induce them to boil their drinking water. It was a waste of time and energy to make the attempt. They thought we meant that they were to drink hot water, and no explanation, however long and detailed, could undeceive them. Most of the Spaniards and mestizos were just as careless. A member of the Board of Health in a neighboring town, when asked if he boiled his drinking water, replied: "No, it's too much trouble." At that time cholera was carrying off fifteen or twenty people daily in

the town where he lived. This man is a college graduate and one of the most intelligent Filipinos I have ever met. What can you expect from the ordinary, ignorant, black *hombre?*

In this way we tried to ward off the cholera as long as possible and to lessen its ravages when it should come. Of course, we received all sorts of suggestions and instructions as to how to act when the plague was actually upon us. Most of the instructions were absolutely impracticable, but all were seriously discussed, and those which could be adopted were adopted promptly. One of the best measures, and really valuable, was the closing of all places of congregation. As soon as cholera appeared, the Presidente came running to me, saying that the school must be closed. I promptly assented, and at once the policemen went through the town collecting the books, while the school was declared closed for an indefinite period. Then I told the Presidente that the church must be closed. "Oh, no, it was impossible." I repeated that the church should be closed at once. "But the padre would not permit it. He had already been consulted, and had said that he could not close the church without the consent of the bishop." "Hang the bishop; the church must be closed." "But certainly, in times of cholera, it was very necessary to meet and pray that the pest should be removed. The padre said that the cholera was a judgment upon them for having been remiss in the past." "Do your praying at home." Finally he yielded, but wanted to see my authority. I told him it was in my rooms and would be forthcoming at the proper time. He closed the church, and then wrote to the Government about it. I wrote to the President of the Provincial Board of Health, and the church remained closed. Then I told him that the *gallera* must also be closed. He looked at me in amazement. Close the *gallera!* The people would all die of melancholy and lack of diversion. The Spaniards had never closed the *gallera.* There had been outbreaks of cholera in 1874, 1882, and 1889, but never any fuss over the *gallera* and church. But I carried the day. Of course, every Sunday there were cockfights all over the town, but that was better than having all meet in one place.

Another rule was that the town halls should be used as detention camps and the schoolhouses as hospitals, unless the town could build special edifices for these purposes. We did neither. There was no money for building new buildings, however cheaply they might be constructed, and hospital and detention camp would both be useless unless well guarded night and day. We had no way of maintaining an efficient guard, and dropped the whole matter.

Then we were told to quarantine every house where there was a case of cholera. No one was to be allowed to enter or leave the house for five days. Good rule, apparently. What was the result? Absolutely nothing. It is the custom of the Filipinos, as soon as any one falls sick, to run to the house to see what the sick man looks like. They have no fear of anything. We were not summoned to the house where the first cases occurred until those attacked were dead or dying. As we approached the house, we saw more than twenty people run out of it and scatter in various directions. What good is quarantine in a case like that? And it is only one of many, although, as we got our system of inspection better organized, they grew constantly rarer.

Another rule was that all infected houses should be burned. Where the houses are situated as close together as sardines in a box, they can't be burned. When a fire once starts in one of these towns, it sweeps over acres and acres before it can be stopped. We did burn one or two crazy old shacks, but as a rule burned only the furniture and bedding which had come into contact with the body of the patient, and thoroughly disinfected the house, its occupants and the remaining furniture. One of the results of maintaining a quarantine or of destroying dwellings is that the people at once secrete the cases. The reason is to be found in their poverty. If they are shut up for five days, they must have food. A native never has more than one day's supply in his house. They must be fed by the municipality, which, as a rule, has very little to expend in this way. Consequently, the people would rather conceal the cases of cholera than suffer the week's confinement and privation. Besides, if, as often happens, the municipality has no funds at all, the quarantine is not to be thought of for a moment. Again, the same result follows the destruction of dwellings. Many of the poor people see absolutely no way of replacing their houses. It's all very well to tell them that they will be paid the value of the buildings destroyed. They have had too much experience to put much faith in such stories. They would also have to wait six months in order that the usual amount of red tape may be gone through. Where are they to live in the meantime? Better let father or brother die and say nothing about it.

The discussion of this last point brings me naturally to perhaps the most important question of all, namely, the disposal of the remains of the plague-stricken. The ideal way is, of course, to burn them. This is what we were told to do; but the very mention of such a thing aroused a storm of superstitious opposition. To say nothing of the difficulty and the unpleasant nature of the operation—in themselves obstacles nearly insuperable—the fanaticism of the people was aroused. They would not even hear of burying the bodies in a special cemetery. They must be buried in consecrated ground. So the authorities yielded, and gave orders that all bodies should be buried in lime. As a matter of fact, in nearly all places they were buried in the regular way, for it was impossible to get lime. The Filipinos and Spaniards both informed me that it would be a tremendous mistake even to attempt burning any bodies. The natives had such a horror of it that they would rather scoop out a trench under a house in which to bury the dead, or throw the body in the nearest swamp. I pointed out that in neither case would they be burying their dead in consecrated ground. Even so—that was a good deal better than having the bodies burned.

Such action on the part of the natives presupposes a wholesale concealment of cases which would certainly have more terrible results than could possibly result from even imperfectly burying the bodies. The main danger to be feared here is the contamination of the water supply. If the cemetery is favorably located in this respect, there seem to be no good objections against burial. Such a concealment as I mention probably seems to you impossible. It would be impossible in Manila. But in a provincial town, with a small body of inspectors, none of them really reliable, with the local authorities only lukewarm, and the superstition and fanaticism of the people thoroughly aroused, a municipal board of health can do very little.

So then we finally decided that all we could do was to take every possible precaution, make every effort to keep the cholera out of the province, and then, when it should come, establish careful, daily house-to-house inspection of the town, in order to keep ourselves informed of the cases as soon as they appeared, give whatever medicines we could, get the dead under the ground as soon as possible, thoroughly disinfect the houses, and—let things take their course. The town bought a large supply of medicines, and the province furnished more, and then, like Mr. Micawber, we waited for something to turn up.

The "something" turned up on September 28, 1902, and it stayed with us for three months, carrying off about 500 people, or more than 4 per cent. of the population. This was a very light visitation. In some places a mortality of 20 per cent. of the entire population has been reported. In this town, in 1882, about 10 per cent. of the people died. Not over 30 or 35 per cent. of those attacked recover. This was the percentage here, and I believe the estimates for the islands during the recent epidemic show about the same figures.

When we tried to give our remedies we found ourselves confronted by a new difficulty. The people refused to take them. Some would say, "God sent the cholera, and if he wants me to recover, I shall. The medicine will do no good." Others were afraid of our medicines, and trusted more in some old piece of bark or "yarb" tea, fixed up by a native practitioner. One must in justice admit that the native medicine-men did accomplish a few cures, and the old inhabitants say that in 1882 a famous old native medicine-woman from Cebu wrought miracles with her "santas medicinas." But the natives did not simply refuse our medicines. Many said, first that I, and then the other members of the Board of Health, were poisoning them. The stories of poisoning have had a great run during the past few months. The enemies of the friars said that there was no cholera at all, but that the friars and their agents were poisoning the wells. Then the friends of the *frailes* said that Americans were poisoning the wells. The stories gained most credence and made the most stir in Cebu and Iloilo, next to Manila the most important cities in the islands. Both of them were terribly ravaged by the cholera.

When the *taos* said that I was a poisoner my enthusiasm began to wane. I was getting tired of giving medicines which the people didn't want to take, and also of disinfecting houses. So when one day three people died of cholera in the house right next to mine, I thought it was time to skip, and did so very precipitately. Some of the teachers ran much greater risks than I did, and stuck to their posts, despite all obstacles. I was not one of them. I know

that I am not a hero, but I also have no desire to be a martyr, and never have had. There are enough of both. As long as I felt that I was accomplishing anything I remained in my town. When things got beyond my control, I left.

Many interesting points remain to be discussed, but I fear that this letter has already reached a wearisome length. After all that I have said, however, about the ignorance and inefficiency of the Filipinos, I cannot but express my appreciation of those associated with me on the local Board of Health. Both were men of wide experience and great energy. They fulfilled their duties ably and well. A comparison of the present epidemic with that of 1882 proves conclusively the wisdom of the measures adopted by the American Board of Health. Then, the great cities were the worst sufferers. Now, the provinces. But while the old Spanish "let-alone, do-nothing" policy, or some slight modification of it, must still suffice for the remoter districts, the magnificent results attained in Manila—where the health officers worked, though, to be sure, under most unfavorable sanitary conditions and the adverse circumstances always to be encountered in a great seaport, yet under the greatest advantages of personnel and equipment—show beyond doubt that at no very distant day, when the Department of Health shall have been thoroughly organized throughout the islands, such an epidemic as the past year has witnessed will be absolutely impossible, and, I may add, that, in bringing about such a condition, the Department of Public Instruction, by increasing the average of education and intelligence, by awakening the people to a realization of their present deplorable state and to a desire for better and cleaner modes of living, will prove a most important factor.

As I look back over the events of the past year, I cannot but think that the part which the teachers have taken in fighting this, the most terrible of Eastern diseases, will prove of great value in their future work. We have gained a more intimate knowledge of the life and character of the people among whom we live than could have been gained in any other way. While the work has been discouraging, disheartening, yes, disgusting, it has also been instructive and inspiring. Surely, the calm fortitude—fatalism if you will—with which the Filipino meets every disaster, his constant cheerfulness under the most trying conditions, may well furnish food for thought to the American. If our recent experience shall aid in giving us a deeper knowledge of the Filipino character, a clearer insight into the workings of his mind, a broader sympathy—and this it cannot fail to do, for the whole unfortunate race—we shall have acquired a sure and lasting foundation upon which to base our future attempts and endeavors to educate and enlighten our Eastern "brethren," and the experience will not have been in vain.

Correspondence.

HONOR THY UNION.

To the Editor of The Nation:

Sir: We have been taught that a workingman's duty to his union was superior to his duty to the Constitution and the laws, and even to the eternal principles of right and justice; but the doctrine that it is superior to the duty and affection of a son to a father, seems to me to touch the high-water mark of "union" ethics. Witness the news item herewith subjoined.

O. Mores.

October 7, 1903.

"Chicago, October 7.—Five hundred glove-makers, employed in four factories, went on strike to-day because the employers refused to grant demands for increased wages and to renew an agreement that expired September 21. Among the manufacturers whose employees were called out is Samuel R. Clexton, sr., father of Samuel R. Clexton, jr., President of Glovemakers' Local Union, No. 4. 'I called out the men in my father's shop, as my union has first claim on my duty,' the latter declared."

GOVERNMENTAL IRRIGATION.

To the Editor of The Nation:

Respected Friend: In the *Nation* of the 24th ultimo there is an admirable editorial on "The Public Land Problem and Irrigation," in which occurs the following statement:

"The public lands having already been occupied, values have reached figures which are practically prohibitive to the man in a 'prairie schooner.' If it is not for these that the costly irrigation enterprise upon which the Government is entering, then who is to be benefited? Those already well to do and able to finance their own ditch undertakings—the wealthy speculators or range-owners?"

If I am not mistaken, the above statement and query, and also the *Nation's* concluding comments, are of peculiar significance from the fact that it is impossible to benefit the "man in a prairie schooner" by Governmental irrigation. Even if the water is brought to the land at public expense, the benefit will necessarily accrue to men of considerable means (presumably "those already well to do and able to finance their own ditch undertakings—the wealthy speculators or range owners"), because the "man in a prairie schooner" will still be shut out by the cost of constructing and maintaining the lateral ditches, and of putting the land in condition for irrigation. The truth of the matter is, that land which depends on artificial irrigation for its fertility is about the last place on earth for men with light pockets. In the first place, the land when prepared for irrigation is necessarily costly, although the water may be brought to it free. In the second place, the situation is peculiarly subject to unlooked-for contingencies, which involve either the prompt use of ready money, or ruin. The man who has capital enough to establish himself *safely* on the irrigated plains, has enough to establish himself anywhere, and needs no aid from the Government.

In regard to the cost to the Government of bringing the water to the land, the lowest estimate that I have seen is $10 an acre; and this only for the two or three hundred millions of acres which are most favorably situated. In view of the possible indefinite extension of the scheme, the ultimate average cost to the Government may be just as well placed at $200 an acre as at $10. And even if this land was secured to the "man in a prairie schooner," how can the Government be justified in providing land for the landless in the Far West at a cost of even $10 an acre, when excellent land may be purchased throughout the country, especially in the Southern States, for $5 an acre, and less? In the territory adjacent to the cities of Boston, New York, and Philadelphia—within 100 miles of the vast fruit and vegetable markets of these great cities—very productive land may be purchased for less than $10 an acre. If the Government may properly use the public funds for the development of arid land in the Far West, ostensibly for the benefit of unequipped homeseekers, why may it not more economically and properly use public funds in the purchase and development of Southern and Eastern land, at much less cost per acre, for the same purpose?

The equitable distribution, or sale, of public land is a legitimate Governmental function, but the use of public funds for the commercial development of land is exactly the same principle as the use of public funds for the purchase of land and its commercial development; and if the Government uses the public funds for the commercial development of land in, and for the benefit of, certain States, how can it equitably neglect the commercial development of land, by the use of public funds, in and for the benefit of each of the other States? If the commercial development of land at public expense in four or five States is "one of the greatest undertakings ever begun in any age," it seems to follow that the commercial development of land at public expense in all the States would be the greatest of all public undertakings. In this connection, however, it may be remarked that when an undertaking is based on false principles, its magnitude only makes it more dangerous and destructive.

The obvious lesson of the present situation is, that the idea that it is a proper function of Government to furnish fertile land to all applicants is a misleading delusion which is exceedingly demoralizing to both Government and people. The Government might as well undertake to furnish capital to all applicants. When the Government had fertile public land to give away, it could give the landless a home for the asking; but (unless Canada should come into the Union in the near future) that situation has passed away never to return. Fertility of soil everywhere now has a commercial value which makes it equivalent to capital, and it cannot be had except in exchange for capital. The water which gives fertility to the arid land of the Western plains is, commercially, exactly the equivalent of the fertilizer which must be used on an Eastern farm. At the present time the best opportunity, in the United States, for the "man in a prairie schooner" is the cheap and fertile land in the Southern States—in other words, it is there that fertility of soil may be obtained with the least outlay of capital; and the effect of Governmental irrigation will be to benefit the wealthy speculators and range owners to the detriment of all other agriculturists. In developing the arid land of the Western plains, the Government enters upon a strictly commercial enterprise in direct and detrimental competition with private agricultural enterprise in all other parts of the country.

Isaac W. Griscom.

Philadelphia, 10th Mo., 8th, 1903.

THE AMERICAN COLLEGE PRESIDENT.

TO THE EDITOR OF THE NATION:

SIR: Will you allow me a few words of comment on your very suggestive article, "The American College President," contained in No. 1995 of the *Nation*? The American College President of to-day is in reality a relic of the times when, as Lessing says, the clergy was still thinking—and eating—for us. In those happy times it was believed that the intellectual welfare of our boys was safest in the hands of a spiritual guardian, who, being by his profession accustomed to begging, was expected to promote also the worldly welfare of the college. Fortunately those idyllic times have passed. The clergyman president is gone, but the promoter has remained.

In academic circles the opinion is growing that the promoter president, too, should go as soon as possible, not only because he presents a ludicrous spectacle, but also for more serious reasons. It is being felt more and more as an intolerable anomaly that, in the very heart of our democracy, a monarchical institution, such as the college presidency really is, should still exist. This feeling has grown all the more since the experiment in several Western colleges of giving the president absolute power has proved an absolute failure. Favoritism and corruption of various kinds were the natural results of this experiment in academic despotism, not to speak of the humiliating sight of scholars, free American citizens, cringing before the almighty president. No wonder that we are appealing in vain to our colleges and universities for help in purifying municipal and national politics.

The American university, moreover, will never reach an ideal standard as long as it remains *a school* with a principal, called president, at its head. The history of the German universities shows us clearly that scholarship can reach its highest form of development and influence only in the academic *republic*, where the individual professor, the personification of his specialty, his *Fach*, is responsible to himself alone. This highest form of academic liberty, the only source of great scholarly and educational achievements, cannot be attained with a president, who will in some way or other try "to shape a policy" for *his* university, or interfere where interference is a sin against the spirit of the true university. Hence the constant secret or open frictions between president and faculty. If most college presidents knew what *their* faculties—not their personal friends among these—really thought of them, but dared not express, they would, if men of honor, resign their positions at once. Not that professors are natural fault-finders. A distinguished university president once told the writer that a man could not be a college president without being more or less of a liar. But how can a scholar who possesses self-respect and high professional ideals look with respect upon an office whose occupants seemingly cannot practise the elementary principles of morality in their dealings with *their* faculties?

I am not exaggerating. Hundreds of professors would corroborate my statements if they dared speak. That they dare not speak characterizes better than all my statements the rottenness of existing conditions. And are we to tolerate these conditions because they are sanctified by American traditions? Away with an office that has become an anachronism and an obstacle in the development of the true university idea! If a faculty, composed, as it ought to be, of the best specimens of American scholarship and manhood, cannot govern itself, then all self-government is a farce, which we should end, the sooner the better. Let the faculty elect, as you suggest, one of their number yearly to the honorary position of representing the university and of presiding over inevitable academic functions. These are now the essential functions of the president, since in all the larger institutions government by faculty committees has become an established custom. For the business part of the university let us have a business man, whom ambitious institutions may easily find among the employees of our great advertising firms. But let us remove with due honors the old college president and the university president of to-day before he fully take the famous step from the sublime.

VERITAS.

TITIAN'S "SACRED AND PROFANE LOVE."

TO THE EDITOR OF THE NATION:

SIR: In the issues of the *Nation* for July 2 and September 24, two entirely contradictory interpretations of Titian's "Sacred and Profane Love" were presented, and supported by arguments both earnest and interesting. To add a third theory to the controversy, may I call to your notice the interpretation which was brought forward by Signor Palmarini, in the *Nuova Antologia* for August, 1902? Setting aside the theory of Herr Wickhoff, which Signor Gnoli presented to your readers, that the picture represents Venus persuading Medea to escape with Jason, and of Mr. Andrews's presentation of Crowe and Cavalcaselle's theory that the subject is "Artless and Sated Love" (or, as he chooses to paraphrase it, "Innocent and Satisfied Love"), we find that Signor Palmarini names the picture "The Fountain of Arden."

To former critics the differences between the two female figures have been the chief aids in interpreting and naming the picture. Signor Palmarini, however, finds these two figures so similar that his key to the right understanding of the picture is found in the fountain, in the presence of the little love god, in the background and the accessories. In the women's figures he finds an identity of complexion, of the color, quality and arrangement of the hair, and of physique. Both have the same eyes, surmounted by fine and slightly arched brows. In both the mouth is small, curved and of the same design, the nose straight and aristocratic, the chin rounded. To him the women are alike in feature, and contrasted only in expression. Here he differs radically from your correspondent, Mr. Andrews, who describes the nude figure as "an innocent maiden, unlearned in the mysteries of life and love." To Signor Palmarini she has the appearance of a woman to whom love has left nothing unrevealed, "the mouth sensual, as though swollen by kisses, the nostrils dilated, the neck more full." Both gentlemen describe the face of the other figure as serene and quiet. In Mr. Andrews's opinion, the serenity comes through "absence of passionate desire," because this has been satisfied; while in Signor Palmarini's opinion it is lack of experience which produces the expression of serenity, ingenuousness, and almost coldness. Because of the similarity of feature, and perhaps, also, because of the difference in expression, Signor Palmarini finds a further resemblance to this type in Titian's "Magdalen," in the Pitti; his "Flora," in the Uffizi; his portrait of Laura Dianti, in the Louvre. To this list we might add the head of the daughter of Herodias, in the Doria gallery in Rome—a head with the same glowing coloring of hair and skin, the same fine features.

The resemblance to the portrait of Laura Dianti, the favorite and afterwards the wife of Alfonso, Duke of Ferrara, is the most important link in the chain, as, in the opinion of Signor Palmarini, this resemblance helps to name and approximately date the Borghese picture. The picture has been supposed to belong to the period of the "Bacchanal" and the "Ariadne" in Madrid, a period when Titian was painting at the court of the Este family in Ferrara, and where, in fact, in 1518, he made the portrait of Alfonso d'Este which is now in Madrid. It was during this same period that Alfonso's first wife, Lucrezia Borgia, died and Laura Dianti became his second wife. It is known from a letter of Ticozzi to Cicognara that at this time, also, Titian painted Laura "nuda e vestita." Other historic details help to further strengthen Signor Palmarini's argument. An existing letter of Titian's of the year 1517 tells of a commission given him to paint a *vasca*, or basin, which was of great interest to Duke Alfonso. A year later the Duke asked him for the design of a painting whose subject was to be supplied by the poet Ariosto. At the Ferarra court Titian had been brought into intimate relations with Ariosto, and Ridolfi records in his 'Meraviglie dell' Arte' that the poet often visited the painter's studio, watching him compose pictures from subjects taken from Ariosto's own poem, the 'Orlando Furioso.' "For," as Ridolfi said, "painting performs the service of mute poetry, and poetry that of speaking painting." Another letter of Titian's, written on the first of April, 1518, speaks of the great diligence and study which he was devoting to a picture whose inspiration had come from the Duke, while only the "corpo" (the body of the picture in distinction from its soul) was to be executed by the painter. Three weeks later, on the twenty-second of April, Tebaldi, the Duke's representative in his transactions with the painter, wrote to Alfonso that he had entirely explained to Titian everything connected with the picture for the Duke, and had given him the paper on which the *figurina* was sketched.

Given these historic data, together with the coincidence of time, the resemblance to Laura's portrait in the Louvre, and the record of another picture of Laura, it seems not unreasonable to follow Signor Palmarini's conclusion that in the figures in the Borghese picture we have two perhaps somewhat idealized representations of Laura Dianti. The commission, then, came from the Duke Alfonso, the inspiration from Ariosto, and the model was found in Laura Dianti, who about this time, certainly very soon after the death of Lucrezia Borgia in 1519, became Alfonso's bride.

Ariosto, in his 'Orlando Furioso,' had told of Rinaldo dismounting from his horse in

a forest beflowered with red and green and yellow, where he came upon two fountains, one of which "filled the heart of him who drank of it with the longing for love; while the other banished all love from the heart and turned into ice the first burning desire." From these two fountains Ariosto's lovers, Rinaldo and Angelica, drank, experiencing in their own hearts the burning and the chilling effects of the two draughts. Ariosto had found his inspiration for the incident of the fountain in the forest of Arden in the 'Orlando Innamorato' of Bojardo, and to this poem Titian turned for further details. Bojardo introduced Rinaldo into a

"shady forest of trees, which has in its midst a stream of clear water. Near by he found a fountain, never fashioned by human hands—a fountain of pure and polished alabaster, elaborately carved. Round about were the flowers of spring; the beech, the pine, and the green olive cast their shade over the waters. This was the fountain of love, which sets on fire whoever tastes of it."

This description of Bojardo fits Titian's picture as closely as many of Politian's verses fit the paintings of Botticelli. In the same way, in these two different periods, pictures and poems were composed for the same patrons and inspired by the same scenes.

Signor Palmarini continues his examination of the picture in detail, finding much in the accessories to strengthen his theory:

"Here we find butterflies, the symbol of love; hares, the symbol of wantonness; a shepherd and shepherdess embracing; the little god in the act of bathing his arrow in the fated water. In those days, no painting, even though it were allegorical, was complete without a human figure. At the fountain in Arden there must be an Angelica. Hence, naturally, arose the thought of placing there Laura—cold and shy before she drank the dangerous water of love—so cold as to have brought with her her brazier; then, having drunk of the water, fired with love, throwing aside her garments, she lifts up to Venus the flame of love. To emphasize this thought, the painter has placed beside the undraped figure a metal bowl, in which we can see a little of the charmed liquid.

"To make more clear these two phases of the same doubly revealed personality—her indifference before drinking, her inflamed desire afterwards—we see on the left, back of the draped figure, a tranquil landscape, the two hares indifferent, peaceful, fearlessly nestling against each other; while on the right, after love has driven them forth from their quiet and shady retreat, they are chased by dogs and hunters. On the right the shepherd and shepherdess are seen in lovers' attitude, and two butterflies pursue each other. Even in the carving on the front of the fountain the painter has wished to signify the erotic nature of the waters. On the left we see the little love-god, drawing a youth on to a barebacked horse, the symbol of lucky fate. On the right a man lashes Cupid, as though in revenge for the flame which burns him. Adam and Eve, the first victims of love, witness the scene."

To some of us the symbolism may seem a little hard pressed by Signor Palmarini; but his theory is certainly an ingenious one and, to all appearances, sufficiently well supported by contemporary data and internal evidence. But many of us have come to look upon the paintings of the Venetians who fell under the spell of Giorgione as poetic idyls, vaguely inspired, perhaps, by some classic legend or contemporary poem, and turned in one direction or another according to the fancy of the patron or the mood of the painter. Whether the picture represent Earthly and Heavenly Love, Artless and Sated Love, Venus and Medea, or Laura Dianti at the fountain of love in the forest of Arden, matters little. Love is the subject of the picture; love and its effect as shown in the human face and in the natural world. No contradiction of interpretations can rob us of this conviction or of our intense pleasure in the picture. To this painting—to many of us the very flower of Renaissance art—we may perhaps wisely apply the words of Rossetti in his sonnet on Giorgione's "Fête Champêtre" in the Louvre:

> "Nor name this ever. Be it as it was,
> Life touching lips with Immortality."

TERESINA PECK.

DIRECTOR RICCI.

TO THE EDITOR OF THE NATION:

SIR: "S. K.'s" praises, in your issue of October 1, of Dr. Ricci's recent rehanging of the Brera are far from exaggerated, and your readers will be glad to learn that this most competent of Italian gallery directors has just been appointed to the Uffizi, the finest post in his country. As Dr. Ricci, for many reasons that do him credit, is no favorite at Rome, his promotion is a great triumph for honest and able administration.

Truly yours, B. BERENSON.

October 10, 1903.

Notes.

Among Charles Scribner's Sons' fall publications may be first mentioned some popular editions of costly works, as Michel's 'Rembrandt,' Opdycke's translation of Castiglione's 'Book of the Courtier,' Brown's Life of John Addington Symonds, and Longfellow's 'Cyclopædia of Architecture in Italy, Greece, and the Levant.' Other announcements are Senator Hoar's 'Autobiography of Seventy Years,' in two volumes; 'Reminiscences of the Civil War,' by Gen. John B. Gordon; 'The American Natural History: A Foundation of Useful Knowledge of the Higher Animals of North America,' by William T. Hornaday; 'Freedom and Responsibility,' by Arthur Twining Hadley; 'The Makers of Hellas: A Critical Inquiry into the Philosophy and Religion of Ancient Greece,' by E. E. G.; 'Central Asia and Tibet,' by Sven Hedin; an extra volume of Hastings's 'Dictionary of the Bible,' with collateral articles and indexes; 'A Literary History of Scotland,' by J. H. Millar; 'The Renaissance in England: Six Englishmen of the 16th Century,' Mr. Sidney Lee's American university lectures; 'Old London Silver: Its History, its Marks, and its Makers,' by Montague Howard; 'Colonel Carter's Christmas,' by F. Hopkinson Smith; Poems by Josephine Daskam; 'A Nonsense Anthology,' by Carolyn Wells; 'The Celestial Circus,' by Oliver Herford; 'The Weaker Sex,' cartoons by Charles Dana Gibson; and 'John S. Sargent,' sixty reproductions in photogravure after this artist, with a critical introduction from the pen of Mrs. Alice Meynell.

'Warwick Castle and its Earls, from Saxon Times to the Present Day,' by the Countess of Warwick; 'Shakspere's Homeland,' sketches of Stratford-upon-Avon, the Forest of Arden, and the Avon Valley, by W. Salt Blessington; and 'Note-Book of an Adopted Mother,' by Eleanor Davids, will be published by E. P. Dutton & Co.

McClure, Phillips & Co.'s new "Contemporary Men of Letters Series" will lead off with 'Bret Harte,' by H. W. Boynton, and 'Walter Pater,' by Ferris Greenslet. We are to have, besides, 'The Musical Guide,' a dictionary, by Rupert Hughes; and 'The Home,' by Charlotte Perkins Gilman.

Brentano's will issue 'The Art of Heraldry: An Encyclopædia of Armory,' by Arthur Charles Fox-Davies.

'Talks to Students on the Art of Study,' by Frank Cramer, and 'The Modern Speech New Testament,' by Richard Francis Weymouth, will be brought out directly by the Baker & Taylor Company.

Fleming H. Revell Company will market in this country the Puritan edition of Bunyan's 'Pilgrim's Progress,' with thirty-one illustrations by Harold Copping.

'Our Friend the Horse,' a manual by Frank Townsend Barton, will soon be brought out by Frederick A. Stokes Co.

The Grafton Press announces 'Waes Hael,' being a collection of toasts by Edithe Lea Chase and Capt. W. E. T. French, U. S. A.; 'Months and Moods,' a fifteen-year calendar,' by Edward Curtis; and 'Our Political Degradation,' by Rush C. Hawkins.

A posthumous work by the late eminent engineer, George S. Morison, 'The New Epoch as Developed by the Manufacture of Power,' will be published by Houghton, Mifflin & Co.

The Oxford University Press (Henry Frowde) have nearly ready 'The Origin and Growth of the English Colonies and of their System of Government,' by H. E. Egerton.

Six years before his death, Leo XIII. appointed Count Soderini to prepare a documentary history of his pontificate. Unrestricted access to the material in the several archives of the Vatican has been granted to the Count, who announces that the work will be ready for publication some time in 1904. It will appear simultaneously in Italian, English, French, and German versions.

The *Neues Tageblatt* of Vienna reports that the Austrian Academy of Sciences has voted the sum of 4,000 florins to Dr. Rudolf Walker, a privat-docent in the University and one of the librarians, for the purpose of preparing a new edition of the letters of Æneas Sylvius. The editor has been engaged on this work since 1899, having made several journeys to Italian libraries, during which he found a large number of hitherto unknown letters of the great humanist. This is to be a thoroughly critical and complete edition in four volumes, and will appear on the fifth centennial of the birth of Æneas Sylvius, October 18, 1905.

Two critical editions of Goethe are being published in Germany at present, one, a jubilee edition of the house of Cotta, to be completed in fifty volumes; the other, an edition in thirty volumes issued by the Bibliographical Institute of Leipzig. Together they contain the results of all the Goethe researches in recent decades. Rather singularly, 'Dichtung und Wahrheit' has been issued simultaneously in each series, both from the pens of recognized specialists; Alfred Dove being the editor of the Cotta volume (the 28th). In general, the literary and historical introductions and notes

of the Leipzig edition are more purely objective than those issued by the rival house, but both represent the finest Goethe scholarship of the day.

Black's guide-books to the British Isles are famous. The firm's latest publication, 'What to See in England,' by Gordon Home (London: A. & C. Black; New York: Macmillan), is an attractive and handy volume. It will appeal peculiarly to the American tourist on a literary or antiquarian pilgrimage. London is the starting-point of all the expeditions; a sketch map shows the twenty-nine more important railway stations by which one can leave that city. The book is especially adapted for the visitor who should find himself doomed to spend a Sunday in London during July or August, the most lugubrious experience of all that the tourist must encounter; Mr. Home's week-end trips will open up many avenues of escape. His plan is to devote two pages to each place of interest; that on the left giving useful information about railway fares and points of departure, with a brief historical description, while the right-hand page is a photograph or sketch. About 150 castles, villages, ruins, and seaports are thus dealt with, the trips beginning with a half hour's run to Harrow, and lengthening by degrees till one is tempted as far as the Border. The illustrations are partly photographs, partly Mr. Home's sketches, and are well reproduced.

From Charles Scribner's Sons we have received the eighth edition of Baedeker's 'Norway, Sweden and Denmark,' and the twentieth of his 'Switzerland,' a proportionate popularity which speaks well for the more Northern playground of Europe.

The same firm sends us a handsome new edition of Henry Van Dyke's 'Little Rivers,' with eight fantastic tinted designs by F. V. Du Mond, of which the last is far and away the best, representing with much imaginative and decorate force the transformation of a dryad into a white birch. Messrs. Scribner have just added to the well-known "Outward Bound" edition of Kipling's Works the 'Just So Stories' and his new volume of poems, 'The Five Nations,' whose contents we have yet to review. In connection with George Newnes, London, they add to the Caxton handy and ornamented series of thin-paper reprints the novels of Thomas Love Peacock, Charles Whitehead's romance, 'Richard Savage,' and Leigh Hunt's 'Dante's Divine Comedy: The Book and its Story,' and to the smaller "Pocket Classics" the Duchess of Newcastle's 'The Cavalier in Exile.' In connection with Chapman & Hall they continue the Edinburgh edition of Carlyle's writings with his 'Wilhelm Meister' translation—three volumes in one, and compact indeed.

The method of Mr. Clifton Johnson's 'Land of Heather' (Macmillan) is much that of his former books. He wanders through the country, living as far as possible with the humbler people, and fixes with pen and camera all he sees and hears. His style is a very simple one, except when he essays a bit of picturesque history; it is full of the most elaborate details, and descends not unfrequently to a Wordsworthian plainness. Yet it would give a pleasing sense of secure accuracy were there not here and there little slips which show defective observation, and a tendency toward over great trust in what the traveller is told. Thus, for example, he has never apparently noticed white heather (p. xi). "Every Scot wears his 'bonnet' in his own house," he tells us on page 26; the fact being that a pious, old-fashioned Scot will eat bareheaded even in the open air. The Scotch teinds, again, are not a tax, even indirect. The last point is illuminative on Mr. Johnson's sources; they were evidently strongly Free Kirk. So, too, as to his information on the bibulous habits of the clergy of the Established Church (p. 235 f.); it, in truth, is "a little surprising, to say the least." After this to learn that the minister "reads the marriage service" (p. 84), and that the people of Galloway are close kin to the Irish (p. 250), does not matter much. The pity is that Mr. Johnson has really a very pretty gift for simple, natural description of the life of the people, and can touch it with sympathy and humor of a quiet type. With greater patience and care and less credulity he could have written a far better book.

Mr. Henry J. Morgan adds to the list of his numerous publications a first volume entitled 'Types of Canadian Women' (Toronto: William Briggs). This work, which embraces more than three hundred and fifty biographical sketches, is profusely illustrated, and contains notices of many ladies, such as Dorothy Dix, who have been but remotely connected with Canada. Whether it is desirable to publish such books at all must remain a matter of taste. This much at least can be said in Mr. Morgan's favor, that he has a wide acquaintance with Canadian biography, and that he has selected his "types" in a spirit of candor. On the other hand, the language of his biographical notes is rather turgid, and at times his copious quotations from the newspapers seem almost ludicrous. The illustrations are taken in the main from photographs, and have been clearly reproduced. The most cursory examination of this book shows that it belongs in the literature of gossip; but Mr. Morgan's gossip is not ill-natured, and his portraits, with their text, will probably possess some interest for those who have a personal knowledge of Canadian life.

'Stuart Tracts,' edited by Mr. C. H. Firth (E. P. Dutton & Co.), consists of tracts already printed in Arber's 'English Garner.' The value of it lies in its cheapness, and in the comments that Mr. Firth passes upon the several tracts. Of the sixteen texts here reprinted, the longest and also the most important is the 'Commentaries of Sir Francis Vere.' This celebrated English general, the elder of the "Fighting Veres," whom Mr. Julian Corbett has recently called "the greatest of the Elizabethan soldiers," served chiefly in the Low Countries, but also took part in the capture of Cadiz and the expedition to the Azores. Though by no means unmindful of his own reputation, he gives technical descriptions of strategic operations in an impersonal way; and even when describing the battle of Nieuport, where he won a great personal triumph, his object, as Mr. Firth says, is "to state a military problem and to show how it was solved." Other famous tracts in this volume are Carey's 'Account of the Death of Queen Elizabeth,' Overbury's 'Observations,' Peeke's 'Three to One,' Morgan's 'Progress in France and Flanders,' and Pitman's 'Great Sufferings.'

The attention of our readers was called to the two first volumes of 'Allchin's System of Medicine' (Macmillan). Volumes iii. and iv., treating respectively of the nervous system and of various important subjects falling under the head of internal medicine, make an equally favorable impression with their predecessors. In all composite text-books there are inequalities and gaps, and all short text-books are bound to be a little dry. Nevertheless, the views given in these essays represent the best English thought, and are bound to be of value to the students in our schools. The introductory chapters in volume iii. on the anatomy and physiology of the nervous system are remarkably fine.

The German marine year-book 'Nauticus,' for 1903, gives an account of the progress made in China in the publishing of newspapers. Until a few years ago barely half-a-dozen important newspapers were issued in the Chinese language. To-day every large city, however remote, has its journals. These usually contain—besides the imperial edicts—extracts from the Pekin periodicals, editorial articles, and a special section devoted to European and American affairs and affording much enlightenment regarding foreigners and their ways. There is even a daily illustrated paper for children, which, reformers hope, will prove an ally to their cause. Nor do the conservatives any longer tabu the press. Even in the city of Hunan, where, shortly before the recent war, an edict was issued against the sale or reading of any periodical literature, there is now printed an excellent daily paper in behalf of the mandarin cause. The Empress is said to devote part of her time daily to hearing Prince P'u-lun read to her the most important newspapers of Pekin, Tientsin, and Shanghai.

The Society of the Red Cross in Japan, which publishes its literature in French, besides furnishing a well-illustrated pamphlet of 150 pages, with a map of its stations, diagrams of the two hospital ships *Saviour* and *Mercy*, and a report of its work in time of war (China, 1894-'95 and 1900) and peace, has issued an illuminated broadside showing its various medals and insignia. One of these latter commemorates the twenty-fifth anniversary of the foundation of the Society, which, both financially and socially, is one of the most flourishing in the empire. The latest pamphlet, of ninety pages, covers the work of 1901 and 1902, and with it is a smaller one containing the Articles of Association in English. Flood, fire, inundation, the breaking of dykes (in which Japan is very much like Holland), the destruction wrought by volcanoes and earthquakes in the islands of the empire, give abundant work to the Society. Incidentally this literature is a sure sign of the quiet but real revolution already wrought in the manner of dispensing public succor. It reveals a transfer of function from what was once paternal and despotic to that which is private and voluntary, thus acting powerfully as a means of national education.

The Asiatic Society of Korea sends forth Volume II., Part I., of its Transactions (New York: G. E. Stechert). Dr. H. T. Jones furnishes a long-needed paper, which sheds vast light on the hitherto dark literary history of the peninsula, and reveals a shining link between the culture of China and early Japan. For 500 years past, the dominant literary force in Korea has been Confucianist in its philosophy and teachings. Such literary activity as thus pre-

vailed has been influenced and controlled by the sages of China. Enjoying royal patronage, a school of numerous and industrious writers has been able to exclude all rival or heretical competitors and to mould to their own standards the literature of the Korean people. The founder of this school was Choe Chi-wun, born A. D. 859, in the old kingdom of Shinra, or Silla. After absorbing as much of the rising Confucian cult as was accessible at his own home, he went to China and spent many years at Singan in Shen-si, the capital of China during the Tang dynasty, and the most interesting city, historically, in China. Serving both as soldier and scholar, Choe returned to Korea in 886 with high purposes and plans. After serving in public office, he became a recluse, and is popularly believed to have been a daily companion of the mountain gods. From Maurice Courant's monumental work, 'Bibliographie Coréenne,' Dr. Jones reprints the notes on Choe Chi-wun, which the *Korea Review* reinforces. Choe was canonized in 1020, and, in all, sixteen Koreans have in line with him received literary and orthodox canonization. These all helped to make Korea Confucian. The supremacy of Confucianism as a school in Korea dates from the founding of the present dynasty A. D. 1392.

A veritable numismatic storehouse has recently been unearthed in the old city of Oreos on the island of Eubœa. The treasure consisted of more than a thousand specimens, mostly silver coins, and among them a number of *unica*. The dates varied from the time of Alexander the Great to the second century before Christ. The bulk of this find has been deposited in the numismatic collection at Athens.

—It is possible that some of our readers may be old enough to remember when 'The Tour of Dr. Syntax in Search of the Picturesque,' in Ackermann's edition, was a favorite boy's book. Of this now almost forgotten work, Messrs. Appleton have brought out a new edition with reproductions of the famous colored illustrations by Rowlandson. In point of fact, the book was written for the illustrations. Thomas Rowlandson, one of the cleverest of English humorous designers, who, in addition to original genius, had enjoyed the advantages of a thorough artistic training in both London and Paris, had offered the publishers of *Ackermann's Repository* (the leading art journal in London at the beginning of the last century) a series of comic drawings representing the adventures of a travelling schoolmaster, and they engaged William Combe to write a poem to bring them in. This Combe was a sort of respectable literary free lance, who had had a very checkered career. He was born in 1741, studied at Oxford, and then plunged into fashionable society in London, where he shone for a while as a leader of the *beau monde*. His fortune squandered, he lived what in the seventeenth century was called a "skeldering" life, now a private soldier, now a waiter, and even a cook—at least, so it is said. Then he turned his hand to literature, to which he stuck for the rest of his long life. He was almost always in debt, and not seldom in a debtors' prison—in fact, he wrote his 'Dr. Syntax' in the rules of the King's Bench. He was a prolific writer, and no less than eighty-four works of his are known—probably not all, as he never wrote under his own name. If Combe had no very great talent, he had vivacity and fluency, and it may be said to his credit that both his life and his writings were free from any taint of immorality or even of coarseness. He was sixty-eight years old when he wrote 'Dr. Syntax,' his most popular work, and eighty when he wrote his last book, 'Johnny Quæ Genus' (also republished by the Appletons). These books were well worth republishing, if not because they amused our grandfathers, at least for the clever illustrations.

—Little need be added to the simple announcement of a new, two-volume edition of Yule's 'Marco Polo' (Charles Scribner's Sons). Always a book unique in its class, perfect in its method, exhaustive in its details, nearly thirty years have passed since its last (the second) edition appeared, and it has been long practically unattainable. Now, even after these thirty years and all the wealth of exploration and study that have gone into them, the corrections by the editor, M. Henri Cordier, professor of Chinese history in the École des Langues Orientales Vivantes and a distinguished Marco-Poloist, are almost *nil;* and his additions, while often rich and full, are additions strictly, and show how securely and with what prescience Sir Henry Yule planned his great work. There are few books in a growing subject, thirty years old, which could stand this test. M. Cordier, too, is to be congratulated on the exemplary diligence, discretion, and devotion which he has shown. His personality is carefully repressed, and his additions exactly indicated. Among these, besides a multitude of little notes scattered throughout the volumes, are an appendix of lengthier notes, many additional maps and illustrations, an elaborate bibliography of Marco Polo's book, and a bibliography of Sir Henry Yule's own writings. To the whole is prefixed a memoir of Sir Henry Yule by his daughter. And now it is for the libraries, to so many of which this work has hitherto been inaccessible, to add it to their treasures.

—Two sumptuous volumes of no little biographical interest have just been put forth for private circulation by his Majesty's printers, Eyre & Spottiswoode. The first of these and 100 pages of the second contain the memoirs of Anna Maria Wilhelmina Pickering, while the main part of the second volume contains extracts from the now perishing record left by her father, John Spencer Stanhope, of his travels on the Continent and his imprisonment under Napoleon. The late Mrs. Pickering lived to be almost eighty years old, and died at the end of 1901. During the last two years of her life, while battling against infirmities, she wrote down for her children, partly in full and partly as disjointed memoranda, these memoirs of her long life. As to her father's account of his travels and imprisonment, it was not published with the result of his researches in Greece, although written out at his dictation in five or six volumes of MS., partly by his wife, and partly by his daughter. "I well remember," says Mrs. Pickering, "the interest which they roused in me at the time, and, having recently obtained an opportunity of reperusing them, I found this interest revived to such an extent that I decided to make copious extracts from them, and to partially save them if possible from the fate which is rapidly overtaking them through the fading of the ink as the years roll on." This resolve Mrs. Pickering carried out by excerpting from one-third to one-half of the whole—all that concerns her father's experiences in Spain and in France; and these excerpts are printed at the end of her own memoirs. Taken in connection with the uniformly entertaining reminiscences of him, and the many delightful letters from him (more especially those to his mother) which abound in Mrs. Pickering's record of her own life, these extracts from Mr. Spencer Stanhope's journals form a tolerably complete biography, not less interesting because it is informally presented instead of being drawn out into the conventional two volumes, and is interwoven with the life experiences of his daughter.

—The name of the author, John Willis Clark, vouches for the accuracy and competence of the text of 'Cambridge: A Concise Guide to the Town and University, in an Introduction and Four Walks'; and the publishers (Macmillan & Bowes of Cambridge) are to be congratulated on its excellent form. Compactness, combined with legibility, and a sufficiency of illustrations adapted to the proper elucidation of the text characterize this little volume, which, though less than five by seven inches, and not a quarter of an inch thick, including the neat and serviceable flexible cloth binding, contains 200 pages of text matter, with index, a useful map, and seventy-six illustrations, besides a portrait of the genial author. The type is large and clear, and the printing, although not up to the very best examples of India-paper impressions, has been well managed, notwithstanding the great thinness of the paper. No one visiting the beautiful university town can afford to be without this useful little companion, nor with its help could fail to come away with clearer impressions and greatly more detailed and accurate knowledge of the things seen. With its authoritative authorship and satisfactory make-up, it is a good example of the ideal guide-book, such as it is to be hoped will ultimately supplant the present forms of travellers' companions. The price should also be noticed because of its reasonableness.

—The present social conditions of the Jews in Germany are interestingly revealed in Conrad's 'Jahrbücher für Nationalöconomie und Statistik.' Of the 7,500,000 Hebrews in the world, Germany shelters 570,000. They are not gaining on the Christians, as is commonly supposed, but actually constituted in 1900 only 11.4 per 1,000, as against 13.3 per thousand in 1880, of the total population. The percentage of births has suffered a startling diminution; in the period 1820-1866 the number of births to every thousand Jews was 37.70; in 1878-'82 it still was 30.32; whereas in 1893-'97 it fell to 22.5, as against 38.15 among the Christians in this last period. The *Frankfurter-Zeitung* is inclined to attribute this to the Malthusian tendencies of growing prosperity. Jewish families of twelve or fifteen, such as were numerous half a century ago, have practically disappeared; the average number of children per Jewish marriage, in the period 1895-'99, was only 2.98, as against 4.21 among the Christians in

the same period. There is also an increasing tendency to mixed marriages, in which the Jewish element is usually absorbed by the Christian. In 1895, only 24.47 per cent. of the children of mixed marriages were Jewish, and nearly all the children of such mixed couples marry Christians. In the matter of divorces there is no increase because of mixed marriages; and the doctrine that such marriages normally result in smaller families and a less robust progeny is not borne out by the figures. As regards employment, 54.56 of the German Jews follow commercial pursuits, as against only 0.04 per cent. in agriculture. Of the women and girls, 21.97 earned their own living in 1895, as against 15.94 per cent. in 1882. The vast majority of all Jews live in cities. Berlin has 92,206, as against only 18,859 in 1861. Frankfort, Posen, Mannheim, and Breslau exceed Berlin in the proportion of Hebrews in the population. Of Jewish children, 41.34 per cent. take high-school courses, while in Prussian universities they constitute 9.32 per cent. of the students. Criminologically considered, murder is committed by Jews with remarkable infrequency; most of the crimes committed by them grow out of commercial conditions.

—It is well to be reminded occasionally how essentially modern is the recognition of freedom of conscience, if only to put us on our guard against a recrudescence of the persecuting spirit which is slumbering rather than dead. A valuable study in this direction is afforded by the latest work of M. Eugène Hubert, the indefatigable professor of history in the University of Liège, entitled 'Le Protestantisme à Tournai pendant le XVIIIe Siècle.' Based upon minute researches in the archives, it shows how the little Protestant communities which survived in Austrian Flanders were gradually extinguished, and how the Edict of Toleration of the enlightened Joseph II., in 1781, was rendered nugatory by the local authorities and the fanaticism of the Catholic population. At Tournai, where a little Calvinist community preserved its existence through the presence of a Dutch garrison under the Barrier Treaty, it virtually disappeared when that treaty was annulled. The Government of the United Provinces did what it could by threatening reprisals on the Catholics of Holland, but this was often insufficient. The account of the Tournai congregation is supplemented by an interesting sketch of the little Protestant community of Rongy, which had managed to survive the horrors of the Tribunal of Blood, but which was subject to incessant petty persecutions. It seems strange to read that it was deprived of the poor privilege of a cemetery in which to bury its dead, who had to be interred in the gardens of the houses; and when a small corner of the public burying-ground was set apart for them, a corpse was dug up and cast out. The pastor who came occasionally to perform the duties of marrying, baptizing, and administering communion was obliged to do so furtively to escape ill-usage, and when a license was obtained from the Emperor to erect a small building for worship it was prevented on the most frivolous pretexts—one of them being that the singing would disturb the rites in the Catholic church, although they were sixteen hundred feet apart. In spite of all this, the little group of worshippers remained faithful, although it was deprived of a pastor from 1802 to 1817. M. Hubert's statements are substantiated by a wealth of documentary material gathered from all accessible sources, and although they may be considered primarily as a contribution to local history, they have a wide-extended application.

NAPOLEON'S RULE IN GERMANY.

Studies in Napoleonic Statesmanship: Germany. By Herbert A. L. Fisher, M. A., Fellow of New College, Oxford. New York: Henry Frowde. 1903.

It may be thought in some quarters that Mr. Fisher is guilty of an improper eclecticism when he passes from the Mediæval Empire to the era of Napoleon. The mediævalists, at least, always look askance at one who, having entered their field, is decoyed from it by the allurement of recent events. But whether or not Mr. Fisher would have done better to confine his attention to a restricted portion of the Middle Ages, it certainly seems to us that this book is more mature and more thorough than its predecessor. While 'The Mediæval Empire' was recommended by gifts of style and by its treatment of the imperial administration in Germany, the portion of the work which dealt with Italy was comparatively thin. The present study of Napoleonic administration draws its data from a wider range of material, and, from the nature of the case, admits of more incisive treatment. In the preface the author says: "I have begun with a volume upon Germany, in the hope that I may be encouraged to complete the work at some future date by further studies of Napoleonic statesmanship in France, Italy, Holland, and Belgium." So far as encouragement can be given from without, Mr. Fisher deserves well at the hands of the reviewers.

Rome has a church for every day in the year, and Germany, on the eve of the French Revolution, possessed an equal number of political jurisdictions. It is an historical commonplace that Napoleon, by his wars and his reallotment of territory, reduced the petty states to a more reasonable figure, but none the less the Confederacy which emerged from the campaigns of the Empire embraced thirty-nine members. Making all possible allowance for consolidation, there is still room enough for complexity and confusion to arise in a modern account of Napoleon's German policy. At first glance the most interesting period appears to be that which lies between the battle of Austerlitz and the peace of Tilsit, embracing as it does the formation of the Rheinbund, the overthrow of Prussia, the creation of the Grand Duchy of Berg, and the establishment of the Kingdom of Westphalia. These are all outstanding events, and Mr. Fisher gives them the prominence which is their due; but he also finds space for special chapters on Napoleon's attitude towards Germany during the Directory and Consulate, on Hanover, the Grand Duchy of Frankfort, the Hanseatic Towns, and the Rhine Departments. As for Austria, Mr. Fisher points out that Napoleon eliminated her from Germany as early as 1806, leaving that distracted and disorganized country divided between Frederick William of Prussia and himself. Thus a few main threads are kept in hand and the narrative is preserved from congestion of facts.

The clue to Napoleon's policy towards Germany is to be found in his dictum that every state is a political creation. This conception had virtually prevailed during the last days of the old régime. Not only had the partition of Poland shown how states can be dismembered by politics, but the general traffic of the diplomatists in souls and square miles gave wide currency to the same idea. This notion, so opposed to the political tendencies of the nineteenth century in its middle years, Napoleon developed to its legitimate conclusion during the War of the Third Coalition, when allies and governments alike succumbed beneath the hammer of his attack. To give Murat a grand duchy after Austerlitz or Jerome a throne after Tilsit, was equally advisable and natural. The Germans, in Napoleon's conception, were a tame and stupid people, who admired royalty as much as they lacked imagination and decision. What they needed at Düsseldorf and Cassel was a court, whether French or German it mattered little. The appointment of natives to subordinate places in the civil service was considered a sufficient sop to local prejudice. Such a state of mind will account for any number of geographical antics. At the same time it must not be forgotten that the Napoleonic states had one stronger basis than could be afforded either by a great victory or the political inexperience of the Germans. Wherever the tricolor flew, there was established the Code, and the Code offered appreciable compensation for levies and cantonments.

One of the leading facts which Mr. Fisher enforces and illustrates is that of Napoleon's alliance with the German princes rather than with the peasants. In France, under both the First and Second Empires, the case was otherwise. There Cæsarism rested on confiscated lands, peasant proprietorship, and those agrarian measures of the Constituent which Napoleon had hastened to sanction. Why did he not follow the same policy in Germany, having tested its advantages at home? Certainly it was not from failure to consider the chances of success, for such a line of action was obvious, and Bacher, an envoy of wide experience in German affairs, actually wrote to the French Foreign Office: "The Confederation of the Rhine will never be consolidated until the majority of the inhabitants of each of the Confederate States have acquired Church property and national domains, or have redeemed their real and personal servitudes at a low price, as well as the greater part of their feudal and seigneurial dues." According to Mr. Fisher's view, Napoleon did not commit himself to the maintenance of French institutions in Germany, and preferred to act through the popularity which the reigning families possessed. The policy of making over confiscated lands to the masses was not free from danger:

"It might," says Mr. Fisher, "have alienated the princes and failed to win the peasants. The authority of Napoleon in Germany therefore depended not upon the interested support of the populace, but upon personal prestige, the force of arms, and the alliance of the ruling dynasties. The clergy who had been secularized, the sovereigns who had been mediatized, the nobles who had lost or feared to lose dues and services, were the natural foes of the new order. Only the princes had been un-

questioned gainers, and their gains were solid and permanent. At the expense of ignominy, they had purchased power. But the alliance of Napoleon with the princes, though admirably adapted for its immediate purpose, the control of the military forces of Germany, was directly opposed to the cause of liberty, and to all the feelings and tendencies which the French Revolution had encouraged in the thinking class."

Readers of this volume are almost certain to be impressed by the characterization of individuals which it contains, and by the cleverness of its incidental references to German society during the Napoleonic era. We shall not, however, attempt to criticise Mr. Fisher's estimate of politicians or to follow his account of Napoleon's government in states that were directly ruled by members of the Bonapartist dynasty. There are two subjects which seem even more important—the creation of the Rheinbund, and French administration of the Rhine departments. The Confederation of the Rhine represents one of Napoleon's most striking experiments in politics; and it was along the Rhine itself that Germany was most deeply affected by French influence during the Revolution and the Empire. Considered from the purely German standpoint, or perhaps from the standpoint of contemporary politics, the effect of the Napoleonic wars on Prussia (embracing, as it does, the reforms of Stein and Hardenberg) is of more consequence; but Mr. Fisher starts out from Gladstone's statement that Napoleon was the greatest administrator in history, and therefore we shall do best if we select topics which most clearly disclose the Napoleonic hand.

The lack of harmony that frequently existed between the Emperor's profession and intent is well illustrated by the diplomacy of 1805. If we compare his statements regarding Germany in the early part of that year with the text of the Peace of Pressburg, we shall see that he entered the War of the Third Coalition as the defender of the imperial institution against the unscrupulous ambition of Austria, and then followed up the battle of Austerlitz by destroying the Empire altogether. Naturally, the German princes were not in a position to know when Napoleon crossed the Rhine what he would do with Austria after he had overwhelmed her, but few could have trusted his professions of fidelity to the old Germanic body.

It was a strange if not a ridiculous situation. Take, for example, the position of Maximilian Joseph, the Elector of Bavaria. Napoleon offers him as a husband for his eldest daughter, Augusta, Josephine's son, the Prince Eugene. The elector is well disposed towards France and so is his minister, Montgelas. The electress, on the other hand, is bound by the closest family ties to Russia and Sweden, hates Napoleon fiercely, and looks to Austria for the protection of the Bavarian frontiers. On September 6, 1805, Austria gave the Elector the choice of joining her or being treated as an enemy. On the 8th he was directed by Otto, the French Ambassador, to leave Munich at once and place himself under Napoleon's protection. The Austrian mandate was unsupported by a show of force. The command of Otto had behind it the divisions of Bernadotte and Marmont. Bavaria, at least, did not throw in her lot with France because the Elector was deceived by fair words about the preservation of the Empire. There was no more escape for Maximilian Joseph than for the Elector of Baden, who bound himself by the treaty of Ettlingen to supply the Grand Army with 3,000 men. Frederick II. of Würtemberg entered the war with considerable zeal, entertained Napoleon at Pforzheim, and conducted a burlesque correspondence with the Emperor during the weeks just preceding Austerlitz—a correspondence in which the writers unite to style the Ratisbon Diet *une misérable singerie*. Singularly enough, the Diet itself did not denounce the French invasion.

"Posts placed round the city of Ratisbon proclaimed the neutrality of the territory in Latin and French inscriptions. The Diet declared itself neutral, it declined to mention the Empire of Germany, it received bulletins from the French camp announcing 'the prodigies which have avenged the Germanic Empire for the invasion of one of its principal members,' it refused to entertain the complaints of the Imperial Knights whom the Princes of South Germany and the allies of Napoleon were now vigorously plundering of their rights."

After Austerlitz a difference of opinion arose between Napoleon and Talleyrand concerning the treatment which Austria should receive. Talleyrand looked back with favor to the time of the Seven Years' War, when France and Austria were allied against England and Prussia. He admitted that the Hapsburgs must lose their Swabian possessions, but he was willing to indemnify them with territory taken from Turkey, and he also advocated the complete separation of Italy from France. The eventual result of this plan would be to make Austria and Russia rivals in the Balkans, to encourage the Asiatic expansion of Russia, and to bring about a collision between Russia and England in the Far East. Such in its salient features was the scheme of Talleyrand. Napoleon rejected it because he thought that a connection with Austria would be less serviceable than one with Prussia, and because he shrank from pushing Russia to the wall by offering Wallachia and Moldavia to Austria. But though the Emperor was unwilling to accept the counsel of his minister, he hesitated a great deal before he shaped the Confederation of the Rhine. "His restless mind," says Mr. Fisher, "was the despair of his subordinates." During the spring of 1806, "scheme after scheme was devised, corrected, torn up, and thrown into the fire." By the end of April Napoleon had decided to compress Germany into eight states, of which four should be under French control.

"A month later the destruction of the Empire is a settled thing. 'There will be no more Diet at Ratisbon since Ratisbon will belong to the Empire.' All kinds of unexpected side-winds came to perplex the current. At one time the Emperor took it into his head that the Prussian alliance would never be very useful, since Prussia could never command the Sound. That being so, why should not Hanover be restored to England, and Prussia compensated in Central Germany? Then, granted that the Empire was to be dissolved and a new Confederation founded in its place, who were to be the members of the new body?"

Three things the genesis of the Rheinbund shows. Firstly, Napoleon's absolute control of the situation in western Germany; secondly, his invention of a hundred plans for turning Austerlitz to the best account; and, thirdly, his belief in the idea that every state is a political creation.

If Napoleon's administration of Berg and Westphalia became burdensome and finally oppressive, better things can be said of his rule in the German-speaking districts which France had seized in her advance to the Rhine. These four departments (Roer, Rhin-et-Moselle, Sarre, and Mont Tonnerre) comprised regions that had been precious in the eyes of France ever since the days of Richelieu, if not since the reign of Henry II. The early Revolution had realized the unfulfilled ambitions of Louis XIV., and it remained for Napoleon to render the new departments an integral part of France. Prior to September, 1802, when these conquered provinces escaped from a provisional administration, their lot under French Government had been a hard one. The armies of the Convention and the Directory had levied cash contributions to the amount of 150,000,000 francs. Public works were suffered to fall into disrepair; charitable institutions were spared no more than the treasuries of the ecclesiastical electors. For a moment in 1797 Hoche had attempted to initiate reforms, but his sudden death restored the evil régime which had preceded him; and though Rudler did something for the conquered territory besides dividing it into departments, the left bank of the Rhine was suffering from tyranny and chaos when the 18th Brumaire gave it a new master.

With the establishment of the Consulate, the French Rhineland received a better and easier government than it had yet known, nor were the military necessities of the Empire permitted to press heavily upon it. The use of French was encouraged, but not enforced by vexatious laws. For the first time the region was well policed. Special legislation protected the peasantry from the rapacious exactions of Jewish usurers. The Concordat went far toward healing the differences which had arisen from the animosity of the Revolution toward the Church. "It was here," says Mr. Fisher, "that the system of the Empire was seen at its best, repairing material waste, obliterating senseless divisions, driving into a torpid populace its keen and vital energies, and in the ordered structure of French law bequeathing one of the most splendid legacies which a conqueror has ever left to a vanquished province." As a result, Napoleonic rule endeared itself to the Rhenish Germans and was not forgotten during the years of reaction which followed Waterloo.

The essential shortcoming of Napoleon's rule in Germany was that he did not understand the Germans. Mr. Fisher is strongly impressed by this and by his moral deficiencies as a ruler. "With no patience, with no sense of human dignity, with no feeling for the pathos of the common lot, Napoleon lacked the sound and noble gifts which sweeten and inspire public life.' The last paragraph of this able work contrasts the Emperor's conception of Germany with that of Mme. de Staël, very much to the advantage of the latter. 'L'Allemagne,' it is urged, should not be regarded merely as an ideal picture which is rendered valueless by its sympathy and sentiment.

"Rather we should see in these eloquent discourses the fine protest of a generous French heart against the subjection of a simple and laborious people; an appeal from force to conscience, from the mailed tyranny of the later Empire to the ideals of human brotherhood which France had once preached, and which a cruel destiny had caused her to forget."

Lord Penzance on the Bacon-Shakespeare Controversy: A Judicial Summing-up. By the Rt. Hon. Sir James Plaisted Wilde, Baron Penzance. London: Sampson Low; Boston: W. B. Clark Co.

The publication of this book was perhaps chiefly an act of piety toward the eminent lawyer who amused his old age by composing it. Yet, slight as the work is, it will command attention because of its authorship, and it will hold the reader who once opens it—unless he is already sated with the subject—because of its lucidity and its moderation of style. Lord Penzance does not profess to have made any contributions to knowledge or to have brought forward any new evidence. His purpose was to state briefly and clearly, "very much after the fashion of a judicial summing-up," the "arguments upon which the Baconians [think] themselves justified in questioning so fixed and venerable a belief as that William Shakspere wrote the plays which have so long passed by his name." He expressly warns the reader that he has not, after all, summed up *judicially*—that, on the contrary, his essay is "very little short of an argument for the plaintiffs," that is, for the Baconians, so called.

The argument is divided into two unequal parts. The first, which is much the longer, undertakes to show that Shakspere cannot have written these plays; the second deals in a rather gingerly way with the proposition that Bacon *did* write them. On the first point Lord Penzance has no kind of doubt. The negative evidence, which he arranges with much skill, and states, as was to be expected, with considerable force, seems to him quite conclusive. The second point, however, is another matter. Granted that Shakspere did not write the dramas that pass under his name, it is still a terrific task to prove, or to make any progress toward proving, that Lord Bacon, or any other assignable person, was actually their author. This difficulty Lord Penzance feels profoundly, and hence the second part of his book will be a disappointment to the thoroughgoing Baconian.

We see no occasion to thresh out the alleged "question" at this time. We have given Lord Penzance's book thus much notice rather because of the excellence of its form than for anything that is particularly valuable in its contents. We cannot part company with it, however, without expressing our surprise that the learned justice should have written so loosely on the question of literary property in Shakspere's time. Speaking of the publication of the First Folio in 1623, he remarks that "the executors of William Shakspere . . . were of course the only people who were entitled to deal with any manuscript of his," and, in general, he seems to have little knowledge of the relations between playwright and manager or between author and publisher in the early seventeenth century. In view of recent discussions, it is also rather startling to read of Shakspere's "perfect familiarity with not only the principles, axioms, and maxims, but the technicalities of English law; a knowledge so perfect and intimate that he was never incorrect and never at fault." Finally, it is certainly hazardous to draw from an allusion to the gardens of Adonis in "Henry VI." the inference that "William Shakspere (if he was the author) had so far progressed in his studies by .. March, 1592, as to have mastered the Greek language thus early; and that he had pushed his reading in directions not traversed by the ordinary run of classic readers." In short, Lord Penzance's book is another document in proof of what ought to be the self-evident proposition that questions of literary history are questions for experts.

The Life of Benvenuto Cellini. Written by Himself. Translated out of the Italian with an Introduction by Anne Macdonell. Two volumes. (The Temple Autobiographies.) London: Dent; New York: E. P. Dutton & Co. 1903.

The Temple Autobiographies, a new series which promises great entertainment, could not do better than to begin with Benvenuto Cellini's life of himself. In some respects it is the most astonishing of all autobiographies. Neither Pepys nor Rousseau surpasses Cellini in unblushing frankness, nor does any one else approach his record of startling adventures. His two volumes contain material for a dozen Dumas romances. They are as interesting to the reader in search of mere excitement as to the historian or to the psychologist. If no other documents remained, they would enable us to reconstruct the society of the Italian Renaissance during the first half of the sixteenth century. But it is late in the day to do more than call attention anew to a work whose unique value no one disputes.

Any series of autobiographies had of course to include Cellini, and since the late J. A. Symonds's translation was presumably unobtainable, the editor had to procure a new version. He certainly was fortunate in his choice of a translator, for Mrs. Macdonell has produced a translation which seems to us not inferior to Symonds's. That is saying a great deal, for Symonds succeeded in giving not only an accurate rendering of the text, but also much of the flavor and spirit of the original, with the result that few foreign masterpieces are so adequately represented in English. Possibly, a seventeenth-century translator might have found racier equivalents for some of Cellini's Tuscan colloquialisms, and the whole book would have had that air of careless ease peculiar to the age before the philologist had superseded the gentleman and scholar; but, on the whole, Symonds is undeniably excellent, and only such a publisher's need as we have hinted at could justify a rival translation.

A careful comparison, sentence by sentence and section by section, of Mrs. Macdonell's work with his fails to reveal any marked difference in quality. She is as accurate and as pleasant to read as he. Her vocabulary never runs dry, and, as she is rather less anxious than he to achieve literary finish, she often comes nearer to reproducing the happy-go-lucky syntax of the original. Cellini laughs at the rules of rhetoric. He expresses himself after his own fashion, let the construction be conventional or not. He uses words gathered anywhere—from the lips of popes, grandees, poets, artists, courtesans, blacklegs, guttersnipe. And fortunately Varchi, a great man of letters, to whom he submitted his manuscript for correction, had the good sense to let it alone, so that posterity possesses in it one of the few world masterpieces not whittled down or softened or retouched to conform to a literary standard. Cellini's translator, therefore, must divest himself as far as possible of literary proprieties; yet he must not appear grotesque—for Cellini never is that, he is simply natural and colloquial. He tells us, indeed, that he dictated most of his memoirs while he was at work in his studio to a boy of fourteen, and the style, which resembles vivid talk rather than writing, confirms this statement. It may be that Symonds is a little too smooth, too literary; and in this respect Mrs. Macdonell excels him. She is not less scrupulous than he in giving an unexpurgated version, and the notes which she supplies, though brief, are sufficient for the cursory reader. Whoever desires fuller information will naturally turn to the Italian editors. Mrs. Macdonell's introduction does not aim at such biographical and critical exhaustiveness as are to be found in Symonds's essay, which is one of his best. Symonds aptly characterized Cellini as a blend of bravo and artist; Mrs. Macdonell is hardly less apt in describing him as "a kind of travesty of the Nietzschian *Übermensch*, terrifying his contemporaries, and raising a smile on our faces only because we are looking on from the safe distance of centuries."

A word may be added on the make-up of these volumes. In size and shape they are handy, and the type, though not large, is clear; but we regret that the running headlines of the pages give no clue to their contents—the title of the book being repeated without variation—and that the text was not broken up into chapters. At first handling, a volume of 275 pages without a break, and with no devices except the occasional number of a new section at the beginning of a paragraph, seems a little forbidding. The fact that the original manuscript was not arranged in chapters does not excuse this neglect. Many Elizabethan plays, as first printed, had no acts, scenes, or stage directions; but it would be folly now not to avail ourselves of these aids to clearness and convenience, and in the case of Cellini's Life some of the best modern Italian editions do subdivide the text in chapters and add a table of contents for each. Mrs. Macdonell's full index of proper names only partly compensates for this lack. There are several pictures of Cellini and his contemporaries, and two of his statues.

Practical Journalism: A Complete Manual of the Best Newspaper Methods. By Edwin L. Shuman. D. Appleton & Co. 1903.

The reader will find this an entertaining volume, no matter what view he takes of journalism. It has a quality of its own, an aim of its own, and a style of its own, and tells so much about "the inside of a metropolitan newspaper office" that it might answer with most students instead of a course in Journalism at any of the universities where such courses are, or are to be, established. If we examine it with care for the purpose of seeing how far the substance of it would be fitted to form part of the curriculum of a university, we must say that it is rather difficult to make out what the answer to the question should be. The chief subjects discussed are "Positions and Salaries," "How a Reporter is Educated," "The Reporter at Work," "Plan of a News Story," "How the News is Gathered," "Edi-

tors and their Methods," "Qualifications for Journalism," "The Sunday Supplement," "In the Artist's Room," "Women in Newspaper Work," "A Chapter on Errors," "Writing Advertisements," "Filling the 'Ad' Columns," "Editing a Country Paper," "The Law of Libel," and "The Law of Copyright." Ninety-nine-hundredths of all this relates to practical details which can be learned only by actual experience in a newspaper office, and the rest belongs to already well-established branches of study. The law of libel and of copyright as affecting newspapers cannot be mastered without going into the whole subject of libel and copyright, which would be part of a course of legal study. What the author calls "Errors" relates to the use of language, and comes under the head of grammar, rhetoric, or composition. For instance, the "importance of learning to spell and punctuate," dwelt upon in this chapter, cannot be exaggerated, but this is not specially an essential of a journalistic education. Again, it is no doubt necessary that one who draws for a newspaper should understand the "news end" of a picture (ch. x.), but how he is to learn this through any course of instruction is hard to see. The author tells us, and we are quite willing to believe it, that the practice of supplementing bald statements of fact with the "necessary details," by means of the imagination, is widespread in the world of journalism; but how the true theory of this art can be evolved so as to be taught, we do not know. The author observes that "the ethics of the subject may be left to the individual reader"; but this is a mistake. The ethics of the subject are well enough understood, but they would seem likely in the future university to lead to a conflict between the chair of Morals and that of News.

On the whole, this volume, which is full of valuable hints and suggestions, rather tends to demonstrate that journalism is as much a trade as a profession, and still more an art, to which one is born, or not, as the case may be. If chairs of it are established, there ought to be subsidiary chairs devoted to its greater and more important branches. Then the generous youth could take, if he liked, Advertising 4, or News 3, Society 2, and so on. Ours is the age of specialization. Such courses of electives would, we are satisfied, "draw" wonderfully, and bring in a plentiful supply of cash to many a needy university. Meanwhile, such a manual as Mr. Shuman's will answer very well for the sucking reporter of our day, who, as a rule, is still obliged to learn journalism as best he can in a newspaper office, and without attending any course of lectures at all.

Monna Vanna. By Maurice Maeterlinck. Translated by A. I. Du Pont Coleman. Harper & Brothers. 1903.

"Monna Vanna" was put on the stage in Paris in the spring of last year, with Mme. Leblanc in the title rôle. It had a better reception than was given to "Joyzelle" this spring, and is a far more effective play. In "Monna Vanna" Maeterlinck abandons his favorite device of repetition of unessential phrases of the dialogue, and the atmosphere of a concealed and gloomy tyranny or a sinister fate, which pervaded the earlier plays. The conception of the military adventurer who is ready to betray his side and spare a starving city for the sake of a woman within the walls, is not new. But Maeterlinck does not depend on novelty of incident or plot. His interest is wholly psychological; the question, for him, being not what, in a given case, a man will do, but why he will do it, what sort of soul, what comprehension of other souls he will reveal in his acts or words or gestures. What he may *do* is unessential; the essential is to understand nobly, to believe to the last, in any case to forgive.

In "Joyzelle" it was the heroine whose powers of comprehension and loyalty were put to the test—*l'épreuve*—the word is the keynote of the later plays; she proved triumphantly that, through all the disguises of sin, disease, and death, she could discern and adore the soul of Lancéor. In "Monna Vanna" it is the hero who is tried, and by "a grief that should not be within the experience of man." Guido's is not the soul to stand such a test. When Vanna (his wife) declares that she is ready to sacrifice herself to redeem the starving Pisans and to go to the camp of Prinzivalle, Guido cries out that she never loved him and must already be false in heart. When she returns unharmed, leading Prinzivalle, who for her sake and without reward has betrayed Florence and saved Pisa, Guido refuses to believe her story. He has had two opportunities of comprehension and has missed both. Vanna, finding it hopeless to convince him and seeing that Prinzivalle is doomed, reverses the situation with a suddenness and completeness worthy of a play of Sophocles. She easily convinces Guido that her first story was a lie to save his pride, and claims as her vengeance the right to slay Prinzivalle with her own hands; to him she whispers that they will escape together. One must lie since one is not believed, and one must follow the man who comprehends. "Ah!" cries Vanna with an irony that is lost on Guido, who thinks she has beguiled Prinzivalle into Pisa with false promises, "what fools men are! It is right to deceive them; they adore falsehood."

As a foil to the suspicions of middle age or the cruelty of youth, Maeterlinck regularly introduces an aged man whose sight is clear, whose toleration is infinite, who forgives all because he understands all. Like the father in "Pelléas and Mélisande," Marco in the present play fills the part of a Greek chorus which can only warn in vain and interpret to deaf ears. He and his like are the mouthpieces of the Maeterlinckian philosophy on the stage; their wise and pitying views of life echo the fine sayings of "La Sagesse et la Destinée."

A play of Maeterlinck loses little by being translated. It would be hardly possible to fail in reproducing his short, simple sentences, always most simple when most profound. The present version has no faults that we can discover except, on page 142, a slight departure from the original in the stage directions, where the omission of the name of Prinzivalle in the translation obscures the meaning.

Autori Italiani d'oggi. Da Laura Gropallo. Turin and Rome: Casa Editrice Nazionale, Roux & Viarengo.

The authors of to-day treated in this volume are five in number—Antonio Fogazzaro, Gabriele d'Annunzio, Matilde Serao, Giovanni Verga, and Gerolamo Rovetta; all novelists, though four of the five are either poets or dramatists in addition, and one, Gabriele D'Annunzio, is equally well known in all three branches of literature. One might wish that other novelists had been included: De Roberto and Capuana, the veteran De Amicis, or even Edoardo Calandra, whose literary baggage is indeed far from voluminous, but includes one work of the first importance. Still, the choice made is fairly representative, and to have treated others with similar wealth of detail would have swelled beyond reasonable bounds a volume already bulky.

Signorina Gropallo has approached her task with all seriousness and in a spirit of impartiality that is worthy of high praise. She is a follower of Sainte-Beuve and Taine; she seeks first of all to know all about her subject, the influences to which he has been subjected, the origins of his inspirations, and the relations of his work to these. She is more solicitous to know than to judge; or, rather, she wishes to found her judgment upon the widest possible knowledge, the most searching investigation. She is well equipped for her task with reading, and she is perfectly in earnest and fair-minded. The result is a volume of the highest value to the student of Italian contemporary literature.

At the same time we wish our author had called her work an essay in conscientious criticism rather than in scientific criticism. The former would simply mean that she has striven to give the most complete and the fairest judgment in her power, and would in so far have been perfectly descriptive of her achievement. As for scientific criticism, the name is, in our opinion, not very happily chosen. At best, it indicates a disposition, an intention, rather than a realization. That which is so called has so many affiliations with dogmatic criticism that it seems not worth while to deny the relationship, and that it would be better to limit its pretensions to being the best of the family—with modern spirit and modern equipment. At present its distinguishing idea appears to be that the origins of a man's work are to be sought in the work of his predecessors, in his surroundings, in various influences that have been brought to bear upon him; and this idea Signorina Gropallo has applied with such success in illumination as it is capable of, though, it must be owned, on occasion taking it for more than it is worth—an evil almost inseparable from its use.

Her treatment of Fogazzaro is an instance of both the strength and the weakness of the system. Fogazzaro, by the way, would seem to be indicated, if ever a writer was, for the application of such a system. There are half a dozen or so of principles from which he starts, the sources of his inspiration are in very great part easily recognizable; the scientific critic has but to enumerate these, show how they would be affected by the natural course of development, and lo! there you have the author's work mapped out and fully explained. Signorina Gropallo has done this with a thoroughness that leaves nothing to be desired. It must be confessed that she has also at times overstepped the limits of her theory, and has recognized qualities that are not to be accounted for by the Rosminianism, the Darwinism, the mysticism, or any other of the constituent forces that

have produced the writer. She has not quite overlooked the fact that he has an individuality. In 'Malombra' there are

"beautiful pages that yet diminish the harmony and vivacity of the romance. . . . The book is too rich in delightful observations, in definitions, in sayings now caustic, now delicate, always subtle, that gush spontaneous and fresh from the lips, the thought, the heart of the interlocutors; so that this inexhaustible prodigality overwhelms us like a too abundant fountain. We would like a soberer art, a more organic construction externally and internally, and, in a word, a better disciplined choice of romantic materials."

Setting aside the effect produced upon the critic by this sparkling abundance, the observation is quite true, and we are grateful that something individual should have been recognized in Fogazzaro, something outside of all that has gone towards making him up. But it is not enough. Fogazzaro has a quality very rare among Italian writers, that of humor. For us, Northerners by birth and with the Northern instinct unsubdued by any number of years of Latin contact, it is this quality that brightens his pages, and, together with the serenity that is its product, makes them delightful beyond almost anything in modern Italian literature. As a consequence, the most painstaking study of Fogazzaro which yet fails to render ample justice to this one grace of his, must seem to us to lack something essential, something that puts a spirit into the bones of the skeleton; and this is the reproach, the sole one, we make to the first essay in Signorina Gropallo's work.

Her succeeding chapters, on Gabriele D'Annunzio and Matilda Serao, seem to us more successful. They are, indeed, quite admirable, full, searching, and of a judicial impartiality. She carries us with her when she shows that the one is above all things a lyric poet, while the other remains a journalist, although so great that our critic does not hesitate to accord her a niche in the temple of fame alongside of George Eliot and George Sand. The analysis of the works of the two is masterly, as is the discrimination between their qualities and their limitations. There are pages (as, *e. g.*, 123-124) that are so just and so sufficient that one would like to quote them entire. One is restrained by the reflection that there are so many other pages that have an equal claim to the honor.

The two remaining writers treated, Giovanni Verga and Gerolamo Rovetta, are less striking figures. Verga, as the author of 'I Malavoglia' and "Cavalleria Rusticana," is known to all the world. The careful analysis given by Signorina Gropallo of his other works leaves the impression that fame has in his case been just, and has trumpeted abroad all that is of superlative quality. Still, such a novel as 'Mastro Don Gesualdo' amply repays perusal by the student of literature. In the case of Rovetta we think that Signorina Gropallo has again overstrained her system in referring all the writer's qualities to one dominant characteristic. Rovetta's vocation as a playwright does, indeed, give shape to some of his work as a novelist, but not by a long shot to the extent that our critic would have us believe. In point of fact, were it not for her system, and that Signorina Gropallo has herself written plays, we doubt if she would ever have discovered this ruling trait in reading the novels of Rovetta.

A chapter in conclusion gives an exposition of the principles which are the foundation of the author's critical work. It might be objected to this exposition that it really was not necessary to go so conscientiously to the very root of the matter, that there are certain things that any reader will allow his author to take for granted. Indeed, the worst fault of the book—we do not wish to imply that it is a very grave one—is that it is more conscientious than lively. A little lighter touch, an air a trifle less magisterial, might have won many a recalcitrant reader; nevertheless, the student who is in earnest to know about current Italian literature will have no cause to regret the time spent over Signorina Gropallo's pages.

What is Meaning? By V. Welby. Macmillan Co. 1903. 8vo, pp. 321.

The Principles of Mathematics. By Bertrand Russell. Vol. I. Cambridge (Eng.): University Press; New York: Macmillan. 1903. 8vo, pp. 534.

Two really important works on logic are these; or, at any rate, they deserve to become so, if readers will only do their part towards it. Yet it is almost grotesque to name them together, so utterly disparate are their characters. This is not the place to speak of Mr. Russell's book, which can hardly be called literature. That he should continue these most severe and scholastic labors for so long, bespeaks a grit and industry, as well as a high intelligence, for which more than one of his ancestors have been famed. Whoever wishes a convenient introduction to the remarkable researches into the logic of mathematics that have been made during the last sixty years, and that have thrown an entirely new light both upon mathematics and upon logic, will do well to take up this book. But he will not find it easy reading. Indeed, the matter of the second volume will probably consist, at least nine-tenths of it, of rows of symbols.

Lady Victoria Welby's little volume is not what one would understand by a scientific book. It is not a treatise, and is free from the slightest shade of pedantry or pretension. Different people will estimate its value very differently. It is a feminine book, and a too masculine mind might think parts of it painfully weak. We should recommend the male reader to peruse chapters xxii. to xxv. before he reads the whole consecutively, for they will bear a second reading. The question discussed in these chapters is how primitive men ever came to believe in their absurd superstitions. This has generally been supposed to be the simplest of questions. Lady Victoria does not deign to mention La Fontaine's pretty fable (the sixth of the ninth book; the whole of it is worth rereading if you have forgotten it) of the sculptor and his statue of Jove:

"L'artisan exprima si bien
Le caractere de l'Idole,
Qu'on trouva qu'il ne manquoit rien
A Jupiter que la parole.

"Même l'on dit que l'ouvrier
Eut à peine achevé l'image,
Qu'on le vit frémir le premier,
Et redouter son propre ouvrage.
. . . . . .

"Il étoit enfant en ceci:
Les enfants n'ont l'ame occupée
Que du continuel souci
Qu'on ne fâche point leur poupée.

"Le cœur suit aisément l'esprit.
De cette source est descendue
L'erreur Payenne qui se vit
Chez tant de peuples répandue.
. . . . . .

"Chacun tourne en réalités
Autant qu'il peut ses propres songes.
L'homme est de glace aux vérités;
Il est de feu pour les mensonges."

La Fontaine's theory is somewhat complex, and allows more to the artistic impulse than modern ethnologists have done. They make mythology rather an attempt at a philosophical explanation of phenomena. But the authoress shows by a painstaking analysis that all such theories—La Fontaine's and the new current ones alike—are fatally irreconcilable with those traits of the primitive mind that have struck Tylor, Spencer, and ethnologists generally, as the deepest graven. In place of them she offers a hypothesis of her own, and the reader is tempted to lose patience with her for regarding it only as provisional, so strongly does it recommend itself, until she presents quite another view which one must admit has its plausibility.

The greatest service the book can render is that of bringing home the question which forms its title, a very fundamental question of logic, which has commonly received superficial, formalistic replies. Its vital and far-reaching significance has been even more ignored than usually happens with matters of universal and ubiquitous concern. To direct attention to the subject as one requiring study, both on its theoretical and on its practical side, is the essential purpose of the work. But in doing this the authoress has incidentally made a contribution towards the answer to the question, in pointing out three orders of signification. She has wisely abstained from any attempt at formal definitions of these three modes of significance. She tells us what she means only in the lowest of those three senses. To have gone further would have shunted her off upon a long and needless discussion.

One can see, though she does not remark it, that her three kinds of meaning correspond roughly to Hegel's three stages of thought. Her distinction, too, partly coincides with what was long ago said, that to understand a word or formula may, in the first place, consist in such familiarity with it as will enable one to apply it correctly; or secondly, may consist in an abstract analysis of the conception or understanding of its intellectual relations to other concepts; or, thirdly, may consist in a knowledge of the possible phenomenal and practical upshot of the assertion of the concept. We might point out other interesting affiliations of her thought, sufficient to show that she must be upon the right track.

Lady Victoria, however, does not wish the matter to be agitated in the logician's study alone. She urges that people do not sufficiently take to heart the ethics of language. She thinks that modern conceptions call for a modern imagery of speech. But we fear that she does not realize how deep the knife would have to go into the body of speech to make it really scientific. We should have to form words like those the chemists use—if they can be called words. In particular, she preaches making logic—"significs," she calls it, but it would be logic—the basis or core of education.

All those ideals deserve to be pondered. The book is very rich in illustrations drawn from contemporary writing.

BOOKS OF THE WEEK.

Allen and Greenough's New Latin Grammar. Boston: Ginn & Co.
Andrews, Charles M. A History of England. Boston: Allyn & Bacon. $1.50.
Annual Report of the Board of Regents of the Smithsonian Institution. Report of the United States National Museum. Year ending June 30, 1901. Washington: Government Printing-Office.
Anthony, Geraldine. Four-in-Hand. D. Appleton & Co. $1.50.
Barnett, S. J. Elements of Electromagnetic Theory. The Macmillan Co. $3.

The *Nation* says:

"The mere name and the very cover are full of hope. . . . This small volume is a safe one to lend to a grumbler, an invalid, a hypochondriac, or an old lady; more than safe for the normal man. . . . The book should fulfil a useful mission on rainy days, and on kerosene-steeped evenings in those spots of earth where men and women do congregate."

HISTORICAL REPRINTS IN LIMITED EDITIONS

The Indian Logick Primer

By JOHN ELIOT

Apostle to the Massachusetts Indians.

Edited by **WILBERFORCE EAMES,** of the Lenox Library. Reprinted for the first time from the unique copy of the original, in the British Museum, and known to collectors only from bibliographical data.

150 copies, each numbered; with reproduction of the title page. Small octavo, appropriately bound, $6.00 net.

A Topographical Description of Virginia, Pennsylvania, Maryland and North Carolina, 1778.

Edited by **FREDERICK CHARLES HICKS,** Ph.B., LL.B., Member of the National Geographic Society; of the Library of Congress. With reproductions of Hutchins' celebrated map, three folding plans, facsimile of the original title page, and a biography of the author, *the first (and only) incumbent of the civil office of Geographer of the United States.* The edition, each volume numbered, will comprise 294 copies, 267 on Dickinson paper (250 for sale), and 27 de luxe (24 for sale) on special handmade deckle edge paper. The regular library edition, $3.50 net; large paper, $5.00.

Octavo, cloth and special antique boards.

Narrative of the Adventures of Zenas Leonard, a Native of Clearfield County, Pa., who spent five years in trapping for furs, trading with the Indians. 1839.

Edited by **Dr. W. F. WAGNER.** An accurate reprint of one of the scarcest pieces of Americana, three or four copies only being known to exist. As a member of the Walker California Expedition of 1833-34 and one of Bonneville's party at a later date, the author gives many facts heretofore unauthenticated. An edition of five hundred and twenty copies only will be issued, with a complete introduction, copious notes, an index, map and illustrations. Printed on Dickinson paper, each volume numbered, $5.00 net.

Octavo, cloth extra.

Narratives of Indian Captivities

A series of (about) ten volumes to be devoted to some of the scarcest and rarest volumes of this character. As a collection it is the intention of the Publishers to once more put before the American public many accounts of the adventures, battles, imprisonments and escapes of our forefathers, which though published and read in days long past, are now almost impossible to procure.

The first to be published is

A Narrative of the Captivity and Sufferings of Benjamin Gilbert and his Family. 1780.

Edited most carefully and fully annotated by **FRANK H. SEVERANCE,** author of "Old Trails on the Niagara Frontier." Two hundred and fifty copies of the regular edition will be printed on Dickinson hand-made paper, deckle edge, at $3.50 net, and twenty copies on Imperial Japanese Vellum at $5.00 net. Each volume will be numbered. A map, illustrations in facsimile and an index will be included.

The Second Volume will be

A Faithful Narrative of Robert Eastburn, During His Late Captivity Among the Indians. 1758.

Edited by **JOHN R. SPEARS,** with an introduction, notes and facsimile of the title page of the original, which, with one or two exceptions, is the rarest book of its kind known. Uniformity as to the number of copies of each volume will prevail throughout the series, both on hand made and vellum. The price of this volume will be $2.00 net and $3.50 net, respectively, each numbered.

The Third Volume

REUBEN GOLD THWAITES of the Wisconsin Historical Society will edit the third of the series, which will comprise—**A Short Biography of John Leeth. Giving a brief account of his Travels and Sufferings among the Indians for eighteen years. . . . From his own relation, by Elwel Jeffries. 1831.** The rarity of this book is extreme, and Mr. Thwaites will supply all the necessary information. The price will be the same as the Eastburn. The binding of the set will be a uniform fine quality of cloth, the *de luxe* copies being untrimmed and with paper label. The size of each volume, crown octavo.

A circular fully descriptive of each issue will be sent on application.

AUTOBIOGAPHY

Reminiscences of the Civil War

By General JOHN B. GORDON

With 3 Portraits . . . . . $3.00 net. (Postage extra)

THESE reminiscences, which are destined to take the place on the Southern side held by General Grant's "Memoirs" on the Northern side, were written by General Gordon from time to time throughout a great number of years. They are not, therefore, a made-to-order book, but the spontaneous recollections of a very full life. From Bull Run to Appomattox General Gordon was in most of the great fights of General Lee's army. He knew the leaders of the Confederacy intimately, and his acquaintance was enlarged during his career as a United States Senator by intimate association with leaders of the Union cause.

He was the friend of General Grant to the end of his life.

This is not a narrative history of the war, but records with anecdote, incident, and with eloquence, the personal experiences of General Gordon and the eminent leaders who were his near friends.

No other such intimately personal record has been produced by either side. Every chapter contains humorous incidents, and often pathetic ones, which will pass into the permanent history of the war.

JUST READY

ART

JOHN S. SARGENT

A Collection of 60 Reproductions in Photogravure of his Finest Paintings

With a critical introduction by Mrs. Meynell.

Folio $30.00 net, an elaborate edition de luxe, $60.00 net

THIS elaborate volume offers, for the first time, an adequate collection of the paintings of Mr. Sargent, particularly of his portraits, of which there are fifty-four. The plates run as large as seven by ten inches in size, offering a sufficient area for the rendering of much of the technical as well as the general artistic excellence of the originals. The selection includes many pieces of portraiture celebrated in this country as well as in England, copies of which have been beyond the reach, heretofore, of the general public. The list includes, among others,

Some of the Paintings

Mrs. Meynell	Miss Daisy Leiter
Carmencita	Mrs. Joseph Chamberlain
Ellen Terry as Lady Macbeth	The Duke of Portland
Coventry Patmore	Mrs. Graham Robertson
Lady Hamilton	Joseph Jefferson
Mrs. Cornwallis-West	Madame Duse
Mrs. Carl Meyer and Children	Henry Marquand
Alfred Wertheimer	Mrs. Marquand
	Paul Helleu
	Theodore Roosevelt

FICTION

SANCTUARY

By EDITH WHARTON *Illustrated $1.50*

Mrs. Wharton's story, "Sanctuary," the first work of any length which she has published since *The Valley of Decision*, deals with a psychological situation of a most interesting and novel kind, arising from a question of heredity and covering two periods a generation apart. The whole is worked out with the subtle power which is characteristic of Mrs. Wharton's best work, and holds the reader intent on the solution hidden until the last from even the cleverest conjecture.

For Students of German

German Composition

By B. MACK DRESDEN, A.M.
Instructor in German, State Normal School, Oshkosh, Wis.

Price, 40 cents

Dresden's German Composition meets the demand for continuous prose material for translation into German. It is intended for students who have a fair knowledge of the grammar of the German language and who have done in addition at least one-half year's reading and translating from the German into the English. This book is the result of much thought and experience with classes in this subject. In it the author has embodied these ideas and methods which he has employed with great success with his own pupils. Besides the exercises, the book includes a brief review of the most important laws of German grammar and syntax; and footnotes containing many explanations which cannot fail to be of much value to the student in his work. A vocabulary is given at the close of the volume.

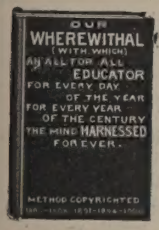
How to Judge Architecture

By RUSSELL STURGIS.

Large quarto, 84 illustrations, net $1.50 (postage 14 cts.).

A popular guide to the appreciation of buildings, by the leading critic of art and architecture in the country.

The Baker & Taylor Co., 33-37 E. 17th St. New York.



TANGLED WITS

Freed from their snarls. Brain poise, thought-power, lucidity, come from the absorption of that marvellous work on mind-control and idea culture.

WHEREWITHAL

It is bread for the brain—manna for the mind. Sets your mental house to rights; assorts and systematizes your ideas; gives you keen perception, judgment; thought-flashes come, not spasmodically, but with precision; you are a mountain of mental strength. Invaluable as an educator. Makes a *throne-room* out of university, college, or school room.

It has won the *honorary degree* of LL.D. for its author.

It solves national, state, municipal, educational, capital, and labor problems.

Mailed to any address on receipt of price, $1.00, by the publishers.

Talks of Napoleon at St. Helena

With General Baron Gourgaud

Together with the Journal kept by Gourgaud on their Journey from Waterloo to St. Helena Translated, and with Notes

By Elizabeth Wormeley Latimer
Author of "France in the Nineteenth Century," etc.

Gourgaud's famous Journal has never been translated into English, and this need has been keenly felt by students of Napoleon, especially since the appearance of Lord Rosebery's "Napoleon: The Last Phase." In this admirable work the author says:

"The one capital and supreme record of life at St. Helena is the private journal of General Gourgaud."

This journal is too prolix for complete translation, so that Mrs. Latimer has extracted from the two volumes almost all that Napoleon said to Gourgaud in familiar chats about his past life, and his speculations as to the future. She has omitted much that she considered irrelevant from the standpoint of the general reader, and the result is a book fairly crowded with interest from beginning to end. Mrs. Latimer has always excelled in the faculty of picking out essentials, and nowhere has this characteristic been more pronounced than in her arrangement of the "Talks of Napoleon."

With eight portraits. 8vo, 292 pages, *net* $1.50; delivered, $1.64.

Famous Assassinations of History

By Francis Johnson

No more interesting presentation of Mr. Johnson's remarkable book can be made than to give the list of the famous personages whose violent deaths have had, in his consideration, a notable effect on the world's history. A chapter is given to each event, and the author tells the story with a wealth of language and imagination that brings these stirring scenes before the reader in a manner equalled by few previous historical works.

These are the famous men and women whose assassinations have had a far-reaching effect and influence on posterity:

Philip of Macedon	Rizzio and Darnley	Jean Paul Marat
Tiberius Gracchus	William of Orange	Paul I. of Russia
Julius Cæsar	Ivan the Terrible	August von Kotzebue
Tiberius, Caligula, Claudius and Nero	Henry IV. of France	Duc de Berry
	Wallenstein	Abraham Lincoln
Hypatia	John and Cornelius DeWitt	Alexander II. of Russia
Thomas Á Becket	Alexis, Son of Peter the Great	William McKinley
Gessler	Peter III. of Russia	Alexander I. and Draga of Servia
Inez de Castro	Gustavus III. of Sweden	

With 31 portraits. 8vo, 434 pages, $1.50 *net*; delivered, $1.64.

Delightful Reminiscences

MY OWN STORY

By JOHN T. TROWBRIDGE

Illustrated $2.50 *net*. Postpaid $2.68

HOUGHTON, MIFFLIN & CO., Publishers

SINCE THE ENTIRE FIRST EDITION OF MR. MORLEY'S **"Gladstone"** WAS REQUIRED TO FILL THE ADVANCE ORDERS, ITS PUBLISHERS HAVE FOR A FEW DAYS BEEN UNABLE TO SUPPLY THE WORK, BUT BEG TO ANNOUNCE THE

Second Edition Now Ready of

Mr. JOHN MORLEY'S *Life of*

William E. Gladstone

In three octavo volumes, illustrated with portraits, etc. Cloth, $10.50 net.

"Mr. MORLEY'S biography of Gladstone is accepted by all reviewers as a great contribution to political literature, conspicuous for dignity of style, sense, proportion and philosophic gravity. —*London Cable to the New York Tribune*

"If the year were otherwise barren of important books, if nothing else appeared which the world would not willingly let die, the 'Life of Gladstone' would give rich distinction to this publishing season." —*The Evening Sun*, New York

NOTABLE BOOKS TO BE PUBLISHED ON SATURDAY, OCTOBER 24

A New Book by the author of "The Call of the Wild"

Mr. JACK LONDON'S — **The People of the Abyss**

A portrayal of the labor and life of the London slums—of the conditions of poverty, degradation and suffering in the crowded East End of London. It tingles with all the vitality of his Alaskan stories and is full of a vivid realism possible only from a man who knows London as Mr. Jacob A. Riis knows New York. *Fully illustrated from photographs. Cloth, 8vo, $2.00 net* (postage 22c.).

Mr. E. A. KIRKPATRICK'S. — **Fundamentals of Child Study**

A discussion of instincts and other factors in human development, with practical applications by the author of "Inductive Psychology." *Cloth, 12mo, $1.25 net* (postage 12c.).

Mr. CHARLES MAJOR'S *new novel* — **A Forest Hearth**

A Romance of Indiana in the Thirties, by the author of "When Knighthood Was in Flower," "Dorothy Vernon of Haddon Hall." A sunny, vigorous love story, alive with action and full of charm. Illustrated by CLYDE O. DELAND. *Cloth, $1.50.*

Mr. STEPHEN GWYNN'S *new novel*

John Maxwell's Marriage

A strong, original story of the end of the eighteenth century in Ireland, when it was still possible to take a wife by force, or to be hunted for one's life because of being an American "rebel." *Cloth, $1.50.*

Mr. SIDNEY PICKERING'S *new novel*

The Key of Paradise

A story of about the same time, but as different in scene and subject as may be. Its heroine is a little Italian princess who has been told that to find the key of Paradise "one has only to love with the great love and be loved in return." *Cloth, $1.50.*

Mr. F. MARION CRAWFORD'S *new novel*

The Heart of Rome

A TALE OF THE "LOST WATER"

In Mr. Crawford's new book the *story* is the thing. The conflicting interests aroused in a search for buried treasures under the palace of the ruined Conti group themselves into an unequaled picture of the social life of Rome to-day, through which runs a most charming love story. *Cloth, $1.50.*

Mr. A. T. QUILLER-COUCH'S *new novel*

Hetty Wesley

is a portrayal by the author of "The Roll Call of the Reef" of some of the developing conditions in the Lincolnshire parish of Epworth, the home of the Wesleys. *Cloth, $1.50*

A CHARMING BOOK FOR YOUNG GIRLS

Mrs. MABEL OSGOOD WRIGHT'S *new story*

Aunt Jimmy's Will, *By the author of "Tommy-Anne," "Dogtown," etc.*

A story that will delight all the young people who know how a thirteen-year-old girl feels, and that will interest helpfully very many older ones who may have forgotten. Illustrated by FLORENCE SCOVEL SHINN. *Cloth, $1.50.*

Published by **THE MACMILLAN COMPANY** 66 Fifth Avenue New York

The Nation.

NEW YORK, THURSDAY, OCTOBER 22, 1903.

The Week.

President Roosevelt, according to the dispatches from Washington, is facing a grave disagreement in his Cabinet. The report of Charles J. Bonaparte and Holmes Conrad on the postal scandals seriously reflects on both the Treasury and the Post-Office Department, and practically calls for the resignation of Robert J. Tracewell, Comptroller of the Treasury. Of course, Mr. Payne and Mr. Shaw object; and Mr. Tracewell is rallying the whole Indiana influence to support him. The difficulty is that, in choosing investigators, the President went "outside the official family," and picked an Independent Republican and a Gold Standard Democrat—"two mugwumps." They acted without regard to private or political interests, and purely on the assumption that the post-office business is public business; while the two Cabinet members take the common official attitude that the Government is run for the benefit of office-holders and their friends, and that the man who disturbs them is interfering in private matters. Of course, Mr. Roosevelt cannot for a moment give in to the views of Messrs. Payne and Shaw. In these postal scandals he has put his hand to the plough, and he cannot look back. He appointed Mr. Bonaparte and Mr. Conrad simply in order to get an unbiassed report. If they find Mr. Tracewell at fault, President Roosevelt is the last man in the country to help shield him. Indeed, the situation offers the President a happy issue out of some of his troubles. The most inefficient and irresponsible member of his Cabinet has, by common agreement, been the Postmaster-General; and next in order has come Secretary Shaw. If President Roosevelt lets them go, he will gain far more in public approval than he can lose through the defection of their private following. But, gain or lose, his course is clear.

The action of the Civil Service Commission in demanding the reinstatement of five employees in the Philadelphia mint who were removed solely for political reasons, is no more surprising than Commissioner Cooley's report that Philadelphia has the worst-managed Federal offices in the country. Naturally, since the bosses' word has been law in regard to the appointments of their heads. It appears that the irregularities pointed out by the Philadelphia Civil Service Association in its last annual report have become more flagrant than ever. Mr. Cooley declares that "Men have been removed from classified positions without any cause whatever, and nobody cares to give any explanation of how or why it was done." This is precisely what was to have been looked for under the circumstances. An these scandals may be expected to crop out in every place where political reasons have obtained in the appointment of postmasters or heads of departments. The situation in Philadelphia has been so notoriously bad that President Roosevelt owes to himself and the public service a thoroughgoing series of removals from office and the severe punishment of all offenders.

As far as the navy estimates are concerned, Secretary Moody proves himself to be a more pliable official than his recent Republican predecessors. He has not only followed his chief, President Roosevelt, in his large-navy ideas, but has apparently been taken into camp by the extreme imperialist officers. For the year 1904-1905, he would have this country expend the enormous sum of $103,000,000 for the support and increase of its war fleet—$72,000,000 more than in 1893, when the navy was still in the process of reconstruction. Now it is larger and stronger than at any time in the peace history of the United States, and still the insensate cry is for more men, more ships, and more guns. To judge by Secretary Moody, a visiting Martian might think this country in the Middle Ages, surrounded by hostile neighbors, and threatened with wars lasting thirty years. Instead, the country is by nature happy and law-abiding, and devoted to the arts of peace, except for a few politicians, shipbuilders, and naval officers. Where to-day is the enemy who menaces our shores? What nation has a fleet capable of attacking our coasts save our cousins, the English, with whom we are on better terms than ever? Who can maintain that our fleet as it stands to-day is built for defensive purposes merely? It has long since passed that stage, and has become a growing menace to our peace and prosperity. Should Mr. Moody's estimates be accepted by Congress, we shall be paying two-thirds as much as England does, with her vast battle fleets. Are we aiming to rival her in the mad race to throw away millions on death-dealing instruments?

Mr. Samuel Gompers has given the employers of labor to understand that there must be no cutting of wages in the event of an industrial setback. At the meeting of the Civic Federation on Saturday he said: "If the time comes to suggest to the employer the advisability of cutting or making an attempt to cut wages, it will be disputed by us. We will not let that go easily. We will make a stand against it, not only because it is uneconomic and unwise, but because it simply accentuates the industrial crisis, and gives it greater strength." If the American Federation of Labor, of which Mr. Gompers is the head, maintains this attitude through thick and thin, the consequences may conceivably be unpleasant. His assertion that a cut in wages would be uneconomic is entitled to very little consideration. If general business slackens materially, producers will reduce prices, despite the fulminations of labor organizations, and this means, of course, that the cost of production must be curtailed. But an early step in this direction must be a lowering of the wage scale. The reasons are plain. In the first place, economy in this direction is more quickly and easily initiated than in any other. A manufacturer cannot effect at will a lowering in the cost of his raw materials—he has to wait for the world's market to do that for him. And it is also impossible for him to force an immediate reduction in transportation charges, interest rates, rentals, etc. But he can move promptly and effectively in the matter of labor, and that is the reason why a lowering of wages or a reduction in the number of the employed is always apt to mark the beginning of a period of industrial depression. Already, in fact, the railroads have begun to cut wages and to lay off hands, and there has also been a certain amount of closing down in the steel industry.

Mr. John Mitchell, at the Chicago meeting of the National Civic Federation, discussed very interestingly the open shop, and union compulsion of employers and non-unionists. He properly held that organized labor has a right to work with the associates it likes, or to refuse to work. But he maintained also a right of "compulsion" as against employers and non-unionists, which he did not define, but admitted was a stage more vigorous than "persuasion." Of this compulsion, he said it "must be judged on its merits, and must not be decried simply because it is compulsion." We have no desire to follow Mr. Mitchell in verbal quibbles, and so, admitting his premises that union coercion must be judged on its merits, we call his attention to compulsion as it actually exists. It means in practically all cases violence. Open rioting and murder were Mr. Mitchell's potent allies in the anthracite strike. What does he think of the merits of that form of compulsion? In Chicago the right to compel non-union teamsters meant the right to beat them senseless; in New York the compulsion

applied to independent housesmiths was the breaking of their ribs by Sam Parks's "Entertainment Committee." These are examples of union compulsion as it actually is to-day. Hair-splitting Mr. Mitchell need have no fear that it will not be judged "on its merits."

It is reported that Walking Delegate Farley has confessed to Mr. Jerome the whole story of recent blackmailing operations in the building trades. The confession incriminates Farley himself, Sam Parks, and McCarthy. Scores of hold-ups are revealed, and the evidence for many indictments is supplied. Mr. Jerome felt sure of convicting Parks and McCarthy without Farley's assistance. The value of the reported revelations, then, is not that they hasten the condemnation of this nest of blackmailers; it lies rather in the effect that the exposure is likely to have upon the workmen in the building trades. When these laborers see clearly the methods and the results of government by Sam Parks, when they perceive the shamelessness with which he debauched every principle of honest unionism, we are confident that they will repudiate him indignantly. Having cleansed the inner rottenness of their organization, they will be likely to listen to President Gompers as he advocates the arbitration plan. A prompt acceptance of this treaty between employers and employed would ensure, in part at least, the restoration of the building industry. Further delay will mean lack of employment through the winter and great suffering among what was formerly our most prosperous class of workmen.

Last week's testimony in the Shipbuilding case brought to public knowledge the memorandum of "bonuses" set aside for promoters. This became a topic of particular interest when Mr. Gates, last year, disclaimed on the witness stand any knowledge of the $26,000,000 of the Steel and Wire Trust's $90,000,000 stock which had "disappeared" in the promotion. What inquisitive people have long wanted were details as to the method of showering new stock upon promoters; and in the Shipbuilding testimony we get them. Nine millions of the bonds were to be sold for cash—three millions in the United States and six millions "in France and England." The "French and English" figures will chiefly attract attention because of the wide advertisement given a fortnight ago to the methods of the promoters. Every one has been asking, What did the brilliant negotiators get for their labors with Rogniat, Major Spilsbury, and the rest? We are not informed what was actually received. What was contemplated is shown by the "memorandum." For the finding of foreign customers for $6,000,000 Shipbuilding bonds, the promoters were to get $133,000 cash, $700,000 in bonds, and $3,600,000 in preferred and common stock. After making these allowances, the "memorandum" figures out that there would be left over for other outlay on "promotion" and "commissions on underwriting" the tidy amount of $750,000 bonds, $3,900,000 stock, and $67,000 cash.

Workers for clean government in this city have reason for good cheer in a survey of the field. The completed registration is, at least, satisfactory. To say that it alone settles the doom of Tammany would be foolish. We have seen too many elections triumphantly won by the registration, only to be miserably lost by the actual fall of the ballots. Ingenious analysts, it will be remembered, figured out of the registration an infallible Tammany defeat both in 1890 and in 1897. It is enough to say, at present, that the number of enrolled voters furnishes good ground for encouragement. If the final registration had remained at the low level of the first two days, we should have considered the odds desperately against us. As it is, the material of victory is evidently in hand, provided that the canvass from now on be such as to compel it The situation does not warrant jubilation as if the fight were all over, but only that hope and fresh courage which lead to redoubled efforts. More than from a large and probably adverse registration is Tammany's cause suffering from loss of prestige and a panicky leadership. The Wigwam is obviously ill at ease. The rank and file are muttering and apprehensive. They do not know what blunder Murphy will make next, what will be the next damning record to leap to light. The reports we get from every-day Tammany supporters indicate their deep disgust at the way things have gone. Murphy's *coup* in kidnapping Grout they speak of as a *coup de grâce* for the organization. McClellan they flippantly refer to as "a dead one." Aside from such internal rumblings of discontent, the outward front of Tammany betrays its disquietude. It has no taking catchwords. It is more apologetic than aggressive. The claims which it makes are riddled as promptly as the lies it circulates are nailed to the counter. With a formidable revolt of "regular" Brooklyn Democrats on its hands, Tammany feebly protests that national issues are solidifying the party in order to carry the Presidential election next year.

After an impartial trial, lasting fifteen days, James H. Tillman, the slayer of N. G. Gonzales, editor of the Columbia (S. C.) *State*, has been triumphantly acquitted. This is as gross a miscarriage of justice as has ever been witnessed in any part of the Union. The facts in the case are perfectly plain; they were brought out by the State with the greatest care. But, after an overnight deliberation, a jury of his peers has declared the former Lieutenant-Governor innocent of any crime. Its members have thereby served notice on their fellow-citizens that it is sufficient defence for the most dastardly kind of homicide to prove that the victim had attacked his slayer in the public press. It is a notification to all South Carolina editors that they must refrain from criticising any low blackguard in public life unless they wish to pay for their utterances with their lives. At the very moment when the South is clamoring to be let alone and allowed to work out its own destiny, one of its sovereign States is stamped by its own citizens as a commonwealth in which unjustifiable murder goes unpunished and homicide is encouraged.

Under the present Constitution of Alabama the only voters have been those who had been registered under a temporary plan. That ceased to operate on the first of last January, but under it there were registered 188,000 white life voters and only 2,000 blacks, if we may rely upon the Montgomery *Advertiser's* figures. A new election law has now been passed, and under it some 60,000 more whites will receive the suffrage; what is to become of the blacks is not stated. A few more may be admitted—if the boards of registration see fit. Meanwhile, there is some encouragement in the case of Peter Crenshaw, of which the *Advertiser* rightly thinks Northern critics should take note. Crenshaw is a negro politician of some repute, and is also an army veteran. The Limestone County registration board refused to register him because he could not produce his army discharge papers. When he obtained copies from Washington the board again arbitrarily refused to give him the suffrage, and he appealed to the Circuit Court. The case was tried before a jury of twelve white men, the State's defence being based on technicalities, and the jury promptly found for Crenshaw, declaring that he was entitled to registration as a life voter. The case has been appealed to the Supreme Court. While it is noteworthy as being the only one to go before a jury, it is also a striking example of the inevitable acts of injustice resulting from giving a board of white men the right to say whether colored American citizens, fully qualified under the law, shall or shall not vote.

It would be unsafe to generalize regarding the financial situation from the Baltimore trust-company failures. They certainly indicate that the "mobilization of credits" has not proved as effective as was predicted. But the important fact is, that the situation in Baltimore has

for a long time past been unique. The methods employed have been extreme, and have occasioned a great deal of criticism, both at home and abroad. Commitments of capital were made on a scale and in a manner to excite the surprise and reprobation of the banking community of the entire East. Baltimore has simply paid the penalty of over-competition in banking. It has multiplied its financial institutions beyond its real needs, with the result that it has been tempted, as is so often the case in those circumstances, to employ large amounts of funds in outside ventures of a tentative character. It is not the only city in the United States that has had this experience in the last few years, but it is a capital instance. Steam railroads in Mexico and undeveloped parts of the United States, street railways in the South, breweries, real estate, and other slow assets have absorbed its money. Baltimore has also been heavily involved in industrial ventures of an experimental nature, its losses in connection with the International Mercantile Marine Company being notorious. The difference between Baltimore and other leading financial centres of late has been that, whereas New York and Boston have, like Baltimore, been caught with large holdings of unsold securities, these have been of a class that could be much more easily marketed at a price than those of the former city. In a word, Baltimore is not a fair criterion of the rest of the country.

Certain diverse features of the international financial situation admit of a common explanation. The decline of both high-grade and purely speculative securities in this country, the forced liquidation of powerful interests in the stock market, the collapse of a long series of industrial combines, and the threatened reduction of dividends on the securities of still others, may be correlated with the great drop in British consols, the general downward tendency of the London stock market for a long time past, the anxiety with which each settlement day is approached in that centre of finance, the additional safeguarding from time to time recently of the gold supplies of the European banks, and possibly last week's statement of the Bank of France. These phenomena point unmistakably to a world-wide contraction of credit, the first evidences of which were observed in Germany in 1900. Omitting mention of secondary causes, we get back to the fact that credits have apparently been expanded out of proportion to the gold supply of the world, on which they are based. The "capitalizing of the future" of American industries was one form of this movement. Another was the great rise in commodity prices, which necessitated a larger amount of credits to transact the same volume of business. We must also add the great increase in bond issues (both railroad and municipal), the vast enlargement of general business, and the extensive speculation in Western lands.

It looks as if not only Great Britain, but the rest of the world as well, were now paying the penalty of the Boer war. The enormous expansion of the gold output of the world from a yearly average of $162,974,200 in 1891-1895 to $306,724,100 in 1899 furnished the basis for a great enlargement of credits, and, on the strength of this "boom," enlargement speedily went forward, both in Europe and in the United States. The effect of the closing of the South African mines in 1899 was not immediately apparent; the impetus previously gained was sufficient to prolong the expansion of credits for a good many months. Danger signals began, however, to appear in Europe in 1900, and in this country in 1901. These warnings were not generally heeded, and in a sense they could not be; for capital had been so generally converted from a floating to a fixed basis that a wide curtailment of credit was not immediately possible without a sudden and drastic effect upon international financial and industrial conditions. However, for a year at least in this country, and for a good many months in Great Britain, the process of retrenchment has been going on. The highest grades of securities—that is, the ones most easily disposed of—have been liquidated in an almost unprecedented manner, and recently inflated industrial shares have been obliged to seek a market for what they would bring. When this stage is reached, the indications always are that the real corrective of the situation is being applied.

Criticism of Elijah the Restorer in New York seems superfluous, because he has passed judgment upon himself. His intemperate language, his random imputations of vice, his pettishness before discomfiture due to his own defects of oratory, stamp him definitely as the charlatan, did not his list of securities for investment suggest a more sinister character. He lacks serious credentials. It looks as though he would be chaffed out of town. That has never before happened in New York city to any sincere religious movement, however grotesque its methods. Dowie seems to lack the conviction of a religious leader. The shrewd good sense of this town has refused to consider him as anything but the promoter of Zion City. Only recall in how different a spirit the Salvation Army came to New York. They began to lodge the poor and preach to them; the women glorified menial service in the tenements. One has only to compare that movement with Dowie's well-advertised spectacular entry to see the difference between the real and the sham thing.

What the Duke of Devonshire has lost through tardiness he atones for in consistency. Having resigned from the Cabinet, he now accepts the Presidency of the Unionist Free Food League, and takes his stand as the opponent of Messrs. Chamberlain and Balfour on the fiscal matter. In accepting the office, the Duke of Devonshire significantly suggests that the League may wish to "broaden its operations," and reminds the Secretary, Sir Michael Hicks-Beach, that as yet the new President will engage to go in opposition only on the protection issue. This is pretty clear indication that the Duke expects that the opposition to the champions of the fiscal reforms will become general, and that the Unionist Free Food League, which for the present he regards as "a parliamentary committee," may at any time become a genuine party of secession. Such certainly is a fair inference from his guarded words of acceptance and from the situation itself. An element of strength is added to the Opposition by this frank declaration of the Duke of Devonshire, while the discrepancy between the large professions of the Chamberlainites and the personal abilities commanded by them becomes more glaring than ever.

The followers of Mr. Chamberlain have every reason to be disappointed by Lord Rosebery's Sheffield speech. The fact that he has now committed himself so vigorously to free trade after having last May said that he did not regard free trade "as a part of the Sermon on the Mount," will probably be paraded as an evidence of shiftiness. It is not necessarily open to that construction. Mr. Chamberlain's fiscal departure came as a great surprise. Free trade and protection were subjects to which the present generation of British statemen had not been compelled to give serious thought, and it is not astonishing that the savage attack on the existing system should for the moment have thrown Lord Rosebery into confusion regarding the true philosophy of tariffs. He now sees the viciousness of Mr. Chamberlain's attitude, not only from the economic but also from the moral point of view. Previous speakers have pointed out as clearly as Lord Rosebery the weak points in Mr. Chamberlain's programme, but his mastery of the art of discourse makes his Sheffield speech perhaps the most effective utterance so far against a change in the fiscal policy of the nation. The true need of Great Britain, provided it is in a declining state, is, in the opinion of Lord Rosebery, to "cultivate a scientific spirit and better education, and, above all, keep the universe for a reservoir of food and raw material."

THE ALASKA DECISION.

The Alaska Boundary Commission has arrived at a settlement favorable to the American contention; but not unanimously. The Canadian members were unmoved by the opposing arguments. Lord Alverstone, on the other hand, was convinced that the *lisière* conceded by Russia to the United States is an unbroken strip of coast stretching from Portland Channel to Mount St. Elias. In one small particular what has been called a compromise was arrived at. The Commission had no power actually to draw the boundary line. It merely passed upon certain questions, such as, What inlet did the Russians understand by Portland Channel? Is there a chain of mountains parallel to the coast which may serve as the natural frontier contemplated by the Anglo-Russian treaty? In case there is not, should the arbitrary line "parallel to the coast and following its windings," be reckoned from tidewater, and thus be wholly inland; or, being described parallel to an imaginary line drawn from headland to headland, should it cut the deeper tidal inlets? Under these conditions, a compromise finding would mean only that neither party should obtain a favorable answer to all these questions. Canada gets a decision at the southern end of the line. We lose the advantage of a foothold on navigable waters at this point, and Canada gains two small islands which command the approach to Port Simpson, the projected terminus of the Grand Trunk extension. It will probably appear, when the actual survey is made, that the fixing of a mountain boundary at several points—especially at the head of Lynn Canal—will give to Canada small portions of territory at the expense of our extreme claim of a strip invariably ten leagues wide. But these are all minor features of the award. In the main issue—the granting of an unbroken coast strip—the decision is distinctly a victory for the United States.

Much of the credit for this fortunate result belongs to the advocates for this nation, Mr. Watson and Mr. Dickinson; and a very gratifying feature of the whole proceedings is that the weight of the argument was borne, not by seasoned experts in international law, but by comparatively unknown lawyers, with their national reputation to make. Mr. Dickinson's elaborate argument on the *lisière* won earnest congratulations from Lord Alverstone, and all the counsel for the United States showed patient research, brilliancy in presentation, and a firm grasp of the underlying principles that should rule in a very complicated dispute. We take the immediate rise of Messrs. Watson and Dickinson to international eminence as a sign of the unutilized supply of talent in the nation. One of our chief problems is that of enlisting in the Government service abilities such as these two lawyers have shown they possess.

Of course, these gentlemen had very much the better side of the case. It weakened the Canadian contention from the outset that their advocates were unwilling to rest the case upon any single principle of international law. They argued astutely the headland to headland theory, which had some theoretical strength, but they were equally willing to draw the line along the summits of the coast mountains, creating a "chain" *od hoc*. Obviously both arguments could hardly be right. Furthermore, in the light of the evident intention of Russia to cede an unbroken coast strip, the whole Canadian protest bore a belated look. The United States was in possession. No serious complaint had been made until the discovery of gold in the back country. All this gave our counsel a marked initial advantage. It is to their credit that they never presumed upon the situation, but handled the case purely as a matter of equity and of reasonable construction of the treaty.

As to Canadian comments upon the matter, we greatly regret the bitterness of the tone towards Lord Alverstone, and we find the detection of Mr. Chamberlain's hand in the decision nothing less than absurd. Lord Alverstone's character does not admit the supposition that he was guided by timid prudential considerations, while Mr. Chamberlain would, in principle, rather cut off his right hand than alienate a square rod of the Empire. We see no defence for the refusal of the two Canadian Commissioners to sign the decision, when they had at hand the regular means of protest, a minority report. For the moment, their withdrawal from the conference is likely to exacerbate Canadian irritability, but we are confident that reflection will bring fair-mindedness, and that the Canadians will admit that they were squarely beaten in open argument, and that Lord Alverstone's conversion was highly honorable to him. The Canadians have failed to make good a rather preposterous claim, which has secured for them, however, a substantial rectification of the boundary off Port Simpson. They never had the slightest reason to suppose that their extreme pretensions would be granted by any tribunal, and they have, at the worst, merely lost what they never had. On our side, too, there will be no unseemly exultation over the decision. It was inevitable that our claim to the coast strip, supported as it was alike by documentary evidence and common sense, should be fully allowed. Everybody, on both sides, has reason to rejoice that an old occasion of irritation has been removed. After a decent interval the Joint High Commission should be reassembled to consider, with a reciprocity treaty, the few remaining matters in dispute between the United States and Canada.

THE TEST OF THE PRESIDENT.

It is live and learn, in the matter of the actual operation of American government; and we are just now taught by the goings on at Washington something to be had from no text-book or lecture. We are shown, in a word, that Senators are bent upon usurping one more prerogative of the Executive. They long ago took over his appointing power. Latterly they have been asserting that the right to negotiate treaties is theirs, not his. Now they are moving upon another fortress of Presidential privilege, or duty—a duty that goes to the heart of his function as one sworn to execute the laws. We mean his obligation to enforce discipline in the public service; to keep its personnel efficient and honest; and to make an example of every detected rogue. The new Senatorial gloss put upon this essential obligation of a vigorous and high-minded Executive is, "First ask us. Before you dismiss a rascal, consider well his 'influence.'"

Last week, for example, President Roosevelt summarily removed a United States marshal in Vermont. The officer's gross negligence was unquestioned. He had brought discredit upon the service as well as himself, and the President promptly took off his head, as a terror to evil-doers. But the real terror is a Senator whose patronage is interfered with, and that portent immediately appeared at the White House. Senator Proctor was down upon the President instanter, wanting to know how a "man" of his could be turned out of office and *he* not consulted. He may not have put his demand in exactly that language, but that was the practical upshot. Call no office-holder a scoundrel until you have asked permission of his Senator. Mr. Proctor's labors with the President resulted in the humiliating announcement from the White House on Monday that Mr. Roosevelt had decided to "investigate further" the case of the removed marshal.

We call this action humiliating because, in any aspect, it tends to degrade the Presidency. How can the Chief Magistrate make his punishments exemplary if they are subject to recall or modification through Senatorial dictation? If President Roosevelt was too hasty, and proceeded upon inadequate information, in dismissing the Vermont marshal, that was a blunder which stands by itself, and should be confessed as such; but to give it out that the case is to be reconsidered "at the request of Senator Proctor," is to cut the nerve of executive energy and to reduce the President to the contemptible position of a Mayor of the Palace, taking orders from his real masters. Senators tell him, in effect: "It is not for you to say

that officials are inefficient and corrupt, and must be removed for the good of the service. That is our affair, and you are to go on doing as you are bid. Leave all the rest, including your reëlection, to us."

A similar ominous temper is displayed in the last stages of the postal scandal. When President Roosevelt named two gentlemen of ability and character to probe the rottenness to the bottom, a chorus of approval went up from the party press: There, you see the determination of a Republican Administration to cleanse the service; no guilty man shall be allowed to escape. But, bless you, no sooner had Messrs. Bonaparte and Conrad brought in their report than the Republican managers began to thrill with consternation and rage. What! let two miserable Mugwumps recommend the dismissal of good Republican office-holders! Senators were at once discerned on the horizon. They flapped indignantly down upon Washington, asking angrily what all this meant. An investigation was one thing—that was all very well to throw dust in the people's eyes; but a thorough report, exposing Republicans in office—come, come, that was too much! Did the President want to put Indiana in the doubtful column? Did he think he could get along without the electoral vote of Iowa? Supposing there had been a few irregularities, had not the beneficiaries all been Republicans, and was not this a Republican Administration?

The point we make is, that here we see the way in which corruption entrenches itself in the public service, even when an honest and clean-handed President endeavors to expel it. The attempt is to frighten and fetter the Executive. No one doubts Mr. Roosevelt's sincere intention to drive out the malingerers and the conspirators, the looters and the peculators. He meant business when he told Messrs. Bonaparte and Conrad to strike deep, without fear or favor. But to the Senatorial mind the whole thing was a pretence from the beginning. Imagine Senator Beveridge really wanting any of his incompetent appointees in the Federal service, from his father-in-law down, turned out in the public interest! On the contrary, he and his colleagues fill the air with their cries, and tell the newspapers that President Roosevelt will pitch the wretched Mugwump report out of the window. Even the *Tribune's* Washington dispatches are filled with smooth words about the President's not being disposed to insist, in the face of the protests of the Indiana Senators; and about Postmaster-General Payne having successfully shielded this incriminated employee, and Secretary Shaw having saved the other. This we cannot believe. If there is anything President Roosevelt stands for it is pure administration. If there is one power he cannot surrender, it is that of a fearless and honest Executive, determined upon unearthing and routing out every thieving band that may have found a hiding-place in the departments. He cannot for a moment allow it to appear that his inquiry was a farce. The issue is full upon him, and will prove a test not only of his character, but of his willingness to maintain the prestige of his great office. If the President must stay his hand simply because Senators intervene to protect their pet rascals, it is all up with honest government.

THE SOUTHERN (NOT THE NEGRO) QUESTION.

One-half of the entire negro population of the country is concentrated in the six contiguous States of South Carolina, Georgia, Florida, Alabama, Mississippi, and Louisiana. These States compare not meanly with some of the greatest countries in the world, not only in their superficial extent, but in their agricultural, mineral, manufacturing, and commercial possibilities. Their combined area is upwards of 286,000 square miles, or about two-fifths more than that of the European possessions of either the German Empire or the French Republic. Extending as they do through ten degrees of latitude and fifteen of longitude, they have within themselves many diversities of surface, climate, and natural products. Much of their soil is very fertile. Very nearly every important agricultural product of temperate or subtropical climes can be profitably raised in one portion or another of their extensive territory. They produce more than one-third of all the cotton the world consumes. Their mountains are filled with coal, iron, and limestone. Their forests are great and valuable. In the many streams flowing from their hills and mountains they have a vast water power. Their climate is so mild that man may comfortably live there more cheaply than he can farther North; but it is, in many portions of them at least, not warm enough to relax materially, if at all, the energies of the laborer. Their coast line, both upon the Gulf of Mexico and the open Atlantic, is of great extent, and is broken by a sufficiency of good harbors. Their surface is traversed or pierced by many navigable rivers, among them the Mississippi itself. They are still but thinly peopled, having in 1900 less than thirty-two inhabitants to the square mile. Only one of the thirty-eight cities of the country with a population of one hundred thousand or upwards is within them. They have only one town of over eight thousand inhabitants for every ten thousand square miles of their area, while Massachusetts has thirty-three such on its eight thousand square miles. Much progress has been made by these States in the last few years, and yet very little has been accomplished compared with what their natural advantages show may still be done. In 1900 their manufacturing capital was only $46 per head of their inhabitants, as against a per-capita manufacturing capital of $139 in the rest of the country. Agriculture is still far and away their principal occupation, and still the value of their farm property averages but $115 per head of their entire population as compared with $288 in the other States and Territories of the Union.

What is the cause that has thus far held back this great and naturally rich section of the country? Its people have done and are doing much to develop its resources. Outside capital is eager to exploit its natural wealth. What, then, makes the prudent man hesitate to predict for it that magnificent future which would seem assured to it? Its people are not of one race, but of two, and these two are within it substantially equal in numbers. Of its nearly nine million of inhabitants, a trifle more than one-half have negro blood in their veins. There are in these six States as many negroes as were to be found in the entire Union when Abraham Lincoln was first chosen President. The negro inhabitants of these States are one and a half times as numerous as were all the dwellers, white, red, and black, in the thirteen colonies when they declared their independence of Great Britain. What changes in the relative proportion of their two races the future may have in its keeping, it is not possible with any confidence to forecast. Forty years ago the whites outnumbered the blacks by 32,000; twenty years ago there were 243,000 more blacks than whites, and now there are only 25 000 more. While on the whole it seems probable that the tendency which has manifested itself in the last twenty years rather than that which exhibited itself between 1860 and 1880 will in the future prevail, no one can be certain about it. One thing, however, is sure—for many decades, and probably for many centuries, the negro inhabitants of these States will be numbered by millions. In 1900 their negro population was more than double what it had been forty years before. Since 1880 the number of negro emigrants from the region under discussion has exceeded considerably the number of immigrants to it, and yet its negro population has increased in the meanwhile by 39 per cent.

Human nature being what it is, a community in which the population is divided not very unequally between two distinct races is, other things being equal, at a disadvantage as compared with another in which there is no such division. This is true where the two races are as closely allied as Czech and German, and where language is the principal and perhaps the only badge of dis-

tinction. Where the two races are separated by as wide a physical gulf as divides the Caucasian and the negro, the resulting loss of effective strength in the community as a whole will be much greater. There would be much race friction even if the two races were, morally and mentally, substantially equal. There will be still more when one race, whether because of racial peculiarities or as a result of the operation of historical causes, is on the average, morally and mentally, markedly inferior to the other. The overwhelming majority of the white men of the South believe that the negro as a race is incapable of attaining to the moral and intellectual level to which the white race may ascend. If they are right, the South will fall far short of making as much of its resources as will be made by the other sections of the country out of such natural advantages as they may have. In the long run it is men, rather than things, which tell. If it be true that the average negro not only is not, but never can be, as valuable a member of the community as the average white man, it is still of enormous importance to the South that he shall be as useful as it is possible for him under any conditions to become. Nothing else is quite so vital to its future. Its direct interest in the problem of making the negro as high a type of man as he is capable of becoming is far greater than that of the rest of the country, because in large part its own future depends upon the successful solution.

It is easy for one race or people to push down another, and there are many ways of doing it. There is only one way to reverse the process, and in that no one outside of the race which is struggling upwards can be of much help, although it is easy to hinder. Climbing up is a slow and painful process. If a whole race is to be elevated, there must be many weary workers slowly and doggedly struggling upwards. Whether they will so struggle depends upon whether, in their view, the prizes which await them at the top are worth the effort to get there. The future prospects of the South in very large part depend upon its negro population (now in large measure thriftless, immoral and unenlightened) becoming industrious, virtuous, and intelligent. It is going to be very hard for these negroes so to elevate themselves. Can the South afford to say to them, "Strive as you choose, succeed as you can; but, whatever you do, so long as there is a discernible drop of African blood in your veins, you shall never be allowed to obtain many of those things which men of all races and in all ages have most keenly longed for"?

BUBBLES OLD AND NEW.

The young dummy directors who testified on Thursday in the Shipbuilding suit—one of them an incorporator of the notorious Franklin Syndicate swindle—were consistent members of that society of high financiers who have been forming combinations without careful examination of constituent properties, and, just as in the bubbles of two centuries ago, have been asking small investors to put their savings into an absolutely bottomless business. The parallel, indeed, between the recent period of wild speculation and the bubble mania in the early part of the eighteenth century is closer than most of us imagine. While we have talked loudly of forming new precedents, we have been slavishly following the old. We have had a few successful ventures, a few glittering fortunes flaunted in the face of the public, a general rush to buy and a collapse of the market. The story has been often told—by Macaulay, Bagehot, and Lecky; but no modern author has illuminated the situation more clearly than the contemporary journals, *Mist's* and *Applebee's*, when Defoe was writing for them, that keen observer and hard-headed reasoner, who was a generation or two ahead of his time in his grasp of economic principles.

The lucky undertakings and the dazzling display of wealth which touched the imagination of every-day men and turned them into stock gamblers are evident enough in the letters from France in 1719, when John Law was working his miracles there: "There appear nothing but new clothes, new figures, and an infinite number of families raised to new fortunes. They see eight hundred new coaches set up in Paris, and the families enriched purchase new plate, new furniture, and new equipage; so that there is a most prodigious trade there, and money flows like the waters of the Seine." So the news runs on from day to day, and depicts conditions resembling those at the Waldorf-Astoria and other fashionable New York hotels in the hey-day of prosperity—when the newly rich from all parts of the country flocked here to drink champagne and "take a little flyer" in Wall Street. One story in *Mist's Journal* has served as the model for all later tales of the kind. A coachman told his master that he was going to leave service and "live on his own hands." "Well," said the master, "get me another coachman, for I cannot do without." "Sir," replied the man, "that will be very difficult at this time, for I have inquired for some weeks past, and have not been able to get one for myself."

All this exhibition of splendor had its natural effect. The "confluence of strangers" to Paris was "incredible." "Foreigners buy stocks at that rate that if the French gentlemen who first bought—though at the extravagant rate of 1,000 per cent.—do not make their fortunes by selling every subscription which they have one hundred livres upon for a thousand livres profit, it must be their own faults." Merchants from Genoa, Milan, Geneva, London, and "many other places" came in; "so that in time all the French people may have sold out their stock, and so pay their debts with the money which is brought in from other countries." In Paris, then, in 1719, the old trick of unloading on the outsiders was successfully played. The blind pool, too, is no novelty, for when London was fairly seized with the madness, a young man got investors for "a certain subscription, to be made some time or other, they did not know when; to some certain scheme or other, they did not know what; proposed by some person or other, they did not know who; for insurance of ships, etc., they did not know how."

And all this time Mr. Law was the very image of a conservative Wall Street banker who is struggling to check speculation. He "pretends to be surprised at the extravagant rate, and that it is gone beyond his scheme. He never designed strangers should run away with the profits of his undertaking; but, seeing they are willing to pay so dear, he will not obstruct it." Mr. Law's goings and comings were watched and chronicled as if he were an emperor or the head of a twentieth-century underwriting syndicate. People talked of him as reverently as our newspapers talked of our financial leaders: "Nothing is more evident than that Mr. Law has been of an universal service to France; and that by his genius alone he has retrieved the loss of the late long and miserable war, and put the sinking credit of that nation in such a flourishing condition as was never known before. . . . If we consider only the difficulties which he must have surmounted, that alone will show him to be a very great man. And if, on the other hand, we look into his extensive charities, we shall find him equally good and great." The combination of unscrupulous speculator, benefactor of the toiling millions, and eminent philanthropist is highly respectable in its antiquity.

Before the crash came, a few sober people began to ask, "What advantage is it to the nation of Great Britain in general to have things sell for more than they are worth?" "If shares are at market vendible at double the intrinsic value, where must they fall when the price abates?" These "bears," "pessimists," and "prophets of evil," as we should dub them to-day, kept declaring that at last the shareholders would have "only a scrap of paper which entitles them to nothing but dear-bought repentance." These same malicious destroyers of the market—so exactly does the parallel hold—were the very ones who tried to stop the panic when everybody else was frightened. They counselled holding to stocks and "not giving away estates in a

hurry." When the shares fell "below the probable interest on them," Defoe cautioned London:

"That they who sell their Stock now, lose Estates;
"That they who buy their Stock now, get Estates;
"That they who keep their Stock now, save Estates."

Defoe's conclusion of the whole matter was the same that sane critics have drawn from the experiences of the last four years. "Let us look into our morals. This is the way to bring credit in again and set it upon its legs. Do any of these men think to restore credit when they do not restore the principles of just and fair dealing, on which credit is founded, and by which alone it is established? Were ever credit and knavery consistent with one another?" But in 1721, as in 1903, all this preaching was like locking the barn door after the horse was stolen. A dialogue about the subscriptions in Broad Street, London, might as fitly be spoken in our own Broad Street: "Come, come, my friend, money is but dirt—mere dirt!" "Aye, aye, and it is such dirt as you and I have washed our hands of very clean at present."

MARTYRDOM OF THE HOUSEWIFE.

The difficulty of securing domestic help is not new, and it is not peculiar to New York. A century ago, an English writer, William Fordyce Mavor, in his 'Survey of Berkshire,' remarked pathetically: "It is greatly to be lamented that good servants every year become more scarce and difficult to command." Such also was the complaint of our own grandmothers and mothers; such is the complaint of our wives to-day. It is true, however, that servants are harder to find than for some years past. Housekeepers from one end of Manhattan to the other unite in a chorus of grief, which is echoed from Brooklyn, Staten Island, and the Bronx, from Westchester County and Rockland, and from the whole State of New Jersey. The trouble may be more acute here because population is more congested, but if the newspapers of Philadelphia and Chicago are not deceived, the situation in those cities, and indeed in the whole country, is unusually distressing.

Some of the reasons for the present plight are obvious. There have been and must continue to be certain inherent difficulties in the problem. These have often been pointed out: long and irregular hours, confined and often lonely routine, varying quantities of work, vagaries and caprices of mistresses, and the so-called "social stigma." All these combine to draw women into factory employment, with its fixed hours, opportunities to be on the street in going and coming, congenial companionship while busy, definite tasks, formal rules for conduct, consistent supervision and general independence outside of hours of labor. For the many women to whom the kitchen and its duties are not positively attractive, the factory will always be a strong magnet; and the growth of manufacturing must make even deeper inroads upon domestic service. Various suggestions have been offered for improving conditions, but few or none of the remedies are practicable for people of moderate means, who must continue to meet these inherent difficulties as best they may.

There are, however, some new factors in the reckoning. The demand for the work of women is keener than ever before. With the last decade a number of occupations have opened to them for the first time. Women, for example, are acceptably filling positions as factory inspectors and sanitary officers. Most of these new occupations are above the skill and intelligence of the housemaid, but the women who are drafted into the higher service leave room in other callings for the better class of maids to enter, and thus drain off the household service from the top.

The greatest demand for female labor is due to the era of prosperity. Our manufacturing has expanded enormously. With all our factories running full time and paying high wages, the housekeeper is facing a sharp competition at a desperate disadvantage. To add to her troubles, she must compete also with her own class. A few days ago the New York State Department of Labor, in its quarterly bulletin, declared: "Prosperity is so widely diffused that the servant-keeping class is larger than ever before, and has thus created a demand that exceeds the supply." With families that kept no servant now employing at least one, and wealthier families adding an extra nurse, waitress, or laundress, the unfortunate housewife is ground between the upper millstone of the factory and the lower millstone of her own companions in adversity.

Not only is the demand greater than before, but the supply is smaller. The very prosperity that has enlarged the servant-keeping class has enabled poorer people either to maintain their daughters at home or send them to school; and many girls who in 1893 would have been seeking places, are now living at ease on the abundant earnings of their fathers and brothers. Statistics on this point are not available, but the facts are patent. It is plain, also, that employment at good wages has allowed many young mechanics to marry, and has thus transformed possible housemaids into actual wives. The "steady company" has been much in evidence, and his attentions have still further disturbed our domestic economy.

Some people ask why the enormous immigration of the last few years has not filled up our depleted stock; for generally in times of heavy immigration household servants are comparatively abundant. An examination of the Government returns shows that in the twelve months ending June, 1902, the number of female immigrants was 182,374, and in the next year it was 243,900. With an increase of over 61,000, there ought to be some balm in Gilead for our housekeepers. But unhappily the character of the immigration has not been such as to furnish domestic servants. Of the total number of women for 1903, 9,877 came from Asia and other lands outside of Europe. Moreover, of the 234,023 Europeans a large number are from nations whose modes of life and social conditions unfit women for domestic service in America, without a training that would uproot most of their personal habits. In 1902, some 44,853 came from Austria-Hungary, and in 1903 the flood had risen to 58,027. The figures for Italy are respectively 32,643 and 43,656; and the totals for Portugal, Rumania, Russia, Servia, Spain, and Turkey are 41,429 and 51,118. Making these deductions, we have left from the immigration of 1903 only 81,222 women from the countries that usually send household servants. Of these, 15,225 came from Germany, 8,212 from Norway, 32,600 from the United Kingdom, and 16,220 from Sweden. Many of them, of course, started directly West to settle on the prosperous farms there.

The other day a gushing student of the question suggested that "love is the only hope." Without disparaging the Christian virtues, we may be sure that love will not melt the stony heart of factory wages or immigration statistics. With demand strengthening and supply diminishing, the outlook is not cheerful. The only relief now in sight is from a check upon our prosperity. The fall in prices and curtailment of manufactures that are expected in the near future, will inevitably lessen the demand for female labor both in the factory and in the home, and will as inevitably increase the supply. Meantime the martyrdom of the housekeeper must go on. If it be true, as ancient writers allege, that one of the enjoyments of the righteous in heaven is to see the torments of the damned, then the families which have drawn from the greatest American lottery one or two competent and contented servants should be in the seventh heaven of ecstacy.

MATILDA SERAO IN PALESTINE.

PARIS, October 5, 1903.

Numberless are the books that have been written on the Holy Land. I confess having experienced some astonishment on seeing added to the list of the travellers who have confided to the public their sensations in Palestine the name of the Italian novelist, already famous, Matilda Serao. Of all the modern writers of Italy, Madame Serao is the best known in France. She has a wonderful power of giving life to the heroes and heroines of her novels; she is a real-

ist *par excellence*, and at the same time she is never vulgar. She surrounds everything with a sort of beauty and light, similar to the beautiful light of her country. She is dramatic to such an extent that it ought to be very easy to transform all her novels into dramas. She has a tender compassion, *à la* Dickens, for humble, suffering, wretched creatures, and makes us feel, better than many sermons, the terrible lot of humanity. How was she to speak of the Holy Land? And how would her impressions compare with those experienced by so many famous writers?

I opened her book, just translated, with the greatest curiosity, and in the pages of her preface I saw at once that her impressions would not be those of the commonplace traveller, whom she thus characterizes: "This inoffensive traveller, sometimes sympathetic in his frivolity, has an extraordinary resemblance to his own luggage, and it would seem that when he comes home again he, too, retires into a corner with the other trunks till he is needed for another journey." She speaks also of another and rarer sort of traveller, who looks everywhere for picturesque lines and colors, who goes through the world as if the world were a mere panorama. "Afterwards," she says, "when he returns in his mind to those pictures which are not bound to each other by a constant thought or by a thread of sentiment, all the pictures get confused; and, once the rapid pleasure of the eyes has ceased, the memories get effaced, and nothing will remain of his long journeys from land to land." Madame Serao had this thread of sentiment she speaks of; she wished to find in Palestine something else than pictures of deserts, of hills, of lakes, of villages; she wished to enter into communication with the very soul of the "sacred country which has seen and heard God."

I must cite her again:

"This soul of Palestine is spread over the clear mornings of Samaria, in the perpetual song of the fountain where the Virgin washed her pure hands, on the shores of the Lake of Gennesaret whose waters bore Jesus, on a tempestuous evening, wherever the Son of God brought his pain or his hope; and each time that the divine palpitation was communicated to my uneasy soul, I tried to fix its memory on paper. I gave to my material emotion the most simple and most personal signification."

These few lines do not exactly give the impression made by Madame Serao's book, or, rather, do not give it wholly; for (and this is the originality of the writer) she is not purely what may be called a sentimentalist—she is at the same time very poetical and extremely realistic. She lives not only in the past, she lives also in the present; and she has not abandoned in Palestine her usual manner, which consists in the most exact and sometimes the most humorous descriptions of the characters that cross her path. At Jericho, for instance, she asks an old Russian woman, in whose house she spends the night, if there are any roses; the old woman brings her one, and, "like a sentimental girl," she puts it carefully away, between two pieces of wool and in a book. On her return, in the evening, to Jerusalem, she sees the doctor of the French Consulate, who asks her:

" 'Well, have you found the rose of Jericho?' 'Yes, I have brought it with me.' 'Very good. You gathered it on the mountain of the Forty Days?' 'I was not under the necessity of making the ascent; I had it from the garden of the house where I spent the night.' 'In a garden? Strange!' murmured the doctor with the tone of scientific men when they have a doubt. 'Strange? Why?' 'Because the flower is found only at a high altitude, and even then very seldom. Will you show it to me?' "

She showed the rose in the book. "It is not the rose of Jericho." "What is it, then?" "It is a simple May rose; you must have a thousand of them in Naples." "But this one comes from Jericho!" The doctor gave her the scientific definition of the rose of Jericho, and delivered a lecture on roses, finally making her a present of the real rose of Jericho. To Madame Serao it seemed sufficient that a rose should come *from* Jericho to be the rose of Jericho; but the realist in the poet had to be satisfied in turn.

In the city of Jaffa, famous in all Syria for its monasteries and churches, Madame Serao describes amusingly mine host of the Jerusalem Hotel: "He is a hotel-keeper, but also a first-rate Christian, a moralist, a philosopher; he does not deign to speak to his guest." On the doors of the rooms are inscribed, instead of numbers, the names of a patriarch, prophet, or great personage of the Old Testament. "There were on my landing Abraham, Jacob, Ezekiel, Elias chambers." On a table in each room are to be found copies of a work, a treatise on morals, by this singular hotel-keeper—copies in English, in German, in Italian, with a symbolic cover design representing all the beasts of the Apocalypse. One day the author asked Madame Serao if she was married. "Yes," she said, with some surprise. "Then read my book." The next day he asked her severely: "Have you read, and have you understood?" "I hope so," she answered. A few days afterward he gave her a copy for her husband.

It is quite natural to find in Palestine people of all nationalities, and Madame Serao describes very graphically the contrasts which result from these curious meetings. She had spent a night at the inn of Mount Carmel and took a coach to go to Nazareth, a plain *char-à-bancs*, mounted on very high wheels in order to cross the fords. There were ten places in it. The coachman, proprietor of the coach, was a Prussian named Suss; he owned three such coaches, but took the reins himself only for people whom he considered of some importance. Among the travellers was Father Marcel de Noilhac, superior of the Franciscans of Nazareth, who, after a month spent in Jerusalem, was returning to his convent. "A singular type, gaunt, with a tired look, a thin beard, a great straw hat covered with a silk handkerchief, such as all the monks of the Holy Land wear." A Turk asked permission to take a seat in the carriage hired by Madame Serao, "and surely it was a curious sight, this high vehicle driven by a Prussian, carrying a French monk born near Cognac, an Italian lady, and a Turk of Haifa, all rolling over the vast plain of Esdraelon, on a fine morning, towards the place where Jesus spent his happy youth."

Thanks to civilization, the seaport of Jaffa is now united to Jerusalem by a railway. There is but one train a day, and the journey is made in three hours and a half. Madame Serao pronounces this railway odious; it is vulgar, it ought to be condemned in the name of all the tender and poetical ideas which it offends in the mind of the traveller:

"You run rapidly over the plain of Sharon where the Philistines conquered the sons of Israel and took from them the Holy Ark; the train leaves behind the valley where Delilah seduced Samson and sent him, a blind prisoner, to Gaza. You half see the valley of the giants, where David defeated the Philistines; further on, is not there the tomb of old Simeon, who took in his arms the Divine Infant and humbly begged God to recall him to him, as he had lived long enough to see the Saviour; is not there the mount where the Pharisees met Caiaphas to decide on the death of Jesus?"

The approach to Jerusalem, in the rapid motion of the train, is not what it ought to be. Not thus was it seen by the Crusaders who fought and died before its walls, and by all those who, till very lately, arrived on foot, on horseback, slowly, quietly before these towers and gates and churches, all so full of thoughts and of memories. "No, as soon as arrived, we must go with Cook's tourists to the new Grand Hotel, dress again, wait for the bell of the table d'hôte, dine with a British menu, take tea as if we were on the Maloja, in the Engadine, or at Monaco, and sleep ten hours—our first night in Jerusalem."

The first visit was naturally to the Church of the Holy Sepulchre, an indescribable mixture of all architectural styles, of chapels destroyed and reconstructed a hundred times; very symbolic of the perpetual conflict of the various Christian confessions.

"Near the portico which dominates the tomb, you see groups of women, draped in blue, miserable, taciturn, sitting on the ground, with children at their necks. They are Copts who spend the whole day in the church, and look at the crowd with their savage eyes. Nasal songs reach your ears; they come from a gallery adorned with gold and precious stones, where the Schismatic Greeks celebrate their sumptuous ceremonies. Turn towards the underground chapel where Saint Helen saw the Cross, and suddenly a door opens and a strange priest appears, with a great black silk cowl over his eyes, a long beard flowing to his waist. It is an Armenian priest, who sprinkles sacred water, perfumed with roses, on your hands and clothes."

The chapel of the Holy Sepulchre, isolated from the rest of the church, is said to have been constructed on the rock which formed the tomb of Joseph of Arimathea, and in which the body of Christ was placed. The sepulchre was covered with precious marbles by the mother of the Emperor Constantine. This holy chapel has only two rooms, the first called the Angel Chamber, where Mary Magdalene entered, two days after the Crucifixion (all the Hebrew tombs had a small entrance of this sort); the second, the Chamber of the Tomb, in which burn, day and night, forty-four magnificent silver lamps. Thirteen belong to the Latin Catholics—that is to say, to the Franciscans of the Holy Land; thirteen to the Schismatic Greeks; thirteen to the Christian Armenians, and five to the Copts. These proportions have been the subject of long quarrels, and are observed in all the details of the ceremonies of the Holy Sepulchre.

Madame Serao has most eloquent chapters on the Holy Sepulchre, on Jerusalem, on the Via Crucis, on Golgotha, so rich in images, in thought, that it would be idle to attempt to give an adequate idea of them; they must be read, and they could not be read without emotion even by an

unbeliever if he had the smallest touch of poetry in him. Curiously enough, after such admirable pages, you find very commonplace details about the cost of a journey to Syria and Palestine, the hotel and *pension* charges, etc. This part of the book, which is, it must be said, only a sort of appendix, seems to have been written for Cook's tourists. It may, after all, be of some use to many; I infer from it that an excursion to Palestine is not a very costly affair, and can be undertaken by people of the most moderate means.

Correspondence.

UNITED STATES STEEL CORPORATION FINANCES.

To the Editor of The Nation:

Sir: In your last issue you criticise the United States Steel Corporation for paying dividends upon its common stock, while requiring to raise new capital for improvements, etc. This corporation has always been more remarkable for size than financial soundness, and while there may perhaps be two opinions as to paying any dividends on the common stock, nearly every one would agree that the dividends, if any at all, should have been much smaller from the start. The second-mortgage bond issue is also justly to be criticised. The comparatively small saving of 2 per cent. difference between the 7 per cent. dividend on $200,000,000 preferred stock and interest on the same amount of second-mortgage 5 per cent. bonds to be issued in exchange, viz., $4,000,000 per annum, is altogether inadequate to compensate for the dangerous increase of $250,000,000 in the funded debt, and the comparatively paltry addition of $50,000,000 new funds, and the absence of provision for any further permanent borrowing, it being practically impossible to raise new money by the issue of either preferred or common stock.

While your criticisms on both matters taken separately are just, yet it is desirable to point out that the raising of new capital and the payment of dividends in the same year are the common practice of the best corporations, not necessarily in itself a ground of criticism.

Robert S. Minot.

Boston, October 16, 1903.

[Each case of dividend-paying while borrowing new capital has to be judged by itself. In the Steel Corporation's case, the use of both policies simultaneously was a financial blunder, and has been abundantly proved to have been so by the event. The expenditures for which the $50,000,000 cash was to be borrowed were in the nature, not of new plant, but of improvement in the old plant, and this a manufacturer commonly expects to meet from a year's profits or from accumulated surplus. That the company, barely a year after its organization, found itself compelled to place a new mortgage on its property to meet such needs as this, was proof positive that dividend payment on the common stock had been unwisely begun. —Ed. Nation.]

UNIVERSITY IDEALS.

To the Editor of The Nation:

Sir: The most striking contribution of "Veritas" to a burning question is his negative one. He who utters such salutary truth does not venture to indicate his identity, nor even his habitat. Possibly this illustrates the worst result of present conditions, viz., the inevitable timidity, not to say cowardice, of the scholar, and in particular of the mature learned specialist who teaches for a living. Of all men, he should be most fearless. Truth alone should be his overlord. Perhaps the most vital questions of the hour are: "Do we want such a class?" and, "Are we creating or destroying it?"

Human knowledge grows so complex that only a specialist can now speak with authority. Such enthusiastic specialists as Louis Agassiz are "too busy to make money." Most of them lack the magnetic power which reaches the popular ear with voice or pen, and so achieves personal and financial independence. In other words, most devoted specialists at forty or fifty, if they have inherited no fortune and secured no lucrative patent, can be assured of a life-long competence only through a university chair. Such a man will weld no Gurth's or Wamba's collar about his neck if he can avoid it. Whither shall he turn?

There certainly are men and women who give enormously for the creation of so-called universities and who do *not* believe in absolute freedom of speech. They hold, no doubt sincerely, that he who, like Gaius Gracchus, attacks franchises and other vested interests, or, like Anaxagoras, boldly ridicules the mystical and miraculous elements of the traditional theology, are as dangerous as the assassin who only destroys the body, not corporate wealth, nor the immortal soul.

The proviso that the head of a university and two-thirds of its trustees shall, through all future centuries, be avowed members of one minor sect, and that one the most exclusive among "evangelical Christians," is perfectly intelligible and defensible, from the pious believer's point of view. A similar proviso as to the teachers of theology, or of economics either, whether expressed or practically understood and exercised, is, or would be, entirely comprehensible, and, in its own sphere, effective of certain results. But if the other doctrine, that absolute freedom in discussion is the only assured highroad to helpful truth, be still peculiarly American; if, in particular, any of our generous public-spirited millionaires still hold it, then there must surely appear, somewhere, an institution of which that faith shall be the cornerstone.

A judge of the Supreme Court cannot be removed, I believe, for any mere heterodoxy, or even intemperance in utterance, on any subject. He cannot be decapitated by any single autocrat, but only after impeachment before his peers. The cause must be some demonstrable incompetence or unfitness for his position. The humblest teacher once permanently established in a New York city school has very much such a security of tenure. But does our university professor now have anything like it? Until he does, he must heed a warning, curt or kindly, that this or that utterance of his may displease a possible or actual donor, divert funds, and even imperil the rash speaker's usefulness to the institution. Such an institution may incubate much learning and even culture, but not beget heroic citizenship.

May a dreamer dream for one brief paragraph? Imagine twenty million dollars to start with. A hundred "life" chairs, at $10,000 each per annum, may be divided (somewhat like those of the French Academy) among ten large fields of study and instruction. They might be filled, at first, in a general open election by American college graduates, or by a large known group of independent scholars. As vacated, each chair could be filled by a majority vote, either of the subsection, or the entire body, or both. This call would be a direct statement that the recipient was the most eminent authority in his field, throughout the whole English-speaking world, available as a candidate. Some moderate provisions as to the number of hours of actual lecturing, teaching, or demonstrating expected annually, arrangements for retirement on half-pay, voluntary or by unanimous vote of one's colleagues, might provide against actual insanity or senile dementia. Is any teacher in America to-day so situated that he could hesitate to accept such a call? Yet lawyers, physicians, even clergymen, could be named who command thrice the modest income suggested, and whom no man or group of men would dare to threaten or warn.

W. C. L.

Brooklyn, October 16, 1903.

LORD PENZANCE ON THE BACON-SHAKSPERE CONTROVERSY.

To the Editor of The Nation:

Sir: In your recent review of this book you clearly deprecate the opinion deduced by Lord Penzance from the allusion to the Gardens of Adonis in the play of "Henry VI." Truly, his opinion confirms his incompetency and makes his "judicial summing-up" ridiculous.

It may be that his deduction was based upon what another, equally unskilled, has said about the Gardens of Adonis and the play of "Henry VI." Mr. Edwin Reed, in his 'Brief for Plaintiff: Bacon vs. Shakespeare,' page 67, quotes the lines from "Henry V.," i. 6:

"Thy promises are like Adonis' gardens,
That one day bloomed and fruitful were the next,"

and says:

"This reference puzzled all the commentators for nearly three hundred years, Richard Grant White declaring that 'no mention of any such garden in the classic writings of Greece and Rome is known to scholars.' It has recently been found, however, in Plato's 'Phædrus,' a work that had not been translated into English in Shakespeare's time."

Why all this pother? Why seek in the classics of Greece and Rome for such a "reference"? Shakspere need not so far have "progressed in his studies by March, 1592, as to have mastered the Greek language thus early," since on the 1st of December, 1589, 'The Faerie Queen' was entered on the books of the Stationers' Company; and early in 1590 the First, Second, and Third books were published in a small quarto by Ponsonby. Now, in the Third Book, Canto VI., there are about twenty stanzas describing the Gardens of Adonis:

"And called is, by her lost lover's name,
The Garden of Adonis, far renown'd by fame."

. . . . . .

"There is continual spring, and harvest there
Continual, both meeting at one time:
For both the boughs do laughing blossoms bear
And with fresh colours deck the wanton prime,
And eke at once the heavy trees they climb,
Which seem to labour under their fruit's load."

ALFRED WAITES.

WORCESTER, MASS., October 18, 1903.

PRACTICAL APPLICATION OF THE THEORY OF FUNCTIONS.

TO THE EDITOR OF THE NATION:

SIR: In your interesting editorial of October 1, you say, concerning the theory of numbers and the theory of functions, that "no *practical* application, and (as far as one can see into the future) no *scientific* application, either, is likely ever to be made of one or other of those two theories, outside of pure mathematics itself." This statement would probably have passed unchallenged a few years ago, perhaps even as recently as the time when the lamented mathematician to whom you allude was devoting himself to that pure and secluded virgin, the theory of numbers; but the mathematicians and physicists have been coming together within the last decade; they are comparing their standing problems, and are learning how to be mutually helpful and stimulating. It is realized that certain physical problems are at a standstill for want of appropriate modes of mathematical expression, and that there is need for the invention or discovery of new forms of functional relationship. Increased attention is accordingly being directed to the wide field of the theory of functions of a complex variable. The complex plane is one of the meeting-grounds of mathematicians and physicists, and the latter are now quite at home in the presence of that coy handmaiden, the complex variable; indeed, the well-known transformation scene in which she and her image play such a prominent part, is now an important feature in the solution of some practical problems.

The discovery of a new form of function to correspond to a new physical relation is at once a gain to natural science and to mathematics, and it widens the intellectual horizon. A single concrete example of the way in which the mutual stimulus operates may be of interest.

In 1891 Dr. Pockels of Heidelberg, in his treatise on the partial differential equations of mathematical physics, made the following suggestive remarks:

"Both from a mathematical and physical standpoint, multiform functions are important, and it is very desirable that the properties of such functions, their winding-points and singularities, their behavior on Riemann surfaces, etc., should be systematically investigated—in short, all the function-theory questions which were handled in the theory of the Newtonian and logarithmic potential. . . . In this direction of inquiry without doubt a wide and rich field offers itself."

About six years later, Professor Sommerfeld of Aachen, and his pupil, Dr. Carslaw of Glasgow, contributed papers to the London Mathematical Society on the multiform functions that satisfy certain differential equations subject to various boundary conditions; and they used these functions to solve some standing physical problems. One of these was the following problem in diffraction: "Plane waves of sound, light, or electricity are incident on a thin infinite half-plane bounded by a straight edge: to find the resulting diffraction of the waves." This problem had been mentioned in Lord Rayleigh's article on 'Wave Theory' in the 'Encyclopædia Britannica,' in the following terms:

"The full solution of problems concerning the mode of action of a screen is scarcely to be expected. Even in the simple case of sound, where we know what we have to deal with, the mathematical difficulties are formidable, and we are not able to solve such an apparently elementary question as the transmission of sound past a rigid infinite thin plane screen bounded by a straight edge or perforated by a circular aperture."

The appropriate solution was obtained by the conception of a twofold Riemann space having the ordinary physical space as one of its folds, the half-plane as a branch membrane, and the straight edge as a winding line. The characteristic multiform function that expresses the wave motion was derived by the most beautiful use of pure function-theory.

I doubt if either Cayley or Sylvester would regret to see the sway of the virgin queen thus extended over new dominions. If she no longer has the seclusion of a "Leibnitzian monad," she exemplifies in a higher sense the Leibnitzian doctrine of preëstablished harmony—the harmony of the world of nature with the world of the intellect. What God hath joined together, let not man put asunder.

Very truly yours, JAMES MCMAHON.

ITHACA, N. Y., October 10, 1903.

[An apposite instance! Had we known of it, we should have softened our remark. Nor, in making it, did we forget that several applications have been made of propositions worked out by Cauchy and earlier mathematicians before the "theory of functions" was christened, and for which (though they are now incorporated in it) it can take no more credit than the theory of numbers could to the carpenter's rule of three-four-five, which was known to Pythagoras, but the principle of which may to-day figure in a treatise on that theory. But now, for the first time, we meet with one genuine case of an application of the theory of functions, upon which we may ground some hope for further such triumphs. It is a convincing and striking proof that a line of thought which seems to relate exclusively to impossible states of things may, if resolutely pursued, eventually bring great light upon familiar experiences. Let us give this instance a permanent place in our memory alongside of the fact that Pascal, after his wonderful discovery about conic sections, abandoned that study as an idle pastime having no application to any matter of importance.

All this, however, does not in the least touch the point that our remark was designed to make; for at the time when it could be said that the British were neglecting the theory of functions (which is no longer true), there was no glimmer of reasonable hope that it could ever be of any use. As for the theory of numbers, the first application of it has, we believe, yet to be made, unless, perhaps, Cayley used it for his theory of chemical "trees." But that concerns the *partition* of numbers, a separate branch of mathematics which the English have perfected, we believe.

We are heartily of opinion—but it is no longer a matter of opinion—that the younger generation of physicists are going to reap a rich harvest from their studies of the higher mathematics. In this they are only following a time-honored custom, for almost all the great physicists, from Galileo down, have been strong mathematicians. At the same time, there are instances enough—like the beautiful researches of Le Bon on phosphorescence and peculiar radiations—to show that, even in these days, the consciousness of a decidedly deficient capacity for mathematics need discourage no young man, nor young woman, from devoting himself or herself to physical investigations.—ED. NATION.]

Notes.

A new edition of Stevenson's 'Dr. Jekyll and Mr. Hyde,' with illustrations by Charles Raymond Macauley, and a reissue of the century-old 'Peter Piper's Principles of Polite Pronunciation' (for children), may be looked for next month from the Scott-Thaw Co. of this city.

The pioneer missionary of the Episcopal Church in the Northwest, Dr. J. Lloyd Breck, is to be commemorated in a volume of biography and reminiscences by the Rev. Theodore I. Holcomb published by Thomas Whittaker, under the title 'An Apostle of the Wilderness.'

L. C. Page & Co.'s fall announcements include 'Belgium: Its Cities,' by Grant Allen; 'Gardens of the Caribbees,' by Ida M. H. Starr; 'The Art of the Pitti Palace,' by Julia de W. Addison; 'The Cathedrals of Northern France,' by Francis Miltoun; 'Japanese Art,' by Sadakichi Hartmann; 'The Love Affairs of Great Musicians,' by Rupert Hughes; 'Stevenson's Shrine: A Record of a Pilgrimage,' by Laura Stubbs; 'The Kinship of Nature,' essays by Bliss Carman, with 'Sappho: One Hundred Lyrics,' by the same writer; and 'Militarism: or, Peace and War at the Beginning of the 20th Century,' by G. Ferrero.

'Two Argonauts in Spain,' Jerome Hart's letters to the San Francisco *Argonaut*, of which he is editor, will be brought out by the Argonaut Co.

We spoke recently of the approaching completion of the A. L. A. Index to Portraits. This great undertaking is, we learn from the September Bulletin of the Central National Library in Florence, to be paralleled (and of course overlapped) by that institution's own 'Indice dei Ritratti,' which has been in compilation for a decade. The impulse to this index was the gift to the Library of more than 20,000 portraits by Professor Buonamici; but the range of the work transcends this collection to embrace other portraits possessed by the Library as well as those in books. In this last particular, a base exists in a manuscript 'Iconografia Universale' begun in 1828 by Vincenzo Follini, in sixteen vol-

umes, and including portraits scattered through the works in the Magliabechian section of the Library. The Bulletin, by the way, notices the Government appointment of a committee to catalogue and regulate the travelling libraries (*librerie ambulanti*).

One of the unnoticed events that deserve commemoration infinitely more than most battles is the completion of Mr. Charles Booth's description of the 'Life and Labor of the People in London' (Macmillan). This work, which in most respects far surpasses similar essays under Governmental auspices, such as our own census reports, will be of as much value to future historians as Domesday Book; and half the world need no longer be ignorant of how the other half lives. One cause of the success achieved was the unbiased character of the investigation, the design having been solely "to observe and chronicle the actual." In recognition of the magnificent public service so nobly rendered by Mr. Booth, if for no other reason, every one will join in the prayer with which he concludes: "May some great soul, master of a subtler and nobler alchemy than mine, disentangle the confused issues, reconcile the apparent contradictions in aim, melt and commingle the various influences for good into one divine uniformity of effort, and make these dry bones live, so that the streets of our Jerusalem may sing with joy!"

Four years ago we had occasion to praise Mr. Frederic C. Penfield's 'Present-Day Egypt,' and now we can welcome a revised and enlarged edition (The Century Co.). That there was room for this will appear if we mention solely the completion meanwhile of the mighty dam at Assuan, and of its tender at Assiut. The work has been reset and brought closely up to date.

Two editions of the works of Henry Fielding reach us together, and yet not precisely in rivalry. The first, in twelve volumes, is in the satisfactory form of Thomas Y. Crowell & Co.'s earlier meritorious reprints. It requires no further comment, except that it has agreeable introductions to each book, by Dr. G. H. Maynadier, and an etched frontispiece of excellent quality in every volume. The second edition, by Croscup & Sterling, in sixteen volumes, is of the *de luxe* order, and issued in only 1,000 copies. The books have all the attractions of clear type, deckle edges, and labelled red buckram covers, with the additional feature of more than a hundred illustrations, being facsimile title-pages, manuscripts of the author, portraits of himself and associates, and eighteenth-century illustrations to his works. Under this rubric the names of Stothard, Rowlandson, and Cruikshank (his ideal illustrator) are prominent. Furthermore, the present edition is far more complete than any previous, and probably definitive. Fifty titles, mostly under the head of dramatic and legal works, appear for the first time. The editorial compilation was a labor of love of the late W. E. Henley, whose essay on the genius of Fielding appears in the last volume. The general reader will do very well with the Crowell edition; the student and bibliophile must have recourse to Messrs. Croscup & Sterling.

Charles Scribner's Sons have imported the volume on 'Cricket' in the "Country Life" Library of Sport. It is edited by Horace G. Hutchinson, and elaborately illustrated with an assortment of old prints obtained from the Marylebone Club and from private collections. There are chapters by well-known experts on Batting, Bowling, Fielding, County Cricket, Australian Cricket, University Cricket, and so forth, full of excellent advice, discriminating comment, and interesting reminiscence; and the most exacting enthusiast would find it difficult to point out any important development in the history or practice of the game that is not recorded in these 440 pages.

If it be a function of literature to revive happy memories as well as to convey useful information, there will always be room for new books on the Alps. We do not refer alone to the record of mountaineering exploits, but to all kinds of writings which bring brown rock-wall or green pasture before the inner eye. 'A Pleasure-Book of Grindelwald,' by Daniel P. Rhodes (Macmillan), is to be recommended for its title, its illustrations, and its text. The author is apparently a "centrist," for he does not take us into outlying parts of the Oberland. His theme is the region between the Grosse Scheidegg and Mürren — the region, one might almost say, which can be controlled from the Bear Hotel. All the pleasant things of Alpine life and leisure enter into his pages. Winter and summer are alike recalled. We may hear echoes of climbing, but Mr. Rhodes does not look upon the Eiger and the Jungfrau as greased poles. Sliding, skating, and skiing have in turn their share of attention, while along with the notice of each sport we are given glimpses of the most beautiful landscapes which Switzerland affords. The illustrations, though not of the most expensive order, are so very attractive that they extort a word of more than conventional praise. This is not a book to be itemized, but to be read by all who love and miss the Alps.

'Sidelights on the Court of France,' by Lieut.-Col. Andrew C. P. Haggard (Dutton), the most lenient reviewer would find it difficult to praise. Its subject is the court life of France from the days of Francis I. to those of Louis XIII.; or, rather, its subject is the scandalous history of that period. Col. Haggard, we must admit, professes to be shocked at the profligacy which he describes; but why should he describe it? As a contribution to historical literature, his farrago of gossip deserves but the scantiest notice. For example, a single passage will suffice: "It was said and generally believed that the famous 'Man in the Iron Mask,' who was confined for life in the Bastile, was the elder brother of Louis XIV., being in truth the son of Anne of Austria by the Duke of Buckingham." As a piece of story-telling this book also fails to justify itself, for though it would fain be vivacious it is not so. There is no reason that we can see why books of this sort should be written, printed or bought.

'Sweet Violets and Pansies' (Scribners) is a book for such as would cultivate these exquisite floral cousins successfully. The fragrant violet is the favorite of the poet and the society woman, the pansy of the amateur gardener, because of its beauty and endless variety of coloring. It is not often that man can improve on nature, but in the case of the pansy he has done so amazingly. The wild Alpine pansy is a thing of beauty, but not such a joy forever as the garden pansy, which owes its present charms to persistent selection and weeding out. No variety of pansies can be depended upon to reproduce itself exactly; but this very fact is an advantage, as the editor of this volume, E. T. Cook, points out; for "nothing imparts such zest to gardening as watching a bed of seedlings for the opening flowers; . . . there are certain to be pleasant floral surprises in the way of highly promising novelties." He quotes the best authorities on pansy and violet culture freely, gives descriptions of many famous varieties, and full directions for raising from the seed or by means of cuttings.

It is instructive to watch the efforts to interest this country in its wards in the Far East, while our people cannot be said to concern itself yet with Porto Rico—nothing like as much as with Alaska. Mr. Samuel MacClintock, Ph.B., principal of the Cebu Normal School, has compiled 'The Philippines: A Geographical Reader,' which the American Book Company has brought out in good shape, with photographic illustrations of manners and customs, scenery, architecture, etc., and with simple maps. The last chapter describes the government of the islands, and recognizes the possible temporary nature of the existing connection with the United States.

The Smithsonian Institution's annual report for the year ending June 30, 1901, has just appeared. It embodies the report of the United States National Museum, by Richard Rathbun, which in turn embodies the report on the Museum's exhibit at Buffalo in the year named above. The photographic illustrations are very attractive. Room is found at the close of the volume for a narrative of a visit to Indian tribes of the Purus River, Brazil, by Joseph Beal Steere.

The Cambridge Antiquarian Society decided, in 1894, to commemorate the scholarly work of Henry Richards Luard, sometime Registrary of Cambridge University, by publishing the old records of academic life called "Grace" books. In accordance with this resolution, Grace Book A was most carefully edited, annotated, and indexed by Mr. Stanley M. Leathes of Trinity College, and appeared in 1897. Now, after an interval of six years, appears Grace Book B, Part I., containing the proctors' accounts and other records of the University of Cambridge for the years 1488-1511. (Grace Book A, be it remembered, covered the years 1454-1488.) The second part of Grace Book B, promised by the Society for 1904, will cover the years 1511-1549. Thus will become available for students of the momentous period which saw the growth and triumph of the new learning in Europe the minutest records of academic life at Cambridge. Already, in his edition of Grace Book A, Mr. Leathes called attention to the fact that, among the numerous books listed as pledges deposited up to 1488 in various university chests, there was no trace whatever of the revival of learning, and only one record of a printed book, mentioned as a curiosity. Turning to this year's publication of Grace Book B, Part I., we find that what must be a printed book, Ficino's Latin translation of Plato, was pledged in December, 1500. Here, then, is a trace both of the new art of printing and of the new learning. The editorial work upon Grace Book B has been put into commission, so to speak. Miss Mary Bateson has written the Introduction, and several hands have prepared the annotations, established

the text, and achieved the invaluable index under the general auspices of the present Registrary of Cambridge, Mr. J. W. Clark. All this work reaches the high standard set by Mr. Leathes in the first memorial volume, and the learned world may well be grateful for these substantial contributions of the Cambridge Antiquarian Society.

A writer in the *Grenzboten* complains of the unconscionable time it is taking to complete the 'Deutsches Wörterbuch' begun by Jakob Grimm. A quarter of a century ago an optimistic critic expressed the hope of soon seeing the article "Gott" by Hildebrand; but that savant died before he had finished the words beginning with *ge*, and to this day only ten volumes have been completed, leaving eleven more to come. It was hoped that when, in 1868, the German Government took Grimm's work on its shoulders, it would be expedited; but the contrary was the case, and the present situation seems hopeless. Even if each of the five present editors contributed two *Hefte* a year, fifteen more years would be required to reach the end; but, as a matter of fact, only one of the five is an expert lexicographer who comes up to that mark, while the letter U has been given to a man who has done no important literary work in twenty years, and who, in the eight years since he was appointed one of the contributors to the dictionary, has not sent a single sheet to the publisher!

The earliest calendar for 1904 to reach us comes from over seas by way of Lemcke & Buechner, namely, the twentieth issue of the *Münchener Kalendar*, with its familiar monkish trade-mark and the customary display of arms of dukes, principalities, and noble families.

The *Consular Reports* for October has increased in size and in the number and variety of subjects treated. Among these the most important are the English tariff question, German industrial and commercial conditions, and the world's iron and steel production. There is a suggestive account of the work of the French chambers of commerce, 164 in number, in furnishing the Government with information about their districts, in aiding in tariff legislation, providing funds for public works (as, harbor improvements), and in founding commercial and industrial schools. From a brief statement of the occupation of the people in different countries it appears that the largest proportion of those engaged in agriculture, 64 per cent., is to be found in Hungary, the smallest, 10 per cent., in England. "With reference to the percentage of females employed, the United States stands first with only 14.3 per cent.," while in Austria the percentage is 47.

In a paper on the geographical distribution of insanity in the United States, to which a large part of the *National Geographic Magazine* for October is devoted, Dr. William A. White shows that insanity is due, not to physical environment, climatic or topographic conditions, but to the stress incident to the struggle for existence. A careful comparison of the statistics furnished by the census returns of 1880 with those of 1890, the results of which are given in a series of outline maps, make it evident that insanity increases in a certain ratio to the increased congestion of the population. Illustrative of this is the fact that in Georgia in 1880 there was but one insane negro to 1,764 of the colored population, while in New York the ratio was one to 333, or almost exactly the same ratio as for the whites. Mr. O. W. Price urges the immediate application of practical forestry to the lumber industry of this country. It now ranks fourth among our manufacturing industries, with an annual product valued at $566,000,000, but it is run on the fundamentally unsound principle of regarding only present profit without relation to the future. He advocates the gradual elimination of the large sawmill, the substitution of those of moderate size, and the adoption of measures to secure a second crop from the lumbered area.

In connection with that interesting event, the opening of the Germanic Museum at Harvard on November 10, Mr. Heinrich Conried has arranged to give a performance of three German plays—by Hans Sachs, Goethe, and Ludwig Fulda—typical of different epochs in the history of the German drama.

The good impression which foreigners often carry away with them after visiting the United States is evidenced, among other things, by the fact that a member of the Academy of Sciences of Christiania, who does not want his identity to be known, but who has spent a year in the United States, has given 6,000 crowns to the Nansen Fund for the promotion of science, which was established, it will be remembered, after the return of Nansen from his Arctic expedition, to serve as a nucleus for an American Fund. The donor desires in this way to give expression to his admiration and veneration for the American people, and he hopes that the fund will grow by contributions from others entertaining the same sentiments.

That Henrik Ibsen's health is better than it has of late repeatedly been reported to be, appears from a story told in a Christiania newspaper. Ibsen, it seems, is very fond of spending a part of his forenoons sitting on a bench in the Queen's Park, a secluded part of the Royal Park surrounding the castle; but one day, when he came to take his usual airing, he found the gate closed, to his great disgust, for he was unaware that the Queen's Park is always closed to the general public when the Queen honors the city with her presence. The King, however, learned of the matter, and immediately gave orders that Ibsen should be admitted to the park at any and all times, sending him, besides, a key to the park, so that he could always be sure of his ability to enter.

On the 27th of October a remarkable expiatory memorial will be unveiled in Geneva on the spot where Michael Servetus was burned to death for heresy just three hundred and fifty years ago. The placing of this granite block is the outcome of the agitation of Professor Doumergue, the great historian of Calvin. Beneath the record of the historic event the tablet contains the following memorable words: "Fils respectueux et reconnaissants de Calvin, notre grand réformateur, mais condamnant une erreur qui fut celle de son siècle, et fermement attachés à la liberté de conscience selon les vrais principes de la Réformation, nous avons élevé ce Monument Expiatoire le 27 Octobre, 1903."

With what difficulties the students of modern history must contend in Prussia is clear from an article published in the last *Heft* of the *Historische Vierteljahrschrift*, by Professor Rochfahl, who reports that the Government of that country refuses to scholars and savants all access to the state archives later than the year 1840. Permission to study the materials since that year is granted only as an exceptional privilege and with sharp restrictions. Rochfahl, who once secured such permission to secure data for the March Revolution of 1848, was compelled to submit his extracts to the authorities, who eliminated the best and most important portions.

—The first number of the *Scottish Historical Review* appears this month with the imprint of Messrs. MacLehose & Sons, publishers to the University of Glasgow, and is adorned most appropriately with the rampant lion of Scotland, associated in academic circles with the arms of Balliol College, but nowhere, be it admiringly said, more correctly and artistically portrayed than on this beautifully printed quarterly. Thus from the ashes of the *Scottish Antiquary*, of which this Review is technically a "New Series," emerges a periodical which takes its place worthily by the side of the American and English historical reviews. It is intended to cover history, archæology, and literature, "with more particular attention to Scotland and the Borders," and prominence will be given to "the discussion of problems in old English and Scottish literature"—according to the account of it offered by the editor, whose name does not appear. A long list of prospective contributors, including most of the well-known authorities on Scottish antiquities and many others, shows that this review has a most solid backing in Scotland, and makes it certain to deserve a wider support than could be given to the *Scottish Antiquary*. To the present number Prof. Walter Raleigh contributes a paper on the lives of authors, illustrated by uncommonly well-executed facsimiles from the Bodleian engravings and drawings of Isaak Walton, John Aubrey, and Anthony à Wood. Mr. Law's account of Lislebourg and Petit Leith explains the bestowal upon Edinburgh of the name Lislebourg—common in France and Spain for a considerable period beginning shortly before the birth of Mary Queen of Scots. Edinburgh was called Leith-lebourg, and its port Petit Leith, he thinks. However that may be, he absolutely disposes of the popular account of the matter which requires Edinburgh to figure in the mind of the French as the island-city, L'Islebourg. What Mr. Law desiderates is examples of either Lislebourg or Petit Leith before June, 1540, the date of the dispatch of Marillac, in which he finds the earliest use of Lislebourg for Edinburgh. Mr. Millar reports on a curious volume in which Scotland was described for Queen Magdalene by Jehan Desmontiers, whom James V. engaged to do the work for his bride's enlightenment. Only one copy of this book exists in Britain, nor is it frequent on the Continent, where it was printed in 1538. Interesting as the other contributions are, only Mr. Andrew Lang's publication of a letter from Sir William Stewart and Mr. James Wilson's account and publication of an English letter of Gospatric (old English accompanied by a translation) can be mentioned here.

—The article in the July number of the *Burlington Magazine* (New York: Samuel Buckley & Co.) possessing the greatest gen-

eral interest is that which deals with the Sir Joshuas, twenty-six in number, in the collection of the Earl of Normanton. Thirteen of these are illustrated in the plates, two in photogravure, and the rest in half-tone. They include the seven paintings of the cardinal and theological virtues which were made as designs for the stained-glass window at New College, Oxford, and are as charming as independent works of eighteenth-century art as they are inappropriate to their purpose; the other pictures are portraits, the best of which, to our mind, is that of George, third Duke of Marlborough. As a whole, this group of Reynolds's works is pronounced by Mr. Max Roldit to be "unparalleled in any other collection, public or private, all the world over." Of the other articles, that on "The Plate of Winchester College" is most splendidly illustrated. In a review of Ricci's 'Pintoricchio' occurs the following paragraph, which is worthy of the attention of some of our mural painters:

"But modern art is just at a point where Pintoricchio is really more sympathetic than the masters of the great style, for in the break-up of artistic tradition and the decline of classical taste the decorator of to-day is thrown back upon parading the mere materials of his art, upon bright color and relief, upon sumptuousness, and the startling and attractive. He has, in fact, dedicated himself to ornamentation—for we must not debase the word decoration! And of ornamentation, of the sumptuous, the attractive, the gay and the ingenious, Pintoricchio was a master. The gorgeousness of the Borgia apartments delude even critics who ought to distinguish more subtly, into praising them as art."

This coincides so exactly with our own opinion, as expressed in our review of the same work, that it is a pleasure to reprint it.

—The August number, though of the usual high standard of this magazine, is perhaps a trifle less interesting. Georg Gronau seems to us to overrate Titian's portrait of the Empress Isabella, wife of Charles V., of which an admirable photogravure is given. The picture, in our judgment, shows just that lack of vitality which was to be expected in the painting of a person whom the artist had never seen. The publication of the presumptive original from which Titian worked gives its main interest to the article. Mr. Campbell Dodgson writes of a "newly discovered portrait-drawing by Dürer," not of the highest quality, recently acquired by the British Museum, which he thinks he has succeeded in identifying as a portrait of Margaret, sister of Casimir, Margrave of Culmbach; and Mr. Pennell "does not argue with us, but tells us" about "Later Nineteenth Century Book Illustrations." On the whole, we are most thankful for the "Portrait of a Lady," by Rembrandt, in the collection of Mr. J. Hage, a picture of the year of the "Anatomy Lesson," and a beautiful piece of Rembrandt's smooth and finished workmanship in his early period, with all his invariable sense of life. It is published in a good half-tone plate with brief comment.

—Of particular interest were two recent meetings of the Massachusetts Historical Society. The address of the President, Mr. Charles Francis Adams, in which he tells the story of the battle of Salamis, would alone distinguish the proceedings, for he restates the subject in the light of a personal visit to Marathon and Salamis. Apart from this presentation, to which we may return, the Society prints a remarkable series of letters written to Dr. Richard Price, who was so good a friend to America in the Revolution, and a second series of letters from Benjamin Vaughan to the Earl of Shelburne. In the eighty-one Price letters is new material from Franklin, Jefferson, Chauncy, Winthrop, Gordon, Rush, Shelburne, and others, extending from 1767 to 1790. The quality of this correspondence is unusually high, and throws much light upon English and American politics during and after the Revolution. Ezra Stiles thought the Quebec act would cause a "jubilee in Hell," and Chauncy believed the Continental currency and its failure a real blessing to the country. The phrase "prudential algebra" is worthy of Franklin, and his criticism of Necker is quite as good: "I will not say that the writer thinks higher of himself and his abilities than they deserve, but I wish for his own sake that he had kept such sentiments more out of sight." Shelburne makes the suggestion that the displeasure so long displayed against Carleton arose from his not employing the Indians sooner. Hazlitt, the father of the essayist, gives a warning against Dr. Rush which is all the more curious as being undoubtedly true, though much against the character of the doctor. "Sandford and Merton" Day offers a not unjust criticism of American poetry, in connection with a proposal to dispose of the copyright of Barlow's 'Columbiad' in England. The one letter in the collection written by Dr. Price contains a very appreciative account of his friend, Adam Smith, who had recently passed away.

—The letters of Vaughan to Shelburne are supplied by Mr. Adams, and were copied from the originals with an intention of including them in the "Works of John Adams." The nine letters now printed relate to the peace negotiations of 1783. The writer ingeniously urged reasons for retaining the Floridas as a base for threatening the possessions of Spain in America. "While wars are among our foolish customs, I cannot see why the Gulf of Mexico should not as well belong to England as to Spain." With Canada, the St. Lawrence, the Lakes, the Ohio, and the Mississippi in English keeping, there would be a "trading coast" at the back of the American "colonies" answering to the Atlantic in front of them. This was late in 1782, when Vaughan was urging haste so that no interruption could come from Adams, then at The Hague and believed to be hostile to Great Britain and her desires. Later he looked upon Adams as very favorable to England. The two series of letters are notable.

—One of the most encouraging signs that, in this country, the study of Greek, the interest in Greek civilization, are not destined to fall into the background, is the popular support regularly given to the revival of a Greek play. Whether at Harvard or the University of Pennsylvania in the East, or at Stanford or Berkeley on the Pacific Coast, there seems to be no difficulty in securing large audiences who not only sit out a play in a language they do not understand, but follow it with unflagging interest. Aristophanes won no more flattering tribute from his admiring Athenians than was paid him by the 7,000 American spectators who witnessed a single performance of the "Birds," last month, in the new Greek theatre at Berkeley. The fact that seven representations of the "Antigone" were given in southern and central California last year by the members of Stanford University, and that the receipts met all the expenses, is, some will think, a more signal triumph for Sophocles than that famous victory over Æschylus won more than two thousand years ago. To commemorate its success, the department of Greek in Stanford University has published an attractive little volume entitled "Antigone" (San Francisco: Paul Elder & Co.), with a full account of the presentation and a score of full-page photographs, which should be useful to the promoters of any Greek play in the future. A critical study of the play by A. T. Murray is included; but perhaps the most important feature is an essay on the "Choral Side of the Antigone," by H. Rushton Fairclough, who gives a clear and accurate account of the musical setting of a Greek play and the functions of the chorus, together with a discussion of Mendelssohn's choral music, which was composed for the "Antigone" in 1841 at the request of Frederick William of Prussia. It is the great advantage of the "Antigone" that it possesses this set of choruses for male voices in which the genius of Mendelssohn offsets the antiquarian accuracy, or attempt at accuracy, of more modern imitators of Greek music.

—It is usually a dull task, if not unprofitable, to read the Introduction of a college text-book. Not so, however, with the selections from Pliny's Letters prepared for Macmillan's Classical Series by Prof. Elmer T. Merrill. From the humor so frequently observable in the introductory pages we are disposed to infer that Professor Merrill has sat at the feet of the sage of Johns Hopkins—if not as a pupil, at any rate as a reader of those delightful editorial coruscations which appear from quarter to quarter in the *American Journal of Philology*. Professor Merrill sets a high value on the Letters, not discounting them so heavily as some because of their artificial character. A man may be excessively self-conscious, he holds, may write with a constant view to future publication, and still be sincere. It must be conceded, however, that one writing under these conditions will hardly come as near telling the *whole* truth as he might otherwise do. The loss of Pliny's speeches and poems is not regarded as a serious misfortune. As to the former, the possession of the 'Panegyric' "will go far towards solacing our grief for the loss of the remainder." And of the poems we are told: "As every man of letters then or in any period of the world ought to do, Pliny loved poetry; and as few men then or ever ought to do, he tried to write it. Naturally enough, he loved what he had written, but, worse than that, he also admired it." Professor Merrill has made an independent and careful study of the manuscripts, and his readings differ in about one hundred and thirty cases from those of Keil's critical edition (1870). Grammatical discussions are excluded from his Introduction, as he does not choose to display "the bleached and arid bones of grammatical and stylistic framework, laid out in classified order before the student's repugnant vision" right at the start. The commentary is sufficiently full—about two pages

to one of text—and is well adapted to elucidate the thought.

THE "CAMBRIDGE" UNITED STATES.

The United States. (The Cambridge Modern History. Volume VII.) Macmillan Co. 1903.

The present volume of the "Cambridge Modern History" is, although published next after the first volume, the seventh and not the second of the whole series, and, instead of carrying on the European story from the days of Maximilian of Germany and Henry the Eighth of England, makes a new start with the English and French occupation and colonization of North America. It is all (except the two chapters on the French in Canada) occupied with the history of the United States; and out of its 751 pages nearly 200, filling six chapters, are devoted to the War of Secession—a proportion perhaps excessive when one considers that, immensely important as that struggle was, it represents in a certain sense rather a side channel than the main stream of American development. The history of democratic institutions and the history of economic development are, after all, the two lines of progress with which the present and future have most to do.

In conformity with the general plan of this great work, the present volume is the work of different writers selected for the special competence each is deemed to possess for dealing with the particular topic committed to him. Thirteen contribute, all but three of whom are Americans. One of the three, Mr. John A. Doyle, writes four chapters, covering the history of the colonies down to the end of the Revolutionary war. The Declaration of Independence and the Constitution are fully treated by Mr. Melville M. Bigelow. Prof. J. B. McMaster gives us in three chapters a general history of the nation from 1783 till 1850, while the war of 1812, considered as a sort of military and naval episode, is allotted to Mr. H. W. Wilson. President Woodrow Wilson, in a chapter on the State Rights controversy, carries the reader down to 1860, where the late Mr. John G. Nicolay takes up the tale, and narrates minutely the operations in the civil war. After chapters on the South during the War by Professor Schwab, on Political Reconstruction by Mr. Theodore Clark Smith, and on the United States as a World Power by Prof. John B. Moore, which bring the narrative down to 1902, two concluding chapters by Prof. H. C. Emery and Prof. Barrett Wendell give a general survey of the economic development of the United States and of the work of America in the field of literature and art. This enumeration shows how difficult it is to review the book as a whole. One cannot, within the limits of an article of this kind, attempt to describe or criticise the method, the style, the idiosyncrasies of thirteen different writers; nor can one examine the general views of the course of American history presented, for each writer has his own point of view, and it is in the variety of points of view as well as in special competence that the value of this sort of composite work resides.

This, however, we may say of the volume as a whole, that, like Volume I., it is a piece of good, solid, thorough work from beginning to end. There is very little rhetoric and, indeed, very little ornament of any kind. All is practical, direct, and business-like. Few of those general reflections in which the old historians rejoiced are to be found, even when the result of a series of events might be profitably summed up in that form. However, in several of the chapters, such as President Wilson's on the last political phase of the "irrepressible conflict," before the ship was hurried into the rapids by the Presidential election of 1860, we find a clear, broad, and vigorous presentment of most of the forces that were at work worthy of his reputation, as well as an admirable sketch of Calhoun. Mr. Bradley's account of the campaign which wrested Canada from France and gave it to England is full of spirit; and Prof. Barrett Wendell's chapter entitled "The American Intellect" is a striking piece of work in its conciseness, in the constant precision and frequent felicity of its expression, and in the effort to interpret each part of the products of American thought by the other parts, so as to convey a general impression of the typical features of the national mind. There is no harder task than to present such a view which shall be consistent throughout, and yet avoid the error of giving undue prominence to any one leading idea. And although those who have meditated on the topics Professor Wendell handles may find themselves differing from some of his judgments, they will, if they are candid, admit that he has given them suggestions deserving to be pondered over, and fit to awaken new ideas in their own hearts.

One task, however, which the composition of this volume involved is scarcely less formidable than that which confronted Professor Wendell. It is the task of telling the political story of the last few years—years which are in the memory of all of us; years whose events are still the subject of strenuous controversy. Many of the data by which the judgment of history on the actors in those events will be determined have not yet been made public, nor can the most courageous and candid writer venture to say all that he thinks, even when he is sure that he possesses sufficient data, because nobody can be expected to embroil himself in disputes with living men or their near relatives. It is as perilous to deal with the history of one's own time as it is to speak the whole truth regarding some prominent person who has just quitted the world. Prof. J. B. Moore had therefore a duty of extreme difficulty and delicacy when he undertook the last narrative chapter, which covers the period from 1885 to 1902. He has addressed himself to it with honesty and impartiality. He has wisely made it a mere record of facts, and has abstained from the expression of opinions, whether on politics or on persons. Yet without some expressions of opinion it is scarcely possible to convey the whole facts, for the significance of the facts cannot be understood without a knowledge of the personal factors. Mr. Blaine, for instance, and President McKinley are in these pages little more than names, yet it was the character of the two men that at certain points made all the difference to the course things took. We could not send a European to this portion for an account of the proceedings which led up to the war with Spain, and of the features of that war itself with any confidence that he would know all the causes, or even all the main causes, that determined the momentous change that war has brought. This may suggest a doubt whether the editors have been well advised in trying to bring the narrative, except in the form of a bare chronological record, down to the date of publication of each volume.

Returning to the book as a whole, and repeating the impression of fairness and thoroughness which it makes, we may add a few criticisms on points which seem inadequately dealt with. In chapter v. Mr. Doyle describes the incidents in the quarrel with Great Britain with the knowledge and judgment we expect from him, and in chapter vi. ("The Declaration of Independence") Mr. Melville Bigelow gives an extremely careful and valuable analysis of the legal questions at issue between the mother country and the colonies. But a chapter, or a section of a chapter, is also needed to describe the moral and social forces which were tending to draw the nations apart—a branch of the subject which, so to speak, falls through between these two writers. The chapters devoted to the struggle over slavery may appear scarcely satisfactory to those, now becoming few, who remember the ante-bellum days. Slavery was a worse thing, not only in its ultimate economic results, but also in the actual suffering it inflicted, in the moral evils it engendered, in the spirit and temper it created, than would be gathered from chapter xiii.; and although the moral feeling of the North which expressed itself most forcibly among the Abolitionists is touched upon, its importance as a factor is not quite fully recognized. In the later parts of the volume three topics receive less prominence than they deserve. One is the growth of the party system—a growth which is really the most distinctive feature of American democracy, the most remarkable contribution to the "natural history of democracy in general" which America has made. Another is the part played in the public life of the country by great cities and the problems of municipal administration. Though it would have been impossible to trace in detail the changeful phases of corruption and purification, of reform and relapse, in New York or Philadelphia or Chicago, the influence of the cities has grown so notably that this important subject ought not to have been passed over almost in silence. Lastly, there is the negro problem. It is touched on in the chapter on Reconstruction, but its later developments, both social and Constitutional, receive slight notice, though the whole history of the colored race in America is one of the most remarkable and instructive branches of the ethnological annals of mankind.

A critic who notes these deficiencies is also bound to admit the enormous difficulty of compressing into one volume, even a volume of 857 pages, the mass of facts which had to be set forth and explained when tracing during three centuries the progress of a gigantic nation. Even had the omissions been far more numerous, the book would be one of great and permanent value. It contains (and this is an improvement on volume i.) a useful chronological table of leading events, as well as a carefully prepared Bibliography, which serious students will find serviceable. Another improvement is the presence of an index to this volume. It would (we may be allowed to repeat) be a

convenience to the reader if at the corner of the top of each page the name of the writer of the particular chapter were given, for it is hard, when one has occasion from time to time to consult the book, to recollect which of the numerous writers is responsible for the chapter under perusal.

BRYAN'S DICTIONARY OF PAINTERS.

Bryan's Dictionary of Painters and Engravers. New edition, revised and enlarged under the supervision of George C. Williamson, Litt. D. With numerous illustrations. Volume I., A-C. Volume II., D-G. London: George Bell & Sons; New York: The Macmillan Co. 1903.

This well-known work was first published in 1816. An edition revised by J. Stanley was published in 1849, and a supplement to this in 1876. An edition revised by Robert Edmund Graves of the British Museum, and extended to two volumes of about 750 pages each, large octavo, in two columns, was published in parts between 1884-1890, with Sir Walter Armstrong, since so widely and favorably known as a writer on painting, as editorial associate for the second volume. That edition differed in title from the present one, but only in a minor detail. For fifteen years it has been, in a general way, the most useful dictionary to students, for the arts of painting and engraving alone; all other classes of artists being excluded from Bryan's Dictionary except when, as in the case of Antoine Louis Barye, a sculptor was also known as successful in one of the graphic arts. Even this name was admitted grudgingly, however, for the amount and excellence of Barye's work, and the interest it has often excited among artists as well as among the instructed public, would entitle him to more than the six lines allowed.

We must not ignore some slight annoyances to him who would consult this dictionary in the course of his daily work. Take one of the simplest possible instances: each name is followed by the words "was born in ———" or words altogether equivalent to this; but the date of death is not to be found until the close of the biography. Now as this biography may be succeeded by a long discussion of the merits of the artist, or by an attempted analysis of his work at an earlier and a later epoch, it follows that the date of death is almost undiscoverable, and that one is much more apt to catch up Champlin and Perkins, or Seubert, or James, or the 'National Biography' for Great Britain, or one of the two American biographical dictionaries, or Michaud, or Hoefer, or some other general work—anything rather than hunt through the packed text for a date. We have named above books in which this defect (of obvious importance to the busy maker of "copy," while he is writing or dictating), is consistently avoided. Each one begins the notice with a simple parenthesis within which are the two dates, the years of birth and death with a dash between them; or with a statement almost as brief including the place of birth and of death, when known. Alone the magnificent 'Allgemeines Künstler Lexikon,' by Dr. Meyer, based upon Nagler's old 'Dictionary of Artists,' sometimes omits that device for facilitating study; but to this and to similar minor faults of omission it owes its commercial failure, for in thirty years it has not advanced beyond *Bezzuoli*.

Bryan's book had this advantage, a merit shared by the great German work alone, that, after the biography of a notable artist, a list of his works was given, arranged methodically under towns and galleries. As these lists were printed in tabular form, they allowed of very easy consultation. Etchings or other work on copper and wood were separated from paintings in these tables, as where we find under the term "Bol, Ferdinand," first a table of known paintings of importance, and then, after a brief introduction, a separate list of etchings. In each of these two lists, and their introductory notes, by the way, only one thing is lacking—some mention of the fact that Bol counts so obviously for much in the etchings commonly ascribed to Rembrandt.

Comparing volume one of the present edition with that of Graves and Armstrong, there are to be noted many additions, as of persons who have died since the former work was made complete (for the work is limited strictly to the dead), and other insertions of artists of less fame who had not been thought worthy of a place in the first edition. As the preface says: "Many more names have unfortunately become eligible for inclusion, and further researches have brought to light new facts"; and it is stated that about five hundred new notices are to be included in the work. Thus, there is a column devoted to Boecklin (entered, strange to say, after Boekhorst and Boekel); the notice is rather critical than biographical, perhaps as introducing the epoch-making work of an artist so little known in the West. In like manner Rosa Bonheur has about a column, and Benjamin Constant as much. No one of these three artists is allowed a tabulated list of paintings, but many names of pictures are mentioned in the text or in a small-print note at the end of the biography. Ford Madox Brown has a page and a half; but although he had been dead at least nine years before this book can have gone to press, no list of his works is given, but only the names of pictures which are convenient for the criticism undertaken. Burne-Jones (entered under B) receives two pages, but here also the tabulated list is omitted. We regret to see this general abandonment by the editors of the new work of what was a valuable feature of the standard book finished in 1889. We are not unmindful of the fact that the work of very recently living men is mainly in private hands; and that of course would make such compiling more difficult—not less desirable. French and other Continental schools are treated in a rather offhand way. Pierre Victor Galland has thirteen lines only, and Gaillard, chief of all recent engravers with the burin, only eighteen. Perhaps it is not the "foreigner" who receives this slighting treatment at the hands of the English editor, but the decorator and the innovating engraver, rather. At least, Jules Dupré of the newer men has space enough allowed him; as have also Henry Peters Gray and the battle-painter, Detaille, who, by the way, is named not as having died, but as having given up painting only.

Considering the older artists, those of whom no strikingly new knowledge has been obtained, we find the notice of Thomas Bewick unchanged, and that of George Cruikshank also unchanged except for a word or two. Gustave Courbet and Thomas Couture have here, also, the same notices which they had in the former edition, although the notice of Couture was limited to twenty lines and a list of six pictures; that of Courbet to less than a column all told. It is a small matter, perhaps, that Courbet is said to have certain pictures in the Louvre, six in number, whereas that great museum has ten Courbets. The notice given to Camille Corot remains unchanged, and no table of his works follows it, though five or six pictures are named in the text. The fact that the Louvre, the special goal of every French artist, contains five of his paintings, is not mentioned; nor are the very remarkable and precious etchings by Corot named in the new edition, as they were not named in that of 1886.

Considering now some of the great celebrities of old time, some of the giants of whom perhaps all that need be known is given in the former editions, we find that Paul Veronese (under Caliari) has the same notice that he had in the former edition, with the exception of a few deleted lines, and with what appears to be a deliberate omission from the list of all paintings in private hands. Correggio (under Allegri) has also the same notice as in the former edition and the same table of works; but the earlier edition credited this list to "Dr. Meyer's carefully prepared catalogues," an ascription which the new edition omits.

There is one important consideration in the study of all these dictionaries of artists, the tone of criticism adopted. This, of course, varies with the writer of the separate notice, and it would require incredible firmness and unattainable range on the part of the editor-in-chief to restrain even in part the expression of opinion by his numerous contributors. Within limits, the expression of individual opinion can be restrained, can be modified, can be even modified for the better by the added responsibility which weighs upon him who in a sense commits the whole body of his fellow-contributors and his editorial chief as well, and who, therefore, cannot write with the same indifference to the opposite and differing views which he might feel when writing under his own signature and without editorial supervision. To a very small extent only are these conditions changed by the insertion of initials after some of the newer articles. It is still within the bounds of possibility that criticism should be restrained from assuming the dithyrambic tone of Mr. Malcolm Bell's article on Burne-Jones, or the surprisingly positive statements made by the editor in his article on Benjamin Constant, who is there asserted to have been the master of the modern French school—a statement which would astonish most members of that school. But the tone of criticism is, on the whole, instructive. To say that it is altogether just would be to say too much; but what one needs most to know is given in most cases. Thus, in the article on Corot and in the article on Caldecott (to take only the newest biographies), the characterization of the man's work is accurate enough and gives all that one needs, perhaps, in the way of the ordinary search for information.

On the whole, then, this book is a less complete remaking of 'Bryan' than we had

hoped for, and falls short of the ideal as a dictionary of painters and (especially) engravers. There is, however, a new feature of unquestioned value and interest, having only one disagreeable side to it, the consequent increase in the size of the dictionary and also in its cost. Each of the two volumes already issued is as thick as the old volume of twice the number of pages, a difference which cannot be altogether accounted for by a slight increase in the thickness of the paper (which is also very much prettier, with soft, rough surface and a pleasant tint). What really makes them heavy, and also precious to the student, is the addition of one hundred, or of eighty, full-page plates by photographic process, including modern as well as ancient paintings, and, since they are accessible under the alphabetized list of names, extremely useful to the student. That means a collection of four hundred and fifty well-chosen pictures. This, then, is a work for extra-illustration with many inserted plates, not for the sake of making something unique to figure in catalogues of auction sales to come, but for frequent consultation. It so happens that the world has been enriched, of late, by a number of collections of photographic reproductions without texts. In Germany, in France, in England, and in the United States these gatherings of half-tones and other process-prints reproducing the paintings of the great masters by the score and by the hundred abound; and it is not a difficult thing to add twenty Ghirlandajos to the two given here under Bigordi, or as many Bellinis and half as many Boningtons. Moreover, the presence of these pictures suggests what might be done in the way of making a dictionary that would appeal to those who can learn by observation better than by reading.

Sea Scamps. By Henry C. Rowland. McClure, Phillips & Co.

McTodd. By C. J. Cutcliffe Hyne. The Macmillan Co.

It is rather an uncommon coincidence that two books of sea-tales should be issued simultaneously, each by a different author, and that each should have qualities far above the average of their class. 'Sea Scamps' is a vivid, fluent, picturesque, and entertaining series of yarns told by three men, equal participants in adventures on Eastern seas. One is an English surgeon, the other an American railroad man, and the third an English artist. Each in turn contributes to the continuity of the narrative. So skilfully has the author varied the method of expression or style of each of the narrators that the illusion of three distinct contributors, instead of one, is consistently carried out.

Brown, the artist, was not at first associated with the other two on their nautical enterprises. He came in later, under the plea of opportunity to study the movement of the ocean from the deck of a ship. Under these circumstances—although a subsequent and willing participant in their adventures—he feels at liberty to criticise with considerable frankness the moral attitude of his comrades. Of Bolles, the English surgeon, and Knapp, the American railroad man, he says they were unprincipled solely from early associations, which, in the case of Knapp, were rigid New England Congregationalist, while Bolles was so by reason of the High Church teachings he had absorbed as an undergraduate at Oxford. With such handicaps, it was not surprising, according to Brown, that Bolles had been engaged in smuggling opium into the Philippines (since American occupancy), and that he and Knapp had been together in another enterprise perilously near to piracy. Individual opinion as to the falsity or truthfulness of Brown's deductions can best be determined after perusal of 'Sea Scamps.' In the narrative—contributed ostensibly by Brown—called the "Break of the Monsoon," will be found a description of a typhoon at sea which throws into shadow almost any previous attempt to describe this atmospheric phenomenon. For vivid, impressive suggestion of verity, for wild and turbulent movement, it has never been surpassed, if ever equalled.

Mr. Cutcliffe Hyne, in many of his sea tales, has done as much—many will concede as well—for the Scotch marine engineer on tramp (and other second or third-rate) steamers, as Kipling has done for Tommy Atkins and the British army. In 'McTodd,' he holds to the fore with no diminution of his accustomed power and humor. McTodd is a whiskey-soaked Scotch engineer, who, under the influence of liquor, is involved in constant trouble. Courageous, competent, and resourceful, drunk or sober, his love of whiskey bars him from a Board of Trade certificate of chief engineer; consequently he is a chronic growler and fighter. His hand is against every man's and every man's hand is against him. His shifts of employment lead him from the tropics to the Arctic Sea. The yarns, which are all in the form of personal narrative, have a very uniformly sustained interest. In the exercise of his choice among them, the reader will find it hard to discover wherein one shows inferiority to the other. In them all, however, McTodd's too frequent iteration of his filial devotion and responsibility becomes somewhat fatiguing. This is the sole blemish in what is otherwise fine literary art.

World's Children. By Mortimer Menpes. Text by Dorothy Menpes. London: Adam & Charles Black; New York: The Macmillan Co. 1903.

'World's Children' is preëminently a picture-book. The text which accompanies the one hundred colored plates depicting types of children of different countries and incidents in their lives, is merely to explain the pictures and point out racial differences, manners, and customs. There is much to delight the eye in Mortimer Menpes's work; he has the gift of seizing the characteristic moment, and of rendering it with great freshness of color and accuracy of impression. This is true of his pictures at first hand, but it seems impossible for any mechanical process to be satisfactory where color is involved. Although these reproductions were engraved and printed at the Menpes Press, under the direct superintendence of the artist, it is evident from many instances of defective modelling, the pervading blackness in shadows, and the frequency of hot, tawny tints, that the original painting has suffered much through its translation, even under these most favorable conditions. We take as an example Marguerite, the Flemish child, a charming arrangement of delicate tints of white, in which the child's face tells out as the only positive color. The drawing and modelling and expression leave nothing to be desired, but the color of the face is leaden where it should be brilliant, as if the reds had been rubbed over with pencil. In many less careful drawings, more like sketches in execution, the flesh tints look quite inky, as in "Rough Locks" (Sicily), "Fiammetta" (Italy), "An Armful (Cashmere), "In the Sun" (India); while "The Lilac Sunbonnet" is a remarkably subtle example of delicate color accurately rendered. We note also a "Bye-Street in Cairo" as one of the most pleasing pictures in the book.

No especial plan has been followed as to the nationalities represented. Although there are many examples of English, Italian, French, Indian, Chinese, Japanese, and Mexican children—besides other European nationalities—Turkey and Greece, Austria and Germany have no representatives here. Of American children there are three illustrations, two of Puritans and one little lady in her perambulator, while the corresponding text by Dorothy Menpes offers severe criticism as to our method of education, formed chiefly, we should judge, on varieties to be met with in transatlantic travel. Where children are concerned, generalizations are dangerous, especially when distributed among different nationalities, for children are much the same all the world over. We are surprised to read the following remark: "There are perhaps no more obedient children in all Europe than the children of France. A French child never dreams of questioning a command." The narrative is most interesting when it tells of children of Cashmir, Ceylon, Burma, India, and Japan, the less familiar nationalities affording therefore more scope as to folk-lore, the manners and customs of their juvenile populations, their religious observances, their opportunities of education, their games and feasts and ceremonies, as also their mode of dress or undress. We note that "Fiammetta" and "Carita" are from the same model, owing, no doubt, to the exigencies of the number of illustrations offered. The book is handsomely bound in blue and gold.

Homes and their Decoration. By Lillie Hamilton French. Dodd, Mead & Co. 1903.

A work like this appeals to women of all classes and of every variety of fortune, from the wife of the millionaire who can bring precious marbles and wood carvings from old Italian palaces and priceless treasures of applied art for the decoration of her luxurious dwelling, as also to the struggling helpmate of the overworked Government clerk, who can have recourse only to the carpenter, cheap fabrics, and casually acquired furniture for the making of a home. Miss French offers suggestions and advice to all; she writes as one in authority, referring to a long experience of correspondence on this subject with bewildered matrons in every part of the United States and Canada and with colonists abroad. She treats at length of every detail of household arrangement, from the reception rooms of the wealthy to their servants' sleeping-rooms and kitchen. The only part of the house left unmentioned is the nursery, which seems a remarkable lapse, now that

so much attention is given to the early education of the young through their surroundings, and considering the important part they play in family life.

The making of a home is certainly more of an instinct than a talent to be acquired from books or teaching of any kind. It is not given to every one to bring a sense of harmony into their house any more than into their lives; nor do riches help much here, for the meaning of a home comes from the fitness of the surroundings to the individuality, associations, and history of its inmates; and its dearest possessions are generally an inheritance from the past rather than a selection of costly furniture. We have all known many examples of the inefficiency of good bric-à-brac and the best upholstery to give an appearance of comfort, and Miss French has much to say as to the ineptitude of women of wealth to meet the daily requirements of life in the arrangement of their homes and in the exercise of hospitality. She insists that every woman of whatever station should know how to give her rooms a look of cheerfulness and welcome to the entering guest, and that the capacity to achieve this proves the degree of culture attained by quick sympathy for the requirements of others. Miss French is rather exorbitant in her demands on hostesses in general: she even expects them to furnish the guest chamber with the medicines which may come into request during a short visit. With due regard to American hospitality, which is proverbial, this is more than could be looked for.

Innumerable descriptions of the special arrangement of certain rooms are given, which satisfy this writer's taste, accompanied by full-page illustrations, while the text is interspersed throughout by pen-and-ink sketches of every imaginable object of different degrees of interest and decorative value. We should say that Miss French's proclivities are in favor of elaborate furnishing; her suggested arrangements are often very complicated. We note that she not infrequently commends the disguising of one material to look like another, as, for instance, on page 63, where enamel paint is made to look like red brick. On another occasion it is oak furniture (which she considers inadmissible) that must be transformed by white paint. It has always been one of the principles of good decoration to let things be what they are, not to try to get iron to look like wood, or brick like stone, but to obtain from each material by proper treatment the effects it is capable of. But Miss French is full of fads and prejudices, notwithstanding the wide range of her enthusiasms; she gives lists of objects indispensable and lists of objects undesirable, which will seem a little surprising. Her advice to keep precious books in cases enclosed with glass is contrary to the latest convictions of bibliophiles, who find that open bookcases allowing the air to circulate are the safest.

The Mediæval Stage. By E. K. Chambers. Oxford: The Clarendon Press; New York: H. Frowde. 1903. 2 vols.

In spite of all the books on the subject, the history of one of the greatest products of human genius, the Elizabethan drama, has never yet been adequately written. But the work of criticism and preparation is going valiantly forward; and in the meantime scholarship is concerning itself, quite justly no doubt, mainly with questions of genesis and origins. We have here a discussion of origins which is of formidable learning, and quite the best thing of its kind that has yet been done in English. The title of the work has the merit of brevity, but is a little misleading. The literary side of the mediæval drama is almost totally neglected, the stage itself is only incidentally discussed, the dramatic product of England is the centre of attention to the practical exclusion of that of other lands, at least from the point where the religious drama begins to nationalize itself, and the whole of the first (and larger) volume is taken up with things which previous historians have scarcely regarded as part of the material of drama at all. This volume is, indeed, an account of mediæval minstrelsy and of the so-called "Folk Drama"—that is, of the mediæval customs of festivals and pageantry studied in their origins and development as expressions of the mimetic instinct of the folk. Mr. Chambers is an eager folklorist, and this volume is essentially an elaborate study in folklore. The culture-historical and social background is investigated on an adequate scale. One feels that the impulse of the modern method and movement in historical studies is at last communicating itself to literary history, even as studied in England.

We feel, too, that the author has been on the whole well advised in his self-imposed limitations, and has within these made an important contribution to learning. It is true that the first volume advances various views which at best are speculative and uncertain, and contains much material which seems excessively remote from the subject. It is true that the connection between folk "drama" and literary drama is somewhat obscurely presented. It is true, perhaps, that the first half of volume ii., dealing with the Religious Drama, makes no essential advance upon the treatment of Creizenach and other authorities, while the second half (the Appendices) reprints, along with much that is new or inaccessible, a portion that was already well known to scholars. Nevertheless, the work as a whole is a work of solid erudition, and presents a mass of valuable material, sidelights, and suggestions. It now remains open for Professor Manly, in the long-expected third volume of his 'Specimens of the Pre-Shaksperean Drama,' to complete the treatment of the mediæval English drama on its literary side. The public would then have an adequate equivalent of a complete history of the subject, embodying the results of a century of research and the conclusions of recent scholarship. If this could be supplemented by a translation of Creizenach's 'Geschichte des neueren Dramas,' the needs of the English-reading public would be sufficiently served until the great historian of the drama shall appear.

The author's range of inclusion is dictated by his conception of the dramatic, of what constitutes drama in its germs and essential principle. Not dialogue by itself, of course, and so nothing in Anglo-Saxon literature, in spite of its frequent use of dialogue form, is drama; and not the Middle English 'Harrowing of Hell' and similar *estrifs* and *débats*. But it is dialogue combined with impersonation in more than a single rôle; and of this combination the manifestations are traced through various ramifications into divers forms and conclusions. The old question of the mediæval minstrel and his relation to and inheritance from his forebears, the *mimus* and the *scôp*, is debated afresh. The evidence adduced still remains inconclusive, and the author is forced to content himself with the probability that the *mimus*, who disappears as a player of farces in the seventh century, and his like, who reappeared in the fifteenth century playing farces, must in the interval have been practising the rudiments of the art of acting, and that something rudimentarily dramatic must have persevered through all this time. The question still remains open.

The plain people who have not followed the vagaries of recent folklorists will be surprised to learn of the latest theory, here presented, of the origin of certain familiar but ancient and venerable sports. Like the mediæval drama, they arose from ritual. As in the villages of India to-day, so in the village communities of our Germanic ancestors, certain rites and sacrifices were necessary for the fertility of the fields. Fortunate was the man or the company of men who could secure a portion of the sacrificial beast or the sacrificial grain to bury under his furrow. So it comes that, in the primitive game of football, "the ball is nothing else than the head of the sacrificial beast, and it is the endeavor of each player to get it into his own possession, or, if sides are taken, to get it over a particular boundary." The author is not unaware of the humor of this explanation. A moment later we are told that "if Golf belongs to the present category, it is a case in which the endeavor seems to be actually to bury the ball." Here certainly is a game which in the hands of many hierophants tends to revert to its primitive function! Similarly, the traditional hood of the mediæval fools and jesters "was originally a sophistication of a more primitive headdress, namely, the actual head of a sacrificial animal worn by the worshipper at the New Year festival."

The treatment of the actual history of the religious drama itself, from its origin in the liturgy to the beginnings of its transformation under the influence of humanism, is reasonably brief—some 225 pages. But nowhere else in English has the process of this evolution been so clearly displayed. Here for the first time is sufficient evidence adduced to make the modern reader understand and realize the astonishing variety and abundance of dramatic performances in mediæval England. Centuries before Shakspere's day the nation had been trained to the habit of spectacle and mimetic entertainment. The chief contribution of the Renaissance, after all, was that of literary consciousness and of literary form.

The History of the Peninsular War. By Charles Oman. Vol. II. With maps, plans, and illustrations. Henry Frowde. 1903.

Mr. Oman's 'History of the Peninsular War' is carried rapidly forward by a second volume, which surpasses its predecessor in bulk, although it is confined to the events of 1809, and even closes with September of that year. It will be remembered that the motive of this work is found in the short-

comings of Napier and in the recent publication of valuable materials. Napier, with all his knowledge of the war and his literary brilliance, admired Napoleon too much. As for the documents which have been made available since his day, there can be no doubt that they justify a fresh consideration of Peninsular campaigning. Mr. Oman writes with a great command of statistical detail, and his accumulation of data has been supplemented by a special study of topography. Thus, in the present volume, he puts a different face on Wellesley's passage of the Douro by bringing out the fact that the river at Oporto runs between cliffs nearly two hundred feet high. Here, the English operations were attended by the most extraordinary good fortune, for the French did not discover the presence of the enemy until an hour after the first troops had made good their crossing. Napier at this juncture is quite unsatisfactory, offering no adequate explanation of Wellesley's *tour de force*. Mr. Oman supplies a photograph which clears matters up at once by showing the remarkable character of the ground. No Frenchman who was not on the very edge of the cliff could have seen what was happening on the surface of the stream below. To be sure, Soult was careless, but the precise nature of his carelessness can be explained only by the description of a very peculiar locality.

The campaign of 1809 was marked at the outset by such singular complexity that it can hardly be called a campaign at all until the month of July. Napoleon, hastening from Spain to direct the politics and war which culminated at Wagram, left the most astonishing directions to his generals. Take, for example, the burden laid upon Soult. The unfortunate Duke of Dalmatia was bidden in midwinter "to expel the English, to pacify Galicia, to take Oporto and to march on Lisbon"—all within a time limit of twenty-three days. But campaigning in the Peninsula bore little resemblance to campaigning on the Danube; the war soon lost its unity, and by May six sets of operations were simultaneously in progress. These, Mr. Oman points out, were not part of one general scheme of strategy, but quite disconnected. In northern Portugal, Soult opposed Wellesley; and in Aragon, Suchet opposed Blake. Victor and Cuesta contended for Estramadura; Sebastiani and Venegas for La Mancha. Ney invaded the Asturias, and Saint Cyr sought to conquer Catalonia.

Out of such chaos some sort of military order was evolved during the summer by Wellesley's plan to combine with the Spaniards for a march upon Madrid. The French armies drew together to frustrate this movement, and the dénouement was Talavera, the central battle of 1809 in the Peninsula, as Wagram was in the operations about Vienna. To describe the fighting about the Cerro de Medellin would be quite impossible within our limits, but it is interesting to observe that it justified in a striking manner Wellesley's belief that the line could beat the column. This, Mr. Oman selects as the groundwork of his tactics, and the idea was one which he had seized even when he was in India. The honors of Talavera, however, were fairly shared between general and troops, for the French could not have been beaten without the exceptional steadiness of the British foot commanded by Sherbrooke and Mackenzie. In point of casualties, Talavera can be paralled only by Albuera, one of the British divisions being so smitten that nearly two-fifths of the men were incapacitated. Wellesley failed to capture Madrid, but Soult also failed to surround him and Cuesta. In spite of the carnage, Talavera left the situation much as it had been before. Though a personal triumph for Wellesley, it still left Napoleon in possession of opportunities for offensive fighting.

Mr. Oman is particularly concerned to revise the *facts* of the Peninsular War, but his main motive does not deter him from pausing to make a generalization or to portray an individual. It was inevitable that at some time he should pronounce an opinion upon the qualities of Wellington. He does not wait till the conclusion of his last volume, but turns away from the spring campaign of 1809 to discriminate between the virtues and shortcomings of the Commander-in-Chief. On the whole, the verdict is a severe one. To be sure, Mr. Oman praises "Wellesley's extraordinary ability" and illustrates it by adequate examples; but at this time of day there is no novelty in such a view. The striking circumstance is, that an ardent admirer of Wellesley's capacity should possess a low opinion of his heart. The Duke's correspondence with Lady Burghersh came out in time to be given its due weight, yet, notwithstanding all proof of kindness towards personal and family friends, Mr. Oman condemns Wellington for the callousness which he displayed toward troops and officers. The facts in question affect one's judgment of him as a warrior, and weigh more heavily than any charge of tactical faults. A general who does not possess the affection as well as the fear of his troops, cannot get out of them the full measure of their fighting power. This, in Mr. Oman's eyes, was Wellington's chief limitation. In conversation with Lord Stanhope, he called the rank and file the scum of the earth, and said that English soldiers were fellows who enlisted for drink.

"His notions of discipline," says Mr. Oman, "were worthy of one of the drill sergeants of Frederick the Great. 'I have no idea of any great effect being produced on British soldiers,' he once said before a Royal Commission, 'by anything but the fear of immediate corporal punishment.' Flogging was the one remedy for all evils, and he declared that it was absolutely impossible to manage the army without it. For any idea of appealing to the men's better feeling, or moving them by sentiment, he had the greatest contempt."

Mr. Oman's 'Peninsular War' has passed well beyond the initial stage, and bids fair to realize the aims which the author outlined in the preface to his first volume.

Ancient Athens. By Ernest A. Gardner. Macmillan. 1903.

The constant excavation and research which has been going on in the city of Athens and its environs, especially within the last quarter of a century, has cleared up many questions in archæology while necessarily raising some new ones. An accurate and scientific résumé of these results in English has been a growing desideratum; and this is now satisfactorily filled by Professor Gardner's 'Ancient Athens,' a handsome volume illustrated with many photogravures, and presenting, like Mau's 'Pompeii,' something of a holiday aspect. The illustrations are beautifully clear, and chosen with great taste, subject only to the necessary limitations of views which include wide spaces within a brief compass. Two serviceable maps of the city are added, one of which marks in detail the author's scheme of the route of Pausanias.

The contents include dissertations on the natural features and water supply, the ancient walls, the Acropolis before and after the Persian wars, the city in the classic period and in Hellenistic times, the most important temples, and the theatres. A separate chapter is given to each of the following topics: The Parthenon, the Ceramicus, the Piræus, the route of Pausanias, and the subject of Early Attic Art. The result is a most attractive and at the same time scientific handbook of the antiquities of Athens, designed, perhaps, primarily for the student of classical antiquity, but well fitted also for the purposes of the art student, or of the intelligent amateur in art and architecture, who likes to be certain of his facts. Even as a guide-book, there is no impropriety in recommending to the traveller captivated by the beauty of Athens this summary so luminous, accurate, and impartial by one whose position as director of the British School gave him every opportunity to master his subject, and whose handbook on Greek Sculpture proved his fitness for such studies. Mr. Gardner's general attitude is highly impartial and dispassionate; if he has a bias, it is slightly conservative. But he states facts and conflicting theories with great fairness, and adds his own conclusion without the slightest dogmatism. He does not accept Dörpfeld's identification of Calirrhoë, nor his well-known views on the Greek stage, nor his opinion that the early temple of Athena was restored after the Persian invasion. He will not positively decide whether the "Theseum" is a temple of Hephæstus or of Heracles; as to the topography of the harbors, he follows Leake, in the main, recently supported by the investigations of Angelopoulos. Professor Gardner's method has the great merit of helping the reader to form judgments for himself; that being the case, a greater number of references to sources and authorities might have been desirable. His delicate taste in art is evinced in many places, *e. g.*, in the remarks (p. 509) on the impossibility of any genuine restoration of the noblest and most refined architecture.

The proof-reading of this work was done in London, and the printing in this country, and hence a few blemishes. The most serious we have noticed is the occurrence of "southwest" (p. 149) for southeast, where a glance at the author's map reveals the printer's error. The Greek will also bear revision in a few places. There will be an opportunity for this in the work-a-day edition which is likely soon to be demanded.

TARDE'S LAWS OF IMITATION

Translated by Mrs. **Elsie Clewes Parsons,** with an introduction by Prof. **Franklin H. Giddings,** of Columbia. 404 pp., 8vo, **$3.00** *net* (by mail $3.20).

In his introduction to this important work Prof. Giddings writes as follows:

"From his office of Magistrate M. Tarde observed the large part that imitation plays in criminal conduct. Does it play a smaller part in normal conduct? Very rapidly M. Tarde's ardent mind ranged over the field of history, followed the spread of Western civilization, and reviewed the development of language, the evolution of art, of law, and of institutions. The evidence was overwhelming, that in all affairs of men, whether of good or evil report, imitation is an ever-present factor."

LITTLE, BROWN & CO., Publishers, Boston.

NOT LIKE OTHER REPRINTS

The term "reprint" has fallen somewhat into disrepute with us. It often stands for literary piracy and mechanical shoddiness. The Unit Books mark a new order of things in the reprint world.

Many reprints are artistic, many are cheap. The Unit Books alone are both. They comprise the best works of fiction and scholarship; are mechanically as perfect in their way as editions de luxe. Covers are green, rich and plain, in durable paper, cloth and leather. Type is legible, paper "featherweight," size 4½x7.

Text is carefully edited—biographies, bibliographies and notes. Cost one cent for every 25 printed pages, paper cover free, cloth 30 cents extra, leather 50 cents extra. Books are uniform, issued once a month. Cheapest good books made. Novel method of publishing described in the prospectus we send for the asking.

We observe literary rights. The Unit Books are printed in a new uniform type-face—no leased worn-out plates, no photographic reprinting.

The Unit series is a novel enterprise. It is to consist of reprints of classic works—ancient and modern. The print will be clear without display or ornament. The experiment will be watched with interest.—*The Nation.*

An interesting experiment in book publishing is designated as The Unit Books, which is to be an unlimited collection of original publications and selected reprints from every department of the world's intellectual activity. An explanation of the title is the novel method under which it will be sold.

The Nation

Was established in 1865 as a weekly review of literature, science, art, and politics, and its editorial management has been unchanged from the first. It is conducted in a spirit of complete independence. The list of more than two hundred contributors includes most of the leading names in literature, science, art, philosophy and law in this country, and many of corresponding eminence abroad. THE NATION presents a complete and accurate record of the world's current history, with impartial comment on questions which would occupy the attention of intelligent men. To the scholar, the student, the thinker, and to all professional men it is confidently recommended as an aid to sound thinking.

Subscription, $3.00 a year, post-paid. Shorter time at a proportionate rate.

Important Announcement
Gleason's Greek Primer
$1.00
By CLARENCE W. GLEASON, A.M. (Harvard)
of the Roxbury Latin School.

This book can be completed in less than a school year. The verb is developed slowly and naturally, with the second aorist to the fore. The number of lessons is great and gives much practice on verb forms. The infinitive and participle and indirect discourse are treated at length. Three lessons are devoted entirely to Greek equivalents of common Latin constructions. The reading selections in and following the lessons are intended to arouse the beginner's interest in Greek literature, and for that end are taken from as varied sources as possible. To facilitate the acquisition of a permanent vocabulary, both Greek and English vocabularies contain references to the lesson vocabulary where the words first occur. The sentences to be rendered into Greek are cut down to the minimum.

Publication Office, 206-210 Broadway, New York

HANNAH LOGAN'S COURTSHIP, a new companion volume to Sally Wister's Journal, gives a romance of Colonial Pennsylvania a generation before the Revolution. Most of the story comes direct from the diary of John Smith, who wooed and (for this romance ends as all good romances should) ultimately married Hannah. John was an ardent wooer, but even in the crisis of his suit he had other interests,—social, religious, commercial, political, agricultural,—which make his diary extremely interesting and valuable outside of the romantic element. He moved in the social circle which comprised the Quaker governing element of his day, and the Pembertons, Norrises, Morrises, Sculls, Logans, Evanses, Shippens, Robertses, and many other elect Quakers, flock thickly in his pages. His wooing, not perfectly plain even as concerns Hannah, was complicated by James Logan's opposition and by scheming relatives into as pretty a situation as Fate could devise.

Strictly historical. Thoroughly edited by ALBERT COOK MYERS, and profusely illustrated. Cloth, $2.00. *Ready about November 20th.*

New Lovers for Sally Wister

IT would doubtless have been marvelous in the eyes of Sally Wister, stiff little patriot as she was, albeit Quaker, could she have foreseen her personal conquests in Britain. Last May the "Athenæum," reviewing her Journal, said, "We profess ourselves her devoted servants." Now comes the "Academy," the other great pillar of British literature, and says: "One may without impropriety fall in love with a maiden who has 'lain for a century dead,' and we make no doubt that Sally Wister will have scores of lovers. . . . It is Sally Wister herself who gives the charm to the Journal, for no one else has seen this corner of a great conflict through her clear, sweet eyes."

Edited by ALBERT COOK MYERS. Profusely illustrated. Cloth, $2.00.

The Independence *of* the South American Republics

A STUDY IN RECOGNITION AND FOREIGN POLICY

By FREDERIC L. PAXSON. 12mo, cloth, $2.00.

Mr. Paxson has done one signal service in bringing out the fact that, even more completely than has been surmised, John Quincy Adams was the real head of the Monroe Administration, and was the real power behind the throne as regards the Monroe Doctrine. Furthermore, the author shows that the Monroe Doctrine itself was in process of formation for many years before it was enunciated in 1823. Finally, the present study throws new light upon the rivalry between John Quincy Adams and Henry Clay. Thus we have a work which will attract the immediate attention of every student of American history, and the attention will be well repaid.—*The Outlook*, August 29, 1903.

This little book, which reviews comprehensively and brilliantly, but somewhat briefly, the inception and culmination of the revolts of the Spanish colonies in the Southern continent, is especially timely today, when the final extinction of Spanish colonial rule is so fresh in the minds of the people of the world. Not only is this phase of this discussion of interest and value, but so also is that which considers the question of American foreign policy, as applied to the recognition of Spain's revolted colonies. To obtain his material for this discussion the author has searched the archives of the British Foreign Office, and of the American Department of State, as well as the papers of the Adams family of Massachusetts, to which last-named archives access has been granted by Mr. Charles Francis Adams. It was during the incumbency of John Quincy Adams of the office of Secretary of State that the greater portion of these delicate questions were settled.—*Boston Transcript*, September 2, 1903.

FERRIS & LEACH, Publishers, PHILADELPHIA

LONGMANS, GREEN, & CO.'S NEW BOOKS

American Citizen Series

NEW VOLUMES.

Actual Government;

As Applied under American Conditions. By ALBERT BUSHNELL HART, LL.D., Professor of History in Harvard University. Crown 8vo, 644 pages, with Maps, Diagrams, Bibliographies, and Illustrations. $2.00

"For purposes of reference and practical use this book will be found far more valuable than anything that has yet been prepared upon the practical workings of the government. It is scholarly within its scope, but it is by no means technical or obscure."—*Gunton's Magazine*, N. Y. C.

". . . It will take a high place as a work of reference with all who wish to have ready access to the essential facts of government in this country. It is rendered the more useful by a pretty full index and an ample bibliography."—*The New York Times.*

"Seems to us to fulfil its purpose better than any other existing treatise. . . . It is a well-balanced production, with its facts brought down to date, and is written in a style singularly attractive. We recommend it heartily."—*The Dial*, Chicago.

Financial History *of* the United States

By DAVIS R. DEWEY, Professor of Economics and Statistics in the Massachusetts Institute of Technology; Secretary of the American Statistical Association; author of "Study of Statistics," "Irregularity of Employment," etc. With Diagrams and Bibliographies. Crown 8vo, 568 pages. $2.00.

"An admirable sense of proportion is everywhere in evidence, and gives . . . a unity which works of the sort too frequently lack . . . The book is excellent. Scholarship and insight have gone into it. No careful student of American history can afford to neglect it."—*Nation, N. Y.*

"This is a successful book. The author has had a distinct and specific historical aim in view, and he has attained it. The result is a valuable contribution to American history. There is throughout evidence of a fine and rigorous sense of proportion. In other words, the materials as to the financial history of the United States from the beginning of our national life, have been clearly mastered. And the whole constitutes a highly instructive line of historical study. . . . The value of the book for students and other readers is greatly enhanced by the abundant bibliography and other references covering the several specific topics treated of in histories, debates, and other documents. . . ."—*Chicago Tribune.*

LONGMANS, GREEN, & CO., 93 Fifth Avenue, New York

The Nation.

NEW YORK, THURSDAY, OCTOBER 29, 1903.

The Week.

Cuban reciprocity, to consider which the President has now summoned Congress, stands to-day in a position different from that it occupied when first urged. The appeal of a prostrate people and an imperilled industry does not now come with the old force. By her remarkable recuperative power, and with admirable patience and fortitude, Cuba has, thanks partly to a rise in the world's price of sugar, surmounted the fear of impoverishment. A cry of rescue can no longer be raised. Our solemn promise to the Cubans remains—though about two years overdue. Doubtless the uncompromising protectionists will be ready to break it for two years more. But the whole matter should now be approached in a reasonable and practical spirit. Cuba has as much to give as she asks us to grant. Her knocking at the tariff door is but one of many indications that the time has come for this country to fling it open, so that commerce may go out as well as come in. Facilitating trade with Cuba is only the first, though most urgent, step to be taken in removing the fetters that hamper our exporters in so many parts of the world. Uncle Sam will soon have to look over his garden wall and see what the chances are for doing business outside. Cuban reciprocity should be promptly followed up by Argentine reciprocity and Canadian reciprocity. Upon the present unhappiness of our Northern neighbors a proposal to engage in mutually advantageous trade would fall most soothingly.

When we annexed Hawaii and later Porto Rico and the Philippines, our cocksure Imperialists everywhere welcomed their inclusion within our territory as being so many strong outposts in the national defence. Hawaii was to ward off the fleets of Japan from San Francisco, just as Porto Rico was in some mysterious way to defend us from attacks by way of the South. The Philippines, too, were to be a great source of military strength to us. Everybody admitted this except a few warped anti-Imperialists and "Little Americans," who took the ground that such territorial outposts would necessitate great fleets and vastly expensive fortifications for defence. Their point of view is now fully confirmed by the Chief of Engineers, Gen. George L. Gillespie, in his newly published annual report. There are, he says, not only harbors in the Philippines, in Hawaii, in Porto Rico, and the new naval stations in Cuba to be fortified, but we must spend millions upon Guam, upon our Samoan island, and upon the many coaling stations, large and small, which we have been gradually establishing all over the world. As a small beginning, Gen. Gillespie asks only two and one-half millions of dollars for insular defences in addition to eight millions for our home defences. For the apportionment of the millions to be squandered in this way upon our insular possessions he desires a general board similar to the Endicott Board, in following the recommendations of which we have already spent hundreds of millions at home. Among all foolish and wanton methods of wasting public money which have yet been devised, this fortifying of harbors we do not need seems to us preëminent.

A fixed par of exchange between gold and silver-using countries would obviously be of enormous benefit to the world. Efforts to secure it have been discussed time out of mind, but the task remains one of the future. How far the suggestions of the Commission appointed early this year by the President of the United States to consider this question are of practical importance, is a debatable point; but the Commission has at least framed an interesting hypothesis. The violent fluctuations of silver in recent years have had a demoralizing effect on the finances of such countries as Mexico and China, and it was at the instigation of these two Powers that an American Commission spent the summer in Europe in consultation with the leading Governments over the possibility of establishing by joint action a fixed par of exchange between the East and the West. Its report is now made public, and some misconception regarding the character of its mission has been cleared away. There has been a pretty general fear that the Commission was trying "to do something for silver," but it appears conclusively that its main purpose is to establish a gold standard for the remaining silver-using countries. It recognizes, as every one acquainted with the East must, that while such a standard is perhaps feasible, a gold currency is not at present. Hence a silver coinage for Government account at a ratio of 32 to 1 is recommended, to be kept at par by gold credits in the leading financial centres of the world, against which exchange can be sold.

The arguments by which the Commission backs up its project are sound in the main. Its reasons for selecting a ratio of 32 to 1 have some weight; and its views regarding the effect upon the price of silver of greater regularity in the purchase of such amounts as are needed for coinage purposes, are entitled to consideration. But when everything has been urged as to the desirability of a fixed par of exchange, the practicability of the scheme outlined in behalf of a gold standard for China and other silver-using countries remains extremely doubtful. The most that can be said is that a highly important international problem has been discussed in an intelligent manner by three gentlemen of sound economic attainments. The success of their measure depends upon too many contingencies. To say nothing of unforeseen economic factors, there are many political and other considerations to be kept in mind. The attainment of the Commission's end must depend largely on the attitude of the Viceroys, and this might suggest that "graft" is quite likely to play a part in settling the question. The ultra-conservatism of the Chinese people is, of course, a matter of considerable importance. Furthermore, can it be assumed that, when it comes to the point, the Imperial Government of China will consent to the large measure of foreign control of its finances that the present scheme contemplates? Here the report is vagueness itself. It is complacent over a general "approval of the principle" by those who will take no step to put it into execution; and has comfortable hopes of what China may be induced to do; but to actual progress the Commission is not able to point.

The first attempt at enforcing the anti-anarchist act passed after the assassination of President McKinley is alarming to all who hold to American ideals of personal liberty. On Friday night Secretary Cortelyou's United States marshals broke into a meeting and arrested John Turner as "an avowed anarchist." Unquestionably the Government means to deport him—a logical act under an absurd law. Turner has made no incendiary utterance in this country; he has not, in the words of the law, "advocated the overthrow by force or violence" of any organized government. When he preaches the gospel of anarchy among us it would be time to deport him. To proscribe him because he may have written or talked elsewhere against constituted authority may be legal; it certainly is repugnant to American ideals. In Portland, Oregon, United States District Judge Bellinger has rebuked a similar arbitrary action of Secretary Cortelyou's. The case was that of two French women, imported, it is alleged, for immoral purposes, who were arrested and detained for a month without trial or hearing. Very properly Judge Bellinger ruled that Secretary Cortelyou is "guilty of exceeding his authority and of introducing tyrannical

methods of deportation." Put beside these two cases the harrying of suspected Chinamen in Boston by the Department of Commerce, and it will be evident that that newly organized authority is exercising a mischievous activity. At least, these doubtful arrests of Secretary Cortelyou have served to show the absurdity of a hastily framed act which attempts to exclude immigrants for immorality and for political heresy without legal evidence of either disqualification.

That enterprising army contractor, Congressman Lucius N. Littauer, has now read the full text of Attorney-General Knox's decision in his case. The kernel of the document is in the last sentence. After saying that an affirmative opinion could not be followed by a vindication of the law, on account of the statute of limitations, Mr. Knox adds: "A negative one might be regarded as an affirmance of the validity and propriety of methods of dealing with the Government in cases where, after all, the form of the transaction is not to be so much considered as its substance." In short, Mr. Knox feels that the real question is not whether, in furnishing gloves through E. R. Lyon, Mr. Littauer successfully evaded legal technicalities, but whether he did not practically violate the statute forbidding Congressmen an interest in army contracts. On this point there can be no doubt. The published correspondence between Mr. Littauer and Mr. Lyon proves that the former was the real principal, the latter a go-between—a mere name. Mr. Littauer, then, though he escapes legal penalties, cannot escape the moral. Henceforth, he must be known as a man who tried to sneak round a salutary law against corruption and was caught—a few weeks too late.

Care in the choice of a father is nowhere more advisable than in the Federal service. Young Mr. Quay, the circumstances of whose resignation from the army are remembered though not recorded, had the foresight to choose a Pennsylvania Senator for his father, with the result of slipping as easily into a lucrative civil office as he had before dropped out of the army. How painful in comparison with this wise choice is young Mr. Landvoigt's selection of a mere postal officer, and how unfortunate for the unwisely chosen father! Landvoigt senior has been forced to resign—properly, we judge—because Landvoigt junior is engaged in the supply of registry books to the Post-Office. Now, since a man cannot help his occupation, there is all the more reason why he should be careful about his parentage. If young Landvoigt had had the sense to be Senator Quay's son, there is no reason to suppose that the Administration would have troubled either of them. Nobody criticises Senator Quay because his promising boy slips into a soft berth, but everybody condemns that impossible parent, Mr. Landvoigt, for letting his son do business with the Registry Department. All of which goes to prove the adage: Be sure you have the right father, and then go ahead.

Senator Lodge's *Scribner* article on the Senate consists of a kind and patient explanation to the ignorant. The common notion that the Senate has grown great on usurped power, he shows to be an entire mistake; the fact being that the Senate has rather laid aside power than eagerly grasped at it. It might, for example, in the guise of "Constitutional adviser" of the President, have insisted upon being present at Cabinet meetings. So, too, it might have claimed the right to draft the great appropriation bills, instead of simply bedevilling them. And the Massachusetts Senator painstakingly points out that the enlargement of the Senate's prestige has come about solely through the exalted wisdom and virtue of its members, who in this respect fully realize the brightest hopes of the framers of the Constitution. That the House cannot do better than sit in rapt wonder at the feet of such a Senate, is the fair inference to be drawn from Mr. Lodge's contention. That Senators should have all the patronage, he takes as a matter of course. How can the President "know" the appointees? Senators, of course, know, on the principle that the Lord knoweth them that are his. In Massachusetts, however, they do say that some of Lodge's appointments cause the evil disposed to assert that Satan also knows his own.

"Unparalleled outrages" upon the negroes in Rush County, Texas, are vouched for by R. T. Milner, an ex-Speaker of the Texas House of Representatives, by Gen. Webster Flanagan and by the Henderson *Times*. Mr. Milner declares that the crimes were "some of the most atrocious ever committed by white men in any country, in any age of which history gives any account." The first offences were whippings. That example served as an excuse to "wreak vengeance" upon innocent negroes. Finally, the lawlessness became "a furious passion to inflict upon harmless and helpless negroes punishment and death in a manner so horrible as to reflect the savagery of the barbarous and bloodthirsty ages of the long past." Had a Northern editor insinuated that such things could occur in the South he would have been denounced as a slanderer and vilifier. Now that Southern men have cried out against this fresh example of Southern ill-treatment of the negro, we shall hope to see justice vindicated, if it takes all the power of the State of Texas.

Devery did not explain on Friday how he made his own pile, but he did cast a certain light on the various lucrative relations of the Tammany leader, Murphy. He very distinctly charges Murphy with the proprietorship of the Empire—that unspeakable dive in which the Crafts murder took place. Murphy, he says, forced the removal of the police officers who were stationed outside of that notorious den. Finally, he said, "Charlie Murphy is the biggest grafter this town has ever seen. He has managed everything from a ladies' baseball nine to a disorderly house." We commend this characterization, by a recognized authority, to certain fledgling statesmen who have been impressed by the sincerity of Mr. Murphy's demeanor. Should Murphy object to his portrait as drawn by Devery, the courts are open. A suit Murphy vs. Devery is a thing to imagine with a shudder, but it might be illuminated by the invincible gayety of the ex-Chief, and it certainly would interest the District Attorney.

The affidavit of Bernard Lynch, the saloonkeeper who perjured himself in order to save Parks, the blackmailer, contains one significant touch: "The persons [Samuel Parks, Henry Farley, and their lawyers] were in my private room drinking champagne." This picture of the simple and abstemious life of the walking delegate should appeal powerfully to the horny-handed housesmiths. The rank and file of the union were out of work and their families were in want; but Parks and Farley were able to sit in the back room of a saloon sipping costly wines. The question which their unhappy followers will naturally put is the same which the voters of New York put to Croker: "Where did you get it?" The answer is easy; Parks got it by holding up building contractors and real-estate owners. In one case his price is said to have been $50,000; but, as an Assemblyman once remarked of a Tammany colleague now in Congress, "He is not particular; he will take anything he can lay his hands on, from $25 up." Joseph Plenty, for instance, refused to be bled for more than $200. The story of 'Plodding Parks, or the Road to Wealth' should be "written up" and placed in every Sunday-school library. It will teach the rising generation that well-directed industry is the secret of success. By steady attention to business, by picking up unconsidered trifles of $25 here, $200 there, and $50,000 elsewhere, a man may rise from the blackest slums until he can hold up his head and drink champagne with the proudest Trust promoter in Wall Street.

To those who recall the beginnings of the Amalgamated Copper Company, the recent decision of the Montana court comes as a tremendous anti-climax. Early

in 1899 there were rumors of an impending copper combine with a billion-dollar capital; but if such an idea was actually entertained, it was speedily abandoned, and the present company was floated with a capital of $75 000,000. Every effort was made to prepare the minds of the public for magnificent developments, and the bait was swallowed. Numerous intimations were spread abroad that the stock would speedily go to a dizzy figure, as high even as 200 being predicted, and the credulous public rushed to "get in on the ground floor." After the allotment of stock, the price was forced above par for a brief period, but eventually broke and went as low as 89¾ in 1900. Subsequently, the capital was increased to $150,000,000, and the market quotation was "jack-screwed" up to 130, affording the insiders an opportunity to unload prior to the reduction of the dividend in the fall of 1901, which sent the stock headlong to 60½ in December.

The losses were widespread and severe. The *modus operandi* of the Amalgamated could no longer be hid. Inflated prices had been paid for most of the constituent properties, but the great Boston and Montana Company had been secured at a price which seemed on its face to indicate ability to carry the rest of the "outfit." The acquisition of the Parrot mine was also expected to contribute to this result. Meanwhile, litigation sprang up on all sides, and for several years past the Amalgamated has been a powerful factor in Montana politics, aiming, it has been openly charged, to get control of the judiciary. Last week a lower court dispossessed the company of the Minnie Healy mine, a valuable property. More important still, it has rendered permanent the injunction forbidding the payment of Parrot and Boston and Montana dividends to the Amalgamated, and has intimated that it may later appoint receivers for these two constituent companies. As a result, the Amalgamated has closed down all its Montana mines, smelters, and other properties, pending a decision by the Supreme Court. What is the real motive? Does the company hope, by rendering industrial conditions in Montana chaotic, to coerce the Supreme Court? Or is the copper situation in such shape as to make it welcome this pretext for a shut-down?

It is strangely perverted reasoning which leads the disappointed Canadians to complain that Lord Alverstone's decision against them was not "judicial." In fact, the Lord Chief Justice was the one member of the tribunal who was in a position to display the temper of a judge. The rest were violent partisans. Our own Senator Lodge, we know, would not have been persuaded though one rose from the dead. His colleagues would likewise have said that they were open to conviction, but that they would like to see the man who could convince them. Of a similar mind were the Canadian arbitrators. Lord Alverstone's prepossessions, if he had any at all, must have leaned to the Canadian side, but he was not absolutely committed; and the very fact that the argument in the case impelled him to decide as he did—against the British contention—would seem to be the highest and final proof of judicial-mindedness. His impartiality and conscientiousness appear as clear as did Mr. Justice Harlan's, when, in the Bering Sea arbitration, he voted against some of the American positions. If Judge Bradley had gone against his party in the Electoral Commission, many things might have been said of him, but it would scarcely have been alleged that he had not acted as becometh a judge.

The indefatigable President Harper proposes that the University of Chicago shall endow athletics and abolish gate receipts. If Dr. Harper can cut his way through the thicket of practical difficulties, he will make a notable contribution to academic progress. College athletics would be far nearer their ideal condition if the games were free to undergraduates and alumni and their personal friends, and were closed to the rest of the world. Our centre-rushes would then no longer be paraded through the newspapers as the most distinguished persons of their generation, the amount of money received by the teams might bear some fair proportion to the college receipts for tuition, and the expenditures for coaching, travelling, and dressing would be less extravagant. Of course, the money of the football team is not squandered on those "compotations, ingurgitations, surfeitings, drunkennesses, and enormous and excessive commessations" that so scandalized an ancient critic of university life; but to-day young men are reckless with thousands when they should be careful with hundreds. No marvel that they forget the proper place for athletics in a scheme of physical and intellectual discipline.

With the resignation of Signor Zanardelli, Italian politics will fall into uncertainty. Weighted with years and overburdened by ever more exacting duties, the most attractive Prime Minister of recent times seeks honorable retirement. More than two years ago Zanardelli carried into a compromise Cabinet, framed out of apparently incompatible elements, something of the moral enthusiasm which survives apparently only in participators in the struggle for United Italy. He assumed control at a time when the bitter warfare between the Socialists and the reactionary parties had, under a temporizing Premier, lapsed into hopeless sulkiness. Zanardelli went cheerfully about a task of reconciliation that might have appalled the most hopeful statesman. He held his uneasy Socialist allies to support of necessary legislation, he placated disgusted moderates. If his constructive work in legislation was small, he renewed a right spirit in a demoralizing political order. His foreign ministers brought to an end the old and foolish misunderstanding with France, and, without offence, loosened the bonds of the Triple Alliance. His Government acted fearlessly against the Camorra in Naples and the Mafia in Sicily. All this was largely due to the inspiring influence of Zanardelli's brave and generous personality. Urgent reforms remain for his successor to make—redistribution of taxation, relief of the chronic distress in the South. But all these things will be more possible because Zanardelli mastered the anarchy ruling at Montecitorio, and called back Italian politics to something of the high seriousness of the Risorgimento.

The reduction of the Bulgarian army to the peace status is probably the signal for a general armistice in the Balkans. Winter is approaching, and it was understood that the revolutionary bands would suspend operations with the first snow unless help came from outside. But the present revolt remains far more serious than the sporadic outbreaks of twenty years past. The bands will winter in the mountains, only sending home their weaker members. Meanwhile great stores of rifles and ammunition will be accumulated against the spring, when, failing radical reforms, guerrilla warfare will begin again in more formidable guise. During the winter the agents of the Bulgar propaganda will work among all civilized nations. They should have little difficulty in arousing the sympathy of the Christian world for the Macedonian sufferers. England and France are already contributing liberally to the relief of the homeless and famine-stricken population. Other nations, we believe, will not fall behind, while it is probable that many people will feel that the most effective measure of relief is to contribute directly to the revolutionary chest. Such action would find justification in the hopeless nature of the Austro-Russian demands, even in their amended form. Hilmi Pasha, the organizer of the terrible drives in the vilayet of Monastir, is to remain Governor-General. Already the Porte is protesting against the single reform measure that promises substantial amelioration—the appointment of tax assessors friendly to the Christian subjects of the Sultan. Finally, Germany and Italy are cavilling at the very mild control which Austria and Russia are proposing to exercise in Macedonia.

THE "LABORER" IN FEDERAL OFFICES.

The Civil Service Commission's demand upon the Treasury Department for the reinstatement of five employees of the Philadelphia Mint discharged for political reasons is not merely a revelation of gross abuses in that institution. It is a fresh warning to the President, and to all interested in the welfare of the public service, that it is time to close up the "laborer" loophole by which many unqualified persons obtain classified positions without examinations, in direct violation of the law. What has been done in this respect in the Mint has been done in the Philadelphia Post-Office, and, it is believed, to a greater or less degree, in the New York Custom House. The public will remember that the naval "historian," Edgar Stanton Maclay, was carried on the rolls of the New York navy yard as a "laborer" until discharged for his criticisms of Schley, and that the now famous report of Mr. Tulloch gave numerous instances of "laborers," some of whom held two positions, but most of whom toiled not, neither did they spin.

The object-lesson afforded by the Philadelphia Mint cases is very plain. Mr. Francis P. Rodden had been employed for about eleven years as a "roller" in the classified service. He was faithful and efficient, but his place was "wanted" in the pursuance of a scheme by which the Mint's classified employees were reduced by thirty-eight persons, while the unclassified service was increased by forty-two. Mr. Rodden was notified that his dismissal was due to insubordination, of which not the slightest proof was submitted; perhaps it was not deemed necessary to waste ink and paper on a Democrat. Instead of appointing an employee from the classified list in his place, his work was assigned to two "laborers," both Republicans. One of them was an "active political heeler in the Seventh Ward"; the other was the son of the foreman. Thus, in place of one obnoxious Democrat the Mint was served by a personal favorite and by a party worker. In the eyes of Superintendent Landis, a valued Quay man, this was doubtless an extremely meritorious act; at least he continued this policy by discharging four Democratic watchmen and employing six Republicans in their stead. From the point of view of a Quay or a Platt, Mr. Landis is certainly a wonderful public servant. No one but a political genius or a magician could make five places become eight, and then fill them with the faithful in the very teeth of the silly civil-service reformers.

But Mr. Landis cannot lay claim to real originality. The former postmaster of Philadelphia, Mr. Hicks, was removed because of his striking penchant for "laborers." The work of the office seemed to increase over night, but with the demand there was always the supply. Mr. Hicks, too, had a very remarkable experience, not usually shared by large employers of labor, for he speedily found, if we may judge by his selections, that there were no unemployed Democrats in all the City of Brotherly Love. His successor, Postmaster Clayton McMichael, had the itch for laborers in only a little less virulent form. Within a year he had appointed forty-seven, thirty-seven of whom took the places of an equal number of men left over from the Hicks era, who mysteriously disappeared from the service or were transferred. One of these McMichael laborers was Charles S. Morgan, jr., who thus defined his arduous laborer's duties: "Copying letters, opening letters, straightening up the desk, bringing messages from one part of the building to another; that is my idea of a laborer's work, and I cash the checks when signed by the Postmaster." John S. Knowles, another laborer, the son of the Assistant Postmaster, earned $600 by acting as messenger for the cashier's division, and—surprising as it may seem—to the Assistant Postmaster. Edward J. Wynne bent his back and strained his muscles in the money-order division "casing" money-order advices, for the sum of $700 a year. As his name indicates, he is a relative of the First Assistant Postmaster-General.

The purpose of all this scheming and manœuvring is plain. These are the final efforts of the spoilsmen to "beat" the civil-service rules. Driven from one entrenchment to another, they are now in the last ditch. The one way in which they can oblige their political bosses and owners is to make a man a laborer and then give him clerical work. So flagrant had this abuse become in Washington a year or two ago that there were 800 laborers found doing work to which no man is lawfully entitled until he has passed an examination and been appointed from an eligible list. This was too much for President Roosevelt, and in July, 1902, he issued an order establishing labor boards and a registration system. The department heads are now compelled to appoint laborers from an eligible list, but the 800 who have sneaked into the service are to retain their present "classified" positions. A similar ruling has recently been made for the Philadelphia Post-Office in the hope of stopping the practices cited above.

But this does not lessen the culpability of officials who, like the Superintendent of the Mint, have openly and avowedly ignored the eligible lists furnished by the Civil Service Commission and appointed laborers instead of men who had passed their examinations. In the Mint, as Commissioner Cooley has just reported, the number of unclassified employees has increased out of all proportion to the amount of unclassified work, there having been a net increase since May 1, 1902, of fifty-three unclassified employees and a decrease of thirty-seven holding classified offices. Naturally the Commission insists that all these classified positions now held by laborers should be declared vacant and refilled after an open competitive examination, and that there should be proper regulations for the employment of laborers at the Mint.

By an order of March 16 last, President Roosevelt provided for the extension of the labor registration system to Federal offices outside of Washington. Save in Philadelphia, nothing has yet been done to carry out this order. Collector Stranahan is reported to have opposed its introduction in this city very bitterly, and the spoilsmen at the head of the other Federal offices here and elsewhere look with equal disfavor upon the plan. The President should now see to it that the system is applied without loss of time. The Philadelphia situation should prove to him that only prompt action will prevent further scandals, and he already has enough on his hands. Incidentally, the Philadelphia experience should demonstrate the folly of expecting heads of great offices to look with favor upon the classified service until they themselves are believers in it, and in fixity of tenure in office, as against appointing political favorites to please a boss or with an eye to a local political situation.

BUSINESS AND THE CURRENCY.

Troubles in the money market always raise a hue and cry about the currency laws. The deep-seated tendency to attribute such a state of affairs as this country has been passing through for a year or more to a defective monetary system, springs from a variety of causes. For one thing, this is the traditional way of explaining a financial dislocation. During a very large part of our history, the influence of unsound currency methods on the general financial and industrial welfare was unmistakable. This was certainly the case down to the repeal of the Sherman law in 1893. But many of those who are now using the defective-currency argument to explain the collapse in Wall Street ignore the fact that our present currency situation differs from previous ones in two particulars: first, such circulating media as we now possess are in no danger of directly inflicting loss on the trading public; and, second, the time has apparently forever passed when they can weaken the national credit. Our present currency bears no resemblance to the inflated note issues of the State-bank days or to the silver issues that so greatly impaired the public credit prior to 1893.

Another cause for the confusion that now exists regarding the relation of the currency to the business situation is a widespread inability to distinguish between money and capital. The address of Comptroller Ridgely, on "The Busi-

ness Situation and the Currency," before the Bankers' Convention, is therefore timely. He maintains that the business situation is not largely attributable to currency, and that it is not to legislation that we should look for permanent relief. If we had had a better and more elastic currency system, and if the surplus revenues of the Government had not been taken out of circulation, there might not be so much fear of a stringent money market. But, on the other hand, if there had not been the most absolute confidence in the soundness of our currency, the disturbances in the stock markets of the past two years would probably have spread much farther, and doubtless ended in a serious crisis, with severe industrial and commercial depression. Sound opinion will uphold the Comptroller in these statements. But when he goes on to say that, "if there had not been a large surplus revenue and plenty of money in the United States Treasury, the Secretary might not have been able to render the assistance he had to the money market on several occasions, when he checked trouble due to causes entirely apart from all questions of currency or governmental finance," he constructively throws his influence in favor of excessive revenues for the purpose of enabling the Government to dominate the money market in the interest of general business—a species of paternalism that is not likely to obtain wide approval.

But if there is any lack of agreement with Comptroller Ridgely on such points as this, it is speedily lost sight of in the endorsement which his remarks as a whole command. Without going into details, he states concisely his view regarding currency reform in the following language: "I am a thorough believer in currency reform, and agree with those who wish to see the greenbacks retired, the silver withdrawn down to the point which is practically subsidiary coinage or currency, leaving nothing in circulation but gold, as coin or certificates, and a real banknote circulation by gold reserves, with such regulations for issue and redemption that it would be a matter of indifference to the banks whether their credits remained with them as deposits or were circulating notes." But we have a very different system in force, and it is the Comptroller's opinion that there is much to be said for the argument that this is not the time for any very radical change. He states the philosophy of the present situation with a cogency that leaves nothing to be desired, saying: "There is no use to delude ourselves with the hope that legislation will help us out of the trouble due to over-expansion and speculation. We need all the reserve money we can get, but legislation will not produce it. We must wait for the accumulation of gold, the only real reserve money. It will be no real help to make a further large increase in banknote circulation, and no one would think of adding to the volume of the greenbacks. No legislation can change fixed capital to productive capital. That is merely a question of time, and there is nothing to do but to wait for it." That is the situation reduced to briefest terms. Not more currency, but more capital, is what is needed to rectify the financial situation.

No one will dissent now from Mr. Ridgely's assertion that "our bank loans have been expanding too fast." In his statement of the causes which have produced this result, he refers to many factors which can hardly have escaped general observation, such as extravagant living, a great rise in prices, and a consequent necessity for larger volumes of credit for the conduct of business on the previous scale, with the vast amount of loanable capital that has gone into fixed improvements which are unproductive or are very slowly becoming productive. His allusions to the speculation in farming lands, however, throw light on a subject regarding which many well-informed people have possessed only a more or less vague knowledge; and of course he does not neglect to mention the part which has been played by the banks in fostering speculation. But, despite all these adverse influences, the Comptroller views the situation hopefully. He keeps his eye on the enormous development of the real resources of the country of late years, and remarks that our recently acquired prosperity "is not going to disappear or vanish in a day because of a slump in stocks or the collapse of a few underwriting syndicates." Yet the applause which he received was well-deserved when he told the assembled bankers that "the speculative attempts to discount the future and overcapitalize earning power have met with foreordained and inevitable failure."

TAMMANY'S MIXED ALLIES.

Rather than be accused of a want of courtesy to its political opponents, the Citizens' Union withdrew, the other day, a political banner which bore the words, "Every thief, gambler, and dive-keeper will vote for Tammany." The same fact was then restated in a different form: "No thief, gambler, or dive-keeper will vote to elect Mayor Low." The change in wording may or may not have salved the wounded sensibilities of Tammany Hall; but the truth of the original statement has not been altered thereby, or even questioned. Now, as during all its career of political crime, the closest friends, the warmest allies of Tammany Hall are found in the denizens of the "world of graft." These it has cherished, nurtured, and rewarded; defended when in trouble, and not infrequently admitted to its innermost councils. Its record shows that whenever the Hall has made its hypocritical pleas on behalf of the downtrodden poor, it has had in mind, not the dwellers in tenements, but those citizens whose chief dread under a reform administration is that of an enforced residence in Sing Sing.

Concerning this alliance with crime and vice, so strenuously denied by Col. McClellan in 1901, but so plainly admitted by him in 1903, there can be no language too strong. More openly than ever before, Tammany is seeking to bind to itself the vulgar violators of the law. The elevator man who declared the other day his intention of voting for Tammany because he had been promised his former position as steward of a poolroom in the event of Col. McClellan's election, is merely a type of a class to which Tammany appeals with irresistible force. Unable to bring a single serious charge against Mr. Low's Administration, driven to national issues or to the wildest falsehoods in order to save themselves from total silence on the stump, Tammany's leaders are now trying to purchase the city by wholesale promises of immunity from the legal punishment of public offences.

The liquor dealers who would make sales in defiance of the statutes are daily assailing Mr. Low, positive that Col. McClellan's election would mean a relapse to the system of police blackmail and illegal sales. The gambling syndicate is worried only by its fear that, owing to Mr. Jerome, Tammany may not be able to "deliver the goods"—that is, the freedom of operation—it so glibly promises. The corrupt building contractor is for Tammany, heart and soul, knowing full well that there will be no Perez M. Stewart to enforce the law without fear or favor if the city votes for the grafters. Even to the theatres, we are informed, the tip has gone forth that Col. McClellan's success will mean official forgetfulness of the laws forbidding standing in the aisles, and requiring other precautions in the interest of the public.

There is not a single interest which would profit financially by a failure rigidly to enforce the laws, to whose greed Tammany has not made its corrupting appeal. "Help us to the offices," it cries, "and you may ask of us any favors you please"; and it dangles this bait at the very moment that its subservient candidate is suavely assuring his audiences that, if elected, he will give the city "an honest and a business Democratic administration." With the best intentions in the world, so weak a man could never prevent his Tammany associates from carrying out the pledges made in their desperate search for votes.

Upon the most dangerous class of those who would betray the city in order to make unlawful gains, Mayor Low touched in his most admirable speech in Cooper Union on Wednesday week. The abandoned and the outright criminals of a great city are ever in a small minority.

With their aid alone Tammany never has won and never could win. Their contributions to the campaign fund are rather in the form of promises to pay as soon as unleashed to prey upon the community. It is to the soulless corporations that Tammany looks primarily for its sinews of war. Therefore, when it is announced that "Tim" Sullivan, the man who "holds the bag" for Tammany this year, has visited the offices of the president of a great company, and that this same officer of a public-service corporation has called at Tammany headquarters, the public must not be blamed if it reads the news with suspicion and uneasiness. It cannot forget that as the city grows there are more and more valuable franchises to be awarded; that there are legal proceedings under foot by the present reform Administration to recover from traction companies millions of dollars which have long been owing the city, but as to which proceedings slumbered during the Administration of Tammany's Van Wyck. The public can but marvel that the president of any corporation doing business with the city should dare to call upon the Tammany leaders, whatever his errand, for he must know that only a sinister interpretation of his visit would become current.

The resounding applause that greeted Mr. Low's references to the corporations which have paid blackmail to Tammany Hall, shows that his firm stand against corporate greed meets with the approval of every honest citizen. Not even Tammany's wildest fabricators have dared to intimate that the Mayor's relations to corporations are not all they should have been. But in exposing the alliance of Tammany Hall and the unscrupulous corporation managers, he should not have shrunk from mentioning names. This, the most serious menace to the cause of good government, cannot be handled with kid gloves. The arch-traitors who pay over trust funds to an organized band of pirates should be known, that the finger of scorn may be pointed at them, that their names may become bywords, and they themselves be ostracized in their social, if not in their business relations. Bereft of their secret aid, Tammany Hall would not have the slightest chance of success.

THE "DECLINE" OF BRITISH INDUSTRY.

The Duke of Devonshire's description of the Blue Book, prepared in response to Mr. Balfour's "inquiry," as "a rearrangement and consolidation of statistics" is strictly accurate. The work has reached this country, and, so far as it is possible to make any headway at all through the enormous mass of facts and figures which it presents, it appears to have no real bearing on the broad question of tariff policies. These innumerable charts and tables will undoubtedly be of great service in statistical study. Persons engaged in examining special aspects of the commerce of Great Britain —such as the course of the foreign trade in any one commodity or the development of the mercantile relations with any particular country—will find here a mine of information. But so far as the main purpose of the compilation is concerned, the details given are as valuable to one side of the present fiscal controversy in the United Kingdom as the other. The fact that between 1854 and 1902 the total imports of the Kingdom increased 248 per cent., as compared with a gain of only 186 per cent. in the total exports, proves nothing as regards the tariff policy of the nation. If a great deficiency in exports did not exist, the indication would be that Great Britain was losing money fast. The Board of Trade statisticians estimate the "normal" excess of imports at £160,000,000 a year. But they also figure that this sum is more than offset by the net income of the nation's carrying trade and the returns from foreign investments.

Nor can conclusions hostile to free trade be drawn from the fact that the percentage of exports of manufactured and partly manufactured articles to the principal protected countries and colonies declined from 57 per cent. in 1850 to 38 per cent. in 1902. Such a shrinkage was inevitable under any form of tariff. The countries indicated include the progressive nations of Europe and the United States, and it is not supposable, in view of the large increase in the volume of capital in the last half-century, that, tariff or no tariff, their resources should not have been enormously developed. Artificial causes have not produced the great manufacturing industries of the United States, Germany, and other European nations, but access to unlimited supplies of raw materials, a plethora of loanable funds, and intelligent and energetic populations.

The advocates of protection have read into the trade returns a good deal that does not appear on their face, but there is abundant opportunity for the free-traders to do the same thing. The Chamberlainites, for instance, would contend that the fact that the exports of manufactured and partly manufactured articles to Germany increased from £15,950,000 in 1890 to only £16,442,000 in 1902, indicates that Great Britain's trade with that nation is menaced. As a matter of fact, the exports increased to £20,761,000 in 1899, and were £19,839,000 in 1900, in which year occurred a great financial crash in the Empire. The fact, therefore, that the exports were £16,442,000 in 1902 means absolutely nothing, except that in all probability the decline is the temporary effect of widespread industrial depression in the purchasing nation.

Another noteworthy feature is the colonial trade. The protectionists have been pointing to the increasing exports to the colonies as the salvation of British manufactures, but it looks as if possibly the mother country were building on a somewhat insecure foundation. The self-governing colonies took £52,211,000 of manufactures from the United Kingdom in 1902, against £35,516,000 in 1890. But it should be noted that the exports to this class of colonies actually decreased through a series of years to £27,597,000 in 1894. In 1896 they began to move upwards again, and in 1902 attained the high figure recorded above. The decline in the early eighties can be ascribed partly to the financial crash in Australia at that period, but the increase in recent years may be attributed in considerable measure to the heavy borrowings of the colonies. The export movement to the colonies has, in short, such an artificial appearance as to deter one from attaching too much importance to it as a prop to British trade.

Though it is true that the United Kingdom's exports of manufactures to the principal protected countries and colonies were only £87,062,000 in 1902, as compared with £94,504,000 in 1900, £101,696,000 in 1890, and £93,349,000 in 1880, it is also a fact that its exports to all other countries and colonies were £140,538,000 in 1902, against £130,696,000 in 1900, £127,104,000 in 1890, and £104,851,000 in 1880. If any conclusion at all can be drawn from these Blue Book figures, it is that natural causes are deflecting Great Britain's exports of manufactures in some measure from old customers to new. The figures relating to tin plate are worth a moment's notice. The average annual exports of tin plate to the United States in 1887-90 (the four years preceding the McKinley law) were £4,278,667, from which amount they diminished to £887,432 in 1902. But the exports to other markets rose in the same period from £1,403,974 to £3,445,734, showing how far gains in one quarter may be relied upon to counteract losses in another.

The astonishing thing is not that British trade with the principal protected nations should have decreased so much, but that the shrinkage should have been no larger. In view of the textile development of Germany and the United States in recent years, it is really surprising to find the United Kingdom actually increasing its exports of cotton manufactures to both between 1890 and 1902—in the case of Germany from about £2,800,000 to £3,800,000, and in that of our own country from £2,800,000 to £3,600,00. And in this connection it is worth noting that the Kingdom's consumption of raw cotton increased from 6,900,000 cwts. in 1854 to 15,700,000 cwts. in 1899 (the maximum figure). The consumption of raw wool was at its maximum in 1898. The pro-

duction of pig iron was at its height in 1899, and the consumption of this commodity was at its greatest in the same year. In the face of such facts it is absurd to talk about Great Britain's declining industry.

A PHILOSOPHICAL HISTORIAN.

The most coherent and impressive portion of the late Mr. Lecky's work is probably the 'History of European Morals'; in bulk, his writings on the eighteenth century exceed all his studies in other fields. This already suggests the temper of the great historian that is gone. Mr. Lecky was a moralist in the eighteenth-century sense. In the turmoil of our rapidly shifting civilization, he was distinctly the enlightened man. He attained as early as his undergraduate years at Dublin that serenity and impartiality of spirit which the Encyclopædists regarded as the most desirable possession, but hardly achieved. In other respects, also, he was of the eighteenth century. Before that appalling mass of evidence which crushes the generalizing spirit back to the journeyman work of heaping up facts, he remained unruffled. As a young man he undertook 'A History of European Morals' with the cheerful curiosity of Bayle compiling a Universal Dictionary. This poised and indomitable spirit, which he maintained in the face of constant invalidism, brings him perhaps nearer to Spencer than to any man of his time. It certainly removes him as far from the class of documented athletes of Freeman's kind as it does from the eloquent special pleaders of the Gibbon-Macaulay-Carlyle dispensation.

In the fearless mind which he brought to the great task of interpreting history through philosophy, Mr. Lecky distinctly recalls Hume, Montesquieu, Adam Smith, Voltaire. His superiority in method and his essentially modern quality lay in a truer sense of the difficulties that invested his problems. To read his books is to be instructed in the complexity of historical causes. One feels that he has moved more cautiously and patiently among his facts than those soaring minds who were his constant admiration and study. You rarely surprise him in a dogmatism; were he not a most engaging writer, his kaleidoscopic exhibition of interplaying forces would merely confuse. As it is, it gives to a patient spectator a peculiarly exhilarating sense of a world-life that is always in flux, yet never out of order. Opinions will differ as to the value of Mr. Lecky's studies in history and morals, but no criticism is likely to deny the abiding worth of their intention. To refuse to inject one's personal passions into the analysis of the past, to decline in the interest of eloquence or popularity to treat complicated affairs as simple, to be rigidly a logician and yet frankly to admit the force of chance—those cases "in which a slight change in the disposition of circumstances, or in the action of individuals, would have altered the whole course of history"—this certainly is genuine title to distinction in an age which is intolerant of all painful intellectual processes not immediately useful.

Possibly Mr. Lecky did not realize how much of a pioneer and conservator he was. He pointed the way that historical science must take if it is to enlarge the intelligence of those whom it professes to instruct; and he did this by keeping undimmed what we may call that intellectual courage which, for want of a better word, we name classic. In placid pursuit of his favorite studies he does not seem to have cared to impress his own originality upon others. He lacked the sturdy and aggressive qualities, and hardly seems to have felt himself to be what he unquestionably was, the champion of an urgent cause. Except for the advertising proclivities of the age by which he inevitably profited though disapproving, he might hardly have risen to international eminence. Indeed, it is likely that a large class of his readers take him rather for facts and the amenity of his style than for those elaborate interpretations of facts which are his peculiar contributions to historical science. To a small group of dissidents he was a leader in the highest sense, if hardly their personal chief. He was a kind of living evidence of the dominance of the mind, despite the greater tasks of assimilation constantly put upon it. And he seemed like the visible promise of a time when the balance between accumulation of facts and their interpretation shall be again restored.

Very likely, the merit of Mr. Lecky's point of view will never be sufficiently recognized. His very dispassionateness and the calm flow of his style made Mr. Lecky almost as much a distinguished stranger in a world of strenuous scholarship as he was, for a time, on the Government benches at Westminster. His scrupulous fairness was an offence to the generality. English Whiggism is not so dead that it likes to be told that the Revolution of 1688 was "a movement essentially aristocratic," in which about the only popular element was "that hatred of foreigners which is so deeply rooted in the English mind, . . . and has played a part that can hardly be exaggerated in English history." Nor has the average Englishman or American reached that philosophic detachment from which he can survey the American Revolution as a mere by-current in the mounting tide of Liberalism. But an age that loves pluck and paradox should at least honor the memory of the invalid who delineated 'The Map of Life' while propped on his elbows on a couch.

Correspondence.

CONGRESSIONAL POWER OF INCORPORATION.

TO THE EDITOR OF THE NATION:

SIR: Commenting, on the 15th instant, upon Judge Grosscup's opinion that the Trust question may be controlled by a national law of incorporation, you credit him with originality in so far as he asserts that such a law would be Constitutional, and, continuing, say, "The power of incorporation was never in dispute in the Constitutional Convention."

But the question of granting the general power of incorporation to the Congress was directly before the Convention. On July 26, when that body had proceeded so far as to be agreed upon a Constitution, but not in detail, the proceedings were unanimously referred to a Committee of Detail "to prepare and report the Constitution." On August 6 the committee reported, and, among the other powers granted to "the Legislature of the United States," was that "To regulate commerce among the several States."

In considering the report of the Committee of Detail, each clause of the Constitution as reported was discussed, adopted, amended, or rejected. Mr. Madison thought the powers of the General Legislature too limited, and proposed among others to be granted that it be given power "To grant charters of corporations in cases where the public good may require them and the authority of a single State may be incompetent." Mr. Pinkney proposed the general power "To grant charters of incorporation." When it was proposed to add this power, the clause to regulate commerce among the States had been unanimously agreed to.

In the reports of the proceedings of the convention the proposed amendments offered by both Madison and Pinkney seem to have been lost sight of until the entire instrument had gotten into the hands of the Committee of Style; and, on receiving the report of that committee, Mr. Madison again made an effort to have added to the powers of Congress that of granting charters of corporations. The motion was so modified as to limit the power to granting charters for canals, and, being submitted, was lost by the vote of eight States against three for it.

Mr. Wilson of Pennsylvania, if not the ablest, always conceded one of the ablest, lawyers of the Convention, while favoring the grant of the power as proposed by Madison, yet thought that as to mercantile corporations the power was already included in the power to regulate commerce. (See Journal of Constitutional Convention kept by James Madison, Scott's edition, Vol. II., 549, 725; Documentary History of the Constitution of U. S. A., Vol. III., 555, 744, 745.)

I have not seen the comments to which you refer, but it would seem that Judge Grosscup has overlooked the best of testimony for his claim that Congress has its authority in the Constitution for the solution of the Trust problem by a national law of incorporation for those engaged in interstate commerce. The idea is contemporary with that instrument itself.

GEORGE ROBERTSON.

MEXICO, MISSOURI, October 19, 1903.

Notes.

Selections from the marginal notes on Linnæus's 'Systema Naturæ' pencilled by the poet Gray, and from his designs of insects and birds in the same work (now, by way of Ruskin, in the possession of Prof. Charles Eliot Norton), are to compose a book of some 80 pages, edited by Mr. Norton, and published in a limited edition by Charles E. Goodspeed, Boston.

'Ruskin Relics,' supplementary reminiscences, by W. G. Collingwood, with drawings; and 'Minute Marvels of Nature,' by John J. Ward, are in preparation by Thomas Y. Crowell & Co.

An illustrated stage edition of 'Everyman' is promised by J. F. Taylor & Co. of this city.

The "Puritan Edition" of Bunyan's 'Pilgrim's Progress' already announced will be marketed in this country by Fleming H. Revell Co.

Forthcoming from McClure, Phillips & Co. are 'The Lyceum and Henry Irving,' by Austin Brereton; 'Man's Place in the Universe,' by Alfred Russel Wallace; 'Great Masters,' by John La Farge, illustrated; and, next season, Mrs. Constance Garnett's translation of Tolstoy's 'War and Peace.'

J. B. Lippincott Co. announce 'A History of Theatrical Art in Ancient and Modern Times,' by the Danish actor, Karl Mantzius, in two volumes, with an introduction by William Archer; and 'Recollections and Impressions of James A. McNeill Whistler,' by Arthur Jerome Eddy. Also, 'The Mechanical Engineer's Reference Book,' by Henry H. Suplee.

'The History of the World's Painters,' by James William Pattison, is in the press of Herbert S. Stone & Co., Chicago.

The Eureka Publishing Co., Columbus, O., announces 'The Race Problem Unmasked,' by Everett James Waring, LL.B., A.M., of the Ohio bar, "the first colored attorney to argue in the United States Supreme Court, and the only colored man who ever sat on the bench in the State of Ohio."

Henry Frowde is to publish for Prof. J. F. Bingham of Hartford a collection of noteworthy passages in prose and verse from the most eminent Italians from the thirteenth to the present century. It will make a quarto of more than a thousand pages, containing concise biographies, a characterization of the several periods of Italian literary development, and appendices —the whole in Italian.

D. Appleton & Co. will be the American publishers of Wilfrid Meynell's 'Disraeli: An Unconventional Biography,' with abundant illustrations.

A. Wessels Co. are to be the American publishers of J. A. Hammerton's omnium-gatherum 'Stevensoniana.'

Macmillan Co. have nearly ready 'The Mother of Washington, and her Times,' by Mrs. Roger A. Pryor.

A new and enlarged edition of Prof. Henry A. Beers's 'The Ways of Yale in the Consulship of Plancus' (Henry Holt & Co.) is attractive enough to commend itself to Yale men, if any such there be, who have been heretofore ignorant of the merits of this entertaining miscellany.

The 'Guide to Siena, History and Art,' by William Heywood and Lucy Olcott, which we had the pleasure of reviewing most favorably some months ago, is now published with the imprint of Mr. T. Fisher Unwin, London.

A little more than eighteen months ago we briefly characterized the illustrated quarto volume of Michael Myers Shoemaker, 'Palaces, Prisons, and Resting-Places of Mary, Queen of Scots,' from the London edition. The work has now been placed in the hands of G. P. Putnam's Sons for American disposal.

The inexpensive "Fireside Edition" of Dickens's Works (London: Chapman & Hall; New York: H. Frowde) progresses apace with 'Master Humphrey's Clock,' 'Bleak House,' 'Little Dorrit,' 'Our Mutual Friend,' 'Great Expectations,' 'The Uncommercial Traveller,' and 'Christmas Stories.' In this group of volumes we take leave of Cattermole and Phiz, and make acquaintance with a younger set of designers, like Marcus Stone and Harry Furniss, partly working in line and partly in wash; so that the chronology of the later products stands clearly revealed in the illustrations. The parallel Dent-Macmillan issue of Thackeray, edited by Walter Jerrold, likewise adds 'Catherine,' 'Roundabout Papers,' and 'Christmas,' which all have a common bond in Mr. C. E. Brock's clever sketches, some in red chalk, but mostly pen-drawn, while a few of Thackeray's own designs appear in the 'Christmas' volume, and there is an interesting frontispiece portrait of the author, after Leonard T. Poyet, in the 'Roundabout.'

A third rapidly mounting series in revival is the pretty wine-colored issue of which Messrs. Appleton are the American publishers, and which we have already described in connection with 'Dr. Syntax.' A companion poetical work of Combe's, 'The Dance of Life,' with illustrations after Thomas Rowlandson's colored engravings, is now obtainable; and Rowlandson's work is again reproduced in the 'Vicar of Wakefield.' John Leech, on the other hand, appears in Surtees's 'Handley Cross,' in black and white and in color (the latter very dainty); and the same sporting author's 'Jorrocks's Jaunts and Jollities' is lighted up by Henry Alken's lively colored illustrations. Not all of these works are now readable except as curiosities; collectors will value them chiefly for the plates.

We spoke last week of T. Y. Crowell & Co.'s twelve-volume edition of Fielding's Works, and it is now exactly matched by Smollett's, at a price remarkably cheap considering the excellent quality of the typography and the presentable binding. As before, Dr. G. H. Maynadier furnishes the special introductions. Each volume has a full-page frontispiece design. The same house sends us three volumes of a duodecimo "Astor Edition of Poets," below the dollar mark in price, but more than respectable in appearance and execution. The chance combination is odd, for 'The Canterbury Tales,' with a brief introduction by Professor Lounsbury, and 'The Faerie Queene,' which Professor Trent expounds, are accompanied by the Poetical Works of Alice and Phoebe Cary, whom a single generation has effectually consigned to forgetfulness. Miss Katharine Lee Bates has made this gathering from the several volumes of the estimable Cary sisters, and has even edited it with occasional notice of MS. variants. More diminutive are Messrs. Crowell's "Handy Volume Classics," pocket edition, embracing Montaigne's Essays, 'Elizabethan Dramatists,' Franklin's Autobiography, Carlyle's 'Past and Present,' Emerson's 'Conduct of Life,' Ruskin's 'Frondes Agrestes,' etc.; attractive little books, and legible according to the amount of condensation required in the letterpress. Still another, rather elegant set, with limp covers, is Alexander Jessup's "French Masterpieces"—Balzac, Mérimée, Gautier, Flaubert, Daudet, Maupassant; we can do no more than enumerate them. Paper, print, and binding are here all that is needful; each volume contains a portrait, and an introduction by a competent hand. The publishers are Messrs. Putnam.

There seems a veritable demand for these handy outputs, and we discourse *de minimis* when we mention Messrs. Putnam's vest-pocket edition of FitzGerald's 'Rubáiyát of Omar Khayyám,' an inch and a half wide by four inches long, just the companion for memorizing. FitzGerald's 'Polonius,' on the other hand, published by the Scott-Thaw Co., is a squarish little volume, rubricated, and gayly bound in tan and gold. This form of the collection of "wise saws and modern instances" is decidedly to be commended.

FitzGerald's 'Omar' reappears in the elegant "Thumb-Nail Series" (but it is not so small as that) of the Century Company, along with Goldsmith's 'She Stoops to Conquer,' and Jowett's version of Plato's 'Apology of Socrates' and 'Crito' and the closing scene of the 'Phædo'; friendly little volumes of irreproachable typography and charming covers stamped with appropriate designs.

Finally, the Dent-Macmillan "Temple Classics" shall bring up the Lilliputian rear with Browning's 'Pippa Passes, and Other Dramatic Poems' of the forties, Howell's 'Familiar Letters,' in three volumes, the 'Verba Christi,' drawn for the Greek text from Westcott and Hort; and Bede's 'Ecclesiastical History of the English Nation.'

Mr. Peter Newell still further illustrates "Lewis Carroll" in the handsome volume, 'The Hunting of the Snark, and Other Poems and Verses,' just issued by the Harpers. For what pertains to the title verse and to that of "Sylvie and Bruno," we think our American humorist has succeeded in emphasizing the dreary character of those extravagances. Still, his best designs fall in the earliest section, beginning with a very skilful and graceful imaginative conception of the vanishing before the Boojum (p. 40); and a real artist is discernible behind his comic mask in the "Riddle of the Fishes" (p. 198). With these deserves to be mentioned the group before the hearth, "Rest your old bones" (p. 148). Fairly droll are the Knight Mayor (p. 70), the procession of nursery maids (p. 112), and "How shall I be a Poet?" (p. 132). It is convenient, if not wholly amusing, to have all Lewis Carroll's verse between two covers.

Mrs. Sarah A. Tooley, already favorably known as an interviewer and as a biographer of royalty, has been tempted by the fascinations of the Court to prepare an elaborate history of 'Royal Palaces and their Memories' (London: Hutchison & Co.; New York: A. Wessels Co.). It is the kind of book commonly known as "suitable for presentation," as its forty-eight full-page plates,

many of them of much artistic interest, sufficiently indicate. The writing has not, however, been done in any perfunctory way, for Mrs. Tooley has made careful and extensive research, and has expressed the results in a clear and natural style.

The James H. West Co., Boston, publishes for John Snyder an amusing skit, 'The Wind Trust, a Possible Prophecy,' for which, strangely enough, Dr. E. E. Hale writes a brief introduction. It would seem that Dr. Hale must have avoided prejudice, after the manner of Sydney Smith, by writing before reading, for the protective system has had no doughtier apologist than Dr. Hale, while Mr. Snyder's gay adventure is from first to last a satire on that system, and not merely a satire on that particular excrescence of the system called a Trust. The title obviously suggests its drift to any person who has the perspicacity which a grindstone is not beyond. We are told of the origin, development, and ultimate collapse of the "Istamboul Corporation for the Control of the Wind." There is much excellent fooling which but thinly veils a serious purpose, viz., to excite contempt for the usurpation by a few of advantages that belong to all. The fable is well managed for the most part, but less effectively in the concluding than in the introductory and middle parts. Some of the most palpable hits are incidental, touching our imperialism and related follies on their sorest spots.

Our notice of Prof. James A. Woodburn's 'Political Parties and Party Problems in the United States' (Putnams) has been much too long delayed. Like the same author's 'The American Republic and its Government,' the present volume is a useful, though not a great, contribution to the literature of American politics. The work falls into three parts—a division, by the way, of which the table of contents gives no hint. The first, comprising about one-half of the whole, is a rapid survey of party history, in which the beginnings of the several parties and the course of those of lesser importance are sketched with particular clearness. The second part—"American Party Machinery and How It Works" is a clear and practical account of the "machine" in actual operation. No one can touch this field without showing large indebtedness to Mr. Bryce; but Professor Woodburn has evidently taken the trouble to study the matter at first hand, and his abundant illustrations of the good and the bad are often fresh as well as typical. In his third part the author passes in review certain ethical problems in party politics, in particular those concerning the duty of voting and the various phases of corrupt practices. There is here little that is new and nothing that is profound, but the discussion as a whole has a healthy practicality and common sense that makes it useful and invigorating reading.

A sociological study of a Boston factory district by Mr. R. F. Phelps, who held a "South End House Fellowship at Harvard University," has just been published by that association. It embodies the results of a two years' personal investigation of the industrial conditions in these factories, the housing of the operatives, and the determining factors in the choice of homes. The conclusion is that, "along with our Better Dwelling Societies, we should have a society for the encouragement of suburban residence for the poor—such a society having a central bureau where information may be obtained as to good and convenient localities for the homes of workingmen outside of the crowded city limits. Philanthropic persons might devote themselves to the worthy task of offering valuable information to those workingmen who are ignorant of better possibilities for home life in a healthier and more ennobling environment, thus liberating those whose 'residential inertia' holds them imprisoned in habitations which would be unendurable did the victims of such congested conditions but realize what they suffer." Three outline maps show graphically the main facts obtained by the investigation.

At the annual meeting, October 15, of the Wisconsin State Historical Society, the titles in its library were 248,050, of which 10,584 were accessions within the last ten months. Its invested funds are only $44,-199, but it receives from the State $20,000 yearly, with other assistance. Half the expense of keeping its grand building in order and open for use is paid by the University (to which it has become indispensable) for shelf room, books, lecture rooms, and reading-room. For further help to the University the Society will urge the next Legislature to build a north wing to its library as originally planned, over against that on the south, which is now filled with book stacks in six stories. The seventeenth volume of the Society's Historical Collections, completing the treatment of the French régime, is in the press, and the first ten volumes of its series, beginning in 1855, a reprint of which has been authorized by the Legislature, will be issued in the near future. We record here the fact that the public library in Madison has received $50,-000 from Mr. Carnegie, and various other Wisconsin establishments as much or more; his gifts to eleven libraries in eleven other Wisconsin cities during the last year aggregating $142,000. Several libraries also have just been founded by private citizens, so that already only three cities (with a census of 3,000) in the State remain destitute of a book treasury free to all comers.

—Monumental is the word that may fitly be applied to Prof. Edward Arber's reissue of the Term Catalogues, the first volume of which has just been printed. It covers the years 1668 to 1682, and its large type and generous page are a delight to the eye. For the first time this contemporary list of the issues of the English press is made generally available, and in a form which gives the reprint a greater practical value than the original could ever possess. Professor Arber not only furnishes full indexes, with glossary and notes, but has sought to correct the errors of the original editors of the list. Names were omitted by them, or misspelled, and, through carelessness or intention, misleading items were inserted in the titles. Such errors and omissions have been made good, and yet the "text itself has not been added to nor subtracted from." The rarity and high bibliographical value of the original catalogues—of some of the issues but a single example is known—have made them one of the most desired of acquisitions. Including only such titles as the printers paid for, the lists are by no means complete; but they are the only source, and, considering the difficulties in the path of the undertakers, they constitute a remarkable performance. The history of printing, and even of literature, in this interesting period of English life can be related only with the aid of these lists, and the frequent mention of colonial writings gives them an additional value to American libraries. Professor Arber's preface is a very brief summary of the printer's condition under the rule of the censor, Roger L'Estrange, and he very pointedly inquires how the Quakers succeeded in issuing so large a number of tracts at a time when every effort was made to restrict such appeals to the people? The work will be completed in three volumes, and certainly makes a most important addition to our bibliographical equipment; in a style of editing, too, that places it on a very high plane of performance. Dodd, Mead & Co. are Professor Arber's representatives in this country.

—We made brief reference the other day to Mr. Charles Francis Adams's recent discussion of the battles of Marathon and Salamis in papers which are printed in the 'Proceedings of the Massachusetts Historical Society' for May and June, the fruit of his tour in Egypt and Greece last spring. He criticises severely the "Father of History," but uses no stronger language than others who are very grateful to Herodotus for what he tells, though they recognize clearly the truth that he was not a traveller and historian trained according to modern methods. Mr. Adams seems to agree with Professor Goodwin in holding that the battle of Salamis was fought at the entrance to the bay; but his expressions are not fully clear, and he assigns to the Persian fleet at the beginning of the conflict a position farther to the northwest than is claimed for it even by some scholars who yet believe that the battle was begun in the bay rather than at its entrance. The observations of a layman with Mr. Adams's interest and experience in the arts of history and of war, who views the fields of these battles without the prejudices formed by a long study of rather vague authorities, are bound to be suggestive and stimulating, but the positive results are seldom great. Mr. Adams twice calls attention to the principle, often forgotten by historians, that "an army moves on its belly"; but Herodotus himself was much interested in the care taken to provide sufficient supplies for the army of Xerxes. Mr. Adams was deeply impressed "with the military and naval capacity evinced by the Greeks, and their grasp of the situation." Of the battle of Marathon, he takes no extreme view, but he attaches high importance to Salamis. "If Marathon was the Bunker Hill of the Greek resistance to Asia, Salamis was assuredly its Yorktown," and "not until the fall of Constantinople, more than nineteen centuries later, was the work of that memorable day undone."

—Professor Richardson's 'Vacation Days in Greece' (Scribners) must not be confounded with the books which all travellers, in the enthusiasm of their new experiences, are tempted to write after a vacation visit to Greece. This collection, not wholly unfamiliar to our readers, gives for the general public accounts of visits made to parts of Greece which are seldom visited by the ordinary scholarly traveller, not to speak of the tourist, who never sees them. The author has

just returned to this country after ten years of service in Greece as Director of the American School of Classical Studies at Athens, and his familiar acquaintance with the lands of Hellas is matched by that of few living men, while his broad archæological knowledge is based on a firm philological foundation. So scholars will welcome all that he has to say, and will regret that he has not said more, about Dodona, Acarnania, the Styx, etc. But Professor Richardson is an excellent traveller, as well as a scholar. Not only is he familiar with the literature, history, language, and character of the people of Greece; his chapters show him to be blessed with an excellent temper, a power to adapt himself readily to circumstances, a vigorous physique which makes a bicycle ride of ninety or a hundred miles over Greek roads seem a reasonable day's exertion, and a sense of humor and humanity which makes him a delightful travelling companion or guide. No one should be deterred from reading the book by the knowledge that the author is learned. Most of the chapters are reprinted with slight changes from weekly or monthly periodicals, but the last chapter, on Dalmatia, seems to be published here for the first time. This and the chapter on Sicily are perhaps the most interesting of all.

—There is a fine old-fashioned flavor to the title of a recent publication by the American Unitarian Association, Boston, 'Pioneers of Religious Liberty in America: Being the Great and Thursday Lectures delivered in Boston in nineteen hundred and three.' Dr. S. A. Eliot, President of the Association, writes a preface, in which he gives some brief account of the "Great and Thursday Lecture" that originated with John Cotton and was maintained without a break down to 1775, and then suspended for awhile, to be revived at the conclusion of the siege of Boston, since which time, says Dr. Eliot, "it has had a continuous existence." If this statement is correct, the late O. B. Frothingham was much mistaken, and many have been led astray by him. In his biography of Theodore Parker he represents his father, Dr. N. L. Frothingham, as laying violent hands on the Thursday Lecture to prevent the further enjoyment of its opportunities by Theodore Parker. He says that the lecture died of that violence; that later an attempt to revive it was made, but without success. Be the facts as they may, it may well be doubted if before or since Theodore Parker's sermon the Thursday Lecture has been more honored in the observance than in these eleven lectures on well-chosen subjects, every one handled in an attractive manner, several of them by writers of special competence for their particular themes. Such, for example, are Edwin D. Mead, who writes of "William Brewster and the Independents"; Williston Walker, who writes of "Thomas Hooker and the Principle of Congregational Independency"; W. W. Fenn, who writes of Dr. Channing; Washington Gladden, who writes of Bushnell. Mr. Mead is never content with history that does not yield a lesson for the present time, and he draws out one here with much less complacency than Daniel Webster contemplating the appearance of Brewster at a New England Society dinner. Dr. Eliot's lecture on Phillips Brooks brings out in clear relief some generally neglected features of the great bishop's life.

—Without preface or index, but richly illustrated with half-tone reproductions of well-selected photographs, 'The Heart of Japan,' by Clarence Ludlow Brownell (McClure, Phillips & Co.), will disappoint readers seeking original knowledge of the country and people from one who might be supposed, from the title of his work, to be intimately and profoundly acquainted with the subject in hand. The sub-title, "Glimpses of Life and Nature, far from the Traveller's Track, in the Land of the Rising Sun," leads to great expectations. The author is a Fellow of the Society of Arts and the Royal Geographical Society, and member of the Japan Society of London. He has apparently been in Japan, and perhaps engaged in work and in residence there, for he talks about "our life on the west coast," and even mentions the provinces of Etchiu and Echizen. He gives pleasant glimpses of Japanese life in the interior and the ports, spelling his native words correctly, and using common phrases to express proper names, *e. g.*, Kono Hito (this man) and Sono Hito (that man). Nevertheless, it is a little curious that most if not all the local color in his word pictures is little else than a transference, with literary garnishing, of what has already been written and seen by the eyes of the authors of 'The Mikado's Empire,' of 'Noto,' and of the contributors to the Transactions of the Asiatic Society of Japan. The literary dressing does not and cannot cover up the original features of other writers. The author, having read well and reproduced with some literary decorations what has already been written by English and American residents and students, writes genially and attractively about gods, missionaries, earthquakes, trade, flowers, village life, and the ways of foreigners and natives. Like so many writers of the Sir Edwin Arnold type, he exaggerates, even to caricature, the honorific element in Japanese conversation. This is a delightful book to read for an hour, but its matter, while professing to be fact and experience, as no doubt much of it is, gives to an old dweller in Japan the impression of fiction.

—'The Tree Book,' by Mary Rowles Jarvis (John Lane), is the third volume of the "Country Handbooks Series." It consists of a few notes on trees obviously collected from the encyclopædia and put together with little attempt at system. The trees are not grouped in families, the ash being placed next the mountain ash, as though they were related; the chapter on forestry, advertised as "practical," is made up of vague statistics and even more vague advice. "According to forest fancies of all ages," writes Miss Jarvis, "the moon has much to do with the growth and prosperity of the trees. To do their best, they, with all other plants bearing fruit above ground, must be set out in the light of the moon. But if the timber is to 'dure,' it must be felled in the dark and waste end of the month." Miss Jarvis makes no attempt to supplement this sort of information by describing more modern methods. Her chapter on "How to Distinguish the Trees" is rather literary than scientific. To greet the inquirer with the information that the Stone Pine is, "in age, flowing and graceful," is to leave him much where he was. The photographs, which are numerous, are too impressionistic to be useful. One who knows a leafless walnut from a leafless sycamore will like these pretty groups; one who does not, will learn nothing from Miss Jarvis. The statement on page 101 that English ivy cannot be grown out of doors in America is refuted by the experience of many Americans, who find that, at any rate south of New York, it flourishes out of doors, and covers a wall more quickly than in England if well looked after in the first winters after transplanting. Miss Jarvis seems to think that on "Arbor Day" every American is moved by an irresistible impulse to plant a tree—an amiable delusion very flattering to us. A "series" of any kind always raises the question for what class of readers it is intended—a question more than ever unanswerable if all the "Country Handbooks" are written in the belated, drawing-room-table style of Miss Jarvis.

—Mr. H. Noel Williams, after writing the lives of Mme. Récamier and Mme. de Pompadour, turns his attention to an earlier century. His 'Madame de Montespan' (Scribners) is a large and beautifully printed book, which abounds with photogravures. We need not repeat the considerations that are urged in the preface to justify the publication of this biography, since it finds its best justification in the author's familiarity with good sources and his impartiality of treatment. No little sympathy has been lavished on Mme. de Montespan from the belief that she was a victim of Louis XIV.'s undoubted callousness. Such sympathy, however, is undeserved. To the world the manner in which a *liaison* of twelve years' standing was terminated may well have seemed abrupt if not crude. But in 1682 the world did not know that Mme. de Montespan, besides resorting to quacks and magicians, had actually sought to take the King's life. We say nothing either to extenuate or condemn her jealousy of Mme. de Maintenon, for that is a large question. It is enough to explain the King's action that he should have known of the connection between his mistress and people like La Voisin, Lesage, and Guibourg. Mr. Williams lays no claim to original research in the matter of the *Chambre Ardente* and the poisoning cases; but he has at least made himself familiar with the researches of M. Ravaisson and M. Funck-Brentano. The charities of Mme. de Montespan in her later years were very probably suggested by a genuine repentance—like those of Mme de Longueville. At the same time, the former had blots upon her career beside which the offences of Mme. de Longueville seem peccadillos. We may be quite willing to forget her arrogance and her treatment of La Vallière. The things which we cannot forget are her intercourse with the sorcerers, extended as it was over a period of nearly twenty years, and her personal participation in the horrors of the "black mass." Mr. Williams writes as an historian, and without any special prepossession in favor of Mme. de Montespan. He also shows, and this is a much more difficult matter, a good deal of *sang froid* in his judgment of Mme. de Maintenon. After all, the best thing which can be said of this book is that it is sincerely designed to be an historical essay, and is not prompted by a love of scandal. Mr. Williams's researches, though not profound, may be called adequate. He presents in an agreeable form the most re-

cent opinions which have been reached in France regarding the rôle of Mme. de Montespan at the court of Louis XIV.

PALGRAVE'S BANK RATE.

Bank Rate and the Money Market in England, France, Germany, Holland, and Belgium, 1844-1900. By R. H. Inglis Palgrave. E. P. Dutton & Co. 1903.

It is now thirty years since Walter Bagehot published his 'Lombard Street,' a book whose extraordinary merits were at once perceived, and which has become almost as classical as the 'Wealth of Nations.' From most of what Bagehot said there was no dissent, but his views of the duty of the Bank of England concerning the maintenance of the gold reserve were vigorously controverted. He showed that it was of cardinal importance to maintain a great banking reserve; that "whether the times of adversity are well met or ill met, depends far more on this than on any other single circumstance." He insisted that, under the peculiar conditions developed during a long history, the Bank had come to hold the ultimate cash reserve of the country; that it had become the "Bankers' Bank." It followed that the responsibility of the directors was of a very different nature from that of the directors of an ordinary bank, and that it was their duty to maintain a very much greater reserve; and he proved that, whether the directors liked it or not, the solvency of the Bank itself depended on their maintaining this reserve. It is, perhaps, not too much to say that Bagehot's argument was so conclusive as to cause financial men in this country to suppose that his recommendations must have been followed.

However, as we have intimated, Bagehot's conclusions were very offensive to some of the directors of the bank. Mr. Hankey, a banker of great experience, declared that the *Economist* (in which Bagehot's views were published) had put forth "the most mischievous doctrine ever broached in the monetary or banking world in this country, viz., that it is the proper function of the Bank of England to keep money available at all times to supply the demands of bankers who have rendered their own assets unavailable." Mr. Hankey said that the Bank would bear its full share of any drain, and that it should hold its banking deposits in the most available securities, reserving generally about one-third in cash; but he denied that it was either expedient or practicable for the Bank to keep money unemployed to meet the demands of those who found themselves embarrassed in times of panic. To this Bagehot replied simply that the reserve of the Bank *must* be used, or, at least, be regarded by the public as available, in times of stringency; otherwise the Bank would fail. Were it to stand aloof and let other banks fail, it, too, would be carried down. Its depositors would rush to get out their money, and when its cash was gone, its "available securities" would be useless. It could not realize on them; it could not sell even consols, because no one would have any money to buy them with.

It is difficult to believe that the directors of the Bank were not gradually influenced by Bagehot's unanswerable arguments, and it is probably the common impression, both in England and here, that the Bank maintains a greater reserve than formerly. This impression is not confirmed by Mr. Palgrave's book. The comparatively violent fluctuations in the discount rate of the Bank led him to investigate minutely the methods pursued in its management, with results which are not reassuring, and may even justify some uneasiness. The reserve of the Bank is smaller in proportion to its own liabilities than it was forty or fifty years ago, and it is far smaller in proportion to the liabilities of the other banks. It is provided by the Bank Act of 1844 that, as other banks in England and Wales cease to issue notes, the Bank may increase its own issue to the extent of two-thirds of the amount retired; and these new notes are issued against securities, not gold. Since 1880 these securities have been increased by £3,175,000. In 1879 the notes issued were about £49,000,000, and the gold about £34,000,000. In 1902 the issue of notes was £316,000 more and the gold held £2,858,000 less. The number of banks, or banking offices, in the country has increased from probably less than 1,000 in 1845 to 6,700 at present, all depending ultimately on the reserve of the Bank; and the great increase in the Scotch and Irish circulation, as Mr. Palgrave shows, causes large demands on the reserve.

It is obvious that a small reserve implies severe fluctuations in the rate of discount. The amount of the reserve will be watched anxiously, not only by the Bank directors, but also by the public, and if it declines there is no other way to restore it but to diminish loans by charging more for them. Such fluctuations, Mr. Palgrave shows, are injurious to trade, and especially to trade carried on with conservative methods. He observes:

"Great instability in the rate of discount is a very prejudicial thing to the interests of commerce, and hence to those of banking. The close competition between one country and another renders it a far greater danger to our business now than previously. A supply of capital at a fairly low rate, and at a rate which may be expected to remain tolerably constant, is as important to trade as a steady supply of food and other necessaries of life to every one, and of the materials on which he operates to the manufacturer. Instability in the rate for money tends to render the results of trade more uncertain than they otherwise would be, and is sufficient even to prevent business enterprises from being entertained which otherwise might be carried out to the advantage of the country. The chapters which follow show how much more equable the rate of discount has been at the Bank of France and at the Bank of Holland than in this country. Nearly the same may be said of the rates in Belgium and in Germany, although in Germany a higher rate has been charged than in this country; in the three other countries named the rates have not only been more equable, but they have been lower."

The great interest taken in the weekly return of the Bank is explained by these remarks. The relation of reserve to liabilities, and the probable demands on the reserve, form the basis of most of those calculations which are continually being made by men engaged in business as to the movement of the Bank rate of discount. It is reasonable to expect that the form of the Bank statement should steadily improve; that it should convey more and more information to the public. Unfortunately, a different policy has been adopted. No figures are now published of several details, such as the temporary advances made by the Bank, or of the bills discounted, or of the amount of the balances kept by bankers with the Bank both in London and in the provinces.

What gives these omissions a sinister aspect is the fact that they are of comparatively recent occurrence. Up to the time when Bagehot wrote, and for a year or two after his book appeared, a great deal more information used to be given. After 1875, the amounts of the bills discounted and of the temporary advances, which had been uniformly given from 1844 downwards, no longer appear, and since 1877 the London bankers' balances have been altogether left out. Hence, as Mr. Palgrave says, since 1878 down to the present time "bankers are absolutely ignorant of matters which are of the highest importance to them. Every bank knows, of course, its own balance, and occasionally the amount of that of one or two of its neighbors, but there is no general knowledge of the amount of the collective balances of the bankers standing to their credit at the Bank of England as a whole." The enormous extension of the banking business makes it extremely desirable that every safeguard be strengthened, and that every available source of knowledge should be utilized. The private banks have recognized these conditions. When Mr. Palgrave began his inquiries, in 1877, he was told that it was impossible to ascertain the details of the operations of the banks. No private bank then published its accounts; now their practice is more enlightened. That the Bank of England should have adopted the policy of giving less information than formerly makes it doubtful if Bagehot's arguments and warnings have been so effective as has been generally supposed.

It is true that the capital of the Bank is very large; but its deposits have increased enormously. As late as 1870 the average deposits did not much exceed the capital; they are now nearly four times as large. The reserve has increased, but not to the extent of the liabilities, and the most dangerous of these liabilities, the bankers' balances, had shown a very great increase when the Bank ceased to disclose its amount. We only know that whereas this item was less than one million pounds in 1844, it had become nine and a half in 1877. In 1844 this liability was only 11 per cent. of the total reserve. In 1866 it was 93 per cent., and it was more than 75 per cent. in the years 1873-77. Probably these deposits have very greatly increased since that date. They are a dangerous liability because they are the "till-money" of the banks—the money which every bank must keep on hand to meet the checks that are presented over the counter, and the demands of its customers for cash. This money is kept with the Bank of England, and it cannot be regarded as a reserve. It must be available to meet sudden demands. Against it the Bank holds a vast amount of "other securities," the nature of which it does not disclose, while there is reason to believe that the quantity of "bills discounted" has relatively diminished. Mr. Hankey, in his book on banking, quoted the remark of a relative of his, C. Poulett Thomson, to the effect that nothing was easier to conduct than the business of a banker "if he would only learn the difference between a mortgage and

a bill of exchange." It would be reassuring to know that the directors of the Bank of England are keeping this lesson in mind.

Mr. Palgrave's tables bring out the fact that on many occasions the bankers' balances have equalled, and sometimes exceeded, the reserve. This tendency is progressive. Between 1844-53 this excess occurred once; between 1854-61, eleven times; between 1862-69 twenty-one times; between 1870-77 twenty-eight times. After 1877 the reports of the Bank cease to give this information. The last report which gave it showed that "the reserve available against the ordinary as distinguished from the banking portion of the liabilities was less than three millions instead of eleven and one-half millions, and that the proportion of this reserve to the liabilities on deposits other than those derived from the bankers, instead of being 57½ per cent., as the annual statement makes it, was only 23½ per cent." Whatever view we take of this, it is evident that these balances cannot be both the reserve of the Bank and the reserve of the bankers. It is estimated that the liabilities of the bankers have increased from about seventy millions in 1844 to one thousand millions in 1902. Practically the only reserve of cash that is kept against these enormous liabilities is the reserve of the Bank of England. No doubt, as was explained by Mr. Gibbs—afterwards Lord Aldenham—a certain part of the bankers' deposits with the Bank is never disturbed; it is necessary for the transaction of their daily business. But whatever is above this minimum may be called for, and called for suddenly. In 1876 these balances fluctuated nearly ten millions between their lowest and their highest point; and this ten millions could not properly be regarded as part of the normal reserve of the Bank.

The Bank announced in 1878 that it would not feel bound to adhere strictly to its published minimum rate of discount, and it has more recently adopted the practice of rediscounting bills. It seems that for more than a century prior to 1839 the Bank rate never rose above 5, nor fell below 4 per cent. It followed that the Bank did a very small business in discounts; in 1844 it held only £113,000. Thereafter the Bank adapted its rate more nearly to that of the market, and by 1848 it was believed to hold half the discounts then outstanding. Of course the number of alterations in the rate of discount has increased, and it is evident that at present the power of the Bank to fix the rate in the market is much less than formerly. Mr. Palgrave makes some valuable suggestions concerning the government of the Bank and the methods of determining the rate for money, but we cannot comment on them further than to say that they are in the line of Bagehot's recommendations. When we regard the fluctuations in our own market, those at London, however exaggerated by unscientific methods, seem very tolerable. But as the London banks agree on the rate to be allowed on deposits, they might easily fix a discount rate; and our own experience shows that publicity is nothing to be dreaded by sound banks.

Many interesting matters besides those which we have mentioned are discussed in this valuable essay, but we can only allude to them. In the midst of our clamor over the dearth of paper money, it is impressive to be told that the total note circulation of England and Wales was in 1900 only two millions greater than in 1844, although the coin in circulation has increased probably seventy millions. But the wisdom of suppressing the notes of the country banks is open to question. Some very instructive comparisons are drawn by Mr. Palgrave between the conduct of the Bank of England and that of the great banks of the Continent; and his work is based throughout on elaborate tables of figures. We have said enough to indicate the character of this treatise to the very intelligent class of men engaged in the banking business in this country, and we trust that it may receive a critical examination. Its theme may appear remote; but the principles involved are fundamental in any financial system resting on credit.

HOBSON-JOBSON.

Hobson-Jobson: A Glossary of Colloquial Anglo-Indian Words and Phrases and of Kindred Terms, Etymological, Historical, Geographical, and Discursive. By Col. Henry Yule, R.E., C.B., and A. C. Burnell, Ph.D., C.I.E. New edition. Edited by William Crooke, B.A. London: John Murray. 1903.

Col. Sir Henry Yule, geographer, biographer, historian, scientist, editor, diplomat, engineer, soldier, poet, humorist, Indologist, was the main maker of this book; a great scholar and a many-sided man. Few knew so well the geography and travels of the Middle Ages and of the age of modern discovery in relation to Asia. It was Yule who edited 'The Book of Ser Marco Polo' (1871 and 1875), and authored its varied wealth of note and comment. It was Yule who reduced Sir John Mandeville, "the Father of English prose," to his true status as a translated myth, the fictitious hero of a French romance patched up from old travels and old fables. These were good preparations for the present opulent book. Yule had as a chosen associate Dr. Burnell, a man of wide learning, especially versed in the ways and tongues of Southern India, who died four years before the book first appeared, in 1886. Three years later Sir Henry Yule departed this life. And now, after seventeen years, the work appears in a new edition, rightly without change in the original text, but with many notes of correction and addition, and many new articles, by the competent hand of Mr. William Crooke, the author of several works on the ethnology and folklore of northern India, who has had the coöperation of many willing scholars in this multifarious task. The work is more than ever a monument of science and history. It is truly a thesaurus, a treasure out of which a man may at all times bring forth things new and old.

It is a discursive enclycopædia. Colonel Yule, with the modesty of merit, called it, under the truth, "a colloquial glossary," and then, with characteristic humor and with good literary instinct, chose as the leading title the peculiar Anglo-Indian phrase "Hobson-Jobson." No one who has not seen the book—or has not learned from other sources something of the devious ways of Indian words in European mouths—can appreciate the full significance of this happy title. Let it suffice here to say that "Hobson-Jobson" is in its first state ("Yā Hasan! Yā Hosain!") a Mohammedan festal cry, and in its later stages ("Hosseen Gosseen, Hossy Gossy, Hossein Jossen, Hobson Jobson"), the British soldier's gradual improvement and subjection of that (to him) unmeaning foreign jabber. In its ultimate form, "Hobson-Jobson," it may be said to reflect in one phrase the British soldier's notion of the peoples, customs, religions, and languages of India. The phrase, we are told, is passing out of use, in its military application; but it will continue to live as the doubly allusive title of this varied summary of India, and as a happy term for the frequent derangement of epitaphs which marks the contact of two different civilizations, one of which essays, like a python, to squeeze and engorge, or, to use the diplomatic word, to assimilate, the other. In this latter sense it is used in Edward E. Morris's partly similar work on Australian words and things, 'Austral English' (1898).

The plan of the book is simple and scientific. The subject is India, or South Asia, as seen by Europeans; its natural history, geography, ethnology, custom, philology, in summary, as they are encountered or sought or needed by the English or European reader or traveller. The facts are numerous, of all ages and kinds, recorded in many languages. They are stated, each by itself, or in small groups, in "the most senseless and fit" order, the irrational, impersonal, undisputed order of the Roman alphabet. A systematic statement in the form of a chaptered history would have been unhappy for the purpose. What is wanted is the facts, clear and compact. History in the literary form is often a device for omitting most of the facts. Each article in this book, as a rule, contains a definition or a discourse, with etymology and usually some note or anecdote. Then follows the chain of history in the form of quotations set in chronologic order.

The quotations are historic, illuminating, apposite, from various sources, ages, languages, from forgotten or recondite books, out of deserts of prose or the *hortus siccus* of dead notions. This kind of quotation is science, not mere compilation. It is no such easy task as composition. The learning, the imagination, the insight, the memory, the judgment, required to find, understand, appraise, select, arrange, and print such chains of quotations as abound in this work, and, for another example, in the 'Oxford English Dictionary,' far surpass the mental equipment of the average novelist or poet. The average novelist is, indeed, sometimes more entertaining; nor do we despise these mitigations of literature. Better, saith the Philistine reader, is a dinner of herbs where fiction is, than a stalled ox and science therewith. But why not both? There is both science and entertainment in Yule's long arrays of quotations. The range is vast; the variety is great. Under the important rubric, "India, Indies," for example, the chain begins with the cuneiform inscription (translated) on the tomb of Cyrus (dated B. C. 486), and proceeds with Herodotus (B. C. 440), Megasthenes (B. C. *c.* 300), Arrian (A. D. *c.* 140), Hwen-T'sang (A. D. 650), a series of Hindu and Arabic writers, and at length the modern Portuguese writers, Barros (1552-1613) and Camoens (1572). Then, for other phases of the subject, the editor

harks back to Hwen T'sang, cites Marco Polo (1298), Friar Jordanus (*c.* 1328), Shakspere (*c.* 1601), Pinto (1614), Morier (1826), then Linschoten (1598), and so on, some twenty-nine writers. Then, under "Indian," follow citations from an Anglo-Saxon poem, Shakspere again, the first book of Maccabees, Polybius, Livy, Athenæus, Elphinstone. It is usual to praise this sort of thing as "industry," as it were an humble, drudging virtue, suited to plodding minds, to the tortoises of literature. But let the hares try to do the like!

Hundreds of the articles invite philological remark. We venture to offer additions or solutions in a few cases: The article upon "Dhow, Dow," the name of "the old-fashioned vessel of Arab build," familiar to English readers in connection with the attempts to suppress the slave trade on the East African coast, discusses the etymology without conclusion. A Persian-Arabic form is cited (*dāo*), but the Arabic status is doubted. The form is certainly entered in some Arabic dictionaries (*dâw* in Steingass, 1884, p. 351), and it is certainly not "native" Arabic. Is it not native African? It is found just where it is needed, in the Swahili, or "language of the coast" of East Africa. Krapf, in his 'Dictionary of the Suahili Language,' 1882 (p. 47), citing Bishop Steere as authority, enters *dau*, and defines it as "a native boat, sharp at both ends, with a square mat sail. They are the vessels of the original inhabitants of Zanzibar, and chiefly bring firewood to the town from the south end of the island." The Swahili language contains many boat names, some Arabic or Indian; but *dau* appears to be native. A language must have some native words. The correct English spelling is, as Yule notes, *dow*, rather than *dhow;* or, better, simply *dau*, the form used by Sir Harry H. Johnston of Kilima-njaro and okapi fame ("The Kilima-njaro Expedition,' 1886, pp. 25 and 318).

Under the title "Suclât, Sackcloth, etc.," a multiform name for a multiform cloth, at one time embroidered silk, but in its later use applied to European broadcloth, the many forms are cited, and different etymologies are proposed, without result. But the solution is not far to seek. *Suclat*, Chaucer's *siclatoun*, the modern *scarlet*, are all concerned. The Anglo-Indian *suclat*, *suklat*, *sooklaat*, (Telugu *sakalāti*, Canarese *sakalātu*), represents the Persian *suqlât*, *siqalât*, *saqalât*, Arabic *siqillât*, beside *sijillât*, particolored linen, and this is merely the Middle Latin *sigillatum* or *sigillata*, "figured cloth." We read in late Latin of *tentoria sigillata*, "particolored tents," and *serica sigillata*, "figured silks." Cicero spoke of *scyphi sigillati*, "figured or reliefed cups," and we may speak in English of pottery or other things as "sigillate," that is, "sigilled" or "sealed," stamped or marked with a figure. The L. *sigillum* itself has penetrated into Arabic, Turkish, Persian, and Hindustani. The Arabic word appeared also with Arabic suffix as *siqlâtûn*, Persian *siqlâtûn*, *saqlâtûn*, whence Old French *siclaton*, *ciclaton*, *siglaton*, Middle English *siclatoun*, *ciclatoun*, etc. Further, the Arabic word, as of foreign origin, took a popular twist, perhaps under Mediterranean influence, and as *saquarlât*, Persian *saqirlât*, Turkish *iskerlât*, gave rise to Italian *scarlatto*, English *scarlet*, etc. Finally, the Anglo-Indian *suklat* took on sometimes the melancholy guise of *sackcloth*, in which one sees no glimpse of *scarlet*. It is worthy of notice that the original meaning here ascribed to *suklat*, *siclatoun*, *scarlet*, namely, "figured cloth" (and hence "colored cloth," and even "whole-colored cloth"), is paralleled in the meaning of another Eastern fabric, *gingham*, which, according to Scott, cited in this edition (p. 376), meant in Malay and Javanese "striped cloth." Fabrics that are figured or striped, or highly colored, are likely to receive names of such meaning (*brocade*, *check*, *blazer*, etc.); and any fabric name, in a continuing trade, is likely to pass over to other fabrics (*flannel*, *merino*, *linen*, *silk*, *wool*, *felt*, etc.).

The lover of sports will find here that strange word *gymkhana*, which, we are told, is a factitious word made in the Bombay presidency out of the English *gymnastics*, cut down (as our American boys and girls in college cut down *gymnasium)* to *gym*, with *khana*, "probably based on *gend-khana* ('ball-house'), the name usually given in Hind[ustani] to an English racket court" (p. 406). From *gymkhana*, through "gym suits," one's mind passes to pajamas. These familiar, not to say *négligé*, articles are of Anglo-Indian origin. They are in this book under the spelling *pyjammas* (p. 748). This represents the Hindustani form *pâe-jâma*. Our American spelling accords better with the Persian *pâ-jâma*. The name means, with as much elegance as the circumstances and the liberal fit permit, "leggarment."

There are many amusing stories and quotations. One (p. 601) is of "a very gallant Governor-General" who said that "he had found it very tolerable, on a sharp but brief campaign, to 'rough it on chuprassies and mussaulcheés.'" There is a joke here, but it requires a diagram. The Governor-General meant, "rough it on chupatties and mussalla." When we add another diagram, and explain that while he meant to say, if we may paraphrase the sentiment into Western idiom, that he really enjoyed eating hardtack and molasses, he did say that he enjoyed eating cooks and sutlers, the joke is fully revealed. By this process one can elucidate the most difficult jokes. Such confusions of similar words are of course inevitable in all frontier "Hobson-Jobson," and are doubtless latent in many unsuspected passages in ancient literature as transmitted to modern times. In other articles we meet the lady who, in time of danger, "left our own compost," meaning our own "compound" or station (p. 243); the clergyman "who spoke of the deposition of 'the bloody Punjaub of Lahore'" (p. 742); and the poet (Browning) who twice takes *nautch*, a dance, for a dancing-girl (p. 620). What would the poet make of a *poggly nautch*, which is a name for a fancy-dress ball? It means a fool's dance. And speaking of *poggle* ("a fool, a madman, an idiot"), experienced persons will see something apt in "the native name for a regular picnic," which is, according to Lady Dufferin, "*poggle-khana*, that is, a fool's dinner" (p. 717), but more literally "a madhouse," "a lunatic asylum."

A few verbal errors still need to be corrected. The name of Blumentritt, the Philippinologist, misprinted "Blumenroth" in the first edition (under *bobbery-bob*, p. 76), remains unchanged in the new edition (p. 101). The name of Whitney is unluckily printed "Witney" (p. xlvii), and the name of the book cited is given as 'Oriental and Linguistical Studies'; it should be "linguistic." Americans generally prefer the simple forms in *-ic* (biographic, biologic, etc.), and some make a crusade against the forms in *-ical*. As for the slight inconsistencies and omissions in the transliteration of the mazy alphabets of the East, we make no account of them. In a future edition a systematic recension of the words and transliterations by a few professed philologists, Indic and Semitic, would lead to a finer accuracy; but there is no harm in casual inconsistencies of spelling and print. They do not worry readers who have souls.

It is a fact of much significance that this admirable work of historic research, of scientific importance, of philologic value, was made by a British soldier and a member of the British civil service. It is one of a thousand works of respectable scholarship produced in the military atmosphere of the British empire. At the best such works are but a small residue of permanent science and humane learning left from the grinding of the military machine on which such huge sums are spent. The military machine of the United States is now demanding even huger sums. Are we getting any fair residue of science and humane learning from this enormous military expenditure? It were a great gain to secure a fixed percentage—say, 5 per cent. to science and humane learning and humanity, and only 95 per cent. to the Juggernaut of war. In time the percentage devoted to good works might be increased to 7 or even 10 per cent.

THE PRICE OF EMPIRE.

Principles and Problems of Imperial Defence. By Lieut.-Col. Edward S. May, C.M.G., R.A., Professor of Military Art and History at the Staff College. London: Swan Sonnenschein & Co.; New York: E. P. Dutton & Co. 1903.

Prior to the late war with Spain, an American had but little interest in the questions so ably discussed in this book. Happy and secure behind a double line of defence, the outer held by the navy, and the inner by the army, he could look out upon the world from the shelter of that strongest of natural military positions, a geographically self-contained area bordered by friendly neighbors and an equally friendly sea, and he could pity the unfortunates upon whom fate or their own folly had imposed the necessity of keeping armed to the teeth, in constant readiness and in constant dread. Six years ago he might possibly have glanced at the title of Col. May's work, and he certainly would have tossed the volume aside, thanking God that he was not as other men are—forced to study such grave problems, and to provide against the stern eventualities which these problems suggest. How different is his position to-day! In the South Pacific, he sees the flag of his country flying over far-distant Tutuila in the Samoan Group, where the likelihood of trouble with the natives there and with the Germans on the adjacent islands combines with the establishment of a useless coaling station (costing half a million of dollars) to make him inquire what he should do in the event of hostilities, and whether the place itself is worth the expense

of holding. In a lesser or greater degree, the same annoying queries arise as he turns towards Porto Rico, Hawaii, Guam, and the Philippine Islands, and he perceives with an illumininating flash of comprehension that his new burdens are the same as those which his British brother bears not of choice but through dire necessity. If he be both thoughtful and patriotic, he will consider the advantages and disadvantages of retaining these over-sea possessions, as well as the moral obligation to keep them which, it is freely asserted, we have incurred, and he will further seek to know what steps must be taken to preserve our footing and control. To such a reader, 'Imperial Defence' will be extremely useful, for it makes clear how the thing is to be done, and it explains, for England, the manner in which the existing state of affairs was brought about.

In these days of unreasoning aspiration after world-power, of blindness to the real greatness which lies within our natural borders, of chasing the will-o'-the-wisp of bigness across wide stretches of ocean, of pushing our military outposts into a region where international jealousies bid fair to break out at any moment in open war, and to involve us in quarrels with which we have no part or lot except of our own choosing, it is both timely and refreshing to be reminded by the voice of history, speaking through a student abundantly qualified to interpret her teachings, that success has never crowned the efforts of the colony-builder except when the merchant and the trader preceded the soldier and the sailor. "In the case of England, commerce was the germinating power which called our many resting-places on the water into existence." This was true in the times of Tyre and Carthage; it was true when Genoa and Venice held the palm of commercial and naval supremacy; and it was true when Holland outgrew her narrow confines. England's astonishing over-sea expansion and the equally impressive colonial failures of France and Germany bear further witness to the same immutable law. "It was individual effort and private enterprise that built [England's] foundations, and our Government has usually followed, often hesitatingly and anxiously, where its citizens had led the way fearlessly, vigorously and wisely."

The sequence, as Colonel May traces it, is simple and logical. A hardy race of islanders takes naturally to the water, to fishing and trading. So the sea habit is formed and commerce is established. Soon the merchant extends his operations to more remote shores, planting his "factory" or trading-post in distant corners of the world. About it cluster other kindred interests, and ere long the monarch is called upon to furnish defence against land attacks on the one hand and protection to the ships which maintain trade and communication with home on the other. When a colony is actually born, the Government is asked to adopt a new child into its family of dependencies, and to assume the responsibilities of foster parent, not the least important of which is the obligation discussed in the pages of 'Imperial Defence.' Such a colonial policy, the result of individual effort rather than of ministerial design, necessitates a special provision and disposition of the national forces. In this respect, Englishmen enjoy one great advantage over foreigners: they know exactly what is essential to their well-being, if not, indeed, to their existence as a nation, and in the light of that knowledge can plan and execute without hesitation, while Germans, Frenchmen, and Americans cannot tell at what moment a change of ruler or administration may put an end to a state of affairs abroad which is lacking in naturalness, so to speak, and thus may reduce the problem of national defence to its simplest terms—maintaining the integrity of the home borders.

For the present, at least, like the English, we too have outlying possessions and garrisons to be supplied and protected; we too have long lines of exposed communications to defend and keep open; indeed, our military requirements so closely resemble theirs that we too may be said to have our problem of Imperial Defence. In a general way, our plans must be modelled after theirs, but our task will be simpler, however arduous. It requires no gift of prophecy, no analysis like Jomini's, to appreciate the part which the Philippines are to play in our next war with a civilized Power. This part will inevitably dwarf all others into insignificance, for the conditions are ideal—the military occupation (in the midst of a large and hostile population) of an extensive and most difficult territory, seven thousand miles distant from the base, with a line of communications to preserve long enough to reach nearly one third around the globe. "This is our weakest point," we shout to an amused world, "come, butt us here!" Few of us realize the gravity of the situation or the awful possibilities which it involves.

Whether or no we fully understand our responsibilities, as a world power, we ought, as good citizens, to fit ourselves for the new sphere upon which we have, so heedlessly, entered. So far as the matter of defence is concerned, no better general guide can be found than Colonel May. Belonging to the school of Colomb, Mahan, and Sir George Clarke, he emphasizes the necessity of an adequate navy. "We should measure our strength with that of the two sea powers next in importance to us," for the

"navy must keep the highways of the ocean and communication of the Empire always open to us, and must acquire, as early as possible after war breaks out, such a mastery over the fleets of our opponents that it may be possible to send our land forces on expeditions across the waves. When the navy has done that, it will have attained what we know as command of the sea; and until it has established that essential condition in all schemes for the defence of the Empire, the task it is called upon to execute will remain unperformed, and the army must stand and wait for its accomplishment."

Passing to the "function of the army," it is impossible to avoid noting the facility with which Col. May's conclusions may be paraphrased to suit our own needs, thus:

"We find, then, that we may summarize the function of the army in our scheme of Imperial defence in the following brief paragraphs:

"(1.) To defend India [the Philippine Islands] and our colonial possessions which are without local forces of their own.

"(2.) To hold the naval bases throughout the world which supply our ships with coal, stores, and ammunition; provide them with facilities for refitment or repair, or give them shelter when menaced by superior force—and this, when we are at war with a great power, will form a duty hardly second to the first named.

"(3.) In minor wars to furnish a compact, easily transferable force to provide punitive expeditions or forces to deal with the savage races with which we may come in collision.

"(4.) When we are engaged with more formidable antagonists, to place at our disposal the equivalent of three army corps, with cavalry in addition, with which to reinforce the troops defending India or our Colonies [Philippine Islands. Porto Rico, etc.], or to take offensive action as may be needed beyond the seas.

"(5.) To ensure the presence of such troops at home as may provide drafts and reinforcements to those abroad.

"(6.) To give security and confidence at home and enable our ships to operate where they will."

A few years ago this extract would have meant absolutely nothing to the American reader; to-day it is full of sinister significance. In view of this significance, we are led to doubt the wisdom of maintaining so small an army as ours. According to Col. May:

"In the present state of politics and armaments all over the world, three army corps and a cavalry division ready for immediate mobilization do not constitute a force which in common prudence can be termed excessive. Behind these first three army corps, three others, largely composed of our auxiliary forces, are to be organized to furnish drafts and train troops in war time for our establishments abroad, provide for home defence, and reinforce our armies engaged with the enemy. In addition, provision for garrisons and mounted infantry in the shape of yeomanry will also be made."

Translated into figures, this means about 135,000 men under arms on a peace footing, with as many more in the first reserve. There is no possible use in shutting our eyes to facts. Imperialism is the most costly enterprise a nation can embark upon, and those who are unwilling to pay their scot should withdraw from the game.

Our author, in emphasizing the importance of naval bases and coaling stations in the general scheme of defence, points out the unavoidable, yet considerable, demands for protection which they make upon the sum total of the nation's armed strength. Their bearing upon political questions is unmistakable. It will startle some Americans, after reading, "In the West a momentous change in the great routes of the world is about to be made. When the Isthmian Canal is cut, the highway of the world's trade will run east and west through the Caribbean Sea," to be told that

"It will not matter, when war comes, who has fortified the new canal, or who may levy tolls there, or in whose hands its possession is supposed to rest. The batteries that may protect the passage will not give a ship security that steams beyond their range. The country which commands the sea will dominate the outlets to the ocean, and that power which can keep a squadron superior to those of others in the neighborhood will control the passage of the waterway."

Have we really neglected a vital factor in our complacent calculations?

The rule of the seas necessitates ownership of the cable communication across (or rather under) them, with the attendant obligations of defence. Here, again, for England, commerce and war are alike interested. To her private companies belong no less than 114,000 out of a total of the 193,000 nautical miles reported in June, 1901. These cables secure to the British Government a priceless advantage over its enemies.

We need only glance at Col. May's chapters on "Our Food Supply in Time of War" and "The Protection of Our Commerce." The first will give us no concern, and we have no commerce to protect. To whom, we wonder, does he refer when he says:

"We have never deliberately organized a navy either to develop or protect our commerce. Of late years, in certain countries, quite a different policy has been set on foot. The strong navies are being built up to protect the commerce, not only that is, but that is to be, or there may be ulterior motives beyond the mere protection to commerce."

We notice one curious error. "During the Spanish-American war, the *New York*, a merchant vessel, flew the flag of Admiral Sampson"; and we suspect that the author, in discussing "The Protection of Commerce," has failed to profit by the classical essays of Sir John Colomb, wherein, among other things, the latter suggests guarding the points where the great trade routes intersect. Nor can we admit for a moment that, during the war with Spain, "the long coast line of the United States was notoriously inadequately defended." Panic along shore there was, there always has been, and there always will be. Panic, always unreasoning, lacked every excuse for being in this instance, since our coasts were in a satisfactory, if not perfect, state of defence. This subject was thrashed out at the Naval War College three years ago, and the army cleared of the grave charge of neglect and unpreparedness which had so lightly been brought against it. But a lie dies hard.

In the concluding chapter, "Organization for Imperial Defence," Col. May advocates the creation of a great general staff in London, through which the resources of the whole empire, of whatever nature and provenance, may be utilized in war time. "The coöperation of the services is, indeed, the cornerstone of Imperial defence; coöperation, above all, in the council chamber."

Col. May's style is vigorous at all times, if not always beyond criticism. His sanity of view prompts such expressions as, "Strategists are fond of indicating certain places on the map as dominating points, the possession of which would confer on their owners a kind of supernatural power over and above what their numbers and armament may bestow. . . . The ocean is, in fact, nothing but road, and the right of the road falls to him who is strongest." His integrity of purpose and his broad-mindedness are reflected in his constant recognition of the predominating part which the navy should assume—"Imperial strategy demands naval supremacy as a first postulate in our schemes of defence"; and his patriotism in his appeals to his countrymen to pause and consider while there is yet time. Americans ought to be grateful for so frank an exposition of the real significance of the important movement upon which they have entered, and for the counsel and warning which this most interesting and readable book so generously offers.

Warwick Castle and Its Earls. From Saxon Times to the Present Day. By the Countess of Warwick. With two photogravure plates and 172 illustrations. Two vols. New York: E. P. Dutton & Co. 1903.

This is a work which it is not easy to describe and criticise in a short notice. Lady Warwick has made excursions into the field of serious historical literature without giving one the impression that her studies of Clark, Pollock and Maitland, and Round are much more than excursions. She has drawn heavily on the 'Dictionary of National Biography,' as she could not fail to do, but one may doubt whether she has followd up its bibliographies with much thoroughness. Judged strictly as an historical writer, her main advantage comes from an unrestricted access to the archives of Warwick itself. Thus, she is able to print for the first time a striking letter of Nelson, written on September 3, 1805, to George Greville, Earl of Warwick. "On board ship," says he, "our wish is to get as close as possible, by which I think we suffer less and the Enemy [more] than by long shots, and I always endeavour to inculcate the doctrine *get close* and you will be a Victor." While everyone is familiar with this feature of Nelson's tactics, such a precise statement from his own pen and almost on the eve of Trafalgar is not without interest.

It may seem ungrateful and ungracious to begin by pointing out what seems to us the chief limitation of Lady Warwick's book. At the most, it wears the guise of erudition without being very profound. At the best, it is marked by sprightliness and more than an ordinary share of individuality. Lady Warwick is not afraid to write in the first person, nor to give sketches of her contemporaries when she is bent on drawing an historical analogy. Fulke Greville reminds her of "Owen Meredith," and Robert Greville, Lord Brooke, suggests Mr. John Morley, who is spoken of with much sympathy. "He has displayed Mr. Chamberlain's vigor without his inconsistency, and Mr. Balfour's cleverness without his hesitation." Lady Warwick also shows that, besides raciness of style, she possesses a fair share of historical disinterestedness. This quality appears, for example, in her appreciation of Mary Rich. "She was really a very interesting woman," says Lady Warwick, "though one cannot help feeling that one would rather not have seen too much of her." This is the sentence with which the sketch begins. But the closing passage strikes a different note: "It was a beautiful life and a beautiful death for those who have the sympathy and the imagination to see it."

We once came across the following sentiment from an American in the visiting-book of the "Warwick Arms Hotel": "The Middle Age had its castle for the one, the Modern Time has its homes for all." The grandiloquence of this outburst was probably due to the deep effect which the majesty of Warwick produced on the mind of the writer. At any rate, there can be no doubt that it is a national monument, in the best sense of that hackneyed phrase. Lady Warwick indicates the difficulty of her task by saying that the history of the Castle "is bound up indissolubly with the history of England." Were it necessary to illustrate this fact, attention might be called to the national character of the sympathy which was elicited by the great fire of December, 1871. As it is, the legends of Guy of Warwick and Godiva; the authentic deeds of the Beauchamps, Nevilles, and Dudleys; and the more modest but still important annals of the House of Rich and the House of Greville, centre in this one historic spot. The mere beauty of Warwick, apart from its associations, has endeared it to thousands of American tourists, some of whom will be sure to welcome the present work.

Lady Warwick has given her two volumes a handsome dress, although they are rather heavy to hold and are printed on paper of the highest glaze. The illustrations are numerous and well chosen. The collections of the Castle itself furnish many of the subjects, and the rest are drawn from excellent sources. We must not neglect to state that in the second volume (pp. 766-768) will be found a list of his own achievements which was written by George Greville, the second of the Greville Earls of Warwick. As a record of personal exploits we know nothing quite like it, except the *Monumentum Ancyranum* wherein the Emperor Augustus describes the benefits conferred by him on the Roman world.

A History of the Mississippi Valley, from its Discovery to the End of Foreign Domination. By John R. Spears, in collaboration with A. H. Clark. With facsimiles, illustrations of historic places, maps, and portraits. New York: A. S. Clark. 1903. Pp. 416.

Few monographs have appeared covering the whole valley of the Mississippi from first to last while under foreign control. The topic has seemed too huge, as Jove's bolt was too heavy for thievish Mercury to lift. De Soto first of Europeans saw that supreme river in 1541, and his route from Florida had been overland and westward. Pushing further west into the terra incognita, he became exhausted, returned to the river, and, while preparing to sail down it, died and was entombed in its waters. His men, who had dwindled from an army to a handful, brought home such tidings that Spain, although by papal bull king of the continent, for almost two centuries gained no foothold on the continental river. Hence La Salle, in 1682, having canoed it from the lakes to its mouth, claimed for France its whole watershed, now ascertained to exceed a million square miles. The French tenure of this valley, though it lasted fourscore years, was military occupation rather than peaceful settlement. Fur traders outnumbered farmers, while both, together with mechanics, were fewer than soldiers, adventurers, and wood rangers, who sunk themselves and the savages still lower. In 1763 this matchless valley was lost from brim to brim by France—the western half secretly ceded to Spain and the eastern yielded to England as spoil of war. Two decades later, the eastern portion, having been largely conquered by Americans, was surrendered to them at the recognition of their independence. Trans-Mississippi, having been handed back from Spain to France, was sold by Napoleon to the United States April 30, 1803, just fifty years after fur dealers had fixed their local habitation where St. Louis now stands.

These matters of common knowledge have touched the world at vital points, and of course have become the themes of manifold volumes in both hemispheres. Interest in them, which was doubling while the St. Louis Exposition's coming was shining afar off, will spread during its splendors and outlast them, even if Mississippi pearl fisheries should not, as is now hoped, eclipse Ormus and Ind. Accordingly, average readers

abroad as well as at home demand such a history in size and substance as Messrs. Spears and Clark have just supplied. The work of these writers, if not less pretentious than some others, is less prolix. Its pages are scarcely one-fourth as multitudinous as those of Roosevelt's 'Winning of the West,' and to him as a veteran author on a similar topic this latest volume is dedicated. From him, too, and others, these later heralds have borrowed thunder without much acknowledgment, or, alas, even accuracy. The purpose of Mr. Spears, whose name for brevity we use to represent his junior partner also, or the joint firm, was to eschew swelling up into that big book which as a big bore is passed by on the other side by the generality of readers. His single volume, though more than a three-pounder, thanks to cheap paper, has only four hundred large-type pages and a fourth as many of index, facsimiles, portraits, and especially sketch-maps from recondite sources, which furnish welcome object-lessons. A part of them, however, though they make up a show, we wish had been more thinly scattered, or reformed altogether into a better grade.

The handiwork itself is naturally, perhaps necessarily, rather of selection than of research, yet Mr. Spears has made the material his own by a style which stamps it with his own personality—a bit flavored with Carlyle. In treating of the successive claimants of the American continental backbone and its radiations, our chronicler sweeps us along with Spaniards who were rather tramps than explorers, raiders on a plundering and butchering trail, westering from the Atlantic into the land-sea of prairies; starting all pride and pomp, degenerating into fuss and feathers; ultra Quixotic, or, even more crazy, finding nothing of what they sought; transient as a ship's wake on the waves, and in the end within a hairbreadth of perishing like a vessel which puts to sea and is never heard of again. Then, passing to the French stage, Mr. Spears paints Joliet and Marquette in many of their *ipsissima verba*, and the classes, sacred and secular, of which they were types, showing up, by the way, the blunder in the Washington rotunda where the place of the sole head of the earliest exploration down the grand waterway is usurped by the chaplain he had taken along with him. The entering edge of a wedge must be thin, but that edge comes to naught unless backed up and buttressed by something heavier and tougher behind. In fact, French soldiers and missionaries, however good for pioneers, lacking settlers in masses and in permanence, fought like one who beateth the air. Expansion was also crippled, because the physical resources which would have increased their efficiency tenfold were lavished on mistresses like Pompadour, or in excluding from New France a million Huguenots who made other wildernesses blossom like the rose. Indian fugitives from New England (p. 40) were the oarsmen of La Salle down and up his unknown highway, and negro slaves labored in New Orleans from its first decade. These facts were prophetic and ominous of the contrast between a state of factotums and one of *fainéans*. A hundred years of French endeavor as often baffled as renewed, captains leading well, but without rank and file to follow, from head to mouth of the river, are sympathetically portrayed by our author. La Salle, "greatest of all French Americans," is his ideal from first to last. He deserves preëminence as first to reveal in all its amplitude the mysterious river, and that single-handed; yet more admirable is he for what he would have achieved but for treachery in his associates, and most of all for his death, so tragical that it will forever move readers to tears more than for most martyrs. It was his to find the true *La Chine* and to traverse it to its very end in the sea.

Financially, French ownership of a million miles of the richest land in the best latitudes of the world, both for tillage and traffic, was a loss. Few individuals or monopolies but became "land-poor." The chief promoter, Crozat, failed. Law, whose South Sea bubble had burst in England, blew up one larger in Paris, and that more iridescent, which dazzled like "one entire and perfect chrysolite." The heads of fur-trading rings, and they only, became opulent. The six posts fortified by La Salle as links in a chain uniting Canada and Louisiana united nothing, and others few and far between, isolated like Sahara oases, were expensive, but had nothing to guard within their reach or sphere of influence. Better had their outlays been scattered in the bottom of the sea. For seventy years the end and aim of these garrisons was to fit out Indian scalping parties, to officer them, and thicken their ranks for murder and conflagration along the frontier of English settlement, whose fringe was advancing inland like a tidal wave.

It was naturally upon the greatest eastern affluent of the Mississippi that French and English, confronting and clashing, began an international duel which wrought the ultimate downfall of France in continental America. The chain of forts and the "thin line" or festoon of *habitans*, too weak to bear its own weight, was crushed under the "Old Man of the Sea," whom it could not shake off. It is a noteworthy irony of fate (or mystery of Providence?) that Washington, who, as a green subaltern on the Ohio, had been first to fight for British supremacy in the West, just thirty years afterwards, in 1783, as Generalissimo in New York, received from the British the relinquishment of that claim as well as that of all sovereignty over the United States. The twenty years of British rule were stagnation or Rip Van Winkle slumber. The West from the Alleghany crest was set apart by royal proclamation for a game preserve, or the first of those Indian reservations defined by Spears as "refuse heaps, unpleasant enough to look at." Settlers were debarred from entry, and squatters were dispossessed, and that on the ground, as Franklin says, that they were "beyond the reach of profitable commerce with England."

Mr. Spears is rich in epithets which make his style pictorial, as when he calls Washington a "square-jawed man," and Jefferson's gunboats "porcupine policy." Some deformities in style he may throw off his shoulders upon the proofreader, but not his snubbing for six times the name of Thwaites, whom he quotes as often, nor where, in quoting Nicollet (p. 60), manito is drawn out into the monster manitouriniou (p. 4), and, least of all, where Francis Parkman is set forth as "Rev. Mr. Parkman" (p. 142). The map here printed as Marquette's is, says Shea, "not at all a copy of the original still preserved as it came from the hand of the great explorer," and which, we add, has been reproduced in facsimile. A still more memorable autograph should have been reproduced, but is not, namely, the written demand of surrender from the British commander on the Illinois by Clark, which was the death-warrant of British power in the boundless valley. The protograph, itself held by the Wisconsin Historical Society, has been photographed by them.

The Development of the Drama. By Brander Matthews. New York: Charles Scribner's Sons. 1903.

This is a pleasantly written volume, showing a fairly keen sense of artistic principles, and a sufficiently broad comparative view and grasp of the outlines of several literatures, but it is not until the author reaches the nineteenth century and has material to furnish forth a discussion of the actualities of the modern stage, that he seems at home with his subject and fitted to speak *ex cathedra*. For the whole is slight and sketchy, good magazine literature gathered into book form, a sort of primer of the subject graded to the university-extension standard and following university-extension methods; the whole a series of gracefully turned commonplaces, and obviously not for men of reading in the field, but for the beginning public. French ideas and French ideals prevail, and Professor Matthews obviously has most used French authorities. He is not primarily a student of dramatic literature as literature, but rather of stagecraft and of dramatic construction or play-writing. This is the difference and distinction of the book. The aim is to study only dramatic essentials, and so (and with reasonable success) the old classics of the drama are re-valued, from the "Suppliants" of Æschylus down to modern plays.

In its particular kind, then, the book is not a bad one, but it has too many evitable flaws. There is, even for a merely popular and elementary work, too lofty an avoidance of the specific. Dates are almost never given, and references fare as badly. The beginner would not be unwilling to know, for example, the name of the writer (or at least the provenience) of the interesting contemporary description of an old morality quoted at page 190; and similarly of the clever remark on the French classical drama at page 276. Again, this is a spelling reformer's book, and the old-fashioned reader's attention is perpetually distracted by such forms as *dialogs*, *decads*, *dilletants*, *altho*, *Renascence*, and by un-English over-hyphenation, as in such forms as *prose-fiction*, *connecting-link*, *men-of-letters*, and *comedy-of-manners* (has the English preposition *of* no force, then, of its own?). Index there is none, and the slightest possible table of contents.

Neither the scholarship nor the criticism of the book is robust. From so practised a critic one would hardly expect anything so banal and amateurish as the comments upon Marlowe (pp. 206-7), and upon Beaumont and Fletcher (pp. 221-2). In all this there is too little either of original apprehension or of sympathetic historical spirit. So in the comments upon "Gorboduc" (p. 192), "an alleged tragedy of mortal tedium," etc., there is too much of the fine-gentleman air, of the easy superiority of the sated heir of

all the ages. In dealing with the mediæval period, too much is made of the eighteenth-century distinction between "mystery" and "miracle play." The distinction was not recognized in the period itself, and, except rarely for certain specific purposes, is an artificial and misleading classification.

There are other queries and doubts. Why (p. 2) must we believe that the processes of art are acquired by toil and care and time alone, while the message the artist has to deliver is no such thing, but comes by inspiration and is "the gift of God"? But this is perhaps a large question. Again (p. 20), how is the doctrine that all drama consists in struggle and the conflict of will to be applied in the lighter forms of comedy and in farce? The answer in books on dramatic theory has not yet been very satisfactorily given. Is it true that will and the struggle of will (p. 21) are not found in the epic? Are Marlowe's views of the other world (p. 181) really childish? What one, specifically, of the most gifted of the dramatic poets of the Elizabethan age (p. 188) can be cited who shows definitely and directly the influence of the Greek drama? Are the "interludes" (term of vague import) really derived from the moralities (p. 189)? Why is the closet drama, in itself and not as a competitor for stage favor, a "pestilent type" (pp. 204, 315)? As literature it is certainly a type which has justified itself by a score of illustrious examples. And were the efforts of Shelley so "misdirected" (p. 297) in, say, the "Cenci" and the "Prometheus Unbound"? Is it so sure that Webster's plays (p. 205) were planned with no thought that they would ever be read by posterity? Is the "Merry Wives of Windsor" (p. 218) in fact a play which deals "avowedly" with the men and women of Shakspere's own time? Is not Falstaff the same Sir John whom we have met as of the time of Henry IV.? Is Massinger, properly judged (p. 223), a master of blank verse, and of "flexible" blank verse at that? And (to make an end —not that our list is ended) by what right is Heywood cited (p. 311) by the side of Scribe and Kotzebue as a master of the mere mechanics of dramaturgy and so a type of the playwright pure and simple? He may be so, but it remains to be demonstrated.

The Story of Notation. By C. F. Abdy Williams, M.A., Mus. Bac. London: Walter Scott Publishing Co.; New York: Charles Scribner's Sons. Pp. xvi, 265.

It is safe to say that, of the millions who read music, not more than a mere fraction have ever paused to think what a monument of human ingenuity and perseverance that system is which enables them to do so. The transmission of such a civilizing art as music stands next in importance to the recording of speech itself in writing. If our music has not remained such as we find it to-day among savage tribes, we owe this to musical notation; which also has this advantage over written speech, that it appeals equally to all mankind and is the common property of all nations. It is these considerations that recommend the history of musical notation to the attention of all who love music and appreciate its immense civilizing power.

Mr. Williams takes up, one by one, the various systems which, from the fifth century B. C., if not earlier, have contributed something to our present notation. Their details were to be sought in many ponderous tomes, inaccessible, most of them, to English readers; and he has been remarkably successful in explaining them, in spite of the appalling intricacy of some of the number. It is true that he has not succeeded equally with them all; but even the most perplexed of those ancient systems are sufficiently elucidated to show their share in the ultimate result. There is, no doubt, considerable repetition, some of which might, perhaps, have been avoided; and the very natural desire to make his book more readable has occasionally betrayed the writer into digressions not quite germane to his subject. But these are pardonable defects. We can recommend this manual as entertaining and eminently profitable reading.

Mr. Williams naturally begins with the ancient Greek notation, the oldest as to which we are sufficiently informed, and which contributed to our system the idea of calling the notes after certain letters of the alphabet. He next takes up the difficult subject of the neumes, developed as early as the ninth century from the Greek accents. From these we ultimately derive the idea of showing pictorially the movement of a melody up or down the scale. He explains the neumes more clearly than we have seen it done before. The addition to the neume-signs of one or more lines marked as carrying certain notes of the scale ultimately led to our stave of five lines. After explaining the system of Guy of Arezzo, from which our three clefs are taken, and the mysteries of the famous "Guidonian hand," the author passes to the terribly intricate subject of "measured music," which defies the utmost literary skill to elucidate it within a reasonable compass. Mr. Williams succeeds as well as could be expected in showing how the absurd systems at first employed to mark the time-values of notes produced our familiar signs for semibreves, minims, crotchets, etc. The "tablatures" are then described. These were pictorial representations of the keyboards, or of the frets and holes of instruments, showing what keys, frets, or holes were to be employed, just as the Greek letters showed the strings of the lyre or the holes of the flutes. To the tablatures we owe our bar lines. Figured base, "accidentals," signs of expression, and the rest of our modern signs are traced in like manner to their sources. The book ends with a review of many recently proposed reforms in our present notation, none of which have much chance of general acceptance.

The book is richly—perhaps superfluously —illustrated, and is furnished with a good index and two useful appendices, one a list of musical writers, the other a glossary of musical terms. The type is good and the roughness of the paper is agreeable, though it somewhat hurts the clearness of some of the tables and examples, of which the small page necessarily reduces the size. There are some typographical errors, as is natural in a first edition. The most annoying thing is that the illustrations are often far from the corresponding text, and have to be sought with some labor, or avoided where they obtrude themselves unbidden. Of misprints, or possibly slips of the pen, we note, as specimens, Paramesos (p. 41) for Paramese, *memoriae technici* (p. 52), the C clef on the wrong line (p. 99) unintentionally transposing an example, *becarré* (p. 117) for *bécarre*, synnemenon (p. 13, thrice) for synemmenon. In the examples of Greek music the Greek words are here and there misspelled (as on p. 41), and the accents are sometimes given, sometimes omitted. These slips will not greatly trouble an intelligent reader. We must add that the book would be materially improved by a better marshalling of the facts, especially if each of the elements of our modern notation could be separately traced to its origin; but it must be confessed that this would be no easy task, since not a few of the ancient systems have contributed more than one of those elements, and at various periods.

Ordered to China: Letters of Wilbur J. Chamberlin. Frederick A. Stokes Co.

These letters, from various dottings around the circle of the world, to his wife at home by a newspaper correspondent ordered to China during the Boxer uprising, are so full of rollicking fun and hearty affection, withal so buoyant and graphic, that one at first sight cannot realize their real value to the scholar and historian. Chamberlin was more than a first-class gatherer of news. He hated mere sensationalism and exaggeration, and his marked characteristics were good nature, patience, and energy. These are letters penned in haste and without polish pretty nearly every day, however weary the writer might be, but they are wonderfully vivid, and the story in each one is clear. Both ashore and on deck he saw through shams, discerned worth, and knew how to picture human nature in all its varieties. Besides racy descriptions of life in the floating Chinese communities on the Pacific liners, he makes a good study of contrasting race traits and of individual temperaments. The "contract doctors," who go out to attend to our soldier boys, he thought "the worst lot of duffers that ever wore the title of doctor." He has a good deal to say, pro and con, about the missionaries who, at the time of his arrival in Shanghai, were rather numerous, having fled from the interior. He writes much about the confiscated property of the Chinese, which the army softened into "loot" and the missionaries into "reimbursement," though we do not find that even he refrained from stepping up to the bargain counter. Indeed, it would be hard to learn who was not an Achan in the general enjoyment of deserted property. In his encounter with "Mr. A.," we think that, even according to his own account, he comes off second best.

We may be reasonably sure that the dispatches which Mr. Chamberlin sent to New York had some effect in shaping the policy of the State Department at Washington in its treatment of the Peking Government. Certainly the American policy, in contrast with that of the Governments of Europe, was both righteous and efficient. Probably no book thus far written, or likely to be composed, gives from the inside such a vivid and truthful picture of Peking during the boiling of the diplomatic cauldron in 1900, and the petty squabbles for social and diplomatic precedence among the foreign diplomatists. With the Germans, among whom more of the feudal spirit still prevails, the disease was in the bone. The civil war that went on between Mumm von Schwarzenstein, the German Minister, and

Field Marshal Count von Waldersee, as to which should outrank the other at the dinner-table, is almost too funny to be true. Nevertheless, it is on this kind of meat, furnished them so abundantly by the foreign diplomatists, that the native Cæsars in the Tsung-li Yamen have fed for a century. Other social incidents are told in amusing style. When the homesick American officers "proposed the toast 'Sweethearts and Wives,' and sang it over three or four times, a youngster disturbed the harmony by offering this toast: 'Here's to our Sweethearts and Wives—may they never meet.' Well, most of the crowd were married men, and in two shakes of a lamb's tail that youngster was standing on his head in a snowbank outside the door."

The author's tribulations in having his dispatches misrepresented by addition, subtraction, and mistranslation were great, but some of us, even in 1900, who realized the situation, were then able to sympathize with him. This book was well worth printing, for it is full of material for history, besides legend, story, anecdote, and fun sparkling on every page, all set down in free, unstudied style. Here are snapshot literary photographs. On his return, after a journey to see the midnight sun, this one of three brothers who early spent themselves, having served their country with pen and brain, died suddenly at Carlsbad. Having started from home Sunday, August 5, 1900, a cablegram dated London, August 14, 1901, read: "Chamberlin died Carlsbad yesterday. Notify friends."

Biografia di un Bandito: Giuseppe Musolino di fronte alla psichiatria ed alla sociologia. Da A. Morselli and S. De Sanctis. Milan: Treves. 1903.

It has been the fortune of many precious rascals to attain a qualified beatification as heroes of romance within the pages of hair-lifting tales, or even on the operatic stage; but it was reserved for the present day, and the dawn of the sciences of psychiatry and criminal anthropology, to enshrine the villain in works of scientific biography previously consecrated to the saint. The 'Biography of a Bandit' may appear an enticing title to the reader of the jaundiced newspaper, but he will be disappointed in its contents. It is "a medico-legal study and considerations" by two serious-minded university instructors in psychiatry, one at Genoa, the other at Rome, who dedicate their work to their famous master, Prof. Cesare Lombroso of the University of Turin.

The bandit himself, Giuseppe Musolino, enjoyed notoriety in his native province, Calabria, and, indeed, throughout Italy, during the brief years of his criminal career, and especially attracted the attention of the international newspaper world on the occasion of his somewhat spectacular trial at the assizes of Lucca in the summer of 1902. He was at that time less than twenty-six years old, but he had been a tough case (*pessimo soggetto*) ever since his boyhood, and was not inexperienced in the court-room and the jail. Yet he apparently had not tried the excitement of homicide till the month after he reached his majority. Then a friend with whom he had quarrelled was shot and seriously wounded from behind a wall, and Musolino went into hiding in the Calabrian mountains. Some months later he was arrested, tried at Reggio, Calabria, and sent to prison for twenty-one years; but in less than four months, and only thirteen days after being transferred for safer keeping to a new and strong jail, Musolino and three other convicts dug their way through the walls and took again to hiding. This free life lasted just two years and nine months, and during it Musolino's most notable crimes were committed. He proudly proclaimed himself no thief, but he took a bloody and unperturbed vengeance on those whom he suspected of giving testimony against him, of spying upon his whereabouts, or of attempting to capture him. His name filled the countryside with awesome admiration mingled with a wholesome timidity.

His life of adventurous struggle against the strong arm of the law caused him, as is so frequently the case in Italy, to be crowned with an aureole of popular sympathy as a poor unfortunate *(povero disgraziato)*. So he went on through summer and winter, protected by fear or favor, frequenting villages and cities of the district, travelling on the railway, entertained in convents or by respectable families, watching from close at hand the progress of bands of police sent out to find him, and then retiring to sleep peacefully in the beds left warm by his early-risen pursuers. During this time he was continuing his vendetta until he had to his account seven premeditated murders and eight or ten attempts in the same direction. Finally, the authorities took counsel of despair, and set about isolating the bandit by arresting his suspected sympathizers. After a hundred and fifty of these had been incarcerated, Musolino found it advisable to quit the country. So he started northward on foot with the idea of emigrating to France or to America; but far away in the Marches a pair of carabinieri stopped him with questions on a country road, and, on attempting to run away, he was arrested, and later identified by old acquaintances brought from Calabria to confront him. Capital punishment is not practised in Italy, but Musolino's sentence was to life imprisonment in the *ergastolo* of Portolongone on the island of Elba, with the first ten years in cellular confinement, of which the authors say that it is "a shame to our penal and prison legislation, for it involves a physical and moral torture far more atrocious than instantaneous death at the hands of the hangman."

During the time of Musolino's detention at Lucca, pending his trial, the authors of the study before us were given free access to the delinquent, and he appears to have found diversion in their visits and in the minute examinations to which they subjected him. With the help of tabular statements and of diagrams they chronicle the details of Musolino's physical and mental organism, from precise measurements of his person, record of pulse and temperature, photographic reproduction of finger-prints, to the character of his reflex muscular actions and the classification of the subject-matter of his dreams through a long series of consecutive nights. Of course, the mental and moral phenomena are not neglected.

The layman, after a careful reading, will be likely to consider that all this mass of painfully gathered data goes to show that Musolino exhibited no abnormal traits, and was far from appearing a monster of wickedness to an ordinary acquaintance. He seems like a perfectly normal human being, with no lust for blood—only he has the undeveloped moral sense that is characteristic, for example, of the Indian in his savage state; and Calabria is well known to have lagged behind the rest of the world in moral as in material development, if, indeed, it has not retrograded. But the lack in Musolino appears to be entirely moral, and to be a defect in education alone. The authors, to be sure, try conscientiously to make the most out of one indication of possible degeneracy that they appear to be able to discover. Musolino had occasional attacks of epilepsy, and, besides the careful investigation of the facts in his individual case, the authors have inquired into the prevalence of epilepsy in Calabria, both absolutely and in comparison with other parts of Italy. The results are, of course, brought to bear on the fact that Calabria exceeds all other parts of the Italian realm in crimes of violence, and in actual homicide in exceeded only by Sicily. The bearing of the comparison must be left to the expert.

The ordinary reader, who may care little for the details of Musolino's digestion, will yet find great interest in the chapters that treat of the social, economic, and moral conditions of Calabria, and mayhap will be surprised to learn that so much of poetic temperament and agreeable characteristic yet survives in that country, the state of which in its worst portions is shaming the Government of Italy to action in its behalf.

The Nemesis of Froude

Everyone has been hearing of "The Carlyle Controversy," though few have had time to follow it in the profuse publications on the subject. It concerns the clearing of Carlyle's magnificent and beautiful character from the baseless charges of his executor and original biographer, JAMES ANTHONY FROUDE. The whole subject, interesting and enlightening in the extreme, to broad minds, is now summed up and closed finally in one decisive volume of less than 200 pages, admirably written, by Sir JAMES CRICHTON BROWNE and ALEXANDER CARLYLE, entitled,

The Nemesis of Froude

THE GIBSON BOOK FOR 1903

Eighty Drawings

INCLUDING

The Weaker Sex

The Story *of a* Susceptible Bachelor

By CHARLES DANA GIBSON

COPYRIGHT 1903 BY CHARLES SCRIBNER'S SONS

MR. GIBSON'S 1903 book, made up, as heretofore, of selections from his most popular drawings, will be especially attractive this year, not only because it contains *a larger number of full page cartoons* than the previous books, but, in particular, because of the greatly increased popularity and the telling character of his latest work.

The book contains many cartoons of power and originality in addition to the humorous series named in the title, but the keynote may still be found in the question mark cunningly suggested by the clever drawing accompanying the title phrase. Are women really "the weaker sex"? Most of the drawings have a humorous bearing on this all-important question, and all of them show the piquancy, deft characterization, and rare execution that have made Mr. Gibson's great and growing popular success.

Uniform with former volumes, $4.20 net. (Carriage extra.)

Director of the American Archæological School of Athens.
$2.00 *net.* (Postage 20 cents.)

"ALTOGETHER THE MOST REMARKABLE WAR BOOK YET PRODUCED."
—Savannah (Ga.) Morning News.

REMINISCENCES of the CIVIL WAR

By General JOHN B. GORDON

From the Omaha (Neb.) BEE: "His abounding good-will to all sections of the country unite in giving a personal character to this volume which is to be found in few of the records of the civil war."

From the New York MAIL AND EXPRESS: "He writes as an American for Americans, North and South; he notes the underlying feelings of brotherhood, which grew in strength in the combatants as the war progressed; he is as anxious to remember and celebrate Northern valor and chivalry as those of the South. Indeed, his book is a good example of the very fairness, the very freedom from bias which he places first among the attributes which the future historian of the irrepressible conflict must possess."

With portraits. 8vo, $3.00 net. (Postage 23 cents.)

LETTERS OF A DIPLOMAT'S WIFE
By MARY KING WADDINGTON
Illustrated. $2.50 *net.* (Postage 20 cents.)

An Important New Work

Bowne's Theism

$1.75

By BORDEN P. BOWNE

Professor of Philosophy, Boston University.

A clear, sane, and convincing presentation of the "Logic of Theism." The practical and vital nature of the theistic argument is emphasized in an acute and able manner.

The book has been commended by theological reviewers of all denominations. It is one which deserves a place in the library of every man who thinks.

LIFE.

THE SOULS OF BLACK FOLK

Essays and Sketches from "Behind the Veil"

By W. E. BURGHARDT DU BOIS

THE NATION.

"Mr. Du Bois has written a profoundly interesting and affecting book, remarkable as a piece of literature apart from its inner significance."

THE BOSTON TRANSCRIPT.

"It is one of the noteworthy books, not merely of the year, but of the epoch. Its every page is filled with vigor, spontaneity, and spirituality."

THE DIAL.

"Mr. Du Bois is perhaps the most scholarly man of his race in America to-day — a man of high scholarship and culture in that broader republic of human attainment which knows no limitation of race, color, or clime."

THE REVIEW OF REVIEWS.

"No book of similar character has been printed in recent years that equals this volume in power or grace of expression."

THE ACADEMY (London).

"He possesses a command over the finer qualities of English which greatly enhances the poignancy and pathos, the yearning and hope of his terrible indictment."

Third Edition, price $1.20 *net.*

A. C. McCLURG & CO., PUBLISHERS

The Nation

Was established in 1865 as a weekly review of literature, science, art, and politics, and its editorial management has been unchanged from the first. It is conducted in a spirit of complete independence. The list of contributors includes most of the leading names in literature, science, art, philosophy and law at home, and many of corresponding eminence abroad. THE NATION presents a complete and accurate record of the world's current history, with impartial comment on questions which would occupy the attention of intelligent men. To the scholar, the student, the thinker and to all professional men it is confidently recommended as an aid to sound thinking.

Subscription, $3.00 a year, post-paid. Shorter term at a proportionate rate.

IMPORTANT NEW MACMILLAN PUBLICATIONS

THE BOOK MOST TALKED OF IS STILL, OF COURSE,

Mr. JOHN MORLEY'S *life of* William E. Gladstone

Published October 9. First Edition exhausted and second in press on the same date.
20th thousand now ready. In three 8vo volumes, with portraits, etc. Cloth, $10.50 net.

"The work before us has more than fulfilled our expectations; it is indeed a masterpiece of historical writing, of which the interest is absorbing, the authority indisputable, and the skill consummate." —*The Saturday Review*, London.

NEW BOOKS OF ILLUSTRATED DESCRIPTION ARE

Mrs. ROGER A. PRYOR'S *New Chronicles of* The Mother of Washington and Her Times

The work is of real historical value as giving the story of Mary Washington's life fully for the first time. Its pictures of her social life do not give the oft-repeated description of tidewater Virginia, but a view of the region in which she really lived. But most of all the book is singularly attractive in its note of distinction, its compelling interest and a certain intimate charm as if the author were relating among friends the delightful doings of her own circle. Beyond the records ordinarily accessible she has used many unpublished letters, diaries, etc. *Freely illustrated, cloth cr. 8vo, $2.50 net. (Postage 20 cts.) Published This Week.*

By Sir GILBERT PARKER and CLAUDE G. BRYAN

Old Quebec. *The Fortress of New France*

The most quaintly characteristic city in America is described through all the thrilling episodes of its romantic history. The peculiar atmosphere of French Canada is here reproduced in a manner equalled only in Sir Gilbert Parker's fiction, "The Right of Way," "The Seats of the Mighty," and his short stories of "Pierre and His People." *Richly illustrated. Cloth, $3.75 net. (Postage 27 cts.)*

By Mr. M. A. deWOLFE HOWE
long associated with *The Atlantic Monthly*, etc.

Boston: *The Place and the People*

Mr. HOWE knows the history, life, and atmosphere of Boston as fewmen do, and has produced a work distinctive in this, that nearly two thirds of it is devoted to that century to which the modern city really owes the most, yet which has been least described—the nineteenth. *Richly Illustrated. Cloth, gilt, $2.50 net. (Postage 22 cts.)*

Mr. JACK LONDON'S *picture of the life and labour of the London slums*

The People of the Abyss

By the author of "The Call of the Wild."

An account of the conditions of poverty, degradation and suffering in the East End. It tingles with all the vitality of his fiction and is full of such vivid realism as is only possible from a man who knows London as Mr. Jacob A. Riis knows New York. *Cloth, 8vo, $2 00 net. (Postage 22 cts.).*

THE NOTABLE NEW FICTION AND JUVENILES

Mrs. EDITH ELMER WOOD'S *New Novel.*

The Spirit of the Service

pictures the navy in its realities and standards, not merely as the average outsider sees its blue and gold glamour. The story is uncommonly bright and breezy. *Cloth*, $1.50.

A Novel of the Navy, by a Navy Woman.

Mr. F. M. CRAWFORD'S
New Novel

The Heart of Rome

By the author of *Saracinesca.*

"A novel of the old ideal, in which things happen, . . . and with this keen fascination of plot is associated Mr. Crawford's charm of style, his epigrammatic significance and his delightful humor." *Cloth*, $1.50.

MR. QUILLER-COUCH'S
New Novel

Hetty Wesley

by the author of *The Splendid Spur.*

"Mr. QUILLER-COUCH has done something new and unhackneyed, and has done it with a tenderness and sureness of touch that he has never surpassed. The pathetic figure of Hetty Wesley will dwell long in the memory of every man who reads."—CHICAGO RECORD-HERALD. *Cloth*, $1.50.

Mr. CHARLES MAJOR'S
New Novel of Early Indiana

A Forest Hearth

Such a sunny love story as secured for one of Mr. MAJOR'S books the record for popularity indicated by representation for fourteen successive months in THE BOOKMAN'S list of the "six best-selling books." *Cloth*, $1.50.

Mr. JACOB A. RIIS'S
New Stories of the

Children of the Tenements

go straight to the heart. They are true stories, some funny, some pathetic, but all of them have come directly under his eyes during his quarter-of-a-century "Battle with the Slum." *Illustrated, Cloth*, $1.50.

Mr. STEWART E. WHITE'S
Delightful Book for Boys

The Magic Forest

has all the outdoor atmosphere of his *The Blazed Trail.*

THE NEW YORK SUN calls it "a real triumph. . . . No better book could be put in a young boy's hands, and his elders can read it with equal pleasure."

With illustrations in color. Cloth, $1.50.

MABEL O. WRIGHT'S
New Book for Girls

Aunt Jimmy's Will

By the author of "Tommy-Anne," "Waheno, the Magician," "Dogtown," etc. A story of a young girl's summer in New York city; a book to spread a gospel of sunshine. *Illustrated by Florence Scovel Shinn.* *Cloth*, $1.50.

Published by **THE MACMILLAN COMPANY** 66 Fifth Avenue New York

The Nation.

NEW YORK, THURSDAY, NOVEMBER 5, 1903

The Week.

"Well, we must begin all over again." So wrote D'Azeglio to a French correspondent after the crushing defeat of the Piedmontese at Novara; and such must be the watchword of every stout-hearted champion of honest government in this city, after Tuesday's disaster. Mr. Cutting sounds the true note. We must at once, he says, set about preparing for the next mayoralty election. Reform is beaten to fight better next time. With nothing to regret or retract as to the conduct of the calamitous campaign of 1903, we must turn our faces towards the campaign of 1905. Meantime, all post-mortem reasoning about the "causes" of the Fusion overthrow is futile. Every man can point out contributing elements. Fifth Avenue struck hands with East Seventeenth Street to buy votes. There was doubtless some Republican treachery. The pettiest motives actuated many citizens. The artful raising of the partisan cry deluded multitudes. But, when all is said, the hard, brutal fact remains that the voters of New York spurned the best city government they ever had. They were offered impartial enforcement of the law, and they preferred the mercenary tyranny of Tammany, tempered by blackmail. They were offered a public service on the basis of merit, and they voted for one of "pull" and purchase. The most tangible and solid proofs of the benefits of non-partisan government were furnished them—great public improvements, the amelioration of the lot of the poor, justice in the courts and in the tax-office alike—actually lessened burdens with heightened advantages to the commonalty—yet they turned it out with gusto. It was obviously no question of personality. The Angel Gabriel could not have succeeded where Mayor Low failed. It is perfectly evident from the result that no candidate in his place, no independent Democrat, would have fared much better. To put the case thus baldly is to give the true measure of the disaster that has befallen us.

Senator Gorman rebukes President Roosevelt for having precipitated the race issue; but himself proposes to take advantage of it to consolidate his malign power in Maryland, and to make himself the Presidential candidate of the South. In no other way can his inflammatory words be interpreted. To raise the cry of "negro domination" in Maryland is absurd. It has an ulterior purpose. Gorman and his would-be colleague in the Senate, Rayner, urge negro disfranchisement in their own State only to curry favor with those unscrupulous politicians in the South who mean to ride to power over the crushed aspirations of the negro. Senator Gorman's idea that he can have the "race issue" all to himself is preposterous. He appears to imagine that he can openly affront and bitterly attack the sentiment of the North without provoking either retort or resistance. No sly but short-sighted politician ever fell into a more egregious blunder. We have the best of reasons for believing that a rapid awakening on this subject is now discernible in the Republican party. Senator Gorman's unscrupulous appeals to race prejudice are rousing men who will have much to do with shaping the course both of national policy and of national legislation. If the Maryland Senator issues a challenge to make injustice to the negro a leading issue in the next Presidential election, it will be taken up quicker than he dreams. Already we have from President Roosevelt the emphatic assurance that he will not shun that contest. He is reported as saying that if he could be assured of reëlection on condition of turning his back on the principles of Abraham Lincoln, he would be incapable of making the bargain, and would be unfit to be President if he could think of doing such a thing. That he should take this unequivocal and manly stand is only what we should have expected from so outspoken a champion of fair play and equal rights.

Secretary Shaw was rather more preposterous than usual last Thursday at Boston. This cannot be attributed to extreme haste, resulting from the sudden Macedonian cry of the Republican managers of Massachusetts. If Mr. Shaw's speech had not been delivered there, it would undoubtedly have fallen on other ears. To be sure, the subject of his remarks, the tariff, is one on which a few things have been said; but Mr. Shaw knows how to invest an old theme with new interest by the graphic use of diplomatic language. What could be more discreet than his allusion to our clubbing Great Britain over the head in return for our free entrance into her preserves? But it is when he comes to the balance of trade that the Secretary contributes most successfully to the gayety of nations. Not even the inventor of the Chinese puzzle is more entitled to the thanks of a world in search of innocent amusement. The Democratic party advocates Great Britain's policy, and that policy results in an adverse balance of $1,000,000,000 a year. Evidently, Great Britain ought to have been bankrupted decades ago. For half a century at least her imports have annually exceeded her exports by from $300,000,000 to a good deal more than a billion. And yet she has labored under the delusion all this time that she was rapidly growing prosperous. The bills against her have presumably not been running unpaid for half a century. But where has the money come from? The balance has obviously not been settled in gold, for there has not been more than a fraction enough in existenc[illegible]hat purpose. But on this point the [illegible]ary was silent.

Bishop Butler himself was no stronger on analogy than Mr. Shaw. The palm for the best ship subsidy argument must certainly be awarded to him; and the beauty of it is, it is all in a nutshell. We created the commerce of the interior and of the Pacific slope by means of subsidized railroads, and we subsidize rivers and harbors in the hope of aiding commerce. Ergo, we must go on to subsidize ships. Facts, as Le Sage says, are stubborn things, therefore the Secretary of the Treasury discreetly eliminates them from the discussion, and confines himself to names. It all depends on the use of the word "subsidize"; and it is not of the least importance to ask if the word has the same meaning in the one case as in the other. If this Government owned millions of acres of land in South America or elsewhere, to which it desired to transport millions of bona-fide settlers, "subsidy" would mean in the present controversy what it meant when the Pacific railroads were built. But Mr. Shaw's use of the term in connection with rivers and harbors is his crowning effort. If it is bad policy to subsidize steamships, we must, to be consistent, have no more river and harbor bills. This argument is applicable to every form of industrial activity. If a merchant sees nothing to be gained by sending a band wagon all over town to drum up trade, it is very illogical for him to keep the entrance to his store free from obstacles. Expensive fixtures and foolish outlays are among the means by which mercantile establishments most commonly come to grief. If Mr. Shaw is anxious to obtain the 90 per cent. of South American, South African, and Pacific Ocean trade that goes to the rest of the world, he must offer, not fine fixtures in the shape of subsidized steamers, but the best goods at the lowest prices.

There is no mistaking the meaning of the October Treasury statement. A decrease of $4,500,000 in receipts and an increase of $5,000,000 in expenditures practically effaced the surplus of the preceding three months. A balance at the end of October, 1901, of $33,000,000, and at the corresponding date in 1902

of $13,557,000, has been diminished to $669,278. This result is attributed to the falling off in the imports of sugar and iron and steel products, the former by about 32 per cent., and the latter by nearly 50 per cent. But the attempt to explain the decrease in the receipts of sugar by the fact that the Cuban planters are withholding their offerings in expectation of a ratification of the reciprocity treaty with this country at the extra session of Congress, is rather futile. The arrivals of sugar from Cuba showed proportionately less shrinkage than those from either South America or the East Indies. The expectation of Cuban reciprocity would, other things being equal, stimulate exportations to this country from the localities mentioned. Of course, it is possible that the imports from Cuba may have been influenced in a measure by this cause, just as wool imports were in 1894, prior to the law which took the duty off that commodity. But, on the whole, the decline in the receipts of sugar can be placed in the same category with the falling off in iron and steel imports. They are merely corroborative evidence of a fact that can no longer be ignored. Their meaning is that the financial situation has begun to react on the industrial condition of the country, and somewhat to reduce its purchasing power.

A seeming tendency to hold the United States responsible for the evacuation of Mantchuria finds emphatic expression in an appeal of the Chinese Minister at Washington. He protests against the reoccupation of Mukden by the Russians, and asks the Government at Washington to remind the Russians of their broken promise to leave. Such an interference on our part would be an unfriendly act, and Secretary Hay properly reminds the Chinese Government that our stake in Mantchuria is purely commercial. In other words, we are not immediately concerned with any breach of good faith by Russia as regards China. We should not be bound to intervene if Russia and China were at war, nor to oppose, except by diplomatic means, the annexation of Chinese territory by Russia. Thus far our diplomacy has occupied itself merely with gaining trade concessions—notably the open door—and with ensuring the continuation by Russia, whether as tenant or conqueror, of all treaty rights granted to us by China. From this point of view it would be proper for us to protest only when the Russians forbade us free entry at the port of Mukden. For the present, Russia will hardly press such an issue.

President Palma's message to the Cuban Congress is a review of the work of a Government now firmly established, and (or all signs fail) as strong in the affection and pride of the people as it is in the actual possession of power. The President's aspirations for Cuban progress and enlightenment bespeak a truly national sentiment. To that, indeed, he directly and consciously appeals. He thus has the sure position of one who rules by the consent of the governed. Imagine the difference between the feelings of Cubans and of the Filipinos, as the latter are told of improvements by an alien and forcibly imposed government! As for Cuban relations with the United States, President Palma abounds in expressions of gratitude for what this country has done for his republic. The long-promised but long-delayed treaty of trade reciprocity, he assures his people, the American Congress will speedily ratify. That remains to be seen; though we certainly hope that the dog-in-the-manger protectionists will conclude to abandon their blind opposition to a measure sure to be beneficial both to Cuba and to the United States.

Perry S. Heath must retire from the Secretaryship of the Republican National Committee unless the present Administration wants to pose as the defender of the postal frauds. Whatever the Bristow report may say or leave unsaid, whether Heath has or has not been guilty of actual crime, whether he can or can not plead protection under the statute of limitations, the public is already sure that he was deeply involved. Even if he did not carry off much of the swag himself, he was responsible for the disorganization and looseness of administration that made wholesale robbery possible. The leaders of the grand old party themselves admit that Heath has become too heavy a burden for the back of the strongest elephant, to say nothing of one that is suffering from dropsy and indigestion, brought on by gross overfeeding. Heath's connection with the postal scandals in Cuba was not wholly pleasant, but still there was no serious talk of dropping him from the Secretaryship, for looting "dagoes" is nothing between friends. His suspicious relations with the Seventh National Bank of this city were also unhappy; but the proof that he was no drone simply added to his value as a politician. The final revelations, however, are the last straw on the back of the much-enduring beast. Even Senator Hanna must admit that Perry Heath's character has completely overtaken him; and, as Dr. Johnson remarked of a scoundrel of his day, "He may do very well as long as he can outrun his character, but the moment his character gets up with him, it is all over."

One of the most remarkable letters which have found their way into print lately bears the signature of W. I. Risinger, one of the jurors in the case of J. H. Tillman. It throws so much light upon the mental attitude of the better class of poor whites in the South, from which the jury was drawn, towards murder as to be well worth widespread attention. The Spartanburg *Journal* having severely criticised the Tillman jury for its failure to do justice, Mr. Risinger at once rebuked the editor, telling him that he was "following in the footsteps of the decease Editor, 'abusing your liberty.' I wish," Mr. Risinger continues,

> "to be polite in this matter and show more wisdom than you did in writing upon the Lexington court that tried James H. Tillman. To make my letter brief, I refer you to the annals of History when you fail to find a single conviction of any man for shooting an Editor. The State and counsel for same was satisfied with the Verdict, otherwise the State could have gone to the appeal courts, the Masses have accepted the verdict as fair, but seemingly the press wants more blood which can be found by walking in the foot prints of N. G. Gonzales."

He admits that Editor Gonzales was a very able man. His only mistake was in abusing the liberty of the press. If he were the editor of the *Journal*, he declares, and were not satisfied with "the defendant's acquittal, and had the grit to follow my pen, I would certainly invite the defendant to entertain me beyond the Georgia lines." This, being translated, means that in Mr. Risinger's opinion one should not criticise the jury, but kill the defendant. To cap the climax, he intimates that, in his opinion, Gonzales did not die by a murderer's hand, but committed "*suicide by the abuse of liberty with the wrong man.*" We have heard much about the lack of civilization in the Black Belt. Evidently there is a Darkest South Carolina in which the primal instincts are not confined to those of dark skins. Indeed, we never heard of a colored man who publicly counselled the murdering of editors.

The rumors of a conspiracy between the stonecutters and the union to fleece the public receive full confirmation in the publication of "Resolutions adopted by the employing stonecutters of New York and its vicinity, April 7, 1903, and endorsed by the Journeymen Stonecutters' Association April 8." This extraordinary document may be read in copious extracts in Thursday's *Herald*. The method of the combination was simple in the extreme. All bids for stone work were submitted to a committee, and the job was allotted to one of the medium estimates. Afterwards the stone man to whom the award had been made went through the form of competitive bidding with the unlucky contractor. Ten per cent. of the proceeds of the job was turned over to the Association, which also had arbitrary powers to fine and otherwise discipline its members. On Christmas eve a special meeting of the "horse market" was to be held. Then, in the Christmas spirit, the accumulated funds were to be distributed, 10 per cent.

to the Stonecutters' Union, the rest per capita to the active firms constituting the Association. Obviously, these Christmas boxes were at the expense of the building contractors and the general public. It casts an interesting sidelight on profits during flush times that 10 per cent. could be deducted from the price of building-stone, and still a satisfactory profit be left to the seller. Unfortunately, the exposure of this society representing the "Chicago idea" has been made too late for Mr. Jerome to transfer a group of its Christmas revellers to Sing Sing. Failing such poetic justice, some of these gentlemen are likely to be sufficiently occupied in evading justice of the routine sort.

The second conviction of Samuel J. Parks for extortion is a sharp lesson to labor unions. The jury was out only fifteen minutes; and the evidence was so clear that the verdict of public opinion has also been quick and unanimous. The Assistant District Attorney, Mr. Rand, put the case in a nutshell when he declared that Parks was not prosecuted because he was a union man, but because he was an extortioner. It is high time that this distinction between unionism and lawlessness was grasped, not merely by the court, but by the workingmen. They have been acting as if all the crimes on the calendar were sanctified if only they were committed in the name of labor. The discarded theory of papal indulgences never in its worst applications matched the latter-day theory of union indulgences. The unions have often chosen as leaders their most reckless and unscrupulous members; and they have stood by these representatives through thick and thin. Months ago every one knew that Parks was an insolent dictator who was using his position to fill his own pockets without the slightest regard to the welfare of his followers; and yet, in the teeth of overwhelming testimony, he was treated as a martyred champion. At last, however, even the Housesmiths' and Bridgemen's Union has discovered that open defiance of decency is unprofitable, and is taking steps toward expelling Parks. The professed friends of labor must learn that our laws are not, like those of Edward the Sixth, "written in milk."

One should probably not be held to too strict account for what one says at a Lord Mayor's luncheon. Nevertheless, Mr. Chamberlain's speech at such a function in Liverpool last week contained certain statements which were so obviously in the nature of a *reductio ad absurdum* that they are bound to discredit either his intelligence or his veracity. Americans will be chiefly interested in his assertion that this country is not really against his policy, but is, of course, anxious to prepare itself to meet it, if possible, by concessions. If we fail to appease England, she will be forced to retaliate by placing duties upon our goods; and then "the American and not the British consumer will pay the duty." The absurdity of all this is plain. First, retaliation is a game two can play at; if Great Britain places duties on our goods, we shall raise our barrier against hers. Second, what we buy of her is less essential than what she buys of us, as we have boundless resources of a very varied character, while hers are limited in range and of diminishing productivity. Third, as regards the statement that the producer pays the tax, at the head of the Board of Trade's import figures stand the letters c. i. f. (cost, insurance, and freight), to which will be added d. (duty). Last of all, it is folly for an individual to try to drum up business with a club; but this is equally true of a nation.

Mr. Chamberlain may be thinking of the future, but he strangely faces the past. A twentieth-century Empire is his aim, but a seventeenth-century navigation law is his method. He brought out the latter fact pretty clearly in his speech to the Liverpool workingmen on October 27. His special point was the shipping industry. It appears that American reciprocity will work havoc with the British mercantile marine. No more British goods will go into Cuba, and all the traffic between the United States and the island will be done in American bottoms. And not only that, but the large rice trade between Rangoon and Cuba, now being conducted by British ships, will henceforth go to New York, and thence to its final destination in American vessels. Here certainly is the exact spirit of 1660. The navigation laws were passed in order to discourage colonial competition in manufactures and shipping, while affording full encouragement to the exports of raw materials to the mother country. Mr. Chamberlain might almost be accused of plagiarism, for he said at Liverpool that "he wanted to see fewer foreign manufactured articles imported, but more raw materials, in return for British finished goods." It is quite possible, however, that he has forgotten how the navigation laws cost England her American colonies.

Of the late Professor Mommsen everybody will feel that the man was too large to be contained in the *Gelehrter*. Only scholars can fitly appreciate the grinding labor that underlies the 'History of Rome,' and only a minority even among scholars can rightly value that gigantic task of deciphering and publishing all extant Latin inscriptions. It was owing to these labors that the fire which raged in the Corridor of Inscriptions of the Vatican, as Mommsen was dying, could have destroyed no historic evidence of value. All that was permanently useful in the inscriptions that lined the walls was safely embodied in Mommsen's 'Corpus,' or in the kindred publications to which it had given birth. Mommsen so thoroughly represented the gigantic scholarship of older times that it is a surprise, in measuring his public services, to see how large and continuous they were. This biography of a minute scholar reads like that of a statesman. Mommsen was well towards sixty before he entered politics. Time was left for him to be the apologist of his country in the Franco-Prussian war, and the champion of Liberal ideas in the teeth of Bismarck. Anti-Semitism found in him its most venerable opponent. Only the other day he appealed to Englishmen to put off current prejudices and remember the racial bond that unites them with Germany. Probably no scholar of his times had a more truly international influence. In this reconciliation of the rôles of investigator and man of affairs he continued the most honorable traditions of German scholarship. Like the Schellings, Fichte, the Grimms, Schleiermacher, Hegel, Virchow, he added to the glory of the special student that of the promoter of liberal ideas among his countrymen at large.

The fire in the Vatican reminds us once more how insecurely many of the world's greatest treasures of art and literature are held. The present fire was in alarming proximity to the small picture gallery of the Vatican which contains Raphael's Transfiguration, and it threatened to destroy the priceless collection of books relating to Thomas Aquinas left by the late Pope. The manuscript riches of the Vatican library were in imminent peril, and the Loggia of Raphael, the Borgia Apartments, and the Stanze of Raphael might easily have been destroyed in the general conflagration. Happily, such a calamity was prevented, but the incident recalls unpleasantly the fact that many other great collections are in worse case than those of the Vatican. In Italy little wood is used in construction, and a fire plays over the surface of brick and concrete. In northern Europe many of the galleries are food for fire; the Louvre notoriously. By a mistaken economy, portions of the Louvre are used for Government offices, in which a slight mishap—the overturning of a candle, the flinging down of a lighted cigarette stump—might destroy the whole collection. In London, too, a fire near Trafalgar Square has recalled the fact that the National Gallery is a tinder-box. The ill luck—with good luck—at the Vatican may serve a useful purpose if it stimulates the nations of Europe generally to greater watchfulness over their historic buildings.

OUR OBSOLETE POSTAL SERVICE.

The executive committee that is to examine the working of the New York Post-Office and report to President Roosevelt, is on the lookout chiefly for corruption. It turns its scrutiny upon such matters as the alleged "promotion syndicate" which sells advances in the service at a price; upon favoritism or collusion in awarding Post-Office contracts; upon bribe-taking, and possibly even embezzlement of the Government funds. Something of all these evils undoubtedly exists in an organization built up largely after the mind of Senator Platt. But we imagine that the President's committee will make an even larger exposure of inefficiency than of corruption, and we are confident that the report will cause Postmaster Van Cott's retention of his office to look as anomalous as Mr. Payne's holding on to his discredited Postmaster-Generalship.

Indisputably, the greatest of the Government Departments is the weakest. The experience of everybody who uses the mails shows it, comparison with foreign postal services sets our misrule forth glaringly, the unceasing disclosures of rottenness in the permanent force suggest graver evils than lax management. Mr. M. G. Cuniff, in the first of a series of articles to be published in the *World's Work*, does good service by giving to the criticism of an obsolete system striking and specific form. He asserts: (1) that except in rural delivery the service "has made no material advance in a decade"; (2) that the inefficiency of the Department is due to the fact that the Postmaster-General is "a political appointee," as are his chief subordinates; (3) that while the payment for transportation of the mails remains at about the rate of twenty years ago, the cost for similar transportation has been reduced from one-third to one-half.

Nearly every Postmaster-General for many years has been a novice, and has been turned out before he had had time to learn the business. "How do I know? I've been Postmaster-General only a year," said Mr. Payne, when Mr. Cuniff asked him how our Post-Office compared in efficiency with private business organizations and with foreign Post-Offices. The answer is instructive. Even if Mr. Payne were as competent and zealous in the public service as he is in the nice distribution of Republican patronage, he would face an almost impossible task. Except for a small clerical force at Washington—the real managers of the Post-Office—the staff disintegrates every four years, and a new set of novices takes hold at Washington and in the great city post-offices.

Much of the trouble is due to the instability of the higher offices. The Department needs an organization as compact and complete as that of the Treasury. More of the difficulty lies in the ancient and slipshod laws that govern and restrict the workings of the Department. Congress refuses to institute a civilized parcels post, such as every other great nation now enjoys, or to authorize a pneumatic tube service in the cities, although that is most profitably supplied in London, Paris, and Berlin. When these improvements are suggested, the special interests begin to be heard in Congress. Said "a high Post-Office authority" to Mr. Cuniff, "Do you suppose we can have a revision changing the present rates of paying the railroads as long as some of the most prominent Senators and Congressmen are identified with transportation interests, or establish a parcels post while T. C. Platt, President of the United States Express Company, is United States Senator?"

The case is clear: first, the postal service is debilitated by subjection to a chief who is primarily the office-broker of the ruling party; then the starveling Department is kept to quaint, old-fashioned ways by Mr. Platt and similar interested observers, who let progressive bills die painlessly. There has been a good deal of ingenuous bragging about the Post-Office. Impulsive Socialists and Imperialists have said: "The Government that runs the Post-Office can do anything." Let such persons read Mr. Cuniff's articles and learn that the Post-Office is as obsolete as the forty-gun frigate. In London you can send a pneumatic letter at ten, receive a reply before luncheon, rejoin in the early afternoon, and have the surrejoinder before the close of business. A resident of Berlin has his meat promptly delivered from a cheaper market a hundred and fifty miles away at a cost of 12 cents for a twenty-pound package. And these services pay. Compare with that state of things, first, the annual deficit of our Post-Office, and, next, the statement made in successive reports of the Postal Committee of the House of Representatives. This standing indictment reads: "There is not a sane business man in the country who has given the matter any thought but knows that the Post-Office Department could be operated by private individuals on our present appropriation and show a net profit of thirty or forty millions per year."

Since the malady has been too much politics in the service, the remedy is no politics, if that be possible; or, at any rate, less politics. President Roosevelt is helping matters in keeping the place-warmers stirred up. He must not spare the rottenness of the present régime. But the President can never have an honest and efficient Department so long as his effort is chiefly to spy on Payne's doings and pick up his loose ends. The President must have at the head a Postmaster-General who has at least ordinary business capacity and a desire to improve the service. That is the indispensable preliminary to the complete reorganization of an obsolete Department which should at once be undertaken by Congress.

THE HOWZE CASE.

The findings of the court of inquiry ordered to investigate certain acts of cruelty towards Filipinos alleged to have been committed by Capt. Robert L. Howze, Sixth Cavalry, now major in the Porto Rican regiment, are entirely favorable to the accused officer, whose record is thus officially cleared of any wrongdoing. In other respects, however, his singular case seems only to have become further involved by the court's finding, and by the unfavorable endorsement by the Assistant Secretary of War of so much of its decision as relates to Major George K. Hunter, Sixth Cavalry. This officer investigated the actions of Capt. Howze by order of Lieut.-General Miles, commanding the army, and preferred the charges against Capt. Howze by order of Major-Gen. George W. Davis, at that time commanding in the Philippines. To cite merely one contradiction: Secretary Root decided, on May 28 last, that there never had been any such beatings of natives as were alleged. The court of inquiry, which consisted of Brig.-Gen. Francis Moore, Lieut.-Col. S. R. Whitall, and Lieut.-Col. Frederick Ward, flatly differs from the Secretary, but attributes the beatings to a native who had been put over his fellows by the Americans, with the title of secretary of the province. The court avers, however, that no deaths resulted from the whippings.

As far as Major Hunter is concerned, Secretary Root was of the opinion that he was animated only by "bitter personal animosity" against Capt. Howze, due to his having been reprimanded by Capt. Howze when the latter was his superior by virtue of his temporary rank of lieutenant-colonel of the Thirty-fourth Volunteers. The Secretary also charged Major Hunter with having himself contradicted his charges in an affidavit. None the less, the court of inquiry finds that, while Major Hunter had been unfriendly to Capt. Howze, there was "nothing to show" that the Major's "investigation was not strictly impartial and in accordance with the order under which he acted." The board also says that "the investigation was fair and impartial, as far as it extended, and that it was as nearly complete as was within Major Hunter's power at the time he made it." This view of the Major's activity is in accord with his honorable record of thirty years' service, and was made—to the board's credit—despite the fact that the Secretary of War had condemned him publicly *before* ordering the board to ascertain whether or not he was a perjurer and whether or not he was a procurer of false affidavits. The

board might have taken Mr. Root's own arraignment of Major Hunter as a hint to condemn all of that officer's proceedings. Assistant Secretary Oliver's disapproval of the board's finding in regard to Major Hunter is due, he says, to his belief that it is "contradictory in terms and not warranted by the board during the progress of its investigations." And this although the board was on the spot and heard the evidence, while Gen. Oliver did not become Assistant Secretary until August thirty-first!

To many the attitude of the War Department has from the first seemed strange. If Major Hunter was an unfit officer by reason of prejudice, was it right to blame *him* for the investigation, or Gen. Miles, who appointed him the investigator, and Gen. Davis, who in turn ordered him to bring the charges? Granting the prejudice, ought Major Hunter to have been made to defend himself for actions taken by order of higher authority? It is not usual, we believe, to search for the motives of an inspector who brings in a report against another officer. When the report is in the form of allegations properly made, the custom of the service is not to grant a court of inquiry, but to constitute a court-martial, particularly when the charges were ordered by higher authority. Nor is this in any way affected by the fact that, after reading his evidence and instructing Major Hunter how to formulate his charges, Gen. Davis subsequently accused him of "reprehensible methods" and "unmilitary conduct" in originally making the charges against Howze in a personal and confidential letter to Gov. Taft. The upshot was that Major Hunter found himself actually in the position of defending his reputation and his commission in the army, instead of proving allegations made against another in the course of duty. The accuser was on trial far more than the accused.

We hold no brief for Major Hunter, as we held none for Capt. Howze. We had no reason to suspect that Major Hunter was animated by spite, or to doubt Gen. Miles's good judgment in ordering that officer to conduct the first inquiry. We were glad to call attention to the case, not because of any desire to give publicity to the shocking brutalities which are now officially established as occurring under American military rule, but because we were urged to do so by officers of the army who have the honor of the service at heart, and were disgusted with the failures of courts-martial to punish properly men of the stripe of Majors Glenn and Waller and Lieut. J. E. Gaujot. Moreover, the Howze affair differed from most other cases in that the accusations were made solely by army officers, and could in no way be attributed to the influence of the wicked anti-Imperialists. We presume that there will be universal satisfaction that the army is not to stand directly charged with such inhuman offences as were alleged to have been committed by Major Howze. At the same time, it is also gratifying to note that the court did not feel compelled to cast doubt upon the truthfulness of every sworn statement made by a Filipino, as Secretary Root seemed inclined to do.

As a whole, the case illustrates once more the dangers of the army court-martial system in dealing with anything save purely military offences. In other cases, the courts failed lamentably in their duty of punishing officers who were guilty of shocking crimes. For this we have the authority of President Roosevelt in his disapproval of the courts' findings in a number of instances. In the Hunter case the board's belief that he did his duty as ordered by higher authority is set aside by the Assistant Secretary because in his opinion it was "contradictory."

AN "ARTISTIC SWINDLE."

How far the *suaviter in modo* has given place to the *fortiter in re* in the discussion of the industrial Trust situation is shown by the report of the receiver of the United States Shipbuilding Company. Though many of the facts touched upon have been brought out with more or less fulness in the recent hearings, the report presents the situation in some sort of perspective, so that the wayfaring man, though a fool, may not err therein. Besides, the receiver cites a few astonishing facts which have not as yet been brought to the notice of the public. He says, for instance, that the reports of the expert accountants did not indicate such figures as were given out by the directors as the basis for their purchase of the subsidiary plants. A deliberate intent to "mislead and deceive the investing public and the then present and future creditors of the company" is charged. The prospectus of the company is shown to have been false in a number of particulars. The capital was wrongly stated; more than half of the directors mentioned did not hold and never held that office; and the amount of contracts was overstated. The purchase of the various concerns is said to have been "absolutely without intelligent and independent representation." And, in particular, the mortgages signed to secure Mr. Schwab's bonds, received in part payment for the Bethlehem Works, are held to be a fraud on the creditors of the Shipbuilding Company.

The whole affair is, in short, a matter of "plunder" and "artistic swindle." That fact had already become fairly well established; but the receiver's report is a very important document, by reason of the firm conviction which it expresses that all the stock bonuses given to vendors and promoters are recoverable by the Shipbuilding Company under the law. It may be assumed that the receiver has acted under the best legal advice in making this claim. Independent investigation seems to sustain his point; for in Dill on 'New Jersey Corporations' it is categorically stated that "holders of stock given as bonus are liable on it to creditors, but not to the company." The consequences of a rigid enforcement of such a provision would carry consternation to an enormous number of corporations in this country. When one considers the long list of industrial combines which have been created in the last five years, and the use made of stock bonuses in floating them, the outlook for their promoters is not a pleasant one, in view of the insolvencies that have already taken place.

Every shred of respectability is torn from the shipbuilding project, and yet this may be fairly assumed to be but an exaggerated instance of the general industrial Trust policy of recent years. There may have been more restraint in previous instances, but the underlying intent was, there is good reason to believe, the same as in the case of the Shipbuilding combine; and perhaps the difference in method does not count for so very much after all. In how many instances has it been found that the expert accountants "erred" in estimating the value and the earning power of acquired properties? How often has it been discovered that trusts which started with "sufficient working capital to render them independent of the money market," have not been able to conduct their month-to-month business, to say nothing of charging to depreciation? Furthermore, how frequently has it appeared in the past that the vendors sold out with the intent to get their properties back again and make an enormous profit on temporarily deeding them to the combines? Mr. Schwab has exemplified this policy to perfection. According to the Shipbuilding receiver, he has taken the $2,000,000 annual earnings of the Bethlehem works and, instead of turning the money over to the proprietary company, has spent it on extensions and improvements. This is an old dodge with vendors who were lying in wait to get their properties back.

The question now is, Did these revelations impel the public to seek a remedy for this sort of thing? It is to be hoped that the matter of recovering on the bonuses granted by the Shipbuilding Company will be promptly tested in the courts. Furthermore, the moral as well as the legal aspects of the situation need to be straightened out a little. The plea is raised that something can be said in favor of "dummy directors." In organizing a great project, it is a hardship to compel directors to come from remote points and spend several weeks in New York. But why should their convenience be so carefully consulted? Much will be gained if this episode starts an agitation for some such mea-

sure as that of the English Companies Act. Among the provisions of that law is one which reads: "If any person wilfully makes a statement false in any particular, he shall be guilty of a misdemeanor and shall be liable to imprisonment." If we had such a statute, the legal proceedings against Whitaker Wright could be duplicated in this country. But it is a fortunate thing for our Trust promoters that such a law could not be made retroactive.

LIGHT BREAKING IN THE SOUTH.

The October number of the *South Atlantic Quarterly*, a publication issued at Durham, N. C., by professors of Trinity College, contains the most remarkable articles upon the negro problem which we have yet seen signed by men born and bred in the Southern States. It is to the colleges of the South that its friendly critics have long looked for signs of an intellectual uprising against the doctrines of the Tillmans and Vardamans. Just as the movement for a free Germany and a freer New England originated within the walls or under the influences of the higher schools for learning, so it was expected that protests against the narrowness and provincialism of the South, and against that solution of the race problem which would make of the colored people merely hewers of wood and drawers of water, might first be heard from within university halls.

This hope has not been unfulfilled in the past. At the University of the South, for instance, Prof. W. P. Trent was fiercely assailed for years, and is still called a "renegade Southerner," for daring to state his belief that the South suffers from a lack of contact with the world, and from its voluntary isolation from the intellectual and literary ideals of the rest of the nation. At other institutions, also, such as Vanderbilt University, as was evidenced by Chancellor J. H. Kirkland's address at the Educational Conference in Richmond last spring, the spirit of *Lehrfreiheit* has begun to show itself. But in the great majority of Southern colleges, it must be confessed, the faculties are so overawed by local public opinion, or by their respective boards of trustees, as to be unable to express themselves upon the various developments of the South's political and intellectual life. In the discreditable dismissal of Professor Sledd from Emory College, Georgia, last year, for daring to publish views of his own on the race question in the *Atlantic Monthly*, there is suggested quite as important a reason for the comparative ineffectiveness of Southern institutions of learning as any connected with their meagre endowments.

At Trinity College, however, the professors seem at liberty to speak out without fear of consequences. Of the four articles in the *South Atlantic Quarterly* to which we have just referred, one is from the pen of President Kilgo, another is by Professor Edwin Mims, and a third by the editor, Professor John Spencer Bassett. Professor Mims's paper relates to the "Function of Criticism in the South." In it he has dared to say that his Southern people have "undoubted limitations and defects." "We need," he continues, "to ask ourselves uncomfortable questions and to face the answers heroically":

> "How do the Southern statesmen of the present day compare with those of a former generation in progressiveness and breadth of sympathy and culture? How many ministers and editors are there in the Southern States who have national reputations or deserve to have them? How many highly endowed institutions of learning have we? With all our boasted universities, how many really deserve the name? How many libraries, museums, art galleries, publishing-houses, magazines have we? To what extent is scholarship prized among us? Why is it that so many of our men of letters and scholars now live north of Mason and Dixon's line? Such questions and others like them can not be answered by evading the issue and talking of the strong points in Southern character. Only a discontent with things as they are and a knowledge of other people who are strong where we are weak, will give us a desire for perfection."

And Professors Mims devotes the rest of his paper to a "plea for criticism of the South—criticism that will not be destructive, but constructive"; and criticism, let us hope, that will not be silenced by the shotgun and the revolver.

To a Northern college professor such a plea may seem simply an appeal for one's birthright. If in the South these utterances require courage, what shall be said of Professor Bassett's declaration that "Booker Washington is a great and good man, a Christian statesman, and, take him all in all, the greatest man save General Lee born in the South in a hundred years"? He is similarly outspoken in his protests against the Southern editors and demagogues who would stir up the forces of race antipathy for political purposes by dwelling upon such incidents as Booker Washington's luncheon at the White House. He is broad enough to see that "as long as one race contends for the absolute inferiority of the other, the struggle will go on with increasing intensity." But Professor Bassett also has something to say about the superiority of the white race and its consequent duty. It is this:

> "But if some day the spirit of conciliation shall come into the hearts of the superior race, the struggle will become less strenuous. The duty of brave and wise men is to seek to infuse the spirit of conciliation into these white leaders of white men. Is the white man not superior to the black man—superior in mind, superior in opportunity, superior in obligation to do acts of charity?"

Mr. F. G. Woodward, who writes on "Getting Together on the Negro Question," has perceived fully the economic aspect of the subject, pointing out that "the South, moreover, is slow to grasp the historically proved fact that no large part of a people may be socially, politically, and intellectually repressed without becoming either a criminal or a proletarian class, menacing peace, balking progress, thwarting prosperity." Mr. Woodward takes no stock in the prevalent Southern belief that one-third of the people of the South can be kept in "ignorance, subserviency, and serfdom, while the favored two-thirds enjoy the blessings of a generous civilization." He has also a sharp word to say as to that form of "institutional pauperism" which results from "mercenary scrabbling" after Northern bounty. Equally notable is President Kilgo's address on "Our Duty to the Negro," which finds a place in the *Quarterly*, but was originally delivered to the students and citizens of Durham. Did space permit, we should be glad to make copious extracts from this sane and temperate utterance, with the spirit of which we find ourselves thoroughly in sympathy. We cannot refrain, however, from quoting President Kilgo's belief that if the negro "cannot be made to fill a higher place in the kingdom of human life, then American civilization must acknowledge a defeat—it has found a race of people which it cannot benefit, the Christian religion has discovered a man that it cannot save."

If such words, or even President Kilgo's declaration that the question of social equality "is no part of the negro problem," should fall from the lips of a Northern preacher to youth, they would, of course, attract but little attention. Yet in the South the Northern preacher would be impatiently told "to come and live among us and change your views," and regarded as a crank or lunatic. But coming, as the sentiments do, from a Southern college president and his teachers, we must see in them the most hopeful signs of a solution of the race question along lines of wisdom and humanity and Christianity that have yet appeared in the South.

THE SAN FRANCISCO CURRENCY PLAN.

The American Bankers' Association last year passed a resolution favoring the enactment of "a law imparting a greater degree of elasticity to our currency system in order to make it responsive to the demands of the business interests of the country," and appointed a committee to consider the subject and report at its next meeting. Such a report was presented at the convention in San Francisco week before last. Two measures for accomplishing the desired end were recommended. One proposes to substitute other bonds, that may be acceptable to the Secretary of the Treasury, in place of those of the United States as security for national bank notes. The other contemplates an emergency circulation to be issued in cer-

tain cases, under a tax of 6 per cent. which is to be imposed in order to bring the notes home speedily. But as regards the main purpose of giving elasticity to the currency, both of these measures must be considered seriously defective.

By elasticity of the currency is meant the faculty of expanding and contracting according to the demands of trade. In order to impart such elasticity, facilities must be supplied for issuing bank credit in the form of circulating notes when called for by the exigencies of business, and retiring them when no longer wanted. The record of our national bank currency shows that its rise and fall in volume has invariably corresponded to the price of United States bonds—that is, the bank currency has risen in volume when the price of bonds has been relatively low, and has declined when the price has risen. Never has the volume of banknotes been materially affected, one way or the other, by the demands of trade, not even in the panic of 1893. High-priced bonds mean low rate of profit in circulating notes, and vice versa.

Now the question arises whether the selection of an inferior kind of security will impart elasticity to the system. It will still be necessary for the banks to pay more money for the bonds than they will get back in the form of notes. It will still be incumbent on the bank's officers, in the interest of their shareholders, to watch the market, as they do now, and sell their bonds, either to secure a profit or to avoid a loss. The wants of trade will have no more bearing upon the note-issuing function when the bonds of New York city or of the New York Central Railway are deposited than they have now. "A system of bond-deposit security," as the report of the Indianapolis Commission says, "will always be a rigid system."

But a change in the kind of security accepted for banknotes and the adoption of an inferior kind may have other effects. If the Secretary of the Treasury is to decide between different kinds of bonds, accepting some and rejecting others, and perhaps rejecting to-day what he accepted yesterday, his powers will be dangerously great. He will have control of the money market, if he chooses, and he will be supposed to exercise control even if he does not. Even if he uses his power impartially and wisely, he will not escape criticism. He will be accused of favoritism. The times will always be hard with some people, and the impecunious will always hold the Government responsible for their shortage of money. Conversely, the Secretary will always be subjected to political pressure to admit new securities to the favored list, and speculators will be constantly manufacturing securities to be put upon that list, or to fill the space left vacant by those withdrawn from the market. The Aldrich bill in the last Congress, which proposed to legalize the practice of taking other than Government bonds as security for Government deposits, defined the classes of securities of States, cities, and railways that might be accepted. It was the opinion of Wall Street at that time that the object of the measure was to create a vacuum of one hundred and fifty millions in the bond market to be filled by "undigested securities." That vacuum would be much larger if the San Francisco plan should be adopted. The elasticity would not be in the currency, but in the securities.

"Emergency circulation" is a phrase applied by certain speakers and writers to any issue of banknotes over and above the amount which those particular gentlemen think sufficient. When that maximum is reached, the emergency man says that any overplus of notes should be subjected to a tax high enough to cause their speedy return to the issuing bank. But there are serious objections to this scheme of taxation. In the first place, it tends to defeat the very object of the emergency circulation, which is to relieve stringency, to check panics, by enabling banks to issue their credit speedily in its most acceptable form. Yet the tax, if onerous, will prevent the banks from issuing the notes and giving the relief sought for. The avowed object of the tax is to call the notes home to the banks. But it will not have that effect, because when the notes pass into circulation they pass out of the banker's control. Calling them in will be like calling spirits from the vasty deep. The only thing that he can do to stop the tax will be to deposit legal-tender money in the Treasury to retire them. But this will reduce his cash reserve and lessen his power to discount commercial paper. Every dollar thus taken from his reserve will curtail his discounts by four dollars or more.

GEN. FLEURY AT ST. PETERSBURG.

PARIS, October 20, 1903.

The account given by M. Thiers of his mission during the war of 1870 and of his interviews with the ministers of foreign affairs in the various courts of Europe is a very interesting document, which will be more generally read when the notes left by him are published in a more accessible form. His most interesting visit was to Russia. The key of the situation was in reality in St. Petersburg; if Russia had shown a desire to help France, the conditions of peace might have been very different.

Count Fleury has published a volume entitled 'La France et la Russie en 1870,' from the papers left by his father, Gen. Count Fleury, a personal friend of Napoleon III., to whom he rendered great services, and one of the familiar figures at the Tuileries during the whole period of the Second Empire. In October, 1869, Napoleon III. chose him for the embassy to St. Petersburg, in place of Baron Talleyrand, who was called to the Senate. This choice proved that the Emperor needed to place near the Emperor of Russia a person having his entire confidence, and who could establish very cordial relations between the two sovereigns. Since the Crimean war these relations had always been cold and formal. Russia felt humiliated by certain clauses in the Treaty of Paris, made after the war; she was afterwards very much irritated by the encouragement imprudently given by France to the Polish agitation. This Polish question, which was for a time almost threatening, drew together more closely the reigning houses of Prussia and Russia, which had both had their share in the partition of Poland. In 1867, however, the Emperor Alexander accepted an invitation to come to Paris, but a Pole fired at him in the Bois de Boulogne, and a French lawyer insolently screamed on the steps of the Palais de Justice, which the Emperor Alexander had come to visit: "Vive la Pologne, Monsieur!"

The Emperor Napoleon desired better relations with Russia. The new Ambassador had private instructions, emanating directly from the *cabinet* of the Emperor, and thus conceived:

"General Fleury will express to the Emperor Alexander the thought that the Emperor Napoleon, wishing to tighten the bonds which unite the two sovereigns, has chosen as Ambassador an officer who is particularly attached to his person.

"With Prince Gortchakoff it will be necessary to maintain some reserve, and simply to affirm that the French Government desires peace, and consequently the *status quo*.

"In subsequent conversations, General Fleury will insist upon the danger which threatens Europe in consequence of the Germanic idea, which, if it continues to increase, will naturally embrace in its sphere of action all the German-speaking countries from Courland to Alsace."

The note afterwards alluded to the various debatable questions:

"As for the East, one must likewise desire the *status quo*, but there is no reason for not talking of the future. It would be very important to know how Russia understands the future of Turkey, and how she would like, after a general convulsion, to see the countries of the East constituted. . . . If France knew completely the views of Russia, she could examine where her interests would lie in a future which it is possible to predict."

All this was written one year before the war of 1870. The new Ambassador who had to communicate these views was a very shrewd, very agreeable man, a man of the world as well as a soldier. He was very well received by the Emperor, the Grand Dukes, the Grand Duchess Marie (widow of the Duke of Leuchtenberg), by the Princess Dagmar, married to the heir of the crown. In the first interview with the Emperor allusions were made to the difficulties "which the French Empire seemed to meet" (the Opposition had obtained many seats in the French Chamber), to the revolutionary feeling, which seemed to be on the increase, not only in France, but also in Russia and in Germany. The Emperor asked the Ambassador point blank: "Did you see the King, on your way, at Berlin?" "No, Sire." "I am not surprised; I heard from Prince Reuss [the Prussian Ambassador at St. Petersburg] that my uncle is much puzzled over your mission to this court."

The prolonged occupation of the Duchies of Schleswig-Holstein was at the time a

subject of diplomatic negotiation. The Czar was very fond of his daughter-in-law, a Danish princess, who often spoke to him of the Danes; he was also a great admirer of his uncle, the King of Prussia; the French Ambassador occasionally said a word in favor of the Danes. The Emperor sent the order of St. George to his uncle on the day of the centenary of St. George; but the Chancellor told Gen. Fleury "that, in the mind of the Emperor Alexander, this was nothing but a spontaneous and friendly act of courtesy from a nephew towards an uncle whom he venerated; that there was in it no reason for dissatisfaction on the part of France or Austria, since there was no question of Sadowa; that the toast and the telegram were addressed to a past of fifty-four years—a glorious past, which it was quite allowable for the chief of a great military power to evoke on such a festive day." After this allusion to the events of 1814 and 1815, the Chancellor said: "If we are proud of the Berezina, of Leipzig, and of Waterloo, are you not proud of Austerlitz, of Jena, of Eylau, of Borodino? Have we not crossed in Paris the Boulevard Sebastopol—a name which reminds us of a defeat honorable indeed, but which opens a wound hardly cicatrized? Did you not give the name of the Malakoff to the conqueror of the Crimea?" The Chancellor added that, for himself, he was the promoter of the idea of an alliance with France, "an alliance which would be very intimate but for your fatal campaign for Poland. . . . I shall defend this policy as long as I live."

The extracts from the letters which Gen. Fleury sent to Paris are very interesting. He describes minutely the life led by the Emperor. Speaking of the Tsesarevitch, he says: "As for the Tsesarevitch (and it is a good card in our game), he represents what is called the Russian party—that is to say, the anti-Prussian and anti-German party. . . . In the Council of the Empire he has had occasion several times to manifest his anti-Prussian sentiments." The national opinion, as far as it could be expressed by the press, in Russia, was turning visibly towards a French alliance. The Chancellor always indulged in very optimistic language. Russia was beginning to build her railways; she had no object but peace. "If complications arose on the side of Prussia, the Cabinet of St. Petersburg would be led, by the force of opinion, to observe neutrality." Gen. Fleury's dispatches testify to his comprehension of the situation. "Neither Prussia nor Russia," he says in one of them, "has any interest in their mutual aggrandizement. If Panslavism is detested in Berlin, Pangermanism is no less feared in St. Petersburg. . . . Whatever may be the affection of the nephew for his uncle, the Emperor Alexander is obliged to reckon with the national feeling." His judgment on Panslavism is curious:

"I consider Panslavism a sort of sentimental freemasonry, to which it is good form in society to belong, and to which it is also difficult not to make some concession in high governmental spheres. . . . Panslavism is a sort of patriotic dream, which is cherished though it is not easy to see how it can be realized. . . . The Slavic peoples are animated by very different tendencies, according to their political situation. It is not certain that the Servians, the Montenegrins, the Bulgarians are, in their inner souls, tempted in the least to abdicate their autonomy and the liberties they enjoy in order to exchange them for the Russification which is in waiting for them. If the Czechs, the Croats, the Ruthenians, and others invoke the phantom of Panslavism, it is in order to obtain larger concessions. As for the Galicians, by accepting the place made for them in the Austro-Hungarian Government, they bring to Austria incontestable strength. Who can say that the comparison of their fate with that of the Poles will not give Russia serious difficulties?"

All these dispatches show Russia chiefly occupied with Eastern questions, and behind all these was the constant desire to efface some of the traces of the treaty imposed on Russia after the Crimean war, and to make her more free in the Black Sea. This was really the dominant preoccupation, and the war between France and Prussia soon gave Russia the occasion which she longed for. "War may come out of a mere incident," wrote Col. Stoffel as far back as February, 1868. The incident was the vacancy of the Spanish throne. All the incidents which followed—the renunciation of Prince Leopold of Hohenzollern, who had for a moment been a candidate, the meetings at Ems between the King of Prussia and M. Benedetti, the French Ambassador—belong to history. What were to be the conduct and attitude of Russia? The Chancellor Gortchakoff never concealed his thoughts: "Russia is desirous to have a cordial understanding with France; but it is necessary that France should give her tokens of conciliation on the Eastern question. Not that there should be any question of the revision of the humiliating treaty of 1856, which Russia signed with pain; in such a grave question France is not alone, and she can act only in concert with England." This was well understood in Berlin, and Prussia knew that, with promises on the Eastern question, she was sure to obtain the neutrality of Russia.

General Fleury was ordered to remain in Russia when the war broke out. The Emperor Napoleon still thought he could render some service at St. Petersburg. The Ambassador's correspondence with the Duke de Gramont shows very clearly what were the sentiments of the Emperor of Russia. In a letter from Baron Jomini to General Fleury (Jomini was attached to the Russian Foreign Office) we read these lines:

"Considering the manner in which the war is engaged, the best thing Russia can do is to keep out of it as long as she can. But it is possible that the necessities of the struggle may oblige France to draw in Austria. The war would then assume so threatening an aspect for us that, *nolens volens*, it would be difficult for us to remain passive spectators. Eventualities might then arise which would force our hand."

These lines show clearly that if Austria had tried to help France, Russia would have declared war against her. It is painful to think that the Emperor Napoleon threw himself into war without the slightest guarantees on any side. It is difficult also to imagine why M. Thiers thought it necessary to go to St. Petersburg; he could obtain nothing there but polite words.

Correspondence.

IRRIGATION IN THE SOUTHWEST.

To the Editor of The Nation:

Sir: The practical irrigators of the Southwest thoroughly agree with the statement of Mr. I. W. Griscom in the *Nation* of October 15, that "the equitable distribution or sale of public land is a legitimate Governmental function." But they dissent *in toto* from most of the positions and deductions therefrom of this correspondent, who evidently is not familiar with the actual irrigation of arid or semi-arid lands.

The experience of Southern California is wholly at variance with his assertion (in effect) that land which depends upon artificial irrigation is no place for a poor man. On the contrary, the direct opposite of this assertion is true, in the opinion of practical irrigators in this part of the world.

As a matter of actual experience, I think it may with truth be said that irrigation —and irrigation which in almost every instance was initiated by poor men—has been the making of Southern California. This is especially true of Los Angeles County, which formerly included the territory now constituting the prosperous counties of Orange, San Bernardino, and Riverside. Anaheim, the pioneer colony of California (since the change from Mexican to United States rule) was started on the coöperative plan in 1857 by fifty persons, mostly Germans of San Francisco, who, as a rule, were "light in pocket" and dependent on their own labor for their sustenance as well as for the wherewithal to carry forward this (at that time) experimental undertaking. They pooled their resources and bought, at a very moderate price, about eleven hundred acres of a Spanish grant, near the Santa Ana River in this county, and hired a civil engineer to lay it off into fifty small farms of twenty acres each, bring the water in a big ditch on to the tract from the Santa Ana River, and plant each tract mostly to grape vines, and care for the same three years. At the expiration of this period, or soon thereafter, most of the proprietors moved to their new-made homes, where their young vineyards already were beginning to bear. Other thriving colonies, or coöperative associations, following Anaheim methods more or less closely, have been formed, and have proved wonderful successes, the more notable of which may be mentioned—Pasadena, Riverside, Redlands, and Pomona, besides many others. And thus, through the magic of irrigation and coöperation, thousands and tens of thousands of acres of orange and walnut and other orchards have taken the place of the former dry and apparently arid cattle ranges of Southern California.

The Government has millions of acres of arid or semi-arid lands which are worthless without water, but which, with water, will produce anything that can be produced in Kansas and Nebraska, and many things much more profitable that cannot be grown in those States. The waters of the Los Angeles, the San Gabriel, and the Santa Ana Rivers are susceptible of diversion at comparatively moderate expense. But to take out the vast volume of water of the great Colorado of the West, and make it available for the irrigation of the millions of acres of Government land along its banks and on the immense areas of the Great Desert, is a task of such magnitude that only the Government ought to undertake it; and this is the only way it can get these lands occupied and improved. Once the water is brought on to them, the men in a "prairie schooner" will very quickly club together to bring, in lateral ditches, the

water to their ten, twenty, or forty-acre tracts. For, when land is irrigated where hired labor is expensive, a poor man only wants what land he can cultivate himself.

As to the cost of preparing arid or desert land for irrigation, it is practically nil, for, generally, in a state of nature nothing grows on it, although, under cultivation with plenty of water, it is, on account of the excessive heat of those regions, wonderfully productive, as has been abundantly demonstrated along the banks of the river in the vicinity of Yuma, and at Indio, Salton, etc., in the Desert by means of artesian wells. HENRY D. BARROWS.

LOS ANGELES, October 25, 1903.

SCIENCE AND WAR.

TO THE EDITOR OF THE NATION:

SIR: There are now two great funds of approximately the same amount—ten millions of dollars—which are devoted to the interests of science: the Nobel Fund, administered by committees of the Royal Academy of Sweden, and the Carnegie Fund, under the charge of the Carnegie Institution.

The Nobel Fund was given by the Swedish inventor of deadly explosives which have revolutionized the conduct of wars; and the name "Nobel powder" will perpetuate that of the inventor in scientific literature. Other more deadly compounds will, however, obscure the brilliancy of the inventor of this powder in the eyes of the great public. The fund he has established promises to give him a greater monument for all time, and he will be numbered with those who, in the sonorous Latin of the inscription on the walls of Memorial Hall at Cambridge, shine "quasi stellæ in perpetuas æternitates." For the fund is to encourage mankind's effort to abandon wars and to cultivate the arts of peace. In Nobel's will we find the following:

"The said interest shall be divided into five equal amounts, to be apportioned as follows: one share to the person who shall have made the most important discovery or invention in the domain of physics; one share to the person who shall have made the most important chemical discovery or improvement; one share to the person who shall have made the most important discovery in the domain of physiology or medicine; one share to the person who shall have produced in the field of literature the most distinguished work of an idealistic tendency; and, finally, one share to the person who shall have most or best promoted the fraternity of nations and the abolishment or diminution of standing armies and the formation and increase of peace congresses."

These prizes amount to approximately fifty thousand dollars each, and they are also accompanied by a gold medal. They have been awarded to Röntgen, the discoverer of the X-rays; to Lorenz and Zeeman, the discoverers of the remarkable doubling and tripling of spectral lines in the magnetic field; to Van 't Hoff and to Fischer for their investigations in chemistry; and to Arrhenius for his work in electrochemistry.

No scientific man can offer his own work to the Nobel committees. He must be recommended by his peers. To this end, circulars have been sent to investigators in the subjects of physics and chemistry. The circular to physicists reads as follows:

ROYAL ACADEMY OF SCIENCES, SWEDEN.

"SIR: The Royal Academy of Sciences have elected the undersigned members of the Nobel committee for physics; and to facilitate their work, we have the honor to invite you to present to us a proposition for the Nobel prize in physics for 1904.

"According to sections 7 and 8 of the Statutes of the Nobel Foundation, this proposition should be inspired and accompanied by works and other documentary evidence upon which it is founded; and it should reach the Nobel committee before February 1, 1904."

The circular is signed by Hasselberg, Thalen, Knut Angstrom, Hildebrandsson, and Arrhenius, well-known names in science.

These prizes may be said to crown a man after his lifework is accomplished, while the Carnegie Institution starts an investigator who has an idea which he wishes to realize. It is not probable that the Carnegie Institution will ever give sums approaching the amount of a Nobel prize even for the carrying out of a scientific idea. It remains to be seen whether the Nobel Fund or the Carnegie Fund will be the most fruitful in results. It is often said that the profession of a physicist or a chemist does not offer great rewards such as come to men in other learned professions. With the institution of the Nobel Fund this criticism no longer holds. It is true that a man cannot say, "I shall get the Nobel prize after long and arduous labors"; for great results in science come slowly, and some investigators are more fortunate than others who may have the greater learning. Both funds may be said to make for peace, since science is making war so costly that nations hesitate longer before undertaking them. Scientists believe that their labors in time will prevent wars more effectually than peace congresses. Electricity and chemistry are constantly providing more effectual death-dealing methods.

Unfortunately, this opinion is not yet shared by our diplomats and Cabinet ministers. Some years ago, when Mr. Lowell was Minister to England, I met him at a reception, and on his asking where I had been that day, I replied that I had been to the National Gallery looking at the Turners. He brightened, as if pleased to find that a scientific man could have a taste for art, and wished to know which Turner I liked the best. I said that I preferred "Towing the old *Téméraire* to its final resting-place." He remarked, with still greater show of interest, that he also preferred that picture; and he asked what the picture typified to me. I had hardly begun to speak of what seemed to me was the idea of the artist, when he eagerly said:

"It typifies to me vulgar, puffing science towing a poetical rhapsody to its final resting-place."

"Oh," exclaimed a lady in deprecating tones, "Mr. Lowell! Science and scientific inventors, like Nobel, are making war so terrible that they will soon vanish from the face of the earth."

"Madam," said Minister Lowell, "wars will endure so long as women admire chivalry in men."

I was moved to quote from the 'Biglow Papers' some vigorous denunciations of war; for instance, the line—

"This goin' ware glory waits ye haint one agreeable featur."

Knowing, however, our late Minister's genius for correction, I remained silent.

Science certainly has a hard task to combat our barbaric inheritances, which are at war with higher ideals. These animal vestiges, like the vermiform appendix, manifest themselves strongly in youth, and are in evidence even in the mature years of our rulers. The fallacy that war is necessary for a nation's vigor seems to be long enduring; but the Nobel Fund makes for righteousness, and will have its perfect work in time through the labors of the scientific men who arise to be crowned in their efforts for peace.

JOHN TROWBRIDGE.

CAMBRIDGE, October 30, 1903.

LORD PENZANCE AND THE GARDENS OF ADONIS.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of October 22, Mr. Waites points out that the gardens of Adonis were mentioned in the 'Faerie Queene' in 1590. As, however, "Henry VI." may have been written before 1590, and as its author may have meant by the gardens of Adonis something different from what Spenser did, the citations from the 'Faerie Queene' are scarcely decisive. In his 'Natural History,' as translated by Philemon Holland, in 1601, Pliny speaks of "the gardens of the Hesperides, of *Adonis*, and Alcinoüs" (xix. 4); and in another place, alluding to "sothernwood," says that "when it is above ground, the young plants are removed and set, as it were, in *Adonis* gardens, within pots of earth" (xxi. 10). In his 'Morals,' as Englished by Holland in 1603, Plutarch speaks of "those women, who cherish and keep their gardens (as they say) of *Adonis* within brittle pots and panns of earth" (ed. of 1657, p. 455); and in his 'Lives,' translated by North in 1579, he twice refers to the Adonia ("Tudor Translations," ii. 110, iv. 20). Other writers to mention the gardens of Adonis were Theocritus ('Idylls,' xv. 113), Theophrastus ('Historia Plantarum,' vi. 7, 3, and 'De Causis Plantarum,' i. 12, 2), and Erasmus ('Adagia,' 1573, i. 22, 23, ii. 246), who quoted Plato and Plutarch.

It will, perhaps, be thought that these citations show a knowledge of classical literature. On the contrary, they merely indicate an hour or two spent in a large library. In their notes on "Henry VI.," Delius, in 1858, referred to Plutarch, Hunter in 1873 referred to Pliny, Hudson in 1880 referred to Spenser, Rolfe in 1882 referred to Pliny and Spenser, and White in 1883 referred to Plato and Spenser. In 1886 Prof. J. D. Butler quoted Plato ('Shakespeariana,' vi. 230-232), in 1888 A. R. Shilleto did the same ('Plutarch's Morals,' p. 352), in 1896 Alice C. Sawtelle noted several other allusions ('Sources of Spenser's Classical Mythology,' pp. 14-16), while the gardens have been described in numerous Greek, Latin, and classical dictionaries, notably in the 'Dictionnaire des Antiquités' of Daremberg and Saglio published in 1877. Yet of these many references, drawn from recent and easily accessible sources of information, apparently but a single one had come within the ken of Lord Penzance. If we turn to early critical editions of Shakspere not so accessible as the recent ones, the result is still more striking. Neither Rowe in 1709 nor Pope in 1723 commented on the passage in "Henry VI."; but in 1733 Theobald had a long note in which he said: "This Species of *portable Gardens* in Honour of *Adonis* (a Superstition that has been

variously explain'd;) is mention'd by *Theophrastus, Aristotle, Plato, Pausanias, Athenæus, Eustathius*, and a Croud of Authors more, who are quoted in *Castellanus*, and *Meursius* in his *Græcia Feriata*." In a later edition, Theobald quoted the 'Faerie Queene.' In 1744 Hanmer referred to Erasmus, while in 1747 Warburton summed up what had been said on the subject by Theobald, Hanmer, Bentley, and Pearce (the last two in their notes on 'Paradise Lost,' ix. 440).

What, then, has been well known to others for a hundred and seventy years is still unknown to certain Baconians. But this is not all. Even if Shakspere was the author of "Henry VI.," even if he could have obtained his knowledge of the gardens of Adonis only from Plato, not translated into English in his day—still, Lord Penzance's conclusion that Shakspere must have "mastered the Greek language" by no means follows. Lord Penzance does not seem to have been aware of the fact that in the sixteenth century it was common to print the works of Greek authors either in a Greek text, or in a Greek and Latin text, or in a Latin text only. There are now before me a Latin text of Plato printed in 1561, and a Greek and Latin text of Plutarch printed in 1572. It is thus seen that Shakspere could have learned of the gardens of Adonis through the Latin of Plato, Pliny, and Plutarch, and of the Adonia through the Latin of Plutarch and the English of Sir Thomas North. Hence the "rather startling result" which so puzzled Lord Penzance, and which he said demanded an explanation, is, like so many other mare's-nests discovered by the Baconians, purely a difficulty of their own creating. ALBERT MATTHEWS.

BOSTON, October 26, 1903.

P. S.—It may be added that the gardens of Adonis were again alluded to by Spenser in 'Colin Clout,' l. 804, and were mentioned by Jonson in 1599 ('Every Man out of his Humour,' Act iv., Sc. viii.).

FRANCIS ELLINGWOOD ABBOT.

TO THE EDITOR OF THE NATION:

SIR: Dr. Francis Ellingwood Abbot was found, in Cambridge, on October 23, lying face downward on the grave of his wife, who had died just ten years ago, he having lately completed the book on philosophy to which he had devoted his whole life. One of the benefits of an acquaintance with Dr. Abbot was that it gave a new conception of the saying, "The pure in heart shall see God." The unsophisticated purity of his love of and apprehension of truth, oblivious of the tide of opinion, was a quality without which the Introduction to his 'Scientific Theism,' wherein he put his finger unerringly (as the present writer thinks) upon the one great blunder of all modern philosophy, could not have been written. The perfect clearness and simplicity of his argument will blind many a mind to it that could thread its way through the most abstruse tortuosities of law. But Dr. Abbot was like that "best philosopher" of whom Wordsworth speaks—

> "On whom those truths do rest
> Which we are toiling all our lives to find."

He had that spiritual insight into philosophy that Wordsworth attributes to the child. In each writing of a philosophical nature that he produced, he brought out some undeniable and important point that had been almost entirely overlooked by philosophers; so that philosophy is sure to be materially advanced by the great work which he left finished, but which is not yet published.

Dr. Abbot was an intensely self-conscious man, with a perfectly accurate appreciation of himself, and with a noble variety of self-consciousness that bent to no compromise with himself or with others, for all his gentle and loving nature. The world does not like men so extremely consistent as he was, but it seems impossible at this day to review any long-past episode of Dr. Abbot's life without seeing that his course was the right one, the only right one. He was fond of writing verses. Here are two stanzas of seven in his 'Scientific Theism':

> "Art Thou the Truth?
> To Thee, loved and craved and sought of yore,
> I consecrate my manhood o'er and o'er,
> As erst my youth.
>
> "Art Thou the Strong?
> To Thee, then, though the air be thick with night,
> I trust the seeming-unprotected Right,
> And leave the wrong."

C. S. P.

October 27, 1903.

Notes.

The Burrows Brothers' Company of Cleveland project a further extension of their reprints of scarce and neglected Americana, in limited editions, with Eliot's 'Indian Logick Primer,' Hutchins's 'Topographical Description,' Leonard's 'Narratives of Adventures,' and Narratives of Indian Captivities. As heretofore, competent editors are provided in each case.

Harper's November list includes 'America in Literature,' by Prof. George E. Woodberry; 'The Standard of English Pronunciation,' by Prof. T. R. Lounsbury; 'The Making of a Journalist,' by Julian Ralph; 'Tennyson's Suppressed Poems'; 'The Ambassadors,' by Henry James; 'The Russian Advance,' by Albert J. Beveridge; 'The Keystone of Empire'; 'Symbol-Psychology: A New Interpretation of Race Traditions,' by the Rev. Adolph Roeder; 'Winter,' photographically illustrated, by Rudolph Eickemeyer, jr.; William Morris's 'Pygmalion and the Image,' illustrated; and 'Mother and Father,' by Rob Rolfe Gilson, illustrated by Alice Barber Stephens.

Ginn & Co. announce 'The Louisiana Purchase,' by Ripley Hitchcock; 'Greek Sculpture: Its Spirit and Principles,' by Edmund von Mach; and 'Bacteria, Yeasts and Molds in the Home,' by Prof. H. W. Conn.

'Food and Cookery for the Sick and Convalescent,' by Miss Fannie Merritt Palmer, is in the press of Little, Brown & Co.

A. Wessels Co. will shortly publish 'Famous Battles of the Nineteenth Century,' and 'Napoleon Bonaparte,' for boys, by William C. Sprague.

E. P. Dutton & Co. will soon bring out 'Plays, Acting and Music,' by Arthur Symons.

Nearly ready is Esther Singleton's 'French and English Literature,' from McClure, Phillips & Co.

The history of New Hampshire is to be told by several writers in a volume edited by George Francklyn Willey and issued by the New Hampshire Publishing Corporation under the title of 'State Builders.'

Whether it be or be not commendable to collect and publish every discoverable scrap from the pen of a departed man of letters—little ephemeral squibs in newspapers, album-verses, and miscellaneous *quisquilia*—is a question too ample to be discussed in the compass of a note, but it is suggested by the appearance of Volumes I. and V. of the 'Works of Charles and Mary Lamb,' edited by E. V. Lucas (London: Methuen & Co.; New York: G. P. Putnam's Sons). Certainly, if such republication be ever justified, it should be so in the case of Lamb, everything from whose pen has some flavor of his quaintness and whimsicality. While the present edition includes all his work previously published, the editor has spared no pains in tracking his author (often by scent rather than by sight) through files of forgotten journals and other dust-heaps of literature, and has perhaps given even more labor to the elucidation of obscure allusions to persons and happenings of the time, embodying the results of these researches in a mass of notes. The inclusion of Mary Lamb's writings gives this edition a special value, and two well-engraved portraits are an acceptable adornment of these handsome volumes.

With volume seven the sumptuous Macmillan edition of the 'Letters and Literary Remains of Edward FitzGerald' is brought to a close—deliberate, we might call it, in view of the protracted publication covering many months. The miscellaneous character of the present volume, which begins with Omar in all his glory of four versions, and all but ends with the Chronology of Charles Lamb, reflects many phases of FitzGerald. Here are translations from the Persian and from Petrarch; his own short flights of poesy; a letter to Professor Cowell; his preface to 'Polonius' and introduction to 'Readings from Crabbe'; and the admirably prosed obituary notices of Crabbe and of Bernard Barton. His Greek and Spanish sides are indeed wanting, and still the medley contains all of the man if not of the poet. Those who can afford this edition will seek it; it represents, we think, the last word unless the Letters should be reprinted by themselves, as they deserve to be, being for the first time arranged chronologically.

One of the happiest selections for the Miniature Temple Classics was Sebastian Evans's translation of 'The High History of the Holy Grail.' It has seemed good to the publishers, Dent-Dutton, to offer his excellent version in more stately form. The result is an immaculate reprint in octavo, in which nothing but the illustrations may be cavilled at. Jessie M. King has unhappily taken as her exemplar the morbid mysticism of Aubrey Beardsley in his illustrations for the 'Morte d'Arthur,' but she has little of his perverse ability in the management of the pounced line and the solid spot.

Three editions of W. H. Hudson's 'The Naturalist in La Plata' followed rapidly upon its first appearance in 1872, when we judged it a work of rare originality and authority, delightful to read. The demand, it appears, has continued unsatisfied, and now the treatise (for it is not quite a narrative) is once more handsomely produced, with some changes in the illustrations, by J. M. Dent & Co., London (New York: Dutton).

Henry Harland's sprightly story of 'The Cardinal's Snuff-box' has been freshly brought out by John Lane in very attractive

print, paper, and binding, and with clever and graceful pen-drawings in illustration, by G. C. Wilmshurt, and is sure of a prolonged vogue.

A fourth, enlarged edition of Dr. Benjamin Rand's 'Selections Illustrating Economic History since the Seven Years' War' is being brought out by Macmillan. First issued in 1888, and very favorably received, this compilation at once took its place as a text-book in our leading universities, was much improved in the second edition, and is now brought down to the end of the last century. Room has been saved by making a separate volume of the select bibliography of economics which was a feature of the third edition.

The third edition of 'Who's Who in America' (Chicago: A. N. Marquis & Co.) shows an increase, during the two years, of approximately 4,000 names. By so much is the worth of this indispensable national directory enhanced. The brief, authentic biography; the list of authors' works; the present address—sum up information nowhere else to be had between one pair of covers. This little world of nearly 14,500 names is curiously analyzed by the editor in his prefatory remarks, respecting place of birth and residence and age. "Examination of the tables will show that more of the men were born in 1856 than in any other year, and that over one-half of the entire number were born between 1840 and 1860. Of the women, more were born in 1860 than in any other year, and more than half were born between 1840 and 1865." These benchmarks are like the westward-shifting centre of gravity of population in our decennial census.

The seventeenth volume of the English 'Book-Prices Current' (London: Elliot Stock) records the prices fetched at auction from October, 1902, to July, 1903, with the customary scrupulousness and the invaluable index, in which the several entries are still further differentiated by bracketing the date of publication. The editor, Mr. J. H. Slater, in his analytic preface, points to the growing demand for Old English Classics; the unchecked appearance in the auction room of early editions of Shakspere's plays, even of the first four folios, more or less defective; the scarcity of Americana, etc. One work, Alexander Gallus's 'Doctrinale,' a hitherto unknown publication of Pynson's and the first of his dated issues (1492), had for nearly three and a half centuries lain on the shelves of the Appleby Grammar School. Another rarity was Bacon's autograph in Luther's Commentary on St. Paul. Horace Walpole's autograph copy of Chaloner's translation of Erasmus's 'Praise of Folly' also fell under the hammer.

In more senses than one—so far as New England is concerned—Mr. Bradford Torrey may be called the 'Clerk of the Woods,' conformably to the title of his new volume (Houghton, Mifflin & Co.). By his long tenantry of the aisles of the forest, by his devotion to the study of his subject, and by the accuracy of his journal, he well deserves such appellation. It is no small undertaking to make a calendar of a year spent in the woods (and this one begins with May and closes with April), taking daily note of the coming and the going of the birds, of the blowing and the fading of the flowers, and of the multitudinous mutations of nature. Mr. Torrey has done this with admirable patience, and those who have followed his work know what to expect in his lines, for his quality is as certain to manifest itself as the birds are to come with the sun. His quiet humor and his happy faculty of discovering analogies between things in the worlds human and material, it is needless to dwell upon. He reports here that the chicory plant is not marked in Gray's 'Manual of Botany' as bearing white flowers; nor in Britton and Brown's 'Illustrated Flora' as having pink ones; yet, as Mr. Torrey shows, it has both. There are thirty-two sketches in the book, and among them may be noted: In the Cambridge Swamp; Wood Silence; A Day in Franconia; A Text from Thoreau; Signs of Spring; Birds at the Window; Under April Clouds.

It cannot be said that Mr. W. Salt Brassington has made a readable book of his volume on 'Shakespeare's Homeland' (London: J. M. Dent & Co.; New York: Dutton); but doubtless visitors to Stratford of exceptional leisure may find many hints in it for interesting excursions, though the connection of the things seen with Shakspere is often of the slightest. There is a chapter also on the "Home of the Washingtons," and several on Shaksperian celebrations, Shaksperian relics, and the portraits of Shakspere—the last of no especial value or authority. The illustrations, in pen and ink, are from two hands, and some of them are attractive. The frontispiece is a reproduction, in color and said to be "in facsimile," though the process is not named, of the so-called "Droeshout Original." It does not look like a photographic reproduction, but rather like a poor lithograph. Certainly the portrait is no more convincing in this form than in the black-and-white reproductions we have seen hitherto. The book is well printed on good paper, and may serve for an acceptable holiday gift to the sort of person who likes books for their appearance rather than for their matter.

Lord Ronald Sutherland Gower's 'Michael Angelo Buonarroti,' in the Bell-Macmillan "Great Masters" series, will add neither to the reputation of the writer nor to the usefulness of the series. It is not to be expected that such a book should contribute anything to our knowledge of the life of the great Florentine, but the common and accessible facts might be given in clearer and more attractive form; and if really original criticism is more than we have a right to demand, yet something more discriminating than a constant repetition of superlatives might be afforded us. The chapter on "Michael Angelo as Draughtsman" was made antiquated before it was published, by the appearance of Berenson's studies of the 'Drawings of the Florentine Painters'; but in both painting and sculpture Lord Ronald is apparently inclined to accept all the doubtful works, and an extraordinary number of these are included in the illustrations—a procedure which might be justified in a larger and fuller work where an argument on their authenticity was undertaken, but which is in the present case entirely misleading. The "short bibliography" fails, singularly enough, to mention Grimm. In short, the only thing in the volume that seems worth printing, at this date, is Mr. G. F. Watts's high estimate of Michelangelo as a colorist, as well as a draughtsman, in his frescoes on the ceiling of the Sistine Chapel. This is to be found in a fragment of a letter from the veteran artist which Lord Ronald includes in his preface, and is so interesting that one wishes Mr. Watts had been entrusted with the writing of the book.

In her 'Greek History for Young Readers' (Longmans, Green & Co.) Miss Alice Zimmern's aim has been to write a book which shall serve as a link between the tales of Greece with which most children early become familiar and the more advanced histories. In this she has succeeded admirably; she uses the most simple language, and conveys all the essential facts of Greek history from what we know (or, rather, don't know) of the prehistoric dwellers in the Ægean, down to the death of Alexander. The numerous colored and plain maps and the illustrations of Greek antiquities and modern photographs of Greek sites greatly enrich the volume, which is well printed. Miss Zimmern's archæological introduction conveys in language that ought to interest any child the most recent theory about Troy and the earliest encounters of Europe and Asia. An occasional anecdote helps along the information, and a young student who should be led to read carefully through this little volume of 373 pages would acquire, as painlessly as one may, an excellent background of Greek history, together with a smattering of archæology, in these days indispensable.

A novel experiment has been made with the Herodotean story of King Crœsus, out of which "Lucy Snowe," the writer of one or two plays, has constructed a short dramatic piece published by Brimley Johnson (Adelphi, London), with a view to school performances. The first act conveys the glory and greatness of Crœsus along with the wisdom and warnings of Bias and Solon. The second act brings in the oracle from Delphi, the declaration of war, and the death of Atys. The third act begins with the sacking of Sardis, and ends with Apollo's deliverance of Crœsus, who bethinks him of the wisdom of Solon. The contriver of this play has not wandered far from the simple story of Herodotus, and indeed has been well inspired to use as far as might be the very words employed in Mr. G. C. Macaulay's well-approved translation of Herodotus. For the cleverer boys and the older ones in a school of fair size, there are six parts, requiring a good deal of memorizing. There are four parts which require no more than a younger boy could learn to do and say, and eleven parts of microscopic dimensions, suited to the incipient stages of boyhood. To these performers add the necessary supernumeraries, and twenty-five or thirty could take part, though the play might be staged with twenty. Here is a new means suggested for popularizing the substance of things Greek quite apart from the study of the Greek language.

The Rev. R. F. Weymouth, well-known for his scholarly work in preparing the 'Resultant Greek Testament,' completed before his death 'The Modern Speech New Testament' (New York: Baker & Taylor Co.). The title indicates the character of the version. Similar translations have been made, and, while this is one of the best, it is, as the author suggests, "a succinct and compressed running commentary" rather than an exact rendering. Such a work encounters, even more constantly than the Revised Version,

the prejudices in favor of the old familiar phraseology. There are some "modern" improvements in the arrangement: the paragraphs are shorter than in the Revised Version, and the "headings" are let into each paragraph, instead of being placed at the top of the page, as is done in the American Revised Version.

The Financial Directory Association publish 'The Financial Red Book of America,' which is supposed to contain the names of all men and women worth upwards of $300,000, with some indications of the affiliations of individuals with different corporations as directors, etc. Such a book would have a certain value if it were absolutely correct, but a cursory examination shows that the present volume is ludicrously untrustworthy.

The veteran astronomer Senator Giovanni Schiaparelli has turned from the canals of Mars long enough to give us a most lucid and interesting sketch of the astronomy, cosmography, and calendar of the Hebrews ('L'Astronomia nell' Antico Testamento'). It is one of the little "Manueli Hoepli." Another is a quite admirable outline of Assyro-Babylonian literature ('Letteratura Assira') by Prof. Bruto Teloni of the Royal Institute of Higher Studies at Florence. It unites a French lucidity and simplicity in the text with a German detail and exactness in the notes, and throughout is well up to date.

The *International Studio* (John Lane) publishes, in an 'Art Portfolio' with illuminated cover, sixteen of the more important colored plates which have appeared in that magazine. They are mounted each in a heavy mat, occasionally of startling color, and provided with brass rings for hanging. They are well executed, and some of them are of good quality, but eccentricity seems more characteristic of the series than beauty, and it is difficult to take as seriously as the *Studio* does the kind of art in which it is most interested.

We do not often concern ourselves with the fashion magazines, but the publishers of our higher-class monthlies may profitably notice the quality of decorative art and of reproduction reached in some of the covers of the *Delineator*—notably in the design, by W. C. Rice, jr., for the November number. It is long since the *Century* or *Scribner's* has given us anything of such serious merit or anything so well reproduced. We have seen nothing, until now, by Mr. Rice, but his work seems to be worth watching for, and we shall expect to hear more of him. Such a modest and workmanlike production, though not faultless, contrasts most refreshingly with the straining for novelty of the contributors to the *Studio's* Portfolio.

In the *Geographical Journal* for October, a number of exceptional value, Prof. W. M. Ramsay describes the Great Taurus Pass through the Cilician Gates, with many allusions to the ancient history of this region. Referring to the present condition of this part of the Turkish Empire, he states that he was struck with the obvious signs of prosperity and increase in the population, due to a great extent to the administration of the present Grand Vizier, Ferid Pasha, at that time Vali of Konia. He is "a man who possesses the governing instinct and capacity, who has learned much from modern European method, but applies what he has learned, not with the rigidity of a mere official trying to force European ways on an trained, undeveloped, and unresponsive Oriental race, but with the free, rough-and-ready natural power of one who sees what is possible, and gets his work done in a way that the people are fit for. Hence, on the one hand, as I was told, he has greatly increased the revenues which the Vilayet sends to Constantinople, and, on the other hand, I can vouch from personal experience for the fact that the increase is accompanied by obvious signs of increased prosperity among them, and by the most perfect order and quiet. During the last two years we travelled widely in the Vilayet, and found not the slightest trace of disorder, such as we have often observed in previous years in that and in other parts of the country." In a "Scheme of Geography," Prof. W. M. Davis discusses, with the help of diagrams, a method for taking a comprehensive view of geography as a whole—a department of learning concerned with the inorganic conditions that constitute the physical environment of living forms, or physiography, and the response made by all living forms to their environment, or ontography, and the correlation of the facts which fall under these two heads.

"Two years among the Chukchis and Koryaks," the title of the principal article in Petermann's *Mitteilungen*, number eight, is an account of the ethnographic expedition sent out by the American Museum of Natural History in New York in 1900 to study the hyperborean tribes of extreme northeastern Asia. The facts are said to have been obtained from a member of the expedition, but his name is withheld. In this instalment, Vladivostok, the convict isle of Sakhalin and Okhotsk are briefly described. A settlement of the Koryaks was visited, and a remarkably vivid picture is drawn of the dwellings, manner of life, and customs, and especially of a drunken orgy of these savages. Phonographic records of a hundred of their songs and melodies, it is said, were obtained.

Mr. G. T. Emmons's monograph, 'The Basketry of the Tlingit,' in "Memoirs of the American Museum of Natural History," Vol. III., ii., is primarily for ethnologists, but it deserves the attention of all who are interested in the applied arts. Mr. Emmons enumerates fifty-one designs in use by the Alaska Indians. Most of the motives are derived from familiar natural objects or utensils of the lodge or chase. The patterns are frequently striking, and their combinations in the finished basket or cup are often very ingenious and beautiful. Eighteen plates, illustrating five or six times as many examples, show a decorative sense that recalls in some fashion the faultless art of the rug weavers of Turkestan and Caucasia. A single colored plate gives an idea of the beauty of the seasoned spruce root which is the basis of the weave. It has a golden straw tone that willow baskets rarely possess. Mr. Emmons describes the various weavings, the dyes, the symbolical value of the patterns, etc., and his whole study will be suggestive to all who go in for arts and crafts.

A marked feature of the fifty-first annual report of the Boston Public Library is the earnest effort of its officers to increase its usefulness. It has now one hundred and fifty-six agencies—thirty-nine more than last year—for the delivery or reading of books. But, notwithstanding these added facilities for circulation, there has been hardly an appreciable increase in the home use, while the number of borrowers has decreased. This is due largely, in our opinion, to the fact that newspapers and magazines are gradually driving the book from the homes of the middle classes, and partly to the decrease in the purchase of fiction. Of 702 stories reported on by the appointed readers, only 112 were bought. The school-libraries, intended primarily to aid the children in their studies and stimulate their taste for wholesome reading, are now sixty-six, including six in parochial schools. This last is a new departure, and it might be instructive to print in one of the monthly bulletins a complete list of the books chosen for parochial pupils.

So far as Prussia, whose leadership in matters of education is almost always followed by the other German States, is concerned, a uniform system of orthography is at last a *fait accompli*. The Ministry of State has recently published a decree regulating for the schools of that country the spelling of such words as were still a matter of doubt notwithstanding the agreement reached some months ago by the authorities of the German States, Austria and Switzerland. These orthographical *ultimata* have already been introduced in the new and second edition of 'Wörterbuch für eine deutsche Einheitsschreibung,' by Sarrazin, chairman of the Deutscher Sprachverein and the recognized leader and protagonist of uniform orthography in Germany. The Ministry itself declares in its decree that the press and the writers of the country, as also the other German States, ought to adopt these conclusions. Bavaria has already done so. Sarrazin's work is an excellent handbook, and furnishes particulars as to the whole movement and its history.

The Russian bibliograph P. Draganoff has compiled a list of the translations made of Tolstoy's works, according to which he is the most international literary celebrity of the times. His writings have appeared in forty-five languages and dialects, including the Chinese (since 1895), the Japanese (since 1896), as also in the "Esperanto," the new "world's language" invented by the Vienna physician Samenhof. Among the most recent additions is a Siamese version done in 1900, and one into Hindustani in 1901. As for the Eastern European languages, there are eighteen editions in the Greek alone. The total number of Czech editions is 180. Bulgaria claims 80 editions and Servia about 100.

—Pliny succeeded in getting Minerva and Diana to work together in his hunting expeditions about Comum, but the editor of the *Century* has accomplished the feat of harnessing Minerva with Mercury in securing a description of the New York Stock Exchange from the pen of Edmund Clarence Stedman. The paper is illustrated from drawings by Ernest L. Blumenschein. H. Addington Bruce gives a somewhat sensational story of critical difficulties encountered last winter in the construction of the Hudson River tunnel. The progress of the tunnel was stopped temporarily by encountering stone, and the gradual escape of compressed air finally disintegrated the mud above until a portion of the roof was denuded. "At once the river, infuriated," we are told, "began to bombard the unprotected roof with boulders, ice, and the force of its own waves until the tunnel

rang with a perfect fusillade of marine ammunition." As all this was at the bottom of sixty-five feet of water, with but little current, the careful reader will add the traditional grain of salt to this lively bombardment. Andrew D. White's diplomatic recollections in this number deal entirely with Bismarck, whom he does not hesitate to call the greatest German since Luther, though turning the light occasionally upon his faults and foibles as well as his great qualities. Incidentally, M. Thiers comes in for a column of severe arraignment, "the most noxious of all the greater architects of ruin that France produced during the latter half [*sic*] of the nineteenth century." Dr. Buckley contributes a striking article on the "Present Epidemic of Crime," calling particular attention to the encroachments of criminality among classes which ought especially to be exempt—the very young, the well educated, the temperate, and those whose occupations normally imply good character. This is partly, he thinks, a legacy of the civil war, and still more, in proportion to its extent, of the Spanish war. The high nervous tension of modern city life also contributes its quota of evil, as well as the turn which the conflict between capital and labor has taken.

—It is a very ingenious defence which Senator Lodge puts up for the Senate in the current *Scribner's*. The only difficulty is, that we have before us not merely the Senate as he describes it, but also the Senate as we see it constantly with our own eyes, and the two views are not in harmony. Our own eyes show us, for instance, a senatorial interference with appointments which is constantly bringing disgrace upon the Government by forcing unfit men into office and retaining them there for personal and partisan reasons, while Senator Lodge sees in the same set of facts merely the only practical way by which the Senate can exercise its Constitutional duty of advising the President with regard to appointments. A few such palpable fallacies as this do not leave the reader in the best mood to appreciate the really valid argument, that the framers of the Constitution expressly intended to put the Senate in an exceptionally strong position, in order to safeguard the standing of the States as indestructible entities in the new Government. It is the abuse, not the mere use, of the Constitutional powers of the Senate to which people rightly object. The Senator actually cites the case of the Wilson Tariff bill as illustrating the great Constitutional power of the Senate. The fact was simply that several Senators insisted that no bill which did not favor interests in which they were deeply concerned should pass. It is easy enough to show that the action of the Senate in such matters as those mentioned, and in much of its dealing with treaties, does not technically violate the letter of the Constitution, and may in this negative sense be said to fall within the limits of Constitutional prerogative; but it ought to be just as easy for an intelligent man, even an intelligent Senator, to realize that there may be intolerable usurpation in *fact* without going to the point of technical usurpation in *law*. Senator Lodge's assumption that no one would charge the Senate with encroachment except from ignorance of its origin and the powers conferred upon it by the Constitution, is unduly arrogant.

—One finds almost the enthusiasm of a Schliemann in the brief account of recent excavations at Abydos contributed to the November *Harper's* by W. M. Flinders Petrie. In the twenty feet of débris on the early site of Abydos lie such records as were left of a civilization reaching, apparently, about 4,700 years back of the Christian era. Dr. Petrie is especially pleased with the recovery of two ivory images, the first supposed to represent a king of the first dynasty, about 4,500 B. C., and the second marked with the name of Khufu, the great Cheops of Herodotus, whose date was about 500 years later. The head of the latter was accidentally broken off by the spade of the workman who unearthed it, and it took three weeks of patient dirt sifting to recover the loss. The head, reproduced in double the actual size, strikes one immediately as indicative of great will power and executive ability. "As far as force of will goes," says the enthusiastic excavator, "the strongest characters in history would look pliable in this presence." The cautious might be inclined to raise some questions; but, in the presence of such unquestionably important discoveries, caution may wait for its turn until enthusiasm has had its fill. Brander Matthews undertakes the defence of American literature against the silence of Mr. Dodd, whose extensive collection of the "Epigrammatists" includes not a single specimen from any American author. The American epigrams cited by Professor Matthews show a fair degree of merit, though he does not make it appear that the form has been a distinguishing characteristic of any of our authors. The attempts of Lowell and Aldrich in this field he regards as the most successful, Lowell showing the more vigor, and Aldrich the more ingenious delicacy. Admitting the general inferiority which Mr. Dodd's exclusion suggests, Professor Matthews explains it tentatively on the theory that the epigram calls for wit rather than humor, while the American author is apt to be endowed with humor rather than wit.

—That prolific compiler of hymnals, Dr. Charles S. Robinson, was probably wrong in assuming that people do not want to be told when Isaac Watts was born. Mr. Julian's 'Dictionary of Hymnology,' which might be supposed to have exhausted its subject, seems scarcely to have abated the demand for scrappy and accidental gleanings from this field. Such works of this sort as appeared thirty or forty years ago had the attraction of novelty, and might claim the praise due to pioneers; for their late successors less can be said. Some of them are gossipy and sketchy, others are lifeless and commonplace; most of them do little but draw from sources already sucked dry. That 'Famous Hymns and their Authors,' by Francis Arthur Jones (London: Hodder & Stoughton; New York: Edwin S. Gorham), reaches us in a second edition, proves it the kind of book which many people like; yet it has no graces of style and the feeblest pretence at criticism, and it adds hardly anything to our knowledge beyond the death at Quebec in 1893 of Matthew Bridges, an estimable writer who, in later life, strayed beyond the ken of hymnologists. It is not even strong in sentiment and pretty stories to tell at prayer meeting. Not all the 230 hymns it cites are "famous"; of the 200 authors (and composers) indexed, some are little, if at all, known in America, though the range of selection is up to modern standards of catholicity, extending from Romanists to Mrs. Emily H. Miller, and even condescending to heresy in Sir John Bowring. More interesting than the text are the portraits, barring a few familiar from infancy. It is doubtless not Mr. Jones's fault that even here disappointment smites us, since poets are not always poetical to the eye of flesh; but several of these Anglican dignitaries look like Hardshell Baptists from East Tennessee, and the corrugated and awful visage of Bishop Wordsworth (p. 248) suggests manhandling by unconverted savages. And why does good Miss Havergal face the title-page, as if leader of the choir?

—'The Jesuits in Great Britain,' by Walter Walsh (Dutton), is a book which at once suggests the titles of other anti-Romanist works by the same author. These are 'The Secret History of the Oxford Movement,' 'The History of the Romeward Movement in the Church of England,' and 'A Defence of the King's Protestant Declaration.' Mr. Kington Oliphant is a mild critic of the Catholic Church compared with Mr. Walsh. The latter says in his preface: "There are many sensational events recorded in these pages, but I trust that nothing will be discovered in the way of intemperate comment. The facts against the Jesuits are so strong that they do not need the aid of abuse." This is a fair profession, but as we proceed we discover that Mr. Walsh must use language in a very Pickwickian sense if he does not intend to abuse the Order whose history he has set out to write. For example, as he draws near the close, he observes: "In concluding this record of Jesuit deception, trickery, sedition, treason, and crime in Great Britain, it is important to point out that the Order has never repented of its past offences. What it has done in the past it would do to-day, were circumstances favorable. . . . In other words, it is hopelessly incurable." Mr. Walsh's mood may be styled a French calm, according to Mark Twain's definition of it. His conclusions are possibly true, but we cannot consider them justified by his narrative. He prides himself on having drawn very largely from Roman Catholic sources. We must point out, however, that his treatment of evidence is wholly polemical and inconsistent with true historical methods. We quote a single passage to show how Mr. Walsh generalizes at random: "All through his reign Charles II. helped forward the interests of the Church of Rome in his dominions to the utmost of his power, never hesitating to practise every possible deception in order that he might accomplish his evil purpose." We have spoken of this book somewhat severely. If we have done so, it is because we believe that the interests of history are not furthered by such writing, whether it comes from the Protestant or Catholic camp.

—'Shakespeare's Garden' is the title of a closely-printed little book of 250 pages by J. H. Bloom (London: Methuen; Philadelphia: Lippincott), which professes to be a complete account of Shakspere's flora. The idea of such a descriptive catalogue of the trees, shrubs, flowers, and fruits mentioned in the plays is not new. Ellacombe's 'The Plant Lore and Garden Craft of Shake-

speare,' reprinted in 1896, is Mr. Bloom's chief rival. The present work is arranged in the form of a calendar, the flowers, shrubs, etc., proper to each month being named in no particular order, except as they fall in each month. An appendix of more than eighty pages gives a complete collection of all the passages in the plays in which there is the slightest hint of a vegetable, from a nutshell to stewed prunes, for which Shakspere seems to have had no particular aversion. Mr. Bloom's discursive, semi-botanical treatment of his calendar is somewhat confused. Current folklore and extracts from Elizabethan herbalists are served up with Linnæus and Latin names. The book is, in the end, neither a readable popular account nor a trustworthy reference book, still less is it a concordance. Like many works of the kind, written in the seclusion of the English country rectory, it must have been interesting to write; unfortunately that does not make it interesting to read. Who cares to know that there are thirteen references in Shakspere to the common nettle, or that in his day the walnut tree preferred a chalky soil? Only that passionate lover of statistics who rejoices in the knowledge that, last year, we imported eight million bushels of potatoes. The type of mind is peculiarly common to the British Isles, where the purely disinterested craving for unrelated facts is fed by such papers as *Scraps* or *Tit-Bits*. Mr. Bloom's book was written for such a public; one might make up a very readable number of *Pearson's Weekly* or *Answers* from its pages.

—Mrs. E. W. Latimer has made Gourgaud's 'Journal' the basis of a book which she entitles 'Talks of Napoleon at St. Helena with General Baron Gourgaud' (Chicago: McClurg). It will be remembered that Gourgaud's 'Journal' is the latest contribution of any importance to the sources for Napoleon's life at St. Helena. Appearing in 1898, it was warmly praised by Lord Rosebery in his 'Last Phase,' and indeed it furnished that essay with its most striking *pièce justificative*. Lord Rosebery's third chapter opens as follows: "But the one capital and supreme record of life at St. Helena is the private journal of Gourgaud, written, in the main at least, for his own eye and conscience alone, without flattery or even prejudice, almost brutal in its raw realism." Gourgaud was a brave and active soldier who had only reached the age of thirty-two at the time of Napoleon's second exile. Unlike the other members of the Emperor's staff, he was unmarried, and at St. Helena time hung heavily upon his hands. He loved the Emperor, but could not help chafing under the ennui of such a barren existence. According to the record of his own journal he was petulant, jealous, and abrupt. The singular thing is that Napoleon should have shown so much indulgence toward a subordinate who was so young that he had barely reached the grade of general at the opening of the Waterloo campaign. We certainly think that Lord Rosebery presses these memoirs too far when he makes them support a theory that Napoleon had a well-developed bump of benevolence. On the other hand, they are more trustworthy than most of the St. Helena reminiscences. Mrs. Latimer has cut down the bulky original to a fraction of its size and extracted from it Napoleon's own observations. These are arranged for the most part in chronological order, although conversations on miscellaneous subjects like the art of war, great generals, and religion are digested under separate headings at the close of the volume. The editor supplies an apparatus of footnotes which suffices to explain most of the allusions in the text.

ADMIRAL PORTER.

Admiral Porter. By James Russell Soley, formerly Assistant Secretary of the Navy. [Great Commanders.] D. Appleton & Co. 1903. Pp. 499.

That David Dixon Porter (1813-1891) was a great commander will be generally conceded. Unfortunately for his fame, he exhibited traits that provoked in some quarters a bitter personal enmity; and there were those whose prejudices drove them even to the verge of denying to him the qualities of courage and leadership. But Porter's place in history is assured. He will wear the honors of a naval hero. He will be known as an officer who took a broad view of duties to be performed, who was tireless in preparation, quick to move, and brave in action; who kept steadily on, undismayed by threatened disaster; and who showed wonderful endurance under the strain of constant exposure in the face of the enemy.

This work, whose publication has long been looked for, is of more than ordinary importance. The author has had it in hand for many years. Admiral Porter died in February, 1891. He had asked his friend to write a Life, and Professor Soley (then of the navy) acceded to the request. Mr. Soley, it is hardly necessary to state, has performed his task with marked skill and ability, and has made a valuable contribution to naval biography. Perhaps no writer could have been found better equipped to deal with the subject. As librarian of the Navy Department he created the Naval War Record Office. His thorough knowledge of naval routine, as well as his perfect familiarity with the official records of the war, gave him an advantage that has been wisely availed of for the preparation of this volume. Moreover, as regards many of the events narrated, he had the benefit of conversation and discussion with the Admiral himself.

The army has been more fortunate than the navy, in one respect. Grant, Sherman, and Sheridan have left behind them memoirs from their own pens. Admiral Porter, in his later years of leisure, turned to literary composition; but Mr. Soley seems to think that the less said about this line of effort the better. Besides other works, the Admiral wrote a 'History of the Navy during the Civil War.' Of this performance his present biographer remarks: "It is unfortunately inaccurate in many essential particulars, including both dates and events. The book is rambling in style, and hastily and carelessly put together. Its value lies chiefly in its professional comments and its narratives of personal experience" (p. 463).

The inaccuracy of statement which Mr. Soley speaks of as prevalent in the 'History,' seems to have proceeded from an infirmity that beset the Admiral at various times when he took up the pen. Even in official reports there are instances where either the Admiral or his brother officers must have been mistaken as to what actually had occurred. To construct a narrative of what Admiral Porter really accomplished requires considerable research, a keen intelligence, and some experience in weighing conflicting testimony. Possibly this fact may account for the delay that has attended the publication of the present Life. Mr. Soley appears to have met the difficulty, however, and to have surmounted it in a creditable manner. Still, on one or two points which have given rise to controversy the text might well have been made somewhat more explicit. For example, Gen. Butler, it may be recalled, attacked Vice-Admiral Porter savagely in Congress, when Farragut died and it was proposed not to continue the grade of admiral. He carried the House with him on the first vote. Afterwards, Butler published a pamphlet charging Porter with "running away" from his position, just below Fort Jackson, after Farragut's fleet had passed the forts and gone up to New Orleans. He submitted proof that Porter, on the morning of April 24, with his mortar boats, went twenty-five miles down the river, and that he stayed at Pilot Town till the 27th for fear of the *Louisiana*. As a matter of fact, Porter may have deemed it prudent to go down the river, though he denied that he had done so. Butler charged Porter with "falsehood," and brought forward a mass of testimony, partly made up of Porter's own contradictory statements, that leaves little room for doubt as to what was the actual fact. The logbook of the *Harriet Lane* (Porter's ship) ought to show just where Porter was on these days; but this particular logbook, it seems, disappeared from the Department, and, when Butler called to examine it, was not to be found. The question is, perhaps, of no great moment to-day; at all events, it is not worth while to revive ancient feuds. Nevertheless, a public controversy of this nature interests many people, some of whom desire to get at the bottom of the facts, if possible. Hence, one would like to find a little clearer description of the situation than this statement of the text affords:

"Although the mortar flotilla desisted from bombardment, Porter was by no means idle. A portion of the schooners were sent below to refit and prepare for sea as well as to take a position of greater security. Several were moved to the network of waterways in the rear of Fort Jackson to blockade the bayous on that side, and to prevent the introduction of supplies. The *Miami* took Gen. Butler and his staff to Pilot Town to procure launches for bayou transportation. Thence, she went around outside to the rear of Fort St. Philip and took on board a regiment of Butler's force, which she landed near Quarantine, on the left bank of the river above the forts. The *Sachem* was also sent to assist in this duty, all of which was so efficiently performed that by Saturday, the 26th, the people in the forts found the lines gradually drawing around them by movements which they could see but were powerless to prevent. Meanwhile, Porter with his remaining gunboats was engaged in patrolling the river, clearing it of boats by which information could be given to the enemy, and assisting the movements of the army, but above all keeping a close watch upon the enemy's fleet lying under the forts. Each day the gunboats, or some of them, took up a position below Fort Jackson where they could both see and be seen. So matters remained for two days" (p. 200).

In the very interesting account of the first attempt on Vicksburg (p. 226), we observe a slight error, due, we presume, to inadvertence. The text reads:

"Although the forts were not silenced, Farragut wisely decided that it was better to continue on than to return; but the *Brooklyn*, confused by the ambiguous terms of the general order, and finding herself, with the battle still in progress, unable from the smoke to determine the movements of the *Hartford*, remained in position engaging the batteries. At length, seeing that the fleet had passed and that she remained alone with her two gunboats, she dropped with them down the river out of action."

The commanding officer of the *Brooklyn* obeyed strictly the order of the Flag Officer. There was no confusion on board the *Brooklyn;* nor is there anything in the official report from that ship to justify the expression.

This volume, being one of a series designed rather to furnish a sketch than a full biography, would seem to be longer than it ought to be. There is too much detail. Mahan's 'Farragut' occupies 333 pages; this volume 499. What is said of the Admiral's father might well have been condensed. Singularly enough, no mention is made of the Admiral's mother—not even her name is given; yet she lived until 1871. It would be interesting to learn to what extent a mother's guidance and care shaped the destiny of her distinguished son. Another omission, hardly less noteworthy, is that of any sentiment with regard to the vital principle at stake in the war. Not a word is said about the preservation of the Union, or Porter's feelings in reference to the crisis. This is the more marked because we are told that Lieutenant Porter, tired of routine duties, had made up his mind to resign and go into private business, and that he entertained this purpose as late as March, 1861, when he came to Washington. If he saw the spectre of war, he seems to have said nothing about it.

Mr. Soley is a loyal champion of the Admiral. At times we seem to hear the voice of the adroit advocate rather than the utterances of the calm, judicial mind. He is led away more than once to speak disparagingly of the old navy and of Secretary Welles. Porter, full of fire and energy, arrived in the nick of time, and waked the Department up. Porter originated plans, and, by sheer force of a superior and dominating will, compelled the Navy Department to adopt them. Such is the tenor of the author's views. Of the older officers of the navy before the war, Mr. Soley says: "They were dull men of routine, with a narrow range of vision, whose only object was to preserve unchanged the existing order of things, and who frowned upon anything like a progressive spirit" (p. 89). Speaking of Porter's "simplicity and directness" of manner, Mr. Soley says: "No doubt among the rather pompous commanding officers of the period before the war there were many who did not relish it, and who would have preferred to see a greater subservience and flexibility in their junior, yet none could fail to recognize the force and self-reliance of his character" (p. 476). Of Mr. Welles, our author permits himself to say:

"He lacked some qualities necessary for success in executive administration. Slow of decision himself, he was tolerant of slowness in his subordinates. Hence the machine which he controlled, in which rapidity of action was of the first importance, moved during the first year of the war with a deliberation that, in comparison with ordinary business methods of to-day, seems little less than appalling. . . . In the autumn of 1861 . . . the naval administration, still pursuing its deliberate course, stood greatly in need of some dynamic force capable of overcoming its inertia and setting its cumberous machinery really in motion. This force it was now Porter's office to supply" (pp. 134-5).

If all this be true, Admiral Porter must have been secretly praising himself when, after the fall of Fort Fisher, he wrote to Secretary Welles as follows: "I know that no country under the sun ever raised a navy as you have done in the same time, and that no navy ever did more." This is an extract from a letter written by Porter to the Secretary of the Navy, marked "Private," of which "some person ill disposed to the Admiral" procured the publication (p. 462). It was certainly most unfair to print the letter, which, it will be remembered, contained some extremely severe language about Gen. Grant. Mr. Soley wisely passes over the subject with a very few words. It is generally understood that the "ill-disposed" person was Gen. B. F. Butler.

The most important part of the author's duty has been to portray the man, to analyze the character of Admiral Porter, and to assign him a proper rank among men of great distinction. So far as praise of him as an organizer, a strategist, and a fighting commander is concerned, we are at one with Mr. Soley. He is happy in the use of the term "buoyancy" to denote the quality that contributed largely to Porter's success. Porter's generosity, again, in commending subordinates is worthy of admiration, though in the brotherhood of officers the trait is by no means a rare one. The lack of it in Farragut, it must be confessed, was a serious defect. What Mr. Soley observes upon this point, by way of contrast between Farragut and Porter (p. 480), is well said, though it will be news to some readers that Porter was "unassuming" (*ibid.*) and "was not a pushing person" (p. 251). While much may be allowed to the fervor of personal friendship, it is surely going too far to assert of Admiral Porter that he was "the type of all that was best and highest in the service" (p. 457). This type, for our part, we find rather in the character of such men as Foote, Davis, and John Rodgers—officers who daily exemplified the virtue which Davis attributes to Hiram Paulding, of "a scrupulous regard for the rights and feelings of others." We incline to think that the touchstone of Porter's character was his influence over the young officers associated with him. In spite of his faults, he aroused in them a living enthusiasm for high ideals. For example, he was much the best superintendent the Naval Academy has ever had—not because he was a scholar or an educator, but because he infused into the midshipmen a lofty sense of personal and official honor, self-respect and, in short, *esprit de corps.* They even went so far as to try the vicious among their number for improper acts, and to recommend their dismissal to the authorities. Had Porter's tone continued, we should, to-day, be hearing less of "hazing" at Annapolis.

Mr. Soley has labored faithfully, and produced a work of many excellences. His book is well printed; it is a pity that it is not equally well indexed.

THE SCULPTOR STORY.

William Wetmore Story and his Friends; from Letters, Diaries, and Recollections. By Henry James. Boston: Houghton, Mifflin & Co.

It is quite possible that the readers of this book may be divided into two classes: those who drop it in despair at the end of the first chapter, and those who, persevering, find it the most attractive book of the season. The vague and remote phrase, "The Precursors," ushers in eighteen pages of the peculiarly involved and often puzzling style which now tyrannizes over Mr. James. Long and complex sentences greet the reader, the very first of these occupying nearly half a page. The most insignificant words, such as *all, other, they, them, could,* and *can* are put in italics, on almost every page, as if from want of skill to adjust the emphasis without such elementary devices. With the first chapter, however, the perplexing and often exasperating monologue ends and the real book begins—a book whose charm lies, of course, largely in its theme and materials, but also in the clever handling of these. Here we have Mr. James at his best. A 'prentice hand might, of course, make a readable book out of such elements, having in the first place what Mrs. Browning called in one of her early letters "life and light and Italy" to deal with, and having also Browning, Lowell, Story, and Charles Sumner in the foreground, or at any rate self-portrayed in their own letters. But to do this by delicate touches with such keen characterization, with such faithful givings and withholdings, as in these two volumes, really demands a talent as fine as that of Mr. James. His very remoteness from America—that remoteness which caused it once to be said of him that he was not truly cosmopolitan, because a true cosmopolitan must be at home even in his own country—is, of course, visible here. He inevitably makes some errors, as where he spells the name of Sumner's biographer "Pearce" instead of Pierce, and supposes that the Harvard Phi Beta Kappa poem is given after dinner. But these are trifles.

The glimpses of Story's early life are here of little value, and for such facts one must turn to Miss M. E. Phillips's rather inadequate memoir, published six years ago. Those among Mr. James's readers who chance to have known the Cambridge of Lowell's and Story's youth would find little of it here. Even Story's father, that delightful, good-natured and simple-hearted judge and professor, appears in colors hardly nearer to the man than in that anecdote of William Story's wife which came home from Italy in the early days of their foreign residence. It was very likely the invention of some other American woman envious of Mrs. Story's too easy advancement in Italian popularity; but, as Mr. James finds no room for the legend, it may be worth inserting. The tale ran that when the first hunting season opened after their arrival in Italy, Story himself, from either economy or inexperience, kept out of it; and his wife, wishing to shield him from social condemnation, explained it on the ground that his father, Mr. Justice Story, had always kept hunters in America and his son had become

rather tired of it. To those who recalled the image of the dear, smiling bald-headed old judge, jogging into Boston behind his elderly gray pony, the tale was something quite delicious as a bit of conjugal defence; and there is still just enough credibility about it to make it a needful corrective of some of Mr. James's pictures.

Story's life from its earliest days reflected the sunniest of tempers, and was prolonged in cheerfulness throughout a fairly successful career. His natural gifts were so varied that even his ample opportunities could not secure time enough for all of them to mature; and some of them, as, for instance, his great talent for amateur acting and his more questionable early taste for painting, exhibit themselves but little in Mr. James's pages. The writing of law books, which was his by inheritance, was naturally superseded early by other pursuits. His poetry and prose were in a manner imitative of his schoolmate, Lowell, and his only published volume which has found wide reading, the 'Roba di Roma,' was, in great degree, as his Roman neighbors tell us, a digest of innumerable Italian handbooks. though filled with delicious passages of his own. There is much truth in what Mr. James says in reference to this book, as in the following:

"I used to think, I remember, that the great challenge to envy was in the little evoked visions [*i. e.*, Story's descriptions] of that out-of-the-season Rome to which one had one's self to be a stranger, the Rome of the Romans only, of the picture-making populace, both in the city and the small hill-towns, who lead their lives as the sun gets low on the long summer days and the clear shade spreads like a tent above the narrow, sociable streets" (II., 132).

If ever a foreigner, indeed, made Rome his own domain, it was Story; and when one even questioned him as to what months were healthy for residence there, he always answered resolutely, "Every month," and vindicated it by his own experience.

Mr. James shows nothing of the biographer's usual desire to exaggerate his hero, but is rather liable to the charge of a certain shade of lukewarmness. It is a curious fact, however, that, of the leading letter-writers in this book, Story appears to the best advantage in correspondence, his letters being more inexhaustibly cheery and descriptive than those of any other contributor; Lowell's being rather too involved and too jocose, as was his wont; Sumner's rather heavy, and Browning's a little tame and businesslike. Like most Americans of long European residence, Story misses Europe fearfully whenever he comes back to America; and then, when he gets back to Europe, sentimentalizes about America and writes (1850): "Of all places in the world it is the true spot for us. I cannot tell you why it haunts me and taunts me. But ever my heart goes back there in my dreams, and the thought of New England life cuts across me like a knife" (I., 210). It is fair to say, however, that this was written from Berlin, and that he writes from Rome, two years after: "Every day that I live here I love Italy better, and life in America seems less and less satisfactory" (I., 253). Mr. James is usually at hand to point a moral in favor of all that condemns America, and even has a page of curious pondering over the perplexing and invincible fact that Longfellow contrived to be happy in Cambridge and keep up his European culture at the same time. He says in a long and characteristic sentence:

"Did he owe the large, quiet, pleasant, easy solution at which he had arrived (and which seems to-day to meet my eyes through the perspective, perhaps a little through the golden haze, of time) to his having worked up his American consciousness to that mystic point—one of those of which poets alone have the secret—at which it could feel nothing but continuity and congruity with his European? I put the question—for all it is worth—without quite seeing how it is to be answered" (I., 312).

To be sure, Lowell gives some comfort to Mr. James when he writes to Story from Dresden in 1856, proposing "a handsome reward to anybody who will find a cure for the (*small-*) potato disease with which Boston is fearfully infected" (I., 313). He also says, on a later page:

"When I look back and think how much in me might have earlier and kindlier developed if I had been reared here [in Europe], I feel bitter. But, on the other hand, I prize my country breeding, the recollections of my first eight years, . . . and I mean to make a poem out of them some day that shall be really American. . . . I like America better than Germany in many respects. They have too *many* ideas here; so many tools that they only handle them without doing anything. The beauty of Greece was that they had very few ideas, and those simple and great" (I., 314-15).

Six months later, however, Lowell writes from Paris to Mrs. Story:

"Is W. [William] as savage as ever against that wretched town of Boston? Since George Third nobody ever treated it so. Well, I give it over to him. I entrench myself in Cambridge; it is a good kind of place. For the country in general, with Kansas and Brooks and what not, I don't wonder you were in haste to get out of it" (I., 328).

All this was written, it must be borne in mind, at a period which is now ancient history, before the civil war or the abolition of slavery; and it must be noticed in justice to Mr. James that, as a prelude to a long and delightful portrayal of the English-speaking Italian life of that period, he makes this manly statement which should henceforth disarm his severer American critics: "A man always pays, in one way or another, for expatriation, for detachment from his plain primary heritage; and . . . this tax is levied in an amusing diversity of ways" (I., 333).

We have collateral glimpses of many authors or notable persons besides the letter-writers, as, for instance, of Walter Savage Landor, Margaret Fuller Ossoli, Bettina von Arnim, Theodore Parker, William Page, Tennyson, Thackeray, and Charles C. Perkins. To these may be added others, not known to fame, but vividly known to individual memories, such as John Field and Alleyne Otis, to the latter of whom Mr. James gives more than a page which nothing in his novels has ever surpassed in the way of delicious personal analysis and delineation (II., 187). It may well be said that almost any one can describe a very great man, but that it takes a master of the art to paint the miniature of a small one.

In conclusion, it remains only to say of this attractive book that it was apparently printed in England, and that the index, excellent in form, is very inadequate when tried by the American standard. The indexer makes some bad blunders, going even to the extent of twice attributing to Story the statue of Robert Gould Shaw by St. Gaudens; but the most serious defect is in the omission of names. We can understand that an English indexer should have omitted Emerson and Clay, but we might justly have expected that even he would include Lord Brougham and Lord Denman.

LODGE'S STORY OF THE REVOLUTION.

The Story of the Revolution. By Henry Cabot Lodge. Charles Scribner's Sons. 1903. Pp. xviii., 604.

According to the New York *Tribune*, "writing of this sort needs good illustration"—a sentiment which may be accepted in one sense by those who think that good history consists in idealizing and glorifying the deeds of one's countrymen, and in another sense by those who think that good history consists in explaining past events in the light of truth rather than in the light of "patriotism." From the latter point of view, writing of this sort does, indeed, need good illustration; it needs, above all, the glare of a great name and the illuminating power of a national reputation. Mr. Lodge's 'Story of the Revolution' is a better book than his history of the Spanish war; but it is the same kind of "history," with the same virtues and the same defects. Whatever merit such work may have in the popular estimation, to the serious historian, with careful methods and rigid standards, it is worth less than nothing; it is not history at all. But even from the point of view of the "general reader," the need of this kind of effort is not obvious. Fiske's 'Revolution' is more accurate, better written, infinitely more suggestive. True, it has not the advantage of "good illustrating"; and the illustrations in the present case are numerous and interesting—from "Thomas Jefferson writing the Declaration of Independence" to the bedroom of George Washington at Mount Vernon.

With the causes of the Revolution Mr. Lodge is but little concerned. There is some conventional vague phrasing about "world-forces," and the principles of English liberty, Magna Carta, and the Stamp Act. Even the more immediate causes are disregarded. One learns nothing of the Port Act or the Tea Episode, the Quebec Act, or the Billeting Act. With a passing glance at the first and second Continental Congresses, the author proceeds to relate the military events of the war in some detail. With military history, indeed, the book is mainly concerned. Conditions in England and Europe, a knowledge of which is absolutely essential to an understanding of the Revolution, are rarely touched upon, and never with real understanding. The work of Congress is referred to briefly and incidentally. The Loyalists are but just mentioned once or twice; of their numbers, views, action, and importance we have nothing at all. One gets the impression that the Revolution was a spontaneous national movement, and that the only danger of internal dissension arose from the Middle State jealousy of New England. At the close of the volume there are more superficial generalizations on the "meaning" of the Revolution to the world and to America, and an addendum tracing the growth of democracy in the nineteenth century until its culmination in the freedom of Cuba and the emancipation of the United

States from its traditional policy of isolation. Nothing is said of the Philippines.

Turning to the military events of the war, the problem which confronts all historians is to explain why the British commanders, with a force so superior and with control of the sea, were not only not successful in destroying the American army, but were not able even to disorganize it or drive it beyond the mountains; and why, more particularly, the Americans were never so near failure before Saratoga, when they fought alone, as they were after Saratoga, when they had the aid of France on land and sea. Until recent years the conventional explanation of American historians was that the advantages of England were more than counterbalanced by the courage of American soldiers, the stupidity of British generals, and the transcendent and never-failing military genius of Washington. Within recent years historians have become dissatisfied with this explanation. Critics have been questioning Washington's military capacity, or at least minimizing his successes; and it has been pointed out that the most stupendous stupidity cannot explain the failure of British commanders, notably Howe, to take advantage of their opportunities. This has led to a more careful study of English party politics, and there has been advanced the theory that Howe, who was a Whig, used his "olive branch" instructions to defeat the Tories in England, rather than his military power to defeat the rebels in America; in a word, that America has Howe to thank for the preservation of the American army and the victory at Saratoga.

However tenable this theory may be, Mr. Lodge is quite satisfied with the conventional explanation. He sees that it is difficult for 14,000 (10,000 would be nearer the mark) militia, ill-equipped and poorly disciplined, to drive out of Boston 12,000 British regulars; but "it was neither by accident nor cowardice that the British were beaten out of Boston; it was by the military capacity of one man triumphing over extraordinary difficulties of his own and helped by unusual stupidity and incompetence on the part of the enemy" (p. 115). Why Howe left arms and ammunition for the rebels when they might have been destroyed; why he went to Halifax when he might equally well have gone to New York —these are questions not touched upon by Mr. Lodge; but the explanation is doubtless the same stupidity. In the subsequent campaigns in New York and New Jersey we hear a great deal about Washington's genius, but here also there are questions which Mr. Lodge does not touch upon. Why Howe remained seven weeks on Staten Island; why he failed to press his advantage on Long Island, and then remained there two weeks instead of following up his victory, which, according to Gen. Putnam, would have resulted in "dreadful" consequences to the American cause; what were those "political reasons and no other" which made it impossible for Howe to explain why he did not press his advantage at White Plains; how the troops of Cornwallis came to be so "tired" at New Brunswick that it took them six days to reach Princeton; why they rested seventeen hours at Princeton; why seven hours were required to march twelve miles to Trenton? Had Mr. Lodge touched upon these points, the explanation would doubtless have been the same—stupidity. Other interesting questions do not appeal to Mr. Lodge: Why Howe, receiving the order to coöperate with Burgoyne August 16, took two weeks to reply that he could not coöperate; why he could not coöperate; why, when Clinton started out to do for himself what Howe could not do, Howe discouraged him by ordering a part of his small command southward to help reduce forts on the Delaware?

Aside from avoiding questions like these, Mr. Lodge's simple explanation—Washington's military genius and British stupidity—leads him into some curious contradictions. Although Howe could not coöperate with Burgoyne (p. 279), Washington's great task was to keep him from going north. This he had to do "by sheer force of his own skill" (p. 280); yet Howe, instead of going up the Hudson, as Washington expected him to do, went south of his own free will. Further, Howe "was not thinking of Burgoyne at all," and did not understand the "overwhelming importance of that movement" (p. 282); yet when Washington learned that Howe was aiming at Philadelphia, his task was still the same—if he could not save Philadelphia, he must at least "hold Howe there and stop his going north" (p. 282). This he did successfully, keeping him "cooped up" in Philadelphia all winter (p. 315). The "sheer force of Washington's skill," by which he kept Howe from joining Burgoyne, must have been great indeed, since Howe "was not thinking of Burgoyne at all," did not understand the "overwhelming importance of that movement," and was aiming at Philadelphia, which he succeeded in taking. Again, Washington voluntarily remained at Valley Forge in order to keep Howe "cooped up" in Philadelphia all winter after the surrender of Burgoyne. This he did, we must suppose, by "sheer skill"; yet, curiously enough, Clinton, who took command in the spring, "quietly slipped away" (p. 318) on June 18, although the necessity of keeping him cooped up was greater than ever, since he was "isolated" at Philadelphia, and it was necessary for him to get to New York because the French alliance "would soon produce fleets as well as fresh troops" (p. 316). Finally, although Clinton "slipped away" from Philadelphia for the very purpose of getting to New York because Philadelphia was "worthless" to him, we learn that he was "driven from the Middle States" by the victory of Washington at Monmouth (p. 323). Washington had now won three campaigns—New England, the Hudson, and Philadelphia. His task was henceforth to keep Clinton cooped up in New York and prevent a junction with the Southern forces. This he did successfully; yet with all these victories in less than eighteen months the American cause seemed to be going down in "utter helplessness" (p. 491).

A self-satisfied scientist once confided to a professor of history his belief that history must be a "delightful" study. He himself, he said, liked nothing better, after a "hard day's work," than to settle himself comfortably in the evening and read of the heroic actions of men in past ages. Doubtless Mr. Lodge finds it equally delightful, after an exhausting session at Washington, to settle himself by the library fire and spin out the story of the Revolution to his own satisfaction, for the edification of his countrymen. Both the scientist and Mr. Lodge are, nevertheless, somewhat discouraging to the serious student of history. When the story of the Revolution is truly told, probably Washington will be less of a "steel portrait" and more of a human being, yet none the less worthy of grateful remembrance; and the American Revolution, though doubtless capable of intelligent explanation in a less jingoistic spirit, will nevertheless take its proper and exalted place among the "world forces" that destroyed the "decaying monarchies" and the "effete aristocracies" of the Old World.

In the Palaces of the Sultan. By Anna Bowman Dodd. Dodd, Mead & Co. 1903. Pp. xii., 492.

On the outside paper cover of this volume is printed the following:

"Mrs. Dodd had unusual opportunities to see the Sultan, his court, and his palaces from the inside, since, as the guest of General Horace Porter, United States Ambassador to Paris, she, together with General Porter and his party, was received by the Sultan at his court, dined with him, and was personally conducted through his immense private domain, consisting of miles of palaces and parks. Mrs. Dodd has described the details of this visit in the most graphic way. The book is a fresh and timely discussion of Turkish political life and various phases of Eastern life."

The first part of this is quite true; the last quite the opposite of true. In the introduction, dated at New York, October 5, 1902, the author says that she was not only received in the suite of Gen. Porter by the Sultan, but also authorized by him to publish her impressions of her reception at his court, a situation which, while giving her "exceptional advantages and favors," has also necessarily brought in "its train many restrictions." It did, in fact, give her a peculiarly favorable opportunity to view in a social aspect the Sultan himself and his male entourage of courtiers and guards. Gen. Porter's visit coincided in time with the Miss Stone episode, and the Sultan was extremely anxious to conciliate American statesmen and politicians, so that the courtesies shown the visiting Ambassador to France were unsual. Mrs. Dodd describes what she saw with much enthusiasm and considerable effusion, but graphically and effectively withal. The courtesy shown by the Sultan himself and by the aides commissioned to guide and amuse the General and his party prepared Mrs. Dodd to find all things charming. The Seraglio and its famous Treasury, dancing and howling dervishes, the unoccupied palaces of Beylerbey and Dolma Baghtshe, and other sights familiar to every visitor to Constantinople, official or unofficial, are so clothed with an atmosphere of glamour in Mrs. Dodd's description that one is inclined to suspect her glowing and roseate account of the Sultan's residence, palace and gardens of Yildiz, and his own appearance and surroundings, which is really the *raison d'être* of this book.

Of Constantinople at large she saw little, and that of a peculiarly limited character, judging from her descriptions, which tail off to a very thin end in her last chapter on "Scutari and Brusa." Her point of view is almost amusingly feminine, both as to what she sees and the way she sees it. When she launches out into history, as in

her story of the fall of Abdul Aziz, she gives us gossip more entertaining than reliable. Naturally, considering her surroundings, she sees only the show side of life, not the realities, which does not matter greatly when she is describing a trip to the Sultan's stables or a drive through the streets in one of his carriages. Unfortunately, however, she has added to the account of her visits to the palaces and other sights of Constantinople a second section in ten chapters, entitled "Notes and Impressions," dealing with the customs, religion, family life, government, and politics of Turkey. Unfamiliar with the country, a chance visitor for a brief period in the capital, these notes and impressions sound like nothing more than a shallow echo of the statements of some Turkish aide-de-camp. The morality of this section is low, as might perhaps be expected, considering the sources which it seems to reflect. Here is a curious sentence, in which Mrs. Dodd condones, if she does not approve, the persecution of the Jews in Russia and the Armenians in Turkey (pp. 426-427):

"The tribal warfare between the Armenians and Khurds, one that had been going on for centuries, became of European importance when the extortions of the Armenians upon their neighbor Khurds—extortions similar to those practised by the Jew upon Russian subjects, and for which said practices the Czar banished the Jews from his dominions—when the Khurds retaliated upon their oppressors, massacring them wherever found, thus arousing the Armenians to concerted action—one directed equally against their infuriated victim and their Turkish rulers, whose rule was hateful to them—with this triple conflict and its later sinister consequences still another 'Christian' nation was differentiated from the 'heathendom' of Turkey."

In another place (p. 118) the Armenians, whom Mrs. Dodd's informants evidently disliked, are differentiated from all other Christians of the Turkish empire, Greeks, Romans, Syrians, Assyrians, etc., as adherents "of the more semi-idolatrous Armenian creed," while in still another place they are classed among the "believers in the Greek form of Christian worship" (p. 475). From the following it would seem that she prefers polygamy to monogamy (p. 448): "As has been admirably stated by Mr. Stuart-Glennie, Islamism modified the polygamous patriarchal form of marriage as practised among the Semites, greatly to the advantage of women; infinitely to their disadvantage did Christianity arrange the monogamous system of marriage in force among Aryans." Elsewhere we read that the Turk does not proselyte nor persecute (pp. 375, 376); there is compulsory education throughout Turkey, the children learn to read and write, and "the reading of newspapers" has "brought about a corresponding change in the monotony of lives absorbed in an earning of daily bread" (p. 440); "the Moslems were . . . the first to preach this doctrine" of "the spirit of God [which Mrs. Dodd defines to mean Jesus] as having been born of a virgin" (p. 443); woman is better protected and her lot more satisfactory under Turkish law than under the Christian laws of Europe—only America is to be compared with Turkey in this regard (pp. 448 ff.); divorce is almost unknown in Turkey (p. 447); Christian evidence is admitted in Moslem courts (p. 474), and there exist for Christian and Mussulman alike "political, civil, and religious conditions so equal" that they constitute "but one and the same people under different races and religions" (p. 474). At least this is the ideal which the Turk is seeking to realize, but even Mrs. Dodd, although she seems to imply that this ideal is on a fair road to realization, nevertheless is obliged to admit that, "as in the case of many other Turkish laws, this promised religious toleration has not always been held sacred" (p. 475). All this is, of course, very absurd. The source and spirit of these representations are manifest from her narrative. She has with closed eyes and open mouth swallowed all that was given her.

The book is beautifully got up and profusely illustrated. Many of the illustrations are from familiar photographs, but well chosen and admirably executed. The spelling of Turkish names is erratic, and not always consistent. There are several blunders due to carelessness, like *midrab* for mihrab (p. 226 ff.), *seraskerate* for seraskierate (p. 199), *djam* for djami or jami (p. 311); and others due to something else, like *Islams* for Moslems.

The Moon, Considered as a Planet, a World, and a Satellite. By James Nasmyth and James Carpenter. London: Murray; New York: James Pott & Co. 1903.

This is a new edition of a work first published in 1874, which attracted much attention at the time. In view of the rapid advance in every branch of science during the last thirty years, it might be expected to be quite out of date; but the subject of which it treats forms a curious exception to the general rule. It is true that, meanwhile, there has been no lack of investigation relating to the moon in all its aspects. A new era has been introduced in the study of its surface by invoking the aid of photography. The beautiful photographic maps made at the Lick Observatory completely superseded all previous charts and drawings for scientific purposes. These have been improved upon, to a certain extent, by a series of finely executed photographic charts of the moon issued by the Paris Observatory. Still, notwithstanding all the minute and careful study of this planet, the advances in real knowledge of it are little more than matters of detail, and do not radically change any of our ideas about it. If an exception were sought for, the most notable would perhaps be Professor Darwin's cosmological investigations, and their application to the question of the original formation of the moon and the earth as separate bodies. In all other points the questions at issue are in much the same state as in the last generation.

From the time that the "Tuscan artist" supposed that he descried "rivers and mountains on her spotty globe," an interesting question has been whether water or air exists on the moon. Careful telescopic observation shows that what Galileo supposed might be seas were not seas at all, but only darker portions of a solid surface. Astronomers of every generation have carefully scanned the entire visible surface without finding a trace of water. The question whether the moon has an atmosphere has been investigated with the aid of the spectroscope; but all this instrument has done has been to confirm the traditional view that no atmosphere exists of sufficient density to produce any effect that can be made evident by the most delicate tests at the command of the astronomer. The question whether any changes ever take place on the moon's surface, whether a volcano ever emits lava, an earthquake ever changes its surface, or a landslide its outline, has to be answered as much in the negative as ever. It is quite true that, from time to time, evidences of activity have been suspected, but the general trend of science has been in the other direction. Herschel's supposed volcano is now well known to be simply a bright spot seen by the light reflected by our earth shortly after the time of the new moon. The supposed changes in the spot Linné have not been proved to be more than different aspects of the same spot under different directions of illumination by the sun. If, now and then, an astronomer like Prof. W. H. Pickering is more or less confident of having found evidence of change, it must be conceded that those who share this view are in a decided minority, and that the weight of opinion is against them, at least to the extent that no such evidence is as yet in any way conclusive. Indeed, it is difficult to see how, under the circumstances, any cause can be in action on the moon that could produce a change visible in our telescopes. There are no inhabitants to erect cities, no vegetation to grow and decay, no moisture to disintegrate rocks—none of the agencies, in fact, which change the surface of the earth.

It thus happens that, if the work in question were rewritten at the present time on the same general plan, there are but few chapters that would need any modification on account of the advance of knowledge since it first appeared. The feature which gave it its original popularity was the excellence of its pictures of lunar scenery. There is, perhaps, in the heavens no more interesting or impressive object than our satellite when seen about, or a little before, its first quarter through a medium-sized telescope with magnifying power so small that the whole globe may be taken in at one view. The sheen is quite unlike that of any other object with which we are familiar. It is reproduced in Mr. Nasmyth's engravings with a fidelity which the photographs can scarcely attain. Although the latter are necessarily far superior in accuracy and completeness of detail, they are so voluminous and expensive as to be out of the reach of the ordinary reader.

Of the text of the book it may be said that it is popular rather than scientific, setting forth the more interesting aspects of the subject with great particularity, but not aiming to develop features that would interest only the professional scientific investigator. Among the chapters which might have been modified in the light of modern criticism are the first, which relates to cosmography, a subject which must be doubtful at present, and the concluding one, in which the bearing of eclipses on chronology is discussed. The notion, long current, that there must be some particular eclipse of the sun which was predicted by Thales and stopped the battle between the Medes and Persians, has been nearly refuted by the discovery that no total eclipse of the sun fulfils all the required conditions. But it would be too much to expect the authors of a popular treatise to be in advance of the age. On the whole, the general reader and the amateur astron-

omer will still find here a pleasing and instructive presentation of existing knowledge of the subject discussed.

A Treatise on Zoölogy. Edited by E. Ray Lankester. Part I., Second Fascicle. London: A. & C. Black; New York: Macmillan. 1903. 8vo, pp. viii, 451, with many text illustrations.

This is the fourth volume of Professor Lankester's monumental undertaking, but, owing to irregularities resulting from the coöperation of many different authors, it has been impossible to bring the parts out in serial order, and the present is practically volume ii. of the series; volume i. being intended to contain the editor's introduction and summary, together with the first seven sections of the Protozoa. What we now have contains a study of the structure of animal and vegetable cells, and the three remaining sections of the Protozoa, the two volumes thus ultimately forming a complete manual of the group.

The work, being intended for the use of serious students of the specialties to which it relates, is in the main extremely technical; but in the portion under consideration the chapter on the structure of cells, by Professor Farmer, contains an account, historical and otherwise, which includes much that is of interest to every cultivated mind. It is also expressed in clear and comprehensible English. The second chapter, by Dr. J. J. Lister, discusses the Foraminifera, amœba-like animals which enclose themselves in a calcareous or sandy test, often elegant in form and complex in structure. These animals, or their fossil shells, make up enormous masses of limestone in many parts of the world, and have an important use in assisting the palæontologist to identify the age of his strata, while some of the forms still living have existed with little change since remote ages of geological time. This chapter contains much that is new and original.

The next group, treated by Prof. E. A. Minchin of University College, London, is that of the Sporozoa. These minute, chiefly microscopic animals, believed to be modified organisms derived from a Rhizopod stock, are of extreme importance to mankind. To their agency is due much of the disease and suffering which afflict higher organisms. Epidemics which destroy the humble crawfish and the more important silkworm; almost exterminate certain fishes in European rivers; ravage the herds of our own country under the name of "Texas fever"; and decimate the human population under the various forms of ordinary and pernicious malaria, yellow fever, and, possibly, even cancer—are known or suspected to be the work of these minute creatures. The inclusion between two covers of all that is zoölogically known of them, largely the product of the studies of the last decade, has a more than purely technical interest, and will be welcomed by both the zoölogist and the medical man.

The book concludes with a review of the Infusoria by Prof. S. J. Hickson, and an excellent index. More than three hundred text figures illustrate the letterpress, and the paper and typography are of the excellent quality which has marked the previous volumes of the series. We believe, however, that ninety-nine out of every hundred students who use these volumes would be grateful if the edges of the leaves were smoothly trimmed and the binding of a permanent character.

Legal Masterpieces: Specimens of Argumentation and Exposition by Eminent Lawyers. Edited by Van Vechten Veeder. 2 volumes. St. Paul, Minn.: Keefe-Davidson Co. 1903.

This collection contains, as the editor tells us in his preface, "specimens of the best models of the various forms of discourse and composition in which the lawyer's work is embodied." But it is more than a mere collection, for the specimens, which begin with Lord Mansfield's judgment on penalties, and end with an opinion of J. C. Carter on the constitutionality of the New York World's Fair bill, are prefaced in every case by a brief account, both biographical and critical, of the author. Thus we have in all about twenty essays, some of them marked by a good deal of critical ability, on great lawyers, with specimens of what they have done. The whole makes a convenient and entertaining book for professional reading—for legal masterpieces are not for the general public in the long run, however much the general public may be interested in them at the time of their delivery or composition. Even Erskine's brilliant defence of free speech or Curran's most impassioned appeal leaves us cold for the most part—it is difficult, for one thing, to summon up in imagination the situations which made them once so moving.

But this is not primarily an oratorical collection. Such an argument as Hamilton's opinion on the constitutionality of the Bank of the United States is addressed to the intellect solely, and must be put in a class by itself, with Webster's argument in the Dartmouth College case and Marshall's constitutional judgments. These are, indeed, masterpieces, by which it is dangerous to test most of the work of our later bar or bench. Unless we are mistaken, one or two of Mr. Joseph H. Choate's arguments should have been included. Neither he nor Rufus Choate is on Mr. Veeder's list.

Biblical Quotations in Old English Prose Writers. Second series. Edited, with the Latin Originals, Index of Biblical Passages, and Index of Principal Words, by Albert S. Cook. London: Arnold; New York: Scribners. 1903.

Professor Cook published his first series of 'Biblical Quotations in Old English Prose Writers' in 1898 (Macmillan), and the volume at once took its place among the standard works on Anglo-Saxon. The second series follows the same plan and renders the material practically complete. The first series included Alfred's 'Laws,' the 'Pastoral Care,' Bede, Orosius, and Ælfric's 'Homilies.' The second series takes in Augustine's 'Soliloquies,' Boethius, several works of Ælfric, Gregory's 'Dialogues,' Wulfstan, the Blickling Homilies, and a number of other important texts. There are also extensive appendices. One of these deserves particular notice. It consists of parallel passages from the Corpus Gospels, arranged in the manner of a harmony. The "Index of Principal Words" will be welcome to every student and of great value to the future Anglo-Saxon lexicographer.

Detailed examination of a work like this belongs in the technical journals. For our present purpose it is sufficient to say that Professor Cook has executed his laborious task with the care and skill that were to be expected from a scholar of his reputation. The volume is in every way a credit to the Yale Bicentennial Publications.

LITTLE, BROWN & CO., Publishers, Boston.

Like a New Story by THACKERAY

The most delightful Thackeray "find" that has been made for many years sees the light in the November Century. It consists of Thackeray's most important American letters, covering both the first and second visits of the novelist to America, and recording one of the most interesting friendships of his life. The letters have a continuity which gives almost the interest of a new story by Thackeray.

A number of unpublished sketches accompany the letters, including good-humored caricatures of American authors. The picture shown here is Thackeray's caricature of Longfellow, drawn by him on a cover of "Putnam's Magazine."

One of a number of strong features in the November Century Magazine, first issue of a new volume. Sold everywhere, 35 cents. BEGIN YEARLY SUBSCRIPTION WITH THIS NUMBER. $4.00 a year. The Century Co., Union Square, New York.

Benjamin Disraeli

An Unconventional Biography

By WILFRID MEYNELL

A CHARMINGLY personal book made up of Disraeli's talk and Disraeli's letters, around which is written the romantic story of his life. The author has sought to present Lord Beaconsfield as a man of temperament, and to record his moods, motives, and aims in social rather than in public affairs. The volume contains two photogravure and forty other full-page plates, the most interesting series of authentic pictures illustrating the life of the great statesman and man of letters ever brought together.

An admirable book which should be in the hands of every young man

The Call of the Twentieth Century

By **DAVID STARR JORDAN,** *President of Leland Stanford University*, author of "The Blood of the Nation," etc. 80 pp. 12mo, 80 cents *net*. Postage 6 cents additional.

An outline of the work which the Twentieth Century is to see accomplished, and of the character of the men who are to assume the responsibilities of its tasks. Written in a strong, inspiring, manly way, as a stimulus to the ambition of young men—and, indeed, good for all who would aim wisely to do "the day's work." Handsomely printed in two colors throughout, and attractively bound—a desirable volume for gift-book purposes. Society would be done a service if this little volume, so full of wisdom and inspiration, of sane counsel and rare insight, could find its way into the minds and hearts of all American youth.

The Blood of the Nation

By the same author.

82 pp. 16mo. 40 cents *net*. Postage 4 cents additional.

A study of the decay of races through the survival of the unfit. A powerful little volume on a great and vital topic.

HOUGHTON, MIFFLIN & COMPANY, Boston and New York

The Nation.

NEW YORK, THURSDAY, NOVEMBER 12, 1903.

The Week.

President Roosevelt has now ordered acts of war against Colombia. No other interpretation can be put upon his instructions to our naval commanders to prevent Colombian troops from embarking at Buenaventura, or any other national port. This goes far beyond the preliminary affront to Colombia in recognizing the twenty-minute republic of Panama, as Senator Teller aptly calls it. That was bad enough. It was an act which Professor Woolsey of the chair of international law in Yale University declares to be without justification in correct principles. To notify a Government that a seceding State has "accomplished" its independence, almost before the central authorities had heard that there was even a revolution, was a step which would, of course, have led to an instant declaration of war if the offended nation had not been as an infant to a prize-fighter. But now the President has outdone even that act of aggression, and has put us technically in a state of war with Colombia. Almost more amazing is the reason which he assigns for it. "The Washington Government," says the official dispatch, "holds that this policy is in the interest of the general good." But the President of the United States is a creature of law. Warrant for his public acts he must seek, not in his own magnanimous though possibly fallible impulses, but in the law of the land—in treaties, in the Constitution, in the statutes of the United States. It is safe to say, however, that in none of these can Mr. Roosevelt find the shred of a sanction for his hostile course towards Colombia. He sends his vessels of war to Colombian waters and asserts jurisdiction there. He threatens to sink any transport which may put to sea with troops of a country with which we are at peace. And when we ask *quo warranto?* the answer is "the general good"—that is, Mr. Roosevelt's own notion of what the general good requires. It is the stereotyped plea of irresponsible tyrants in all ages.

Financial critics have observed the irony that, after giving Mr. Morgan international renown for squeezing the water out of other people's companies, brought him as widespread condemnation for putting water into his own companies. In some such fashion Secretary Hay seems ready to be the demolisher of the edifice he has laboriously constructed. The Chinese negotiations, broadly speaking, are his best title to diplomatic fame. In meeting the tortuous policy of Russia, he has shown an imperturbable patience and an indefatigable resourcefulness. His strength in all these matters has been less that of our fleet and army than the moral advantage of speaking for a disinterested nation and against oppression of a weak people. To say that the United States did not desire a foot of Chinese territory was worth a squadron. And now Secretary Hay has treated Colombia far more outrageously than Russia ever treated China. For Russia has at least had the advantage of tolerated possession in Mantchuria, she has formally at least respected Chinese suzerainty, she has always alleged colorable excuses for not withdrawing on the promised dates, she has used the delays and decencies of diplomacy to the utmost, and generally has done everything to disguise the show of force. Compare this with Secretary Hay's treatment of Colombia: he has recognized a rebellion overnight, and forbidden the regular Government to exercise the inalienable right of every nation to protect its own sovereignty; he has reversed in a day the diplomatic precedents of a half century towards Colombia; he has punished an independent nation refusing a treaty by filching the territory under negotiation; where the Russians have had a colorable show of maintaining their own vested rights, he has trampled upon rights assured by many treaties and precedents. With what face can he now conduct any humane or disinterested negotiation for another nation? One may imagine the open scorn with which St. Petersburg will wave aside virtuous pretensions emanating from Washington.

Secretary Hay, in defence of the "justice and equity" of the rash act of the President in ordering Colombia out of Panama, makes citations from his predecessors in office. They prove conclusively that we are under solemn obligations to respect and defend the sovereignty of Colombia over the Isthmus. But what we are now about is the destruction of that sovereignty. As for our right to keep transit open, no one has questioned that. It has never been interfered with. Hence references to that part of the treaty are irrelevant. Is it not, in fact, adding insult to injury to assure Colombia that we are slapping her in the face solely in obedience to treaty stipulations? Mr. Hay makes much of the rejection of the canal treaty by the Colombian Congress. Has he never heard of the Hay-Pauncefote treaty, contumeliously rejected by our Senate? That was never alleged by England as a grievance. Not even Mr. Hay broke out in revolution in consequence. His whole statement is singularly inconclusive. No one knows better than he that to find warrant in "the interests of civilization" is to do exactly what Napoleon did in overrunning Europe as a military conqueror.

What a pity that Sackville West was British Minister to Washington before the time of the latest diplomacy! He had been in the service many years when, in 1888, he received his passports from President Cleveland for having advised a naturalized Englishman to vote the Democratic ticket as most favorable to English interests. For this offence his public career came to an abrupt end. Nowadays your telegraphic diplomat of twenty-four hours' standing, representing a republic not yet out of its first week in the incubator, advises Senators with impunity, and lunches with the Secretary of State in all dignity thereafter. Poor Senator Morgan! For years he has resisted the arguments and appeals of the greater portion of the American press, and has bitterly opposed what he has considered the Panama iniquity, only to be told by a fledgling Franco-American-Panamanian diplomat that it is time for him to "call off" his opposition! Could there be a more bitter humiliation than this? The diplomat's brother turns out to have been a "heavy stockholder in the old canal company," a "plunger in the new company," who is "likely to win a fortune" if the present sordid transactions are concluded. We do not wonder that Senator Morgan exclaimed that he had received an offer to buy him from Minister Varilla. Our only wonder is that he escaped an apoplectic shock, particularly when he heard the good news that he was to be replaced as Chairman of the Senate Canal Committee by that eminent canal-builder, M. A. Hanna.

Many disappointed partisans of Mayor Low now say that if he had not been so strict in the enforcement of the laws, he could have been reëlected. We are told that he ought not to have insisted on licensing all the peddlers and push-cart wagons. This is thought to have cost him the East Side vote. Similarly, he lost the support of the Broad and Wall Street office boys who were accustomed to lunching from pushcarts in the streets and blocking the thoroughfares during the noon hour. Their feeling is similar to the view that the Mayor "failed to take care of those who supported him." It seems hardly necessary at this late day to say that a public official has no choice but to enforce the laws, and that when he did so Mr. Low won every one's respect. When, under the specious plea that the "extreme of the law is the extreme of injustice," the

Mayor winked at the non-enforcement of the excise law, his Administration steadily lost ground in the popular regard. It did not begin to show signs of strength until Gen. Greene came into office. What the disappointed ought to do now is to cease from grumbling, and join the movement to solve the excise question and "take it out of politics" by some just and satisfactory law. Then they can lend their influence to the repeal of less important statutes if it seems to them wise and proper to do so. This is the manly way. To criticise defeated candidates for having done their sworn duty is the last thing we should hear of.

In the collapse of Devery's farcical candidacy, there is at least a crumb of comfort. In his own district the Big Chief managed to poll 1,135 votes out of a total of more than 9,600; but it is safe to say that every member of the Independent People's Party was bought at an impracticably great price. Only in three other Assembly districts did Devery's vote pass 100. Evidently, his advice to take all that was offered and then vote as you chose, was not unheeded by the beneficiaries of "The Pump." The case is full of instruction for those who imagined that, in some mysterious fashion, Devery's candidacy was to promote the fortunes of the Fusion ticket. The result makes these augurs look very foolish. Apparently, nobody voted for Devery except a few who were hopelessly in his debt, and a handful of brainless folk who dearly love a bad joke. We cannot hope that there was any moral indignation in the repudiation of Devery by the plain people whom he so assiduously blarneyed; there was, however, a deal of common sense in refusing to take the mountebank for a politician. Undoubtedly, the plain people had their reasons, though bad, for voting for Tammany. There never were any reasons for voting for Devery except in the superheated minds of some of the flightier friends of good government.

The defeat of Mr. W. T. Emmet in the Twenty-second Senatorial District ends the Republican deadlock in the Senate, and carries to fruition the Roosevelt and Platt conspiracy to give back to the latter the complete control of the Legislature, of which he was temporarily deprived last winter by the bolting Republican Senators. Thanks to several up-State and local victories, the Easy Boss has also strengthened his grasp on the Assembly. In this respect Republican success is no more to the advantage of good government than is Tammany success. However much Senator Platt may assure the city of his devotion to civic decency, his flagrant indecency in State matters makes it ever necessary to watch him as a detective watches a confidence man. Gruber's obvious willingness to sacrifice Fusion for his pet judge—whom, however, he happily lost—shows the natural boss instinct of betrayal. The folly of Mr. Roosevelt's friendliness towards Platt and Quay and men of their stripe becomes more apparent every day. While ostensibly making for the advantage of the Republican party, it really menaces, and menaces seriously, its immediate future, for the simple reason that no party of moral ideas can hope to retain the respect of honest voters when it is represented by such men as its present State bosses. The evil results of the McClelland bargain the Republican party will feel more at the next election than this, after a cut-and-dried machine-made session of the Legislature. It will undoubtedly help the Democrats to carry the State for their Presidential electors next fall.

Gov. Garvin's reëlection has excited virtuous rage in Rhode Island. The Democrats and the independent Republicans who supported Dr. Garvin were very unfeeling in their treatment of the Republican machine. They actually ventured to hire detectives to stop bribery at the polls. As a committee headed by Bishop McVickar had already been circulating in pamphlet form the *Evening Post* articles on corruption in Rhode Island, and had been agitating for an honest election, the employment of detectives was obviously the culmination of a dastardly attack upon the right of a freeman to sell his vote to whom he pleases for whatever price he pleases. The Providence *Journal*, mouthpiece of the machine and the traction interests of Senator Aldrich, has flown to the defence of Rhode Island liberties. It does not hesitate to print the charge that the pamphlets were "published and distributed by a sect of Christians which aspires to call itself the only true and catholic church of America"; that the enemies of the machine, including the arch-villain, "the bishop of the diocese," are a "motley throng," and that the detectives were "Hessians hired to risk their lives for a stated cause." These banded hosts of evil, led by the clergymen, college professors, philanthropists, and other well-known rascals of the State, have won a temporary victory; but, it is gratifying to observe, the friends of the machine, though angry, are undismayed. They declare that, in spite of the malevolent activity of the "hireling and the zealot," "we are hopeful of the future, because we have faith to believe that those who honestly strive for better things eventually receive abundant reward for their earnest endeavors." This is, indeed, the stern stuff of which moral heroes are made.

For years past the educated and refined colored man or woman travelling in the South has had one way of escaping the hateful "Jim Crow" car. By paying the additional fare he or she could secure a chair or a berth in a Pullman car, without being set apart like an animal to be shunned or a contaminating leper. Now we must record with humiliation an effort to put all colored people out of the Pullman cars, hitherto deemed beyond the reach of race discrimination owing to the Federal Interstate Commerce laws. The movement began, it appears, with Gov. Frazier of Tennessee, who protested to the State Railway Commission, and induced that body to order the Pullman Company to keep the negroes out. Instructions to this effect are said to have been already issued by the Louisville and Nashville, and the Nashville, Chattanooga & St. Louis Railway; and W. L. Granbery, a counsel of the Pullman Company, announces that that company has actually agreed to the State Railway Commission's wishes. A meeting of the Southern Pullman agents to discuss this issue is also announced. It is to be held in Chicago. But why, asks the Charlotte *Observer* pertinently, is such a gathering necessary if the Pullman Company can be regulated by State boards? Against the proposed outrage the colored people may be expected to protest at once. They should take immediate steps to bring the issue before the courts in order to ascertain if the rights they have always had may be thus taken from them overnight, and they themselves made more than ever a "class apart."

Thursday's announcement that the Steel Corporation had cut the price of steel four dollars per ton, seemed to be received on Wall Street almost with consternation. There are other quarters, however, where we suspect the news was greeted with complacency. We refer particularly to the railways, whose recent reports have unanimously testified to the enormous increase in the year's expenditure, caused by the high cost of materials and supplies. The building trade has been handicapped by this burden almost as much as by its labor difficulties. It is true that steel rails and structural steel were not reduced in price by the cut; but the general tendency is plain enough. What caused the stock market's dismay was undoubtedly, in the first place, the old tradition that, as the price of steel and iron moves, so moves general trade, and, in the second, doubt as to how the cut in steel would affect the Steel Corporation's revenues.

The explanation given is, that the cut was to stimulate trade. Clearly, trade needed stimulating. The company's statement of October 6, when the common-stock dividend was reduced, showed that its earnings for September were nearly $2,000,000 under 1902, and that

orders for steel then in its hands for future manufacture were 1,100,000 tons below last autumn—a decrease of 22 per cent. In view of such conditions, lowering of prices seems a reasonable step; it is the Carnegie Company's historic policy on such occasions. So, we presume, the trade and Wall Street would regard it but for the fact that the reduction also confesses publicly the folly and hollowness of the theories which our great financiers set forth in 1901. Only make your companies big enough in stock and bonds, and we shall have no more fluctuations in prices of materials. Well, the experiment has been tried, though not yet to the end, and two points are already conclusively established. Even a billion-dollar company cannot maintain prices for its product if the consuming public cuts down its purchases. Furthermore, when such prices do decline, signs of alarm are witnessed, not from the small establishments which were to be abolished by the "new finance," but from the great combine itself which had to earn $60,000,000 annually to pay its dividends.

Mr. Chamberlain was, for him, on the defensive last week at Birmingham. He admitted that British trade was not perishing, conceded even that great prosperity had followed the adoption of free trade. But he insisted that the country had prospered only in the ratio of its natural increase of population. Protectionist countries, on the contrary, had seen trade overtake population. England, then, though flourishing, has enjoyed only a portion of the well-being that under a protective system would assuredly have been hers. At first blush this strikes one as a weak appeal, and as far less cogent than the old wail over declining trade. Yet for an audience of manufacturers the argument did not lack attractiveness. Mr. Chamberlain was not appealing to supposititious profits lost in the past; he was rather promising enhanced profits in the future. He was making the straightforward protectionist approach to the cupidity of the manufacturing interests. That argument is always formidable.

As usual, Mr. Chamberlain scored off Cobden, asserting that the great free trader had promised, should England adopt free trade, that the United States would abandon its premature manufacturing and send the mill hands back to the fields "to dig and delve and plough for us." Before condemning Cobden as a foolish prophet on the strength of a scrap torn from context, it may be well to recall what he actually thought of the industrial future of the United States. He visited America in 1835. As he passed the Alleghanies and for the first time looked upon the Mississippi basin, he wrote: "Here will one day be the headquarters of agricultural and manufacturing industry; here will one day centre the civilization, the wealth, the power of the entire world." Again, speculating on the people "which shall surpass and supersede the Yankees," he says: "They must be a race that will be able to dispense with food and sleep altogether." A little later he declared "that it is from the west rather than from the east that danger to the supremacy of Great Britain is to be apprehended; that is, from the silent and peaceful rivalry of American commerce, the growth of its manufactures, its rapid progress in internal improvements, the superior education of its people, and their economical and pacific government." These last advantages we have largely sacrificed since 1835, but the extracts effectually dispose of Mr. Chamberlain's imputation of a bucolic vision of America to Cobden, and they illustrate as well the folly of the comparative view of prosperity. In fact, the fundamental fallacy of the Chamberlain idea is that it neglects British wealth outside of the two kingdoms. No Little Englander could take a more myopic attitude toward Imperial bookkeeping. The prosperity of the British in colonies and dependencies would be no less real though the political status of the Britains beyond the seas should be changed. But Mr. Chamberlain prefers to put the wealth and the population of Great Britain under the glass, and to declare that the ratio of diameters is unsatisfactory.

Signor Giolitti has been the political manager of the Italian Ministry for two years past, so that his assumption of the Premier's title means little real change of policy. The only recruit of real strength in the new Cabinet is the veteran economist Luzzatti, who accepts the Treasury portfolio. Presumably, Giolitti will endeavor to continue the alliance with the Parliamentary Socialists, by virtue of which a coalition Ministry has shown surprising stability. Giolitti is heartily in favor of reduction of the food taxes and of radical reform in the impoverished South. With his accession the Ministry loses moral tone. The scandals of the Banca Romana passed near enough to him to leave him smirched, if not formally implicated. In general he bears the reputation of cultivating rather the arts of the politician than of the statesman. It is matter of surprise that he accepts the Prime Ministry, for it seems that the present Government can be only a stop-gap at best. Very likely Signor Giolitti has a very definite programme of fiscal and tax reform in mind—one that he may present to the constituencies with the reasonable hope of being returned to Montecitorio with a genuine majority.

The politics of the Dual Empire falls into deeper confusion through the announcement of a new Bohemian nationalist programme. In a sense the new demands merely raise more emphatically than before the old language question. But they have an added weight in view of the partial surrender of the Government to similar demands by the Hungarians. Obviously, if the Emperor is to found another Czech University, encourage the use of the langauge in schools, impose it upon certain parts of the army, he will be ministering directly to separation. If he refuses to do as much for the Bohemians as he has done for the Hungarians, the Bohemian Nationalists threaten to use "the sharpest parliamentary" opposition to the present Government. That means a renewal of obstructive tactics at Vienna by the Czechs, and probably also an increase of the chronic disaffection of the Magyars. Theoretically, separation ought to prevail very soon in the Empire. The situation of a Hapsburg Emperor caught between two alien and hostile races becomes daily more anomalous. But if living together is difficult for the races composing the Empire of Austria, separation seems impracticable. Bohemia certainly would stand aghast if by some sudden turn she were taken at her word, read out of the Empire, and made an independent State.

The Sultan, it is reported, stands on his dignity in respect to the new demands of Austria and Russia. He reminds those Powers that he has already promised various reforms which to the best of his ability he has executed. He resents, accordingly, the attempt to exact further pledges in an old matter. This is the attitude of one who knows that the insurrection is over for the winter, and is assured that his Christian mentors have no intention of coercing him. If the new plan were put into effect, however, it would greatly relieve the situation. A grave defect is the retention of Hilmi Pasha as the Governor-General of the four disturbed vilayets. An autonomous Governor directly responsible to the Powers is the indispensable minimum of reform. But there is at least a theoretical gain in the stipulation of Christian inspectors to supervise the administration, and in the provision for officering the Turkish gendarmerie from the armies of the Powers. Similar reforms have failed in practice, but the mere enlargement of the demands upon the Porte is an indication at least of the time when the Near Eastern question will be dealt with seriously. From these demands of Austria and Russia, as from any joint action of these Powers, indeed, rather little is to be hoped. Their immediate stake is too great, their eventual interests too opposed, for them to play a magnanimous part in the Levant. And it is a case for magnanimity.

THE PANAMA DISHONOR.

The sudden separation of the State of Panama from Colombia looks unpleasantly like a vulgar plot with "millions in it." Have our consuls, or any of our military officers, intrigued to bring about this artificial revolution? We cannot fail to note that this is positively asserted in a dispatch of the French consul at Panama to his Government. And we see the same thing hinted in the insinuation of a German newspaper that President Roosevelt has been "working behind the scenes." We can already see material for most unpleasant disclosures. That military "reconnoissance" of the Isthmus by our youthful army officers—what was that for? Were they not really reconnoitring a revolution? The concealed shipment of arms from this country, in aid of the revolutionists, may have been wholly legal, but was altogether suspicious. It is certain that the Navy and State Departments knew all about the revolution in advance. The "tip" was out in this city and in Washington that the affair was set up and would come off according to advertisement. Our naval officials disclaim any actual knowledge of what was to occur, but say with a smile that they made ready for it out of "intelligent anticipation." This it was that caused the orders to the cruiser *Dixie*, on October 24, to put to sea at once, despite her chief engineer's request for time to make repairs, and with four hundred marines in addition to her regular crew—many of them "picked men." As a blind, the report was that the *Dixie* was to go to Guantánamo, Cuba; but it is now admitted that the real destination was Colon. If our consuls warned the Government of what was coming, did they get their information from the chiefs among the revolutionists? Did the latter raise any question about being recognized by the United States? What we know is that they cabled a request for recognition the moment they had launched their pronunciamiento.

Certain stereotyped phrases are invoked. They always are to gloss over wrongful action. It is said that we were bound to recognize the *de facto* insurrectionary government in Panama and Colon—for there is no evidence that the revolution extended beyond those two cities. Of course, our consuls would need to find some local authority with which to transact business. In that sense, if the revolutionists remained in control, they would have to be recognized. So would a band of pirates in their place. But this is a very different thing from recognizing the "republic" of Panama. It yields no sign, as yet, of being even *de facto*. To deal with its officers is one thing; to admit the validity of their claims, as against the central Government which would put them down as rebels, is quite another. The latter would be, on the principles which we as a nation have laid down and contended for passionately, equivalent to declaring war on Colombia. No such break with our traditions and with decency should have been thought of for a moment. We should have continued to observe strict neutrality. If the alleged republic of Panama got on its legs by itself, and asserted its power against the Government at Bogotá, then, after weeks or months, the question of recognition would properly have come before us. At the outset our duty was to keep hands off and await developments. To attempt to force matters—above all, to attempt to smuggle through a canal treaty with this mushroom republic—was shocking.

Prudence and consideration in dealing with Colombia have been the rule of the State Department from Marcy to the present day. The dispatches of Seward and Fish and Evarts and Bayard are filled with expressions of the purpose of the United States to respect the sovereignty of Colombia in every way. It was once proposed by the Colombian Congress to repeal the treaty, or at least article 35, which gives us the right to keep transit open on the Isthmus. But our Minister at Bogotá urged that the American Government would never exercise its power in any unfair or unfriendly way. In fact, it was pointed out from the first that we were under peculiar obligations to uphold Colombian sovereignty. It was even thought that we were bound to help the central Government put down rebellion on the Isthmus; but the Attorney-General of the United States held that our obligation did not go beyond repelling attack from abroad. No meddling in Colombia's internal affairs has been our guide. There has been, it is true, a quiet but perilous extension of our right of landing troops, and of their power when on shore. Secretary Seward once practically apologized because Admiral Pearson landed marines without first asking permission of the local authorities. We have left all that far behind. Capt. Hubbard would not permit Colombian troops to go by rail from Colon to attack the revolutionists in Panama, but he apparently allowed the latter to cross over to Colon.

Secretary Hay is old enough, if the President is not, to recall the vehement protests against the recognition of our seceding States by European Governments. Their mere recognition as belligerents gave bitter and undying offence, though that was doubtless required by international law. But against recognizing them as a government we strenuously argued, throughout those years of fearful struggle. It was, we contended, only a rebellion which we were facing, and which we would put down in time if let alone. Yet the Southern Confederacy had many of the insignia of a nation. Gladstone was not so far wrong, as a mere matter of form, in saying so. Yet we threatened to go to war with any nation which recognized that secession movement, numbering millions of men and with formidable armies in the field. The dispatches of Seward and Adams are full of protests against recognizing the revolted States. At one stroke, however, President Roosevelt and Secretary Hay have thrown American principles to the winds and have committed the country to a policy which is ignoble beyond words. Our position is now the humiliating one of treating a pitifully feeble nation as we should never dream of dealing with even a third-class Power; of giving a friendly republic a blow in the face without waiting for either explanation or protest; of going far beyond the diplomatic requirements of the situation, and that with indecent haste—and all for what? To aid a struggling people? To take a stand for freedom or for republican institutions? To avert a danger? No; but just for a handful of silver, just for a commercial advantage which we ought all to spurn if not come by honorably. For this we have hurried into relations with the seceded State of Panama without giving Colombia a day's notice! It is the most ignominious thing we know of in the annals of American diplomacy.

Imagine Lord Palmerston or Napoleon III. paraphrasing our specious reasoning about the "unanimous movement of the people of Panama to resume their independence," and to set up a government "republican in form"! They could have made out a case ten thousand times stronger for the recognition of the Southern Confederacy. And we should hope that they would have omitted the hypocritical touch in our notification to Columbia about the "ties of friendship" which move us to bring about her dismemberment! And note how the President moves on to arrogate power as keeper of the peace on the Isthmus. He now discovers that he is "bound by treaty obligations" to put an end to "unnecessary and wasteful civil wars" in Panama. No predecessor of his ever drew that juggler's conclusion out of the treaty. Of course, it is not there. The President has invented his obligation, and gives the world to understand that his hasty and unwarranted action in affronting a friendly nation, and entangling us with a band of conspirators, is only his way of establishing a *Pax Rooseveltiana*.

In all the Administration accounts of our treaty with Colombia, it is taken for granted that it was a grievous and now intolerable burden which we took upon ourselves in connection with Isthmian transit. But in the treaty itself this was described as an "advantage" and a "favor" to the United States; and it was expressly set down that "as an *especial compensation* for the said *advantages*," this country was to guarantee both the neutrality of the Isthmus and the sover-

eignty of Colombia over it. This was obviously the view taken by Seward, who, on April 30, 1866, wrote to our Minister at Bogotá:

"The United States desire nothing else, nothing better, and nothing more in regard to the State of Colombia than the enjoyment on their part of complete and absolute sovereignty and independence. If those great interests shall ever be assailed by any power *at home or abroad*, the United States will be ready, coöperating with the Government and their *ally*, to maintain and defend them."

Mr. Seward wrote again, on October 9, 1866: "The United States have always abstained from any connection with questions of internal revolution in the State of Panama, . . . and will continue to maintain a *perfect neutrality in such domestic controversies.*" That was certainly the very lowest measure of our duty. But what has the President done? He has placed the Administration under grave suspicion of actually promoting rebellion in a friendly nation, and of agreeing with the conspirators in advance to give them recognition and military aid. It is certain that he indecently rushed to the support of this most questionable republic *à trois*, and actually has had the audacity to notify Colombia that she will not be permitted even to attempt to reduce her rebellious subjects to obedience. There is a clean disregard of both law and morals in all this. Even the buccaneers who sailed the Spanish Main would have found it too much for them.

THE FUNCTIONS OF THE SENATE.

In organizing a government of checks and balances, the framers of our Constitution made two notable exceptions to that mutual independence of the three coördinate branches of the Government which is the most distinctive feature of their work. They provided that the joint conclusions of the two Houses of Congress, as embodied in legislation, should be submitted to the President for his approval. They also provided that nominations to important offices by the President should be submitted to the Senate for its advice and consent. Although the practical wisdom of both these provisions has always been conceded, the very cogent reasons for them are so near the bottom of the whole question now at issue that they must be brought to mind.

The widest human experience in legislation shows that, however minutely and carefully a single body of men may consider a proposed measure, they are generally, such are the complexities of civilized society, unable to take a complete and undistorted view of all the circumstances which should influence their conclusion. We therefore adopted that feature of the English Constitution which provided that the independent assent of two bodies of men shall be necessary to any legislative measure. The two exceptional provisions of our Constitution are based upon the same general policy as that of legislation by two independent houses. After the latter have separately considered a measure, it is still possible that circumstances clear to the executive engaged in the practical work of executing the law may have been overlooked by them. The benefit of his experience is therefore secured before a proposed law takes effect. The provision that nominations to office shall be submitted to the Senate is based on the idea of extending the two-house system to executive appointments. It is therefore provided that, after the President has decided upon an appointment to office, a body of responsible men, occupying a position which enables them to form an independent judgment as to the qualifications of the appointee, shall pass judgment upon his fitness. It follows that the relation of the Senate to the President in the matter of appointments is in no way different from that of the Senate to the House in matters of legislation, or from that of the President to both Houses when an act is submitted for his approval.

Mr. Lodge's charming and specious argument in the current *Scribner's* applies equally to all three cases. He shows very clearly how much trouble is saved the overworked Executive when, by consulting only one or two Senators beforehand, he can make sure that an appointment will receive the advice and consent of the Senate, and thus insure himself against the danger of having to do his work over again through the Senate failing to confirm the nomination. He even goes so far as to recall a case which cannot but suggest that the House has it within its power to enjoy a similar advantage. He reminds us that the Senate re-made the Wilson Tariff Bill, and adhered to its conclusions with such tenacity that, "without the alteration of a single line, they became law against the bitter opposition of both House and the Executive." The corollary is plain. If the House committee which framed the measure had conferred with prominent Senators in advance, in order to learn what sort of bill the latter would permit to become law, a very bitter contest would have been avoided, and legislation would have gone on with that smoothness which marks the confirmation of nominees to office by the Senate. No one who observes the growing power of the Senate in recent times in this and other directions can be surprised if, before another generation passes away, this custom shall be found slowly and quietly making its way. If the corresponding arrangement with the President has led to no abuse, why should objection be raised to this? A tendency is seen every now and then, among immature members of Congress, to consider the question whether the President is likely to approve a given measure as a very strong factor in determining the amount of attention to be bestowed upon it.

Instead of wasting argument upon this tendency, we shall invite attention to two growing evils of the present practice which are quite independent of any theory as to its propriety. For half a century past it has been evident to all thinking men that the custom of regarding public offices as rewards for political service, generally of a personal character, is a crying evil. In the case of the classified civil service this evil has been remedied so far as it is in the power of law and regulation to do so; but in the case of offices to be filled by Presidential appointment the evil is still in full force. At Washington, communications in regard to appointments to office, especially those between the President and Senators, are regarded as confidential, so that no general statement can be made on the subject which will admit of legal proof. But it is universally supposed and never authoritatively denied that Senators do not merely suggest appointments to the President, but practically determine them. Active promoters of the political fortunes of a candidate for the United States Senate, in most of the States of the Union, look forward to public office as a reward for their work. The promise of such offices is regarded almost as a matter of course. When the supporters of a candidate for a Presidential office are named, a Senator will generally be found heading the list. In a word, the universal opinion is that, while it is quite proper that the President should satisfy himself that the candidate recommended by a Senator is fit for the position he seeks, he has no business to inquire into the Senator's motives in desiring the appointment. Subject to the limitation we have mentioned, it rests entirely with the Senator to apportion the appointments according to the zeal shown by the various candidates in promoting his political fortunes.

It would be a great error to judge the effect of this policy solely by the character of the appointments to which it leads. The demoralizing influence of the feeling that appointment to high positions in the public service depends upon loyalty to an individual, is a fruitful source of misgovernment. In the government of the people for the good of the people, no such consideration should be allowed to have play. Another evil, less serious as a matter of principle, yet more serious in its immediate effect upon the interests of good government, is the absorption of the energies of the large majority of our Senators in managing the politics of their respective States. The public questions of national importance which come before the legislative branch of the government are such as require for their proper consideration the undivided time,

attention, and study of the ninety men who now constitute the Senate. The interoceanic canal question, the tariff question, the currency question, the conduct of our foreign affairs, the feelings, views, and policy of foreign governments, and the administration of the great executive departments of our own, are subjects of which the complexity increases year by year, and which more and more demand the undivided attention of men as well fitted to bestow it as we find in our Senate. To compare their importance with that of the management of State politics by local leaders would be simply ridiculous. Every consideration of good policy demands that those who are officially charged with so important responsibility should be required to devote all their time and attention to the duties of their position. This is impossible so long as they are expected to take charge of political organizations in their several States, and decide who shall be appointed to public office. No thinking person who has watched the development of our national administration since the civil war, can fail to be struck with the gradual reduction of our whole governmental system to a blindly operating machine, worked by forces which have little or no regard to the ultimate effects of their action upon the public welfare. To a certain extent this tendency towards routine is unavoidable. But it is impossible to administer the Government properly by any system of mere routine. As the complexity of the situation increases, it becomes more and more necessary that members of the legislative branch of the Government shall be masters of the details of governmental administration, and thus be able to exert their powerful influence in the promotion of its efficiency and purity.

There is only one way in which this can be brought about. As the reform of the civil service became possible only through the complete elimination of political influence from the requirements for office, so is the complete elimination of Senatorial influence from Presidential appointments a prerequisite to a reform which the efficiency of our public administration most urgently demands. If the principle is once accepted that the recommendation of a Senator shall receive no greater weight or consideration than that of any other equally well-informed citizen; that it must be impartial as between various candidates; and that personal service rendered to the political fortunes of a Senator disqualifies that Senator from directly recommending the giver of the service—it will be the longest step toward good administration that our generation has taken.

THE TIN BOX AND THE TIN PAIL.

The recent drop in Steel securities is only one of a number of indications of the widespread losses that have befallen the capitalist class. It is said that there are seventy-five thousand shareholders in the United States Steel Corporation. At one time the preferred stock sold as high as 101⅞, and the common touched 55. In fact, the wide diffusion of the two issues may safely be said to have been accomplished in the nineties in the one case, and in the forties in the second. Yet on Tuesday the tape registered less than 50 for the preferred and 10 for the common. The former has, therefore fallen below the high point of the latter, and the common, for which at least 60 was predicted as the minimum price, has reached a figure which plainly indicates that in general estimation its days as a dividend earner are numbered. Even a tin box might be expected to perspire under such influences, and there are seventy-five thousand such boxes. Think, too, of the Amalgamated tin boxes. What comfortable pieces of property they were in the summer of 1901, when "Copper" was quoted at 130. To-day it is worth in the market about one hundred points less.

These are merely notable illustrations of how the tin boxes have suffered. Time would fail to enumerate what has happened to the receptacles of other Trust securities. Then there are the "gilt-edged" investments — Pennsylvania, which has declined from 170 in 1902 to about 116; and Chicago and Northwestern, with its drop from 271 to 153. This list could also be extended indefinitely. But the stock-market decline is only one of the ways by which the tin boxes have been flattened out. There is the general reduction in manufacturing profits, due to the higher cost of materials and labor, and to diminished consumption. The shrinkage in this quarter has been clearly enough perceived for months past, but it is commanding increased attention just now because of the cutting of export prices in order to keep our mills in operation, and of such annual reports as have been issued lately by certain railroad companies, showing that operating expenses have increased faster than gross earnings, and also because of reductions in dividends.

But the tin box cannot suffer for any length of time without the tin pail being affected. Labor is fond of breathing out threatenings and slaughter against capital, and usually selects the most inopportune season for doing so. Capital and labor stand and fall together. The one may derive a temporary advantage from afflicting the other, but by so doing it works its permanent discomfiture. Now, capital has lately received a very hard blow. It may not yet have experienced the whole setback; but the first impact is over, and the time has come for labor to feel the effect of the same blow. It is, perhaps, too much to expect that it will meet the situation with calmness and good sense. Some people have a way of calling capital the brains and labor the hands of industry. But this is rather a senseless generalization. The one is as apt to pursue flighty methods as the other. And if capital was capable of being betrayed into its irrational policy of the last few years, it is reasonably certain that labor will not avoid commensurate blunders during its critical period.

Every day brings to light some contemplated step by labor which, if taken, will accentuate a situation otherwise unfortunate enough. The man with the tin pail should take heed to his way; otherwise he will evolve a state of affairs as extreme as that in which the man with the tin box now finds himself. To strike or not to strike is a question which is at present agitating labor unions in many parts of the country. A general strike movement at this time would be as senseless a proceeding as the general buying movement of securities was just prior to the panic of May 9, 1901. That was not the time to buy stocks, and this is not the time to quit work. The man who did the first is now suffering for it. The man who does the second will suffer by and by. The success of the labor unions in advancing wages and in obtaining other concessions in the last few years has given them a false confidence in themselves. One of the vulgarisms of Wall Street is that "any old thing will sell in a bull market." And it is equally true that the extreme demands of labor are comparatively easy of attainment in periods of rapidly increasing industrial prosperity. But even the best of securities have hard sledding in times of financial depression. The lack of buyers frequently sends them below their normal values, and keeps them there for a long interval; and labor cannot hope to escape a similar fate in periods of industrial reaction.

The sooner the man with the tin pail recognizes this fact, the more hopeful will be his outlook for the future. In ninety-nine cases out of a hundred, strikes are as ineffectual in times of industrial depression as was Mrs. Partington's attempt to broom back the Atlantic. When three men are seeking employment for every two places offering, somebody must be disappointed. There is no labor union in existence that can alter this immutable law. To attempt it is only to make the situation worse. So far, 1903 has not been a favorable year for strikes. Nobody knows this better than the labor organizations, and it is to be hoped that, notwithstanding their present threatening talk, the knowledge has made them conservative. It is obvious where the trouble lies with the man with the tin pail. His wage did not go up until there had been an all-around advance in his cost of living, and experience has taught him that, as a rule, it

will come down in advance of commodity prices. But that is due to an economic law which neither he nor any one else can control. The fear that he may attempt this impossible feat is one of the things which are forcing the man with the tin box into an ultra-conservative position. Capital has been rendered timid not only by what it has suffered as a result of its own folly, but also by the threatening attitude of labor.

THE REAL CANADIAN FEELING.

Brushing aside minor grievances aired in press or in Parliament, the real sentiment of Canada on the Alaska decision is, first, one of resentment that the Dominion was tricked into a packed court; next, of sorrow that the British Government connived at the trick for the sake of friendship with the United States. This feeling is expressed by newspapers of every political tone. It is a sincere sentiment, and not a Jingo outcry. From Nova Scotia to Winnipeg it is expressed with surprising moderation and dignity. No one can afford to minimize this deliberate sense of injustice or ascribe it to mere irritation at an adverse award.

What the Canadians resent is, not that they have lost, but that by no possibility could they have won. The United States, having rejected various proposals for arbitration, finally agreed upon a mixed commission, three "jurists of repute" to be appointed on either hand. Both parties agreed to abide by the decision of the tribunal, and the arrangement was fair, and objectionable only because of the possibility of a deadlocked court. Unfairness, in the Canadian view, crept in when President Roosevelt appointed as our three "jurists of repute" Secretary Root and Senators Lodge and Turner—all politicians, and all committed absolutely by their public utterances to the American contention. At the time, the candid press maintained that the selection was unfortunate and unfair, and urged the President, who was presumably pledged to these appointments by the Senate, to change the composition of the Commission. Three days after the appointment of the American Commissioners, February 21 last, the Governor-General of Canada protested to the Colonial Office against the personnel of the Commission, and suggested the reconsideration of the treaty. Lord Onslow, the Under Secretary for the Colonies, replied that Great Britain could not criticise or object to the American Commissioners, remarked that the only alternative was to break off the negotiations entirely, and urged the undesirability of such a course. The advice prevailed with Sir Wilfrid Laurier, who accepted the disadvantageous conditions of the judgment in preference to postponing to the Greek Kalends the settlement of a vexatious and dangerous dispute.

Of the fact that the court was virtually packed against the Canadians, there is not the slightest doubt. The tribunal sat in London, two commissioners bound to the Canadian contention, three to that of the United States, with but a sinble member, Lord Alverstone, really in the position of an impartial judge. By gaining Lord Alverstone the Canadians would merely not lose; by persuading the Lord Chief Justice the American must win. No wonder, then, that the moderate Toronto *Globe* declares: "Everything has been make-believe. . . . The worst the Americans had to fear was a disagreement." Or, as the Toronto *World* puts it: "A deadlock was the best we could expect, and an adverse decision, through the casting vote of Lord Alverstone, was what we had to fear." In Canadian eyes the whole proceedings of the tribunal were hocus-pocus. Practically, the matter reduced itself to a hearing before Lord Alverstone, with power to grant a verdict only for the United States. But the controversy now lies between the Canadians and their own Government, or between the Dominion and the Empire. It is the British Colonial office and Sir Wilfrid Laurier, between them, that have invented in Canada's behoof this variant of an old game—"Heads I don't win, tails you win."

We speak without cynicism in this matter, appreciating the force of Canadian discontent. It was possibly to avert personal criticism that Sir Wilfrid Laurier has declared in Parliament that Canada must appeal for the treaty-making power. The Winnipeg *Telegram* probably expresses a universal sentiment when it says:

> "The plain truth is, that Canada has no confidence in British diplomacy, except as regards its general complacency. It is too aristocratic in its attitude and not sufficiently businesslike. Details are passed over or yielded up with the pride of magnanimity. And there is not sufficient imagination about it to realize values and possibilities. While we may have a certain respect for this attitude, we believe it to be unsuited to business transactions. Moreover, we cannot be satisfied to have our interests determined by it."
